
Period contracts should be based on the English currency equivalent of the Canadian price so that the seller is covered against exchange risks.

Intermediate strengths of pigment will be sold at equivalent prices.

I shall be pleased to receive your agreement to or suggested modifications of this arrangement as soon as possible. I expect to be back in England about June 4th, and look forward to meeting you soon afterwards.

Yours sincerely

C. J. STOPFORD,
General Manager.

CJS/SL/31312

W. C. Beschorman Esq., 18th June 1935.
National Lead Company,
111 Broadway,
New York, N. Y.,
U. S. A.

Dear Mr Beschorman,

As you will see from the enclosed copy of a memo. we have had a meeting with Laporte, when nothing was settled in regard to technical co-operation on a quota basis, but we have decided on a 15% reduction in price. This was decided after consideration of an estimated profit statement which showed that on a basis of 3,000 ton sales and the April production costs, we should have a profit of approximately £60,000, before deduction of tax, over 12 months. This profit will not be realised during the present year as of course production costs were higher during the early part of the year and we started the year with stocks at last year's production costs, which was considerably higher. The April cost was £36 per ton TiO2.

You will note from the memo. that whilst these reductions have been agreed to take place as from July 1st in Great Britain, and that the prices for the Empire (excluding Canada) will be fixed at figures equivalent to the British delivered price plus freight and insurance, we have obtained Laporte's agreement not to alter the Canadian prices for the time being. This does leave open the posi-

tion that an unscrupulous buyer in Great Britain could buy material here (although the material is not sold for export) and put it c.i.f. Montreal at a price of approximately 15.9 cents per lb. for oxide and 6.4 cents per lb. for 25% barium pigment, at 4.93 exchange rate, whereas you will remember that the Canadian prices for British pigment were fixed at 18.4 cents per lb. for oxide and 7 cents per lb. for 25% pigment, based on the rate of exchange of 4.865 Canadian dollars per £.. sterling.

I do not think there is much risk of our material being exported to Canada as we keep a fairly close track on the material we sell, but I do not know whether Laporte are so careful.

Yours very truly,

CHAS. J. STOPFORD

STRICTLY PERSONAL

Dear Dr. Jebsen:

For your information I am enclosing copies of two letters received from Mr. W. S. Robinson together with copy of my reply to his first letter.

You will note in his second letter, dated September 5th, that he answers one of the questions which arose in all of our minds when he first brought the matter up by his statement in the last paragraph of that letter that he was only questioning the obligations of the British partners to each other. I am still of the opinion that when he gets the attorney's interpretation of the contract he will find that the rights of the British partners toward each other are limited to the territory covered by the license agreement, in other words, the British Empire, exclusive of Canada, New Foundland, etc.

Please do not show this correspondence to anyone.

Yours very truly,

W. C. Beschorman
Executive Vice President

W. C. Beschorman Esq.
National Lead Company
111 Broadway
New York City

Dear Mr. Beschorman:

I have your letter of the 25th August with its kind references to myself by you and your associates, which I much appreciated.

Your letter supports my belief that you misunderstand my attitude. You say:

> "I do not feel our British partners have any legal right to say what the Titanium Pigment Company shall do in Canada and whom it should select as a partner".

No right of the Titanium Pigment Company to do what it liked in Canada has been challenged by me. Throughout the long negotiations of the past, the rights of the United States Company in Canadian territory were firmly supported by me.

Again, there has never been any claim made by me that British Titan has any authority or power outside of its territory.

Exhibit 671

Neither of these questions was raised by me—if I had desired to do so, I would have approached you first. If any legal point arises on these questions, I leave it to the lawyers to decide.

In my opinion, the obligations of the British partners to each other are such as to justify the belief that any arrangement which either directly or indirectly increased the relative interests of one party in the Titanium industry, should at least have been discussed with the others before it was even in principle agreed. This does not involve any action of yours or affect any of your Company's rights.

My kindest personal regards to your associates and yourself.

Yours sincerely,

(Signed) W. S. ROBINSON

Mr. W. C. Beschorman,
The National Lead Company
111 Broadway
New York City
U.S.A.

Dear Mr. Beschorman:

British Titan Products

I have been informed that you "are a good deal upset" by [redacted] discussion raised by me on Clause 11 and its relation to the new Canadian company and that you regard my attitude as "an encroachment on the National Lead Company's right to choose the most suitable partner in their opinion for their Canadian business". If these statements correctly represent your views, I feel I should say that you misunderstand my reasons for raising this subject. I thought I had made it abundantly clear at the Board Meeting that I did not raise my point in any spirit of antagonism but solely with the object of determining the rights and obligations of the parties owning British Titan Products.

Before dealing with this matter may I say that ever since the question of Titanium was raised between Mr. Cornish, the late Mr. McCarty and myself I have always

made it perfectly clear that the National Lead Company's rights were clearly recognized by the Imperial Smelting Corporation. I go further and say that examination of our actions throughout the history of this business will, I am confident, show that the protection of the interests of the National Lead Company has been our first consideration. I feel sure that this will be readily recognized by all who were intimately associated with our negotiations from their inception many years ago.

Our records here of past negotiations make frequent reference to the Canadian market. Our English associates were all for attempting in the 1932 negotiations

> "to obtain the Canadian market or at any rate some share in it for the company".

My efforts were directed in bringing about a solution of a difficult problem to the reasonable satisfaction of the National Lead Company. Mr. Cornish wrote me on 20th July, 1932, stating

> "The third modification could not be made to apply to Canada but could be made to apply to all the rest of the British Empire. This is because the American company has exclusive rights in Canada, whereas the European company would not be able to transfer any rights in Canada whatsoever, although the National Lead Company has the controlling interest in both companies. The other stockholders differ in the two companies, Dr. Jebsen holding a minority interest in the European company and none in the American company and some stockholders owning stock in the American company and none in the European.

Exhibit 671

"Inasmuch as our sales department is thoroughly organized in Canada and negotiations have been pending with other Canadian interests to manufacture in Canada and we have $550.000 par value of Canadian gold bonds with which to build the plant (if necessary) in Canada, I think probably this feature will adjust itself by letting our Canadian company instead of building a plant buy from the American company or the new plant to be constructed in England, whichever may prove more advantageous to it, but itself to keep control of its own sales that are already well organized far beyond anything we have in England proper. *For the time being* therefore the Canadian business should be excluded from consideration,"

Our English associates in September of the same year again raised the Canadian question and after discussing the right to deliver to the Canadian Sales Company on an agreed basis plus a reasonable profit it was agreed.

"to ask National Lead Company that when the Canadian company decided to commence manufacturing operations the British company should be given an opportunity to discuss financial participation on equal terms with other parties".

When the Imperial Smelting Corporation finally agreed to the terms of the association with your good selves, the I.C.I. and Goodlass Wall, we did so in the belief that the three English interests were giving up all right, title and claim to the Titanium industry in return for *an equal holding*, viz. 17%, to each. The effect of the proposals which

Exhibit 671

I understand are now being considered for Canada appears to me to definitely alter this ratio.

I trust neither you nor your associates will regard this letter as being any more than an effort to justify—apart from anything there may be in the agreements—my action in raising this point.

In conclusion may I express the hope that you and your associates will accept my assurance that we have no desire to inconvenience the National Lead Company in any way.

My kindest regards to you all,

Yours sincerely,

(Signed) W. S. ROBINSON

Exhibit 672

October 28, 1936.

Dr. G. Jebsen, Vice President
Titan Co., Inc.
26 Rue de la Pepiniere
Paris, France.

Dear Dr. Jebsen:

I have your letter of the 16th, No. 199, enclosing copies of two different letters to Mr. Tasker, all of which is quite interesting.

As I have written you before, a representative of the Canadian Industries Limited will be in London within the next month to discuss with the B.T.P. and then, possibly together, take up with Laporte price and quota arrangements for Canada; I presume that the B.T.P. will discuss arrangements at the same time for England and the rest of the British territory outside of Canada.

I have discussed this matter very fully with the representative of the C.I.L. and the tentative arrangements that we have made are entirely on the lines specified in the second paragraph, page three, of your letter of October 14th to Mr. Tasker.

I kept no memoranda of our conversation, but as I recall it now we discussed four different tentative arrangements. First, to buy out LaPorte's Canadian interests, which would include all patents or patent rights including the Blumenfeld patents, for a cash sum paid at once; second, with cash remuneration over a period of ten years; third, if the above does not appeal to them permit them to sell in Canada up to 100 tons of TiO_2, maintaining our prices. Anything that they sell over 100 tons they will buy

from the new Canadian Titanium Pigment Company. 100 tons represents approximately 10% of the Canadian trade.

Under present conditions I cannot see that the English people can discuss anything with Laporte except as you have outlined in the paragraph of your letter to which I have referred above. Maybe some of the other things may develop for discussion later on.

With reference to the last paragraph of your letter, the DuPont matter is is in about the same position as it was when you left here.

With kind regards,

Very truly yours

W. C. Beschorman
Executive Vice President.

Exhibit 673

October 28, 1936.

Dr. G. Jebsen, Vice President
Titan Co., Inc.
26 Rue de la Pepiniere
Paris, France.

Dear Dr. Jebsen:

I am in receipt of yours of the 16th—No. 203—referring to Thompson's letter of August 18th regarding arrangements for LaPorte, all of which is very interesting.

Mr. MacKinnon of the Canadian Industries Limited, who will be the manager of the new Titanium plant in Canada when built, is making a trip over to England on some business for the C.I.L. and will at that time contact O'Brien and Weber of the LaPorte Company to sound them out on some kind of a line for arrangements in Canada. Before calling on them he will see Stopford and endeavor to work it together.

With kind regards,

Very truly yours

Executive Vice President.

October 30, 1936

Subject MEMO—Wilson, Paterson, Gifford, (1935) Ltd.

To MR. BESCHORMAN, Executive Vice-President, National Lead Company

From I. D. Hagar, Eastern Sales Manager, New York Office

Reference

Dear Mr. Berschorman:

Please note the attached copy of a letter just received from Mr. Paterson of Wilson, Paterson, Gifford, relative to the low quotations on titanium dioxide originating with La Porte made by Bruce Ross in Toronto.

This very satisfactorily clarifies an irritating situation and I believe that there is now reason for a greater degree of confidence that the competitive situation in Canada will be reasonably well controlled while Mr. McKinnon is conducting his negotiations in England.

Yours very truly,

TITANIUM PIGMENT COMPANY, INC.

WILSON, PATERSON, GIFFORD (1935) LIMITED

Montreal, Que., Canada.

October 28th, 1936

Ivan D. Hagar, Esq.,
Titanium Pigment Co., Inc.,
111 Broadway,
New York, N. Y.

Dear Ivan,

I was up in Toronto on Monday and had a talk with Bruce Ross on the telephone, in reference to the prices at which he had been offering English Titanium Oxide. He told me, first of all, that he had quoted these prices owing to a misunderstanding and that in the meantime they had been withdrawn. He said however that they were offering English Titanium Oxide in bags and, as he understood that the bag price was a quarter of a cent per pound less than the keg price, this might account for some of the difference. I recall some discussion in reference to this phase of the matter when we first established English prices, but I am not sure whether we were charging the extra price for the wooden kegs in which he had been getting the material.

He said that he had no knowledge of the contract basis for this material, and I agreed to send him copies of the type of contract we make with our customers, also a letter explaining this as far as possible. I have done this today, sending him these contract forms, with as much explanation as I could get into a letter, and I am making the same explanation to Walter Dickson here. I saw Walter the

day I got back and went over the whole situation with him, and promised to bring in contract forms and I am now going to get him so that I can do this.

I have reported all this to Mr. McKinnon and I still think that these prices were quoted owing to a misunderstanding of how we are writing contracts for the English material. Bruce Ross was very nice about it and said that if he understood the matter thoroughly he would be very pleased to keep in line. Walter Dickson made one or two remarks to me that might possibly indicate that his people in England were not averse to taking advantage of such a situation, but he did not tell me definitely at all that he had any instructions except to keep in line with our prices and contract idea. I was going to telephone you about this, but I knew that you would be very much tied up at the sales convention and if you knew that the prices had been withdrawn that is the most important thing in the meantime, so that I thought this letter would do, more especially as Mr. McKinnon got all this information just as soon as it was available.

Yours very truly,

WILSON, PATERSON, GIFFORD (1935) LIMITED

A. L. PATERSON
Director

Exhibit 675

MEMORANDUM PREPARED FOR MR. MACKINNON'S NEGOTIATIONS WITH MESSRS. B. LAPORTE & COMPANY, ENGLAND, RE TITANIUM DIOXIDE.

Laporte are perfectly justified in attacking British Titan Products and the National Lead Group in any accessible markets at prices fixed by British Titan Products for England against the wish of Laporte. It is true that this is unfriendly as such a move on their part cannot benefit them for two reasons:

1. With greater production we will no longer be vulnerable and Laporte's threat can only be temporary.

2. They cannot establish themselves in the Canadian market for they must realize we will merely meet their prices and take a loss until we are protected by a tariff or have reduced our costs.

Their action demonstrates clearly that Nuisance Value is their only asset and we were correct therefore in evaluating their patents and market position as Nil.

Laporte are in a position to reduce our estimated profits by $62,000 ($99,532 less $37,776) in 1937, $77,000 ($81,722 less $4,534) in 1938, $64,000 ($153,141 less $56,678) in 1939, and probably $40,000 in 1940—(a total sum of $243,000)—apart from the possibility that they may take away some tonnage by making an active effort in Canada.

If we assume that by 1942 we will be able to earn a satisfactory profit at the lower level of prices applicable in England we can regard this sum as capital spent in the development stages without any chance of being recovered.

We should therefore consider the wisdom of granting Laporte a share in the new Company's profits that will satisfy them and at the same time yield a good return on the $243,000.

We do not want to complicate the operation of the new company by having a third partner, particularly as we do not wish to establish an exchange of information with Laporte and therefore the issue of voting stock does not appeal to us.

On the other hand, Laporte do not favour a sale of their patents and rights for cash, as they are interested in sharing in the prosperity of the industry. I believe there is a chance that they feel so strongly on this point they would be prepared to put up cash if they were given the opportunity.

If we had offered to permit Laporte to subscribe for 5% or 10% of the "A" stock a year ago I believe they would have accepted it. Let us work out an equivalent payment through royalty:

1 Profit	2 Bond Interest	3 Tax 17½%	4 7% on A Stock	5 6% on B Stock	6 Surplus available for A Stock	7 Laporte Income (other than 7% on money invested) with following stockholding or royalty: 5%	7½%	10%
$	$	$	$	$	$	$	$	$
100,000	77,000	4,025	7,000	11,975	—	—	—	—
143,667	77,000	11,667	7,000	48,000	—	—	—	—
150,000	77,000	12,775	7,000	48,000	5,225	261	392	522
175,000	77,000	17,150	7,000	48,000	25,850	1,292	1,939	2,585
200,000	77,000	21,525	7,000	48,000	46,475	2,324	3,486	4,647
225,000	77,000	25,900	7,000	48,000	67,100	3,355	5,032	6,710
250,000	77,000	30,275	7,000	48,000	87,725	4,386	6,579	8,772
275,000	77,000	34,650	7,000	48,000	108,350	5,417	8,126	10,835
300,000	77,000	39,025	7,000	48,000	128,975	6,449	9,673	12,897

Another method of satisfying Laporte might be to offer them a fixed tonnage (say 100 tons per annum) for resale in Canada at an agreed formula price or, alternatively, to permit them to resell a fixed percentage (say 10%) of the market. In either case their sales would depend on their ability to obtain business at equal prices, subject to the tonnage limitation.

Laporte might prefer to sell their English product, but we would regard this with disfavour as they have no established position and the maximum outlet is essential to economical operation of the Canadian plant. In any case we should be able to offer them a price that will make it more profitable to purchase as their costs are believed to be high.

The basis for arriving at the price would be the subject of negotiation but our aim would naturally be to relate their resale profit to the income they would receive under the royalty plan. Its advantage over the royalty plan would be the preservation of competition with its resultant stimulation to sales volume and to our own selling organization, together with the fact that Leporte would have to work for their profit. On the other hand, the royalty plan is probably simpler in practice and is perhaps less likely to be regarded as being contrary to anti-combine legislation.

Prices could be made to vary with selling prices by allowing a fixed discount from selling prices or with cost of manufacture by adding a fixed percentage to the new company's cost. The former method appears more satisfactory as we do not wish to divulge cost information.

At present U. K. selling prices of $311.95 per ton for Titanium Dioxide (15% below Canadian level), and assuming a 5% selling cost, Laporte would derive the following net profit at varying discounts:

Exhibit 675

Discount	15%	20%	25%
	$	$	$
Net Profits with annual tonnage fixed as follows:			
100 tons	3,119	4,679	6,239
200 tons	6,239	9,359	12,478
10% of 1937 market (1,115 tons)	3,478	5,217	6,956
7½% " " " "	2,608	3,912	5,217
5% " " " "	1,739	2,608	3,478
10% of 1938 market (1,393 tons)	4,345	6,516	8,690
7½% " " " "	3,258	4,887	6,516
5% " " " "	2,172	3,258	4,345
10% of 1939 market (1,740 tons)	5,427	8,140	10,854
7½% " " " "	4,070	6,105	8,140
5% " " " "	2,713	4,070	5,427
10% of 1942 market (3,500 tons)	10,916	16,374	21,832
7½% " " " "	8,187	12,280	16,374
5% " " " "	5,458	8,187	10,916

It is not likely that Laporte would be satisfied with less than 10% of the market in the early stages and yet we would prefer to limit their sales to a maximum tonnage. We might suggest, therefore, a combination of the two schemes by offering him 10% of the market up to a maximum of 200 tons per annum. With a 15% commission, the net profit would be $6,239 per annum, which is approximately equal to the following royalties:

	$
5% with profits at	300,000 per annum
7½% " " "	250,000 " "
10% " " "	225,000 " "

Below I have listed in their order of preference the various schemes that have been discussed in this memorandum:

Exhibit 675

A. *Outright Purchase for Cash*

A payment of $20,000 might appeal to Laporte, but actually $50,000 (spread over 5 or 10 years) would be well worth while from Canadian Titanium Pigment's viewpoint.

B. *Fixed Quota for 10 Years or Life of Patents*

An offer to sell Laporte 100 tons per annum at a 15% discount, (or even 25% discount), would cost us between $3,119 and $6,239 per annum.

C. *Percentage quota with Limitation for 10 Years of Life of Patents*

An offer to sell Laporte 10% of total market at 15% discount, (or even 20% discount), with a limit of 200 tons per annum would not cost more than $6,239 or $9,359 per annum, with commissions of 15% and 20% respectively.

D. *Percentage Royalty on Profits after Charging Taxes, Bond Interest, First 7% Dividend on "A" Stock and 6% Dividend on "B" Stock for 10 Years or Life of Patents*

An offer to allow Laporte a royalty on surplus profits would be simple and might appeal to them inasmuch as it would be more in line than any other scheme with their original desire to acquire a stock-holding in the new company. A 5% royalty would cost up to $6,449 with total profits at $300,000 and a 10% royalty would cost $12,897.

Exhibit 675

E. *Percentage quota for 10 Years or Life of Patents.*

An offer of this nature would give Laporte a large tonnage after the market is fully developed and if the discount were fixed so as to give Laporte an acceptable return during the early years, the cost would eventually be of greater dimension than we would wish.

F. *Bonds or "B" Stock for Cash*

An offer of Bonds or "B" Stock to Laporte for cash might appeal to them if they place great value on stock ownership even if it did not permit them to share in surplus profits. An obvious objection from our point of view is, however, that they might control company if Bond interest or "B" Stock dividend were not earned.

G. *Bonds or "B" Stock free of Charge*

The same objections as those applicable under "F" above would exist.

It should be noted that an essential feature of any arrangement with Laporte is their agreement to assign all their Canadian Titanium Dioxide patents to Canadian Titanium Pigments Limited.

7th November 1936.
L.W.H.—V.B.

Exhibit 676

Letterhead of

TITAN COMPANY, INC.

Paris, November 9th, 1936.

William C. Beschorman Esq.
Executive Vice President
National Lead Company
111 Broadway
New York City, U. S. A.

Dear Mr. Beschorman,

I refer to Mr. Tasker's letter to you of November 6th, re Canadian supplies.

I was not informed about your last letter before in the Board Meeting, and felt that your request regarding an obligation on behalf of B. T. P. towards the Canadian Titanium Pigment Co. as to deliveries for an undetermined period after the two years subsequent to the starting of a Canadian factory was going rather far, particularly in view of the possibility of having B. T. P. supply some of Titan Company Inc.'s markets, as such an obligation will give the Canadian company preference as to deliveries from B. T. P. for all times, even if regular supplies had ceased during a certain period.

There was no intention by the Board, in not entering into this obligation, not to supply Canada if material is available also after the expiration of the two years, but the obligation seems rather far going.

It seemed from your letter that the main point was to arrange for supplies from B. T. P. similar to the arrangements for deliveries from Titangesellschaft at B. T. P.'s

start and I hope therefore that the minute is satisfactory to you. If not, please let me know. There was some doubt as to whether you wished a separate agreement drawn up, which of course, in case, can be done, but it was assumed that the resolution would be satisfactory to you and would avoid the working out of details which seemed unnecessary in view of the relationship between the companies.

With kindest regards,

Yours very truly,

G. JEBSEN

Exhibit 677

Letterhead of

CANADIAN INDUSTRIES LIMITED

Dear Mr. Beschorman: 21st November 1936.

I thank you for your letter of 18th November enclosing copy of a letter written by Mr. Tasker to Mr. Stopford regarding the status of discussions between British Titan and Laporte on their Australian relations. From this it appears that our thoughts for Canada coincide closely with theirs for Australia and there would seem to be a good chance, therefore, of Mr. MacKinnon concluding a satisfactory arrangement.

I am enclosing copy of the cable from MacKinnon about which I spoke to Mr. Hagar on the telephone to-day, and in reply I have despatched the following cable:

"See no reason for price differential between United Kingdom and United States products unless Weber product substantially inferior. If Weber insists we may postpone reduction in price United States product but Canadian product must be equal or lower in price than Weber's. Understand 25% may disappear gradually from United States market, and whilst we prefer same price for 25% and 30% Weber's claim for differential has some justification but differential suggested entirely out of line. If 30% price fixed at $6.80 we might have to consider $6.50 for 25%. Undue depression of prices not to Weber's long range advantage if he buys Canadian product. Suggest you ask Barley or Stopford for Tasker's letter 19th October re Australia."

Yours very truly,

L. W. HASLETT.

P
Y

CANADIAN INDUSTRIES LIMITED

January 8, 1937

Dear Mr. du Pont:

Thank you for the two letters of December 21st relating to the Tri-Party Agreement. I am returning the duplicate copy of the letter covering the method of handling du Pont patents in Canada, the basis of which was agreed by representatives of our companies some time ago, having noted our acceptance thereon.

I note from the third paragraph of your letter that should du Pont become interested in the development in Canada or Newfoundland of products marked with a double asterisk, the matter would be taken up with C-I-L on the same basis as if these products came within the provisions of Article V.

With regard to obtaining ratification of the agreement by subsidiary companies where there is a minority interest, we agree that it is unnecessary to obtain the consent of the Gardinol Corporation and the International Freighting Corporation. Also that ratification by the du Pont Film Manufacturing Company and Kinetic Chemicals Company be deferred until some one of their products becomes of interest for Canadian manufacture.

C-I-L has the following subsidiaries in which it owns the majority of the outstanding voting stock:

Aluminate Chemicals Limited
Canadian Hanson & Van Winkle Company Limited

Exhibit 678

Canadian Safety Fuse Company Limited
Canadian Titanium Pigments Limited
Gardinol of Canada Limited
Neepawa Salt Limited

We propose to obtain ratification by Canadian Hanson & Van Winkle Company Limited at the first opportunity but would suggest that under present arrangements there is no need to obtain ratification by the other subsidiaries for the following reasons:

In the case of Aluminate Chemicals, Canadian Safety Fuse and Neepawa Salt, the products are excluded from exchange between du Pont and C-I-L;

Gardinol of Canada Limited is covered by their agreement with the Gardinol Corporation in the United States;

the formation of Canadian Titanium Pigments Limited is at present under negotiation and the exchange will be influenced by your agreement with our partner, National Lead.

Yours sincerely,

(S) A. B. Purvis

Lammot du Pont, Esq.,

Dr. G. Jebsen, Vice President
Titan Co., Inc.
26 Rue de la Pepiniere
Paris, France.

Dear Dr. Jebsen:

I am in receipt of yours of the 30th of March, No. 9, and am glad to note that Blumenfeld is forcing Laporte to live up to his agreement.

Do not think the Canadian Titanium Pigments Co., or ourselves, will have any trouble with Laporte as he has more to lose than to gain by not living up to the suggested agreement with the Canadian Titanium Pigments Co.

With kind regards,

Very truly yours

Executive Vice President.

William C. Beschorman Esq.
Executive Vice President
National Lead Company
111 Broadway
New York City, U. S. A.

Dear Mr. Beschorman,

Many thanks for your letters of April 2nd and 6th.

I am glad to note your approval of the various steps mentioned in my letter of March 25th.

Samples of Tidovit, as well as Dolomite, will be sent you from Norway (a sample of Dolomite was sent quite some time ago to the Titanium Pigment Corp.).

With regard to Laporte, I may mention the following:

If I am rightly informed, the agreement between the Canadian Titanium Pigments Co. and Laporte obliges Laporte to transfer some of the Blumenfeld patents to the Canadian Titanium Pigments Co., and also to endeavour to obtain that in connection with such patents as Laporte acquire from Terres Rares during the period of the agreement, any corresponding Canadian patents are offered to Canadian Titanium, it being the intention that such patents shall be licensed to Canadian Titanium without payment during the period of the agreement.

When Laporte break their agreement with Blumenfeld, he can either withdraw his licenses or sue Laporte for

compensation. He has had both alternatives under consideration and asked my opinion. With the reservation on my part that such matters are dependent upon legal advice, I gave him as a preliminary opinion that it would probably be wisest to maintain the agreement and sue Laporte for compensation.

When, however, Laporte so frankly have broken their agreement, they are no doubt very much in the hands of Blumenfeld as to their ability of living up to the agreement with the Canadian Titanium Pigments Co.

However, the matter seems to be settled now, as apparently Laporte have withdrawn from our markets.

With kind regards,

Yours very truly,

G. JEBSEN

Paris, France.

Dear Dr. Jebsen:

Many thanks for yours of the 15th, No. 10, with further comments on the Laporte-Blumenfeld licenses.

While I note that you consider the matter settled now that Laporte has withdrawn from your markets, I wonder whether it is settled so far as Blumenfeld and Laporte are concerned and consequently have warned our Canadian friends to be very certain before they pay any money to Laporte for the Blumenfeld patents that they are getting them with Blumenfeld's consent.

With best regards,

Very truly yours,

Executive Vice President.

Dear Mr. Beschorman,

I beg to inform you that the agreement between the Canadian Industries Limited and the National Lead Company, as well as the Canadian Titanium Pigments Limited, of January this year, has been formally approved by the Titangesellschaft, British Titan Products Company and Sté Industrielle du Titane.

I should be much obliged if you would now arrange for resolutions of Titan Company Inc. to the same purpose.

With kindest regards,

Yours very truly,

Mr. R. G. Beck,
Canadian Titanium Pigments Limited,
630 Dorchester Street, West,
Montreal, Canada

Dear Mr. Beck:

Thank you for your letter of January 4th which accompanied price lists No. 47 to 51 inclusive, made effective by you on January 2nd.

We note that you have made a general reduction of 35¢ per hundred in the price of "TITANOX"-C following our reduction in the United States of 25¢ per hundred.

I also note two types of letters of transmittal which accompanied this announcement, one of short letter of two paragraphs; the other a longer one of four paragraphs. Will you please advise me to what types of customers these different letters went?

Following our reduction in the United States, Lithopone manufacturers reduced the price of regular Lithopone from $3.75 per hundred to $3.60 per hundred pounds. Also, they reduced the price of double-strength Lithopone and Titanated Lithopone ¼¢ per pound.

Yours very truly,

TITANIUM PIGMENT CORPORATION

I. D. HAGAR—General Sales Manager.

Exhibit 684

September 3, 1940

To: L. W. Haslett, Esq.
From: G. N. Bates

SELLING PRICES

Essentially selling prices of Titanium Pigments in Canada have always been based upon American selling prices plus duty and other charges. On the other hand Lithopone, prior to the outbreak of war, sold at prices lower than those in the United States due to the dumping of German, Dutch and British pigments. As Lithopone was cheaper than Titanium Pigments on a hiding basis, the latter was sold to the paint industry on quality and, while the market developed slowly, it was impossible to realize any large scale replacement of Lithopone. As a result a lag occurred between the rate of development of the market in Canada as compared to the United States. For example in 1938 the ratio of sales of Titanium Pigments to Lithopone on a hiding basis was 1.84 : 1 in the United States and .66 : 1 in Canada.

After the outbreak of war the shutting-off of supplies of continental Lithopone and a scarcity of the British product resulted in the importation of American Lithopone, which was sold at the U. S. price plus duty plus exchange, and in an increase in the price of the British material to nearly this level. Although Titanium Pigments increased in price to compensate for the adverse rate of exchange on U. S. Funds, the change was proportionately less than that for Lithopone and the ratio of the prices of the two pigments became nearly the same as in the United States. As this meant that Titanium Pigments could replace Lithopone

on a hiding basis and show some saving in cost, it was expected that progress would be made in overcoming the lag between the development of the American and Canadian markets.

While some progress was made, it was interrupted by the imposition of the War Exchange Tax, which resulted in increased prices for Titanium Pigments and American Lithopone but did not affect the price of British Lithopone. This occurred when supplies of the British product were becoming more plentiful and, as a result, a white pigment was available which was as cheap as or cheaper than Titanium Pigments on a hiding basis.

In the following table the comparison of Lithopone prices with the cost of replacement by Titanium Pigments illustrates the changed conditions during the past year.

	Selling Price of Lithopone Per 100 Lbs.		Cost of Replacing 100 lbs. of Lithopone		
			On a Hiding Basis		On Volume Basis
	American	British	By "TX." A	By "TX." C	By "TX." C
	$	$	$	$	$
Prior to Outbreak of War	—	3.40	3.66	3.97	4.53
After Outbreak of War	4.60	4.30	3.92	4.06	4.64
After War Exchange Tax	4.95	4.30	4.20	4.40	5.04

If a large scale replacement of Lithopone is to be accomplished it is essential that Titanium Pigments provide hiding more economically than Lithopone although this alone will not necessarily induce replacement as Lithopone is a well-established pigment and its replacement usually involves some change in formulation. As the least drastic change is involved when "TITANOX" C is used to replace Lithopone, it is logical to use this pigment in converting customers to the use of the Company's products. In order

to permit the economical replacement of British Lithopone with "TITANOX" C on a hiding basis, it would be necessary to sell "TITANOX" C at 6.5¢ per pound, a reduction of .4¢ from its present price of 6.9¢ per pound. As it is undesirable from the standpoint of profit to sacrifice the sales of "TITANOX" A in favor of "TITANOX" C, it would also be necessary to reduce the price of "TITANOX" A from 17.85¢ to 17¢ per pound. At the proposed prices of 6.5¢ and 17¢ per pound for "TITANOX" C and "TITANOX" A respectively, the cost of replacement of Lithopone would be as follows:

	Selling Price of Lithopone Per 100 Lbs.		Cost of Replacing 100 # of Lithopone		
			On a Hiding Basis		On Volume Basis
	American	British	By "TX." A	By "TX." C	By "TX." C
	$	$	$	$	$
At Proposed Prices	4.95	4.30	4.03	4.16	4.75

Although the proposed prices do not place Titanium Pigments in as favorable position as they would enjoy if the prices were reduced sufficiently to compare with British Lithopone in the same ratio as that existing between the two pigments in the United States, the necessary reductions of .9¢ and 2.25¢ per pound for "TITANOX" C and A respectively would not be feasible. While the larger reduction in the selling prices of Titanium Pigments would increase the incentive for Canadian customers to replace Lithopone, it would lead as well to speculation concerning the margin of profit presently enjoyed, which would not be of advantage to the Company. The proposed prices are sufficiently low to provide a basis for working with customers on the replacement of British Lithopone and, furthermore, if supplies from Great Britain are not adequate to meet the re-

quirements of the Canadian market, a rapid expansion could be expected, particularly in the sales of "TITANOX" C as it could replace American Lithopone on a volume basis with some saving in cost, which is the easiest and most attractive means of replacement for the paint manufacturer, and is an advantage not presently enjoyed in the United States.

As "TITANOX" B-30 has not been mentioned, it should be stated that it is not proposed to reduce its selling price in view of the trend toward the replacement of this pigment by "TITANOX" A or "TITANOX" C. The acceleration of this trend would assist in the elimination of "TITANOX" B-30, which would increase profit when Titanium Pigments are manufactured in Canada.

If the lag in the development of the Canadian market could be overcome, it is estimated that sales of Titanium Pigments in 1941 would amount to 3,750 tons as TiO_2, a quantity 750 tons in excess of the forecast of sales for 1941 on the basis of present prices. In the event of a price reduction it is not expected that the lag in development could be overcome in one year, due to the amount of work necessary in effecting changes in customers' formulations, nor is it expected that it could be entirely overcome as long as supplies of British Lithopone are available. However, it is believed that one-third of the lag can be made good during the coming year, which would be equivalent to 250 tons as Titanium Dioxide.

On this basis the forecast of sales for 1941 is as follows:

Forecast sales 1940	2,580 tons
Additional consumption in 1940 due to large 1939 carry-over	170 "
Increase in 1941, due to industrial expansion	150 "

Exhibit 684

Increase in 1941, due to replacement of American Lithopone	100	"
Forecast sales 1941 at present prices	3,000	"
Increase in 1941, due to price reduction	250	"
Forecast sales 1941 at proposed prices	3,250	"

The increase of 6% due to industrial expansion may appear low but the expansion of the paint industry to meet war-time requirements does not necessarily favor the use of Titanium Pigments to the same extent as the older and more established pigments and, in some cases, consumption of Titanium may decline due to curtailment of the production of normal lines.

In forecasting Net Profit for 1941 and in order to determine the effect of the proposed price reduction, the following range of conditions has been used:

1. Volume of Sales:
   (a) 3,000 tons at present selling prices
   (b) 3,250 tons at proposed selling prices
   (c) 2,580 tons at proposed selling prices, representing no increase in sales, which would be equivalent to a reduction in consumption of approximately 6%.
2. Cost of Pigment:
   (a) Plant costs of $135, $66 and $56 per ton for "TITANOX" A, B-30 and C respectively, representing the maximum estimate of costs for

1940, as given by Mr. I. D. Hagar in his letter of December 18, 1939.

(b) Plant costs of $127.50, $63 and $53.50 per ton for "TITANOX" A, B-30 and C respectively, representing no change from the estimated costs for 1940.

(c) Plant costs of $148.50, $72.60 and $61.60 per ton for "TITANOX" A, B-30 and C respectively, representing an increase of 10% above (a) and taken as the maximum increase in cost without a selling price revision in the United States.

Net Profits, calculated on the various bases, at cost plus 10%, are as follows:

	Volume of Sales Tons	Net Sales $	Gross Profit from Sales $	Income Tax $	Excess Profits Tax $	Net Profit $	
Plant Cost (a)	3,000	1,183,000	319,000	50,500	59,500	93,000	*
	3,250	1,233,000	289,000	43,000	40,000	88,000	
	2,580	981,000	231,000	32,000	17,000	74,000	
Plant Cost (b)	3,000	1,183,000	348,000	57,000	77,000	98,000	*
	3,250	1,233,000	322,000	51,000	60,000	93,000	
	2,580	981,000	258,000	37,500	25,500	85,000	
Plant Cost (c)	3,000	1,183,000	264,000	37,500	25,500	85,000	*
	3,250	1,233,000	230,000	29,500	15,500	67,000	
	2,580	981,000	183,000	21,000	11,000	43,000	

* On the basis of the proposed prices Net Sales would be $1,132,000. Net Profit would be $7,000, $8,000 and $25,000 lower for Plant Costs (a), (b) and (c) respectively.

From the above table it will be seen that in only one case does Net Profit fall below dividend requirements and it results from a combination of conditions which are un-

likely to be experienced, that is a decrease in consumption of 6% from that in 1940, and an increase in U. S. Costs of 10% above those estimated for 1941. Furthermore if we assume that sales in 1941 will be between 3,000 and 3,250 tons and that costs will be between plant costs (a) and (b), the effect on Net Profit of the proposed price reduction would be limited to an amount varying from $5,000 to $8,000.

As taxation absorbs the major portion of Net Profit from Sales in excess of $166,000, it is interesting to note the extent to which prices could be reduced without seriously affecting Net Profit. If it is assumed that Plant cost (a) will be in effect during 1941 and that the volume of sales will be 3,250 tons as TiO_2, the selling prices of "TITANOX" A and "TITANOX" C could be reduced an additional amount of .5¢ and .15¢ per pound respectively below the proposed prices without seriously affecting Net Profit, which would decrease from $88,000 to $84,000 as compared with a decrease of $30,000 in Net Sales. However, any reduction below this amount would have a larger affect on Net Profit as the Excess Profits Tax would then be calculated as 12% of Net Taxable Income. Similarly with the same cost and a volume of 3,000 tons as TiO_2, the selling prices of "TITANOX" A and "TITANOX" C could be reduced an additional .35¢ and .1¢ per pound respectively and Net Profit would only decrease from $86,000 to $83,000 as compared with a decrease of $19,000 in Net Sales. However, as mentioned previously, the proposed reduction in selling prices represents a maximum to which it is believed we can go without exciting speculation on the margin of Profit enjoyed by the Company and, consequently,

it is not proposed to increase the reduction by any proportion of the amounts mentioned above.

While a price reduction would probably create goodwill with customers at the moment, it does disrupt the logical basis of Canadian prices to which the trade has become accustomed. As a price lower than the American price plus duty and other charges would only persist as long as the surcharges due to war are in effect, it is likely that some ill-will would be created when the taxes are removed and Canadian prices revert to the U. S. price plus duty, as the reduction in selling prices would be less than the amount of tax removed. However, if the proposed price reduction were explained as an effort to stabilize the Canadian market and continue its development, which has been deterred to some extent by rising prices, it is believed that the possibilities of ill-will might be lessened. Also it is possible that price changes may occur in the United States before war taxes are removed in Canada, in which case there would be an opportunity to gradually adjust prices. Regardless of this possibility, war taxes will undoubtedly apply for some years and the opportunity of expanding the Canadian market justifies some risk of ill-will at a later date.

Other disadvantages to the proposed price reduction are the reaction of American customers who have branches in Canada and the association in our customers' minds of the Company with Excess Profits Taxation. The former is not believed to be a serious disadvantage as similar situations have existed on other products sold in Canada but should be reviewed with Titanium Pigment Corporation. The latter is relatively minor but may tend to cause ill-will in a few isolated cases.

If the proposed price reduction is approved it is recommended that the change in price be effected 1st October 1940. The effect on this year's business, without considering a possibility of increased volume, would be to reduce Net Sales by $12,000 and Net Profit by $2,000.

In conclusion it is recommended that:

1. A reduction of .85¢ and .4¢ per pound be made in the prices of "TITANOX" A and "TITANOX" C respectively, effective 1st October, 1940.
2. The price of "TITANOX" B-30 remain unchanged.
3. The reduction in price be explained to Canadian customers as an attempt to stabilize the market and decrease the deterring effect that rising prices have on development of the market.

FAIR MARKET VALUE OF "TITANOX" PIGMENTS

Canadian Titanium Pigments Limited was originally formed to manufacture Titanium Pigments in Canada but until the Canadian market is sufficiently large to justify this step, we are purchasing and importing our supply of finished pigment from Titanium Pigment Corporation, New York, U. S. A. This company is a non-profit wholly-owned subsidiary of National Lead Company and handles the sales of Titanium Pigments for the manufacturer, the Titanium Division of National Lead Company. Presently we are obtaining a Fair Market Value below the retail price in the United States and it is our understanding that we should submit information to indicate the extent to which this deduction can be justified.

In the United States the majority of sales are made by Titanium Pigment Corporation directly to customers but some are made through selling agents. Since all Canadian sales are through selling agents, our position is similar to that of Titanium Pigment Corporation when selling through their agents.

The Sales Agents of Titanium Pigment Corporation receive a commission of 5%, which is expected to cover general selling expenses and customers' credit risk. How-

ever, Titanium Pigment Corporation continues to supply technical service and the facilities of their technical laboratory, pay the delivery charges on the shipments from factory or warehouse, pay warehousing expenses and bear the entire cost of advertising and patent expenses in connection with Titanium Pigments. They feel that, if any of these duties were performed by the selling agent, the agent would expect and be entitled to additional commission.

In Canada the formation of Canadian Titanium Pigments Limited relieved Titanium Pigment Corporation of all such expenses as the pigment is sold f. o. b. plant and from there all expenses are borne by Canadian Titanium Pigments Limited. For instance, we have installed a technical service laboratory in Montreal, from which our technical service man operates to provide Canadian customers with assistance in the use of our product. Thus, as Canadian Titanium Pigments Limited is performing a function in Canada greater than that expected of a selling agent, it would seem reasonable to expect a commission correspondingly higher than the 5% normally allowed.

To arrive at the commission that could be expected for a Company performing the work done by Canadian Titanium Pigments Limited, a review has been made of Titanium Pigment Corporation's accounts, and we have determined the cost of performing the various services of which Canadian Titanium Pigments Limited has relieved Titanium Pigment Corporation of the expense and have expressed these costs as a percentage of sales. In calculating the following figures, an average of expenses for the years 1938, 1939 and nine months of 1940 has been taken.

Exhibit 685

(a) Agents' Commission	5.00%	of sales
(b) Cost of technical service	1.56%	" "
(c) Freight and cartage expense....	6.55%	" "
(d) Warehousing expense	.61%	" "
(e) Advertising expense	.38%	" "
(f) Patent expense	.12%	" "
(g) General Administrative expense	1.12%	" "
Total	15.34%	" "

Please note that the expenses listed do not include general office or selling expenses in connection with the sales made directly by Titanium Pigment Corporation to customers, but only include expenses normally incurred in addition to the 5% selling expense allowed on sales through selling agents.

Upon this basis, it would appear that Titanium Pigment Corporation would be justified in establishing a commission of 15% if a selling agent performed all the functions performed by Canadian Titanium Pigments Limited. Would not this indicate that we are entitled to a reduction of 15% from U. S. retail selling prices in determining the Fair Market Value?

G. N. B.

GNB:OVM

Exhibit 686

June 18, 1941

Mr. G. W. Corddry, General Sales Manager
Titanium Pigment Corporation
111 Broadway
New York, N. Y.

Dear Graham:

Many thaanks for your letter of 16th June advising of the new selling prices which will become effective in the United States on 1st July and enclosing a copy of the type of price list you will be distributing. The new prices have been noted and it is intended that we shall make equivalent increases in Canada on 2nd July (1st is a holiday) amounting to 1.4¢ per pound for "TITANOX" A, .35¢ for "TITANOX" B-30 and "TITANOX" C, and 1.05¢ for "TITANOX" L.

It is particularly interesting to see that you have discontinued the differential in favour of "TITANOX" A-Ceramic Grade. Several years ago we managed to swing customers from this grade to the then cheaper "KRONOS" material but since the outbreak of war, there have been times when interest has been expressed in the Ceramic Grade.

I will appreciate greatly knowing your policy concerning forward buying at the current prices, as this is a common problem and we are always glad to have the benefit of your experience. Please accept my thanks for the information you have already passed along as it will enable us to proceed at once with preparing our announcement.

In connection with shipments to Canada, if you allow current prices on shipments to American customers for

Exhibit 686

some definite period or amount after July 1st, it would be quite legal to continue allowing the Fair Market Value based upon current prices on shipments to Canada during this same period. This is a point which I wished to bring to your attention as it means some saving in duty to which we are entitled. If there are any points in connection with this situation on which you are not clear or feel that I have overlooked, please let me know.

Very truly yours,

CANADIAN TITANIUM PIGMENTS LIMITED

BILLINGHAM

CJS/SL/73221

5th. July 1937.

Dr. G. Jebsen,
C/o Titan Company A/S,
Fredrikstad,
NORWAY.

Dear Dr. Jebsen,

With reference to the exclusion of titanium tetrachloride from the Licensed Field in the Agreement dated 1st January 1937 between Canadian Industries Ltd and the National Lead Company of America, I would like to point out that this creates a condition which I think has so far not been fully considered, that is with the probable increase in importance of titanium tetrachloride as a step in the manufacture of titanium pigments, I can visualize the position arising where under these agreements, we are obliged to disclose full details of developments in the manufacture of titanium tetrachloride to the Canadian company, whereas the Canadian company is under no reciprocal agreement in return.

Personally, I think titanium tetrachloride is going to play a very important part indeed in the near future and I think it is unfortunate that we should be in the position of giving full details of titanium tetrachloride manufacture rights under patents and current development in the

process as part of a process for the manufacture of titanium pigments, to a company which is under no obligation to reciprocate in so far as titanium tetrachloride is concerned.

There is also the probability that knowledge in connection with the manufacture of titanium tetrachloride may be of considerable assistance to a competitor considering the manufacture of titanium pigments and if it were at all possible, I would prefer that all members of our titanium manufacturing family were under equal obligations in this respect.

So far as I know, the only exclusion of titanium tetrachloride from the Licensed Field previous to the Canadian one, was in B.T.P.'s agreement with I.C.I., but in this case, there is a decided difference, as I.C.I. is under agreement not to manufacture titanium pigments, and we are under no agreement to give titanium tetrachloride information to I.C.I.

I am afraid that it may be too late for anything to be done about this, but having given you my views on the position, I should be glad if you would see whether anything can be done.

Yours sincerely

C. J. STOPFORD. (sign.)

August 6, 1937.

C. F. Kaegebehn, Esq.,
National Lead Company,
Patent Department,
111 Broadway,
New York.

Dear Mr. Kaegebehn:

Your letter of July 20th re. "T. 186 German Pat. Appl. J. 55,645" has been forwarded to me in copy. I am sending you a few words just to confirm what you have said about our conversations as to a widening of the "Licensed Field" in the agreements with the Canadian Titanium Pigments Limited and the Canadian Industries Limited, as well as in the DuPont Agreement.

I am inclined to think that the Canadian Industries Limited after closer consideration will find it very much to their advantage to have this done and that it will meet with no objection unless the arrangements with DuPont or somebody else should prevent them in some way.

I have no opportunity at present to study the agreement, but if I remember correctly it reserves the right for DuPont to obtain licenses from the Canadian Pigments Limited for United States. If this is so, the following situation may arise:

The Canadian Titanium Pigments Limited establish a production of "Titanium compounds not useful as pigments" on the basis of developments by Titan Company,

Exhibit 688

Incorporated and its associated companies and by further developments of this industry by the Canadian DuPont will have the right to these.

If the patent protection is not sufficient, DuPont is put on its feet with regard to the new industry and a competitive situation may arise between DuPont on the one side and Titan Company, Incorporated and its associated companies on the other side.

I presume that, with the friendly relations between the companies, an arrangement will be made of a satisfactory nature, but even so the situation does not provide for equity, as it gives DuPont kind of an option on such developments from Europe with no corresponding opportunity for Titan Company, Incorporated and its associated companies.

The above considerations may seem far-fetched, but, as you know, the chemical industry may also develop very quickly, and I trust that you in case will have this in mind.

I hope that DuPont also will come in line and realize the advantage of our co-operation in the whole Titanium field.

With kindest regards,

Yours very truly,

G. JEBSEN

Copy to Mr. Beschorman.

Exhibit 689

MEMORANDUM OF A CONFERENCE

Held in Montreal during the Week of August 23rd, 1937, between Mr. C. F. Kaegebehn, National Lead Company and Canadian Titanium Pigments Limited.

Those Present:

1. *General "T" Case Information.*

(a) "T" Case defined.

During discussion the "T" Cases were fully explained, also procedure followed for allocating "T" numbers and the handling of applications. This was also explained in Mr. Kaegebehn's letter of August 1st.

(b) A copy of List of Patent "T" Cases showing situation as of December 31st, 1936 and up to T-181 was received for C.T.P. Files.

(c) A table of cases T-.01 to T-187 specific to the status of these cases in Canada was received for C.T.P. files. This list was reviewed with spe-

cial reference to those cases "In the Licensed Field" and those "Not in the Licensed Field", and the importance of some of the cases. A notation was made on list as each individual case was discussed.

2. *Issued Canadian Patents.*

A table of issued Canadian Patents in which C.T.P. is entitled to rights (showing the situation as of August 1st, 1937) was received and discussed. Copy to be retained by C.T.P. C.T.P. will prepare a list in more detail for their own requirements. Copy will be sent to Mr. Kaegebehn. (Mr. Kaegebehn will investigate ownership of Canadian Patent 225,569 to Buckman).

3. *Pending Canadian Applications.*

(a) Copies of three pending applications filed in Canada by Titangesellschaft I. G. Farbenindustrie were received. These applications have now issued as Canadian Patents 367,934 (T-142), 367,935 (T-141), 367,936 (T-140).

(b) A list of all cases filed in Canada. This list included those cases filed by:—

1. National Lead through Fetherstonhaugh Co., Montreal, (Mr. Taylor). These Canadian applications were discussed with Mr. Kaegebehn and Mr. Taylor and the status of all cases noted.

2. Titangesellschaft through Hutz and Joslin, New York, with Fetherstonhaugh, Ottawa.

Exhibit 689

3. Other cases originating with associates of National Lead filed by National Lead in Canada, in which C.T.P. is to obtain rights in Canada through National Lead were also discussed. The status of the corresponding U. S. applications on all cases was also discussed.

4. *Pending U.S. Applications.*

(a) Copies of specifications of all pending U.S. cases were received by C.T.P. These cases are to be considered by C.T.P. for filing in Canada.

(b) A table of information concerning (a) was received and discussed. Cases at present coming *outside* the "License Field" were noted. C.T.P. will consider these cases as to filing in Canada on the basis of the U. S. Applications. A brief description was given on each case by Mr. Kaegebehn who also pointed out cases which are considered important. Cases that have been filed in France will receive our immediate attention.

Mr. Kaegebehn has promised to keep C.T.P. posted on the status of the U.S. Applications and will send copies of U.S. Office Actions and his replies as dealt with. Also any information which will assist our decision on filing or not in Canada. We will also receive information on the status of U.S. Applications filed by the American Zirconium Corporation.

5. *Cases Authorized for Filing in U. S. and/or Canada.*

(a) Translations of cases filed in Germany and on which filing of corresponding applications in

U. S. and/or Canada has been authorized by National Lead were received by C. T. P.

(b) A table giving information concerning (a) handed to C. T. P. for their files. This table was also discussed.

6. *Trade Marks.*

A letter and table giving information with respect to the trade-mark registration of "TITANOX" and "KRONOS" was received for C. T. P. file.

After a discussion with Mr. Taylor, it was considered advisable to have these trade-marks assigned to C. T. P. Deferred—the assignment of the Trade-marks to C. T. P. will be discussed at a later date.

7. *Cases T-175 to 178 inclusive—Delustring Artificial Silk.*

These cases originated from inventions of I. C. I. These cases were submitted by I. C. I. to C-I-L for filing in Canada. It was considered in December, 1935, that these cases were not of sufficient importance to be filed in Canada. I. C. I. were notified of this in January, 1936. Cases were not filed in Canada and it is now too late.

8. *Burgess TiO_2 Process.*

C. T. P. requested an opinion from Mr. Kaegebehn on the commercial value of the pending Canadian Patent Applications corresponding to U. S. patents. C. T. P. received a letter from Mr. Kaegebehn outlining the National Lead's opinion on the U. S. patents, a copy of a letter received from Mr. J. L. Turner

stating the commercial possibilities. Copy of Report No. 1 Research Project No. 125 was also received. The conclusions were that the Fluoride process described in the Burgess process is not economical when compared with the sulphuric acid treatment of titanium ores.

9. *Canadian Patent No. 345,236 (Case T-104) and No. 345,237 (Case T-102)*

Notice was received from a Canadian Firm of Patent Attorneys that they would maintain the Canadian Patent Office "Working Clause" by advertising at a fee. Mr. Kaegebehn was advised that this notice and all future notices should be referred to C. T. P. who will take care of the requirements of the Canadian Patent Office. Mr. Kaegebehn agreed.

10. *Use of Titanium Dioxide Pigments in Paper Making.*

At C. T. P's request, Mr. C. F. Kaegebehn discussed the patent situation in the U. S. A. Indices of references and copies of selected patents and literature were handed to C. T. P. and discussed. These references were considered with respect to Genberg Canadian Patent No. 327,642.

The reason for requesting an opinion on Canadian Patent 327,642 was because Canadian paper mills were afraid of an infringement suit if they used Titanium Pigments in the manufacture of paper. From the valuable information supplied by Mr. C. F. Kaegebehn it was considered that Can. 327,642 was probably invalid. This is also confirmed by additional information, namely, Meredith Interference No. 63,614

supplied to Mr. Taylor of Fetherstonhaugh by Mr. C. F. Kaegebehn.

The entire Canadian situation was discussed with Mr. Taylor who represented Genberg in obtaining the Canadian Patent and was also connected with the unsuccessful prosecution of the U. S. case. Since this discussion with Mr. Taylor, Mr. Taylor considers that Can. 327,642 is probably invalid and the rights to the Canadian patents could be obtained from the Fraser Company, assignee of Genberg for a very nominal payment. Mr. Taylor has been instructed to enter into negotiation with Fraser Company, which he has done. The matter is now being taken care of by C. T. P.

Mr. C. F. Kaegebehn informed C. T. P. of the situation in the U. S. A. with respect to the use of Titanium Pigments in waxed paper. Canadian Patent No. 343,801 corresponding to U. S. Patent 1,938,948 to Nashua was noted. It was decided to defer any active investigation into the status of the Canadian patent until such time as the situation in the United States has been cleared up.

11. *Jenness Patent.*

Canadian Patent 346,006 equivalent to U. S. 1,923,094 and 2,044,753.

C. T. P. received a notice from Marks and Clerk, Ottawa, that the owner of Can. 346,006 is desirous of disposing of his rights or granting license for manufacture in Canada. The notice was sent out to satisfy the Canadian Patent Office under the "Working Clause."

Mr. C. F. Kaegebehn discussed the U. S. patents and imparted all information possessed by National

Lead concerning the Jenness patents and the Intermetal Corporation.

It was considered advisable to let the matter drop.

12. *Titanium Dioxide from Titanium Tetrachloride.*

In the C.T.P.—National Lead Agreement the "License Field" specifically excludes titanium tetrachloride. It was thought that in view of certain recent developments, particularly the work of I. G. Farbenindustrie on the chloride processes, where titanium tetrachloride is used as a step in the method of preparing TiO_2, that arrangements may be mutually agreed upon to bring the process in the "License Field."

13. *Future Modus Operandi.*

The handling of patent applications submitted by National Lead to C.T.P. for their consideration as to filing in Canada was discussed. A plan was formulated whereby Mr. Kaegebehn will submit cases to C.T.P., C.T.P. will hold patent committee meetings, after the cases have been studied, C.T.P. will report their decisions to Mr. Kaegebehn. Mr. Kaegebehn has promised to assist C.T.P. in any way they desire. Mr. Kaegebehn will send copies of U. S. Office Actions and his replies thereto.

14. *C. T. P.—National Lead Agreement.*

A general discussion of the term "License Field", wherein the C. T. P.—National Lead Agreement differs from the Agreement of 1920, the I. G Agreement and the B. T. P. Agreement were noted and discussed more or less informally. Mr. Kaegebehn pointed out

the most important differences arising out of the discussion and on further study of the greement by C. T. P., C. T. P. considered it would be desirable to make changes in the present agreement, and to have an agreement drawn up which would give C. T. P. the same rights as B. T. P. enjoys in Great Britain. This matter was left open for further discussion at some future time.

15. *Relations between E. I. duPont (Krebs) and C. T. P.*

The arrangement whereby duPont submit inventions to C-I-L for filing in Canada and C-I-L grants rights to C. T. P. for Canada and duPont receives through National Lead Company rights to inventions from C. T. P. in the United States was considered.

16. *U. S. 2,083,887—Wieneke Oliver Filter,* now installed by National Lead was discussed. It was agreed that C. T. P. would not be required to pay a royalty on such equipment.

Exhibit 690

"LICENSED FIELD" OF CANADIAN AGREEMENTS

August 31st, 1937.

Mr. W. C. Beschorman—Executive Vice-President
Mr. C. F. Kaegebein—Manager—Patent Department

Dear Mr. Beschorman:

On July 20th I wrote you a memo in Case T. 186, German Patent Application No. J. 53,645, which case, as was called to our attention by Titan Company, Inc., lies outside the scope of the "Licensed Field" of our Agreement with Canadian Titanium Pigments, Ltd.

I have spoken of this case and other similar cases which lie outside the "Licensed Field" with our Canadian friends. In this connection, we have considered the relation of such cases to the "Licensed Field" of the Canadian Agreements. I beg to report to you on the subject of these conversations.

The Canadian people wish to exchange with us rights to the same extent as B. T. P. and Titanine exchange rights. I assured them that it was your intention that they should obtain such rights, and, in fact, to be treated in every way "as one of the family." I pointed out that even though C. I. L. restricted what it gave C. T. P., just as I. C. I. has restricted what it gives to B. T. P., the exchange between National Lead and C. T. P. need not be restricted correspondingly, just as the exchange between B. T. P. and Titanine is wider than what I. C. I. gives B. T. P.

I found the Canadian people willing and, indeed, desirous to cooperate on any lines which would bring such an exchange about. However, I pointed out that the situation

is somewhat complicated by the fact that DuPont is entitled to receive through National Lead rights in the United States for developments of C. T. P.

My conversations with the Canadian people in this matter were merely to acquaint them with the situation, so that they may consider it as the relations between our two companies develop. I hope that, after careful consideration with the Canadians and with Titan Company, Inc., we will be able to place before you some concrete recommendations in this matter. In the meantime, I have agreed to patent in Canada such inventions which now lie outside the "Licensed Field," but which, if the "Licensed Field" were similar to that of the B. T. P.—Titaninc Agreement, would automatically pass to C. T. P., thus protecting C. T. P.

I attach hereto a copy of my letter to Dr. Jebsen, which discusses the situation somewhat more in detail. This letter is in reply to Dr. Jebsen's letter to me of August 6th, copy of which he sent you.

Yours very truly,

Exhibit 691

EXTRA COPY

August 31st
1937

Dr. G. Jebsen
c/o Titan Company, Inc.
26, Rue de la Pepiniere
Paris—8e—France

Dear Dr. Jebsen:

Your letter of August 6th with reference to Case T. 186, D. R. P. Application No. J. 55,645, was received on August 17th. This was five days before I left for Montreal and, consequently, was most opportune because it enabled me to have in mind your thoughts in my talks with our Canadian friends. Please accept my thanks.

As a result of my conversations in Canada on the "Licensed Field," I am now able to present a somewhat clearer view of the situation.

The principle laid down by Mr. Beschorman to govern the formation of The Canadian Titanium Pigments, Ltd. and the relationship between that company and National Lead Company on the one hand, and Canadian Indstries, Ltd. on the other, was that C. T. P. should be placed in a position analogous to that of B. T. P. vis-a-vis I. C. I. on the one hand, and Titan Company, Inc. on the other. You are aware that the rights given B. T. P. by I. C. I. are considerably more restricted in scope than the rights exchanged between B. T. P. and Titaninc. The C. I. L. apparently desired that the rights which it would give to C. T. P. should be similar to those given by I. C. I. to

Exhibit 691

B. T. P. In any event, the "Licensed Field" as contained in the C. T. P. — National Lead Agreement and the C. T. P. — C. I. L. Agreement, excluding titanium tetrachloride and limiting the definition of titanium compounds to those which are useful as pigments, suffices to place C. I. L. in an analogous position with respect to C. T. P. as I. C. I. stands in relation to B. T. P. However, although the "Licensed Field" of the B. T. P. — Titanine Agreement covers a wider field than is given by I. C. I. to B. T. P., the "Licensed Field" of the C. T. P. — National Lead Agreement was made identical with the C. I. L. — C. T. P. Agreement.

I pointed out to our Canadian friends that, inasmuch as there was no mutual exchange of rights as between I. C. I. and B. T. P., nor between C. T. P. and C. I. L., the "Licensed Field" of the C. T. P.—National Lead Agreement could have been, like the "Licensed Field" of the B. T. P.—Titanine Agreement, of wider scope because there is here provided a mutual exchange. Thus, National Lead and C. T. P. could exchange rights in, e.g. titanium tetrachloride developments, whereas C. I. L. would not receive any such developments from C. T. P. and would not give any to C. T. P.

The relation of DuPont to this situation should be noted here:

Under the existing arrangement, C. T. P. obtains rights for Canada from DuPont through C. I. L. in a field which is substantially that of the "Licensed Field" of the C. T. P.—National Lead Agreement. Thus, it was comparatively easy to stipulate in the C. T. P.—National Lead Agreement that DuPont should receive, on their request, a non-exclusive license for the United States in developments

given National Lead by C. T. P. The comments contained in your letter of August 6th bear directly upon this situation. Therefore, in considering any widening of the "Licensed Field" of the C. T. P.—National Lead Agreement, the position of DuPont must be borne in mind.

I believe I correctly interpret the attitude of the C. I. L. and C. T. P. people in saying that they are willing and, in fact, desirous of securing an arrangement which will enable C. T. P. to enjoy a mutual exchange of rights with National Lead, similar to that which is enjoyed by B. T. P. and Titaninc. I pointed out to our Canadian associates that any arrangement or suggestions in this direction must be carefully considered, in order that the ultimate arrangement be equitable to all parties concerned. In this connection, I further pointed out (1) that any widening of the "Licensed Field" as between National Lead and C. T. P., say to the scope of the B. T. P.—Titaninc "Licensed Field", would automatically place at the disposal of DuPont in the United States a wider field than the "Licensed Field" of our Agreement with Krebs and (2) that there was at present no arrangement for an exchange between Titaninc and DuPont. Thus, as pointed out in your letter of August 6th, DuPont might be placed through C. T. P. in a preferred position with respect to developments of Titaninc and its European associates. Therefore, it would be necessary when widening the "Licensed Field" of the National Lead—C. T. P. Agreement, to correspondingly limit the field placed at the disposal of DuPont in the United States, in order to keep the rights placed at the disposal of DuPont within the existing bounds.

In connection with Mr. Ravnestad's letter to me of July 25th, re Case T. 186, and my letter of August 20th

in reply thereto, I sent a memo to Mr. Beschorman, copy of which is enclosed. I also enclose herewith copy of my memo to Mr. Beschorman of today's date, which reports further to him in this situation.

With very kind regards,

Yours very truly,

CFK:lo
encls.

Mr. T. W. Smith (C. I. L.)

Exhibit 692

Letterhead of

TITAN COMPANY, INC.

GJ/AK Paris, October 1st 1937.

Charles F. Kaegebehn Esq.
National Lead Company
Patent Department
111 Broadway
New York City, U.S.A.

Dear Mr. Kaegebehn,

Many thanks for your interesting letter of August 31st regarding your conversation in Canada on the agreement with the Canadian Industries Ltd. and the Canadian Titanium Pigments Ltd.

You have described the situation well and I am glad to note that you have found the Canadians desirous to follow our line. I hope that DuPont also will take this view, and the very important latest developments on this side, as regards the pigment of higher tinting strength and the effect of the antimony addition as regards the chalking resistance may, although not outside the pigment field, help to open their eyes for the assistance they may have from this side.

As regards the analogy in the relations between the two firms and between I.C.I. and British Titan Products Company, I may draw your attention to the following:

Canadian Industries Ltd. have 50% of the shares of the Canadian Titanium Pigments Ltd., whereas I.C.I. has only 17% of the ordinary shares of the British Titan Products Company. This "only 17%" was an argument of consider-

able weight when I.C.I. declined for their part to accept a Licensed Field as wide as we have it in our agreement with I.G. Farbenindustrie and with British Titan Products Co. However, I.C.I. practically accepted the wider Licensed Field in so far as they anyhow undertook to refrain from any industrial or commercial activity within the wider Licensed Field applied in the agreement with B.T.P.—with the only exception of $TiCl_4$. The Canadian Industries Ltd. are however unrestrained as regards Titanium Compounds, which cannot be used as pigments, as you rightly point out. It should also be borne in mind that the British Titan Products Company is an entirely separate independent organisation and the I.C.I.'s people have only access to its factory and experience to the extent this from time to time may be permitted by the B.T.P.

I do not know how the Canadian Industries Ltd.'s relations to the Canadian Titanium Pigments Ltd. will be, but with 50% interest and no other Canadian shareholder— is it likely and even presumed that the Canadian Industries Ltd. will take a far more direct hand in the management than I.C.I. in the British Titan Products Co.—i.e. their chemists and engineers will assist and have access to the Pigment Co.'s plants and developments (as I.G. to Titangesellschaft's). If so, it will mean that they can build up industries in Titanium compounds other than pigments and compete outside Canada on the basis of the experience in the Pigment Co.

I further enclose a personal letter from Mr. Stopford of July 5th, commenting on the Canadian agreement. I sent Mr. Beschorman a copy to London on July 24th. I do not agree with Stopford's supposition that the Canadian Industries Ltd. and also the Canadian Titanium Pigments Ltd.

can withhold any experience re the manufacture of $TiCl_4$ if they do not use this for the manufacture of pigments, even when we use $TiCl_4$ to this purpose. I interpret the agreement so that if we need the $TiCl_4$ for the production of pigments, we will have the benefit of the experience of the Canadian Titanium Pigments Ltd.

However, he is right in the following:

Canadian Titanium Pigments Ltd. will have the benefit of our experience re $TiCl_4$ and consequently (as far as it is not patented) also the Canadian Industries Ltd., which can use it for $TiCl_4$ manufacture without restrictions as to markets. Further—if C.T.P. do not make use of $TiCl_4$ for the manufacture of their pigments, we may not have access to developments in $TiCl_4$ of the C.I.L.

I should appreciate if the points raised by Mr. Stopford and mentioned above could be definitely clarified as it is always better to have this done in advance before they become of actual interest.

With kindest regards,

Yours very truly

G. JEBSEN

Copy to Mr. Beschorman

Exhibit 692

COPY

BRITISH TITAN PRODUCTS CO. LTD.

BILLINGHAM

CJS/SL/73221.

5th July 1937.

Dr. G. Jebsen,
C/o Titan Company A/S.
Fredrikstad,
NORWAY.

Dear Dr. Jebsen,

With reference to the exclusion of titanium tetrachloride from the Licensed Field in the Agreement dated 1st January 1937 between Canadian Industries Ltd. and the National Lead Company of America, I would like to point out that this creates a condition which I think has so far not been fully considered, that is with the probable increase in importance of titanium tetrachloride as a step in the manufacture of titanium pigments, I can visualize the position arising where under these agreements, we are obliged to disclose full details of developments in the manufacture of titanium tetrachloride to the Canadian company, whereas the Canadian company is under no reciprocal agreement in return.

Personally, I think titanium tetrachloride is going to play a very important part indeed in the near future and I think it is unfortunate that we should be in the position of giving full details of titanium tetrachloride manufacture rights under patents and current developments in the process as part of a process for the manufacture of titanium

Exhibit 692

pigments, to a company which is under no obligation to reciprocate in so far as titanium tetrachloride is concerned.

There is also the probability that knowledge in connection with the manufacture of titanium tetrachloride may be of considerable assistance to a competitor considering the manufacture of titanium pigments and if it were at all possible, I would prefer that all members of our titanium manufacturing family were under equal obligations in this respect.

So far as I know, the only exclusion of titanium tetrachloride from the Licensed Field previous to the Canadian one, was in B.T.P.'s agreement with I.C.I., but in this case, there is a decided difference, as I.C.I. is under agreement not to manufacture titanium pigments, and we are under no agreement to give titanium tetrachloride information to I.C.I.

I am afraid that it may be too late for anything to be done about this, but having given you my views on the position, I should be glad if you would see whether anything can be done.

Yours sincerely.

C.J. STOPFORD. (Sgd.)

Exhibit 693

Letterhead of

CANADIAN INDUSTRIES LIMITED

10th January 1938

Dear Mr. Beschorman:

It has been recently brought to my notice that under the various agreements leading up to the formation of Canadian Titanium Pigments Limited, C.T.P. is not entitled to the manufacturing and selling co-operation of National Lead and C-I-L on titanium tetrachloride, whereas British Titan Products, under their group of agreements with yourselves and the three other stockholders, are entitled to manufacture and sell this product.

In eliminating titanium tetrachloride entirely from the C.T.P. agreement I believe I am correct in saying that C-I-L was influenced by its obligation to I.C.I. to refrain from divulging I.C.I.'s information on titanium tetrachloride and I do not think there was any intention that C.T.P.'s activities should be limited except in so far as this prior obligation of C-I-L made it necessary.

As Mr. MacKinnon and I will be in New York on Tuesday, January 18th, we would appreciate an opportunity of discussing this point if you can spare some time on that day.

With kind regards and best wishes for 1938.

Yours sincerely,

L. W. HASLETT

L. W. Haslett.

W. C. Beschorman, Esq.,

New York City.

Exhibit 694

Letterhead of

TITAN COMPANY, INC.

Paris, March 8th 1938.

GJ/AK

Charles F. Kaegebehn Esq.
National Lead Company
Patent Department
111 Broadway
New York City, U.S.A.

Dear Mr. Kaegebehn,

Re Cahen Agreements.

Many thanks for your letter of January 24th, which I have read with much interest, and I am very glad to note the developments.

I am enclosing copy of a letter of even date to Mr. Garesché, regarding international cooperation. Although part of the letter is of no direct interest to you, there are certain points which have a bearing on patent matters and therefore may interest you.

Yours very truly,

G. JEBSEN

2543

Exhibit 694

Paris, March 8th, 1938.

GJ/AK.

C.E. Garesché Esq.
National Lead Company
Titanium Division
111 Broadway
New York City, U.S.A.

Dear Mr. Garesché,

I refer to your letter of November 24th, received December 2nd, and my preliminary answer of December 30th, re sending reports to the Canadian Titanium Pigments Ltd.

There are certain considerations in this connection, which slipped my mind when I wrote you on December 30th, but which Dr. Raspe has brought forward and have made him and Dr. Kühne hesitate to comply with the wishes expressed by Mr. McKinnon.

I may first recall the situation as it has developed.

According to the agreements, there is provided for an exchange between the associated companies through semi-annual plant progress reports and mutual visits of the plants. This developed into exchange of plant experience, also by letters, and exchange of research reports regarding matters introduced in the plants. Based on the good experience as regards cooperation, it has been voluntarily agreed also to exchange research reports and information on matters which are under development and have not yet reached a more or less final state.

In this way the various associated companies are kept informed also about research work which is on the way and,

may form a basis for important patents. It has been done in the confidence that the various companies will take fully into consideration the interests of the other companies as regards patent protection.

You will appreciate that an organisation, which has been working for many years on a difficult problem, might find considerable inconvenience if another organisation, before the matter has reached a final stage for patent applications, steps in with research work and also applies for patents. This inconvenience may be felt in two ways:

1) The patent applications of the first company may interfere with the patent applications of the other company.

2) Certain patentable improvements, which easily could have been made by the first organisation if their time had not been too occupied with the basic invention, are made by one of the other organisations and patents applied for.

This is partly a psychological matter, which of course should not be given any primary importance, but, considering human nature, must be taken into account.

Both points have, however, a special importance as far as our relations with DuPont and the Canadian Titanium Pigments Ltd. are concerned, in view of the DuPont agreements' inconsistency with the agreements of the National Lead Company group, and the Canadian Company's connection with DuPont and the respective clauses in their license agreement with National Lead Company.

An instance how patent applications can interfere with each other, we have had in the antimony patent of B.T.P.

You may remember that when this invention was made by the B.T.P. they applied for a patent immediately and

informed the Titanium Pigment Co. On a following visit to U.S.A., Mr. Stopford got the information that work on that line had been done for several months in U.S.A. with other additions (and may be antimony), and that it was intended there to put in an application including a range of additions. The complications which arose out of this matter were settled satisfactorily to both parties.

The above manner of cooperation has been developed first of all by the provision in the agreements that the associated companies, each in their territory, have an option on gratuitously exclusive licenses from the others and the right to be informed as soon as a company sends in an application for a patent under a new invention and the right to request that protection for such invention is applied for in the countries within their territory.

As you know, your agreement with the DuPont de Nemours Company does not contain the same provisions, and further, your cooperation with DuPont de Nemours does not go so far as within our associated companies. Instance of this kind we have

a) in the Rutiox matter. (I refer to my correspondence with Mr. Beschorman in connection with Dr. Booge's visit to Europe.

b) The applications for patents by DuPont in the countries outside of North America and the conditions for a license are more or less a matter of Du Pont's discretion.

What is now the situation as regards the Canadian Titanium Pigments Ltd. and their relations to Du Pont?

According to the agreement between the National Lead Co. and Canadian Titanium Pigments Ltd., the latter com-

pany is free to give Du Pont licenses for U.S.A. under inventions developed by Canadian Titanium Pigments Ltd.

This matter concerns only the National Lead Company and not Titan Company Inc. and its associated companies as long as DuPont does not start or is incited to start research work resulting in patent applications, and it is a parallel to the situation already established by the National Lead Company—Du Pont agreement.

Another question is, to what extent do DuPont and Canadian Titanium Pigments Ltd. directly or indirectly exchange experience?

If the Canadian Titanium Pigments Ltd. receive research reports concerning matters under development and where the protection by patents has not been fully explored nor provided for, and this information should go further to Du Pont in the Canadian Titanium Pigments' discretion, then a situation arises which may lead to very undesirable results.

I pointed out this matter when I was over in New York last year and it came naturally up particularly in my conversations with Mr. Beschorman and Mr. Kaegebehn. I also pointed out to Dr. Booge the desirability of arrangements in our direct relations with DuPont (not in connection with Canadian Titanium Pigments Ltd.), which would avoid frictions arising out of situations as above mentioned.

The Germans have now brought the matter up.

I have pointed out that the National Lead Company would be the first to be afflicted, but it cannot be denied that both directly and indirectly the European companies' interests can also be affected.

There is every desire on the part of the Germans to establish a cooperation with the Canadian Titanium Pig-

ments Ltd. and the above is first of all brought up with a view to the interests of all the associated companies, but it has naturally a particular bearing on the actual situation of the German organisation with regard to their Rutiox developments.

I may mention in this connection that the Germans have been very willing to work in the spirit of an open cooperation from the earliest development of a new matter, and have particularly shown this in the case of the use of Aluminium Oxide coating, which they brought to the attention of the associated companies after a relatively short investigation as soon as they felt that here was an important matter, which should be closer investigated. You will probably remember that the first results of Billingham, and I believe also Titanium Pigment Co.'s investigations, did not confirm the German experience due to the method used by the Germans being not sufficiently developed and the thing not sufficiently investigated before it was brought to the associated companies' attention.

In the same spirit of cooperation the Germans have brought forward the Rutiox matter and this enabled the B.T.P. to immediately make themselves familiar with the work, and there has been since then a certain amount of developments going on on both sides under cooperation, which has made it possible for the B.T.P. to save a considerable amount of time.

In this connection, we have instances of developments made in B.T.P. on the basis of the German experience, which seems to illustrate the cases mentioned under b), with the exception that the psychological effect is not yet there, and I trust the matter will be satisfactorily arranged, particularly as the B.T.P.'s organisation fully recognize the priority of the Germans as regards this case.

Exhibit 694

You will no doubt have in mind that informtaion on the Rutiox matter has also been given to your organisation at the earliest moment in order to enable you to take up the matter if you found it of interest, which Mr. Turner has done.

As regards B.T.P.'s standpoint, Mr. Stopford, who knows the Canadian Industries Ltd. and their manner of cooperation with I.C.I., has less fear of the kind mentioned by the Germans. He suggests that the correspondence arising out of reports should be carried out directly between the issuing Company and the recipient, rather than such correspondence passing through the New York and the Paris offices, assuming, though, that copies should be sent to New York and Paris. Mr. Stopford says that he would not like to correspond directly with C.T.P. on technical matters, without a definite agreement from Paris and from National Lead Company.

Provided the above considerations can be met with in a satisfactory way, I think Mr. Stopford's suggestion is a good one, as it would facilitate matters and save time and expenses.

In this connection, I should appreciate if you would ask the C.T.P. to send me copies of their letters to Titan Company Inc.'s European associates, where they concern questions outside of routine commercial matters.

The solution of the questions mentioned above will, I suggest, be found:

1) By an undertaking of the Canadian Titanium Pigments Ltd., which can satisfy the question as to information going prematurely to DuPont (a matter which also is in the interest of National Lead Com-

pany in certain cases, i.e. the development of new pigment qualities).

or 2) By a revision of the arrangement with Du Pont bringing this company wholeheartedly into the family. I hope this last will come off.

Further, that in some way the spirit of the cooperation as regards dealing with patentable developments is brought to the Canadian Titanium Pigments' knowledge and has their agreement.

This last, I trust, will present no difficulty.

There is a third way, which, however, is not so simple to effect in practice and may lead to unpleasant situations arising, namely that the Canadian Company does only receive the semi-annual report and other reports and information concerning matters already introduced in the plants, which would be in accordance with the agreements and even go a little further than this. In this case they can have no representatives in our International Works and Research Committee and it may even be difficult to have them in the International Technical Sales Committee, as the work of the latter sometimes overlaps the work of the other. Such a situation I think would be regrettable. I suggest that our aim should be to have the Canadian Titanium Pigments Ltd. cooperating in the same manner and the same spirit as the associated companies of Titan Company Inc., with representatives in our various Committees.

I enclose for your information a memorandum on the organisation of our International Committees, which may be useful in giving the Canadians an idea of how we work, if you think you should forward a copy to them.

I Exhibit 694

I should also appreciate that you give it your careful attention with regard to any representatives of the National Lead Company, Titanium Division, coming over this year.

We are going to have a relatively short meeting in the I. W. & R. G. in March or beginning of April, chiefly dealing with matters under Section B, and presumably Sales Committee meetings, either end of June—early July, or in September. In September we will probably also have another I. W. & R. G. meeting.

I suppose we can talk over this nearer on my coming visit to New York.

Looking forward to hear from you, I am, with kindest regards,

Yours very truly,

sign. G. JEBSEN.

P.S. I am sorry that this letter has been so much delayed, but it is, as you will perceive, the result of several conversations with our German and English friends.

Copy to Mr. Beschorman

Exhibit 695

Letterhead of

CANADIAN TITANIUM PIGMENTS LIMITED

21st May, 1938

Dear Mr. Garesche:

From time to time we have discussed the advantages that our Company would derive if we were permitted to join the International Committees that have been formed to promote co-operation in the development of the titanium industry amongst the various companies associated by licence agreements. In the hope that you may be able to make the necessary arrangements for us to join these Committees, and so give us access to the development work of the other member companies, I am writing to confirm the following points:

1. With respect to information concerning laboratory work, research projects, pilot plant and other developments which—

   (a) may be placed at our disposal through copies of research reports emanating from your company or from your foreign associates, or

   (b) may be obtained by our representatives as a result of visits by them to plants and laboratories operated by you and your foreign associates, or

   (c) may be obtained by our representatives when attending meetings of the International Committees or meetings with other members of the staffs of the associated companies,

Exhibit 695

it is understood that such information is entirely confidential and must not be discussed with any individual other than officials or proper employees of either your company or your foreign associates. This understanding will apply to any original thoughts or suggestions acquired from either your company or your foreign associates, even though these thoughts or suggestions may not yet have been made the subject of a research or development programme or of a patent application.

2. With respect to research work undertaken by our company, it is understood that such work will be regarded as confidential and information or reports resulting therefrom will be imparted only to your company and your foreign associates. It is further understood that such information and reports may be disclosed to other parties at the discretion of your company, subject, of course, to the obligation provided in Article 3 of the Agreement between National Lead and Canadian Titanium Pigments Limited, dated 1st January 1937, to grant non-exclusive rights for North America and South America to E. I. duPont de Nemours and Company Inc., whenever so requested by them.

3. With respect to patent applications covering inventions made by us, it is understood that, throughout the course of the development of such inventions and of the preparation of patent applications covering them, we will consult with your Patent Department and will first apply for patents in the United States through your Patent Department, and, to

this end, will be glad to invite a National Lead Company representative, appointed by you, to sit with our Patent Committee. It is also understood that any information concerning our inventions and the patent applications covering such inventions will be divulged only through your company at its discretion, subject, of course, to the obligation provided in Article 3 of the Agreement between National Lead and Canadian Titanium Pigments Limited, dated 1st January 1937, to grant non-exclusive rights for North America and South America to E. I. duPont de Nemours and Company Inc., whenever so requested by them.

With kind regards,

Yours sincerely,

L. W. HASLETT

Air Mail

Mr. R. G. Beck—Manager
Canadian Titanium Pigments, Ltd.
P. O. Box 10
Montreal, Que., Canada

Dear Bob:—

Your letter of May 25th came in this morning. Last evening there was mailed to Mr. Haslett a letter by Mr. Garesché, suggesting only two minor changes in the letter written by Mr. Haslett to Mr. Garesché.

As stated in Mr. Garesché's letter to Mr. Haslett, Mr. Haslett's letters of May 21st and May 23rd were reviewed with Dr. Jebsen. The spirit of the letter rather than its wording was regarded as the decisive consideration and it appeared that the same spirit was contained in Mr. Haslett's letter as was embodied in the draft you took back. As Dr. Jebsen pointed out, the spirit of the international coöperation rests upon mutual confidence and the idea of the letter was merely to affirm for benefit of the European associates the moral obligation which, of course, C. T. P. understood.

In connection with your European trip, may I offer a suggestion, the value of which was impressed upon me in recent talks with Dr. Jebsen: Do not discuss any questions respecting the various agreements between the associated companies with any of the European people. Such discussion lies within the perogatives of Dr. Jebsen and the extent to which such questions should be discussed and the manner

in which they should be approached are entirely discretionary with Dr. Jebsen. Perhaps a word in this regard to Mr. Haslett would be helpful also.

With many kind regards and good wishes for a pleasant trip and sojourn in Europe. Please also say bon voyage to Mr. Haslett for me.

Yours very truly,

CFK:lo

C.T.P.L. AGREEMENT

Dear Kaegy:

Many thanks for your letter of May 26, in which you have given us further suggestions with regard to any possible discussions concerning Agreements, while in Europe.

We appreciate greatly receiving such suggestions from you because, as you know, we are most anxious to co-operate with the various members of the Titanium family.

Since Mr. MacKinnon is already in Europe, we are relaying to him the suggestions as made by you.

Thank you for your good wishes for a pleasant trip and, in return, may I wish you the same for your trip to Europe this fall. I may say also, that I am looking forward to seeing you at that time.

Yours very truly,

CANADIAN TITANIUM PIGMENTS LIMITED

Re: Canadian Situation

Dear Dr. Jebsen:—

On July 20th and July 21st, I conferred with Mr. J. C. Asselin Manager of the Legal Department of Canadian Industries Limited, concerning the discrepancies which exist in the Canadian agreements as compared with the agreements between the other members of our titanium family. We endeavored to review the situation, to state the problems and to develop a formula by which these discrepancies may be reconciled in a manner equitable to all members of the family. The results of this conference were summarized in a "Memorandum" and some notes entitled "Alternatives Concerning the Manufacture and Sale in Canada and Newfoundland of Titanium Compounds (which cannot properly be considered as pigments) and Excluding Titanium Tetrachloride and Titanated Lithopones". Copies of these documents are enclosed herewith and in connection with their consideration the following comments may prove helpful:

A. *As to the Memorandum:* The first paragraph serves to introduce the subject. Four alternatives, which are dis-

cussed in the notes, are stated and it is indicated that one—Alternative D—appeared to Mr. Asselin and me to be the most equitable. The concluding three paragraphs stated basic considerations which were taken into account when developing the four alternatives. These are: (1) that the rights reserved for Du Pont shall be restricted to pigments; (2) that C.I.L. desires to reserve rights with respect to titanium tetrachloride and titanated lithopone; (3) that the question of the division of profits as between National Lead Co. and C.I.L. under each of the four alternatives were to be disregarded in seeking an equitable solution.

In connection with the reservation by C.I.L. of rights to manufacture and sell titanium tetrachloride and titanated lithopones, the reasons for this were explained to me to be the following:

(a) Titanium tetrachloride being a war material, C.I.L., like I.C.I. wishes to reserve the right to manufacture this material without restrictions.

(b) C.I.L. acts as selling agent in Canada for titanated Lithopones produced by Du Pont; they have developed the Canadian market and wish to continue activities in this material.

B. *As to Alternative A:* This sets forth the disadvantages and complications which are foreseen, if the present situation is allowed to remain unchanged.

C. *As to Alternative B:* This considers the possibility of C.I.L. refraining from activities (manufacture and sale) of titanium compounds—excluding titanium tetchrachloride and titanated lithopones—in Canada and Newfoundland, and turning over to C.T.P. inventions relating to titanium

compounds which it may acquire. This alternative would probably be most acceptable to C.T.P. because it would mean that C. T. P. would receive developments from the National Lead group and also from Du Pont and I.C.I through C.I.L. However, certain difficulties, set forth in the notes, are presented. The principal one, in my opinion, is that under such a situation Du Pont and I.C.I. would be justified in expecting rights in developments of C.T.P. and this may well involve, as stated in your letter of August 6th, 1937—re. Case T. 186—placing at the disposal of Du Pont information and experience acquired by C.T.P. from the National Lead group.

D. *As to Alternative C:* This considers the possibility that C.I.L. retain the right to activities (manufacture and sale) of titanium compounds in Canada and Newfoundland, while C.T.P. is enabled to obtain rights regarding titanium compounds from the National Lead group. Such an alternative might be favorable to C.I.L., inasmuch as it does not place any restrictions on C.I.L. with respect to exploiting developments that it may receive from Du Pont and I.C.I. However, in this instance, what might well amount to an intolerable situation could develop; namely, National Lead Company and its associates could not be expected to grant exclusive rights to C.T.P. where C.I.L. reserved the privilege of competing in compounds in Canada and Newfoundland. Accordingly, a situation may arise where National Lead and its associates, on the one hand, would be competing with C.I.L. on the other hand. Furthermore, it might prove difficult for C.T.P. to prevent information concerning compounds which it may receive from National Lead Company from flowing to C.I.L.

Exhibit 698

C. *As to Alternative D:* This considers the possibility that C.I.L. will refrain from engaging in activities (manufacture and sale) of titanium compounds—excluding titanium tetrachloride and titanated lithopones—in Canada, except through or at the request of C.T.P. The words "except through or at the request of" are taken verbatim from Article 11 of the Partnership Agreement between I.C.I. et al. and Titan Company, Inc. This alternative appeared to be the most acceptable to all parties. It will result in a complete exchange between all the members of our titanium family, including C.T.P.; it places C.I.L. in a position, with respect to C.T.P., analogous to the position of I.C.I. with respect to B.T.P.; it does not prevent C.I.L. from engaging in activities in titanium compounds but they may do so only pursuant to arrangements made with C.T.P. It may be, however, that in agreeing to refrain from activities itself, C.I.L. may not develop as many improvements as it would if it were not so restrained and, hence, the number of developments placed at the disposal of Du Pont and I.C.I. may be somewhat diminished.

It will be further noted that the possibility of information reaching Du Pont through C.I.L. or directly, concerning developments in compounds placed by our group at the disposal of C.T.P., has not been touched upon. With the C.I.L. people I have studied several of the contractual arrangements of C.I.L. These arrangements are of such nature that with respect to various processes no information is passed on to Du Pont and I believe that it will be possible to insure that the same be carried out by C.T.P. with respect to titanium compounds. C.T.B. is willing to undertake the same assurances as are contained in Mr Haslett's letter to Mr. Garesché, dated May 21st, 1938.

They feel that this letter is sufficiently broad to apply not only to pigments but to compounds as well, but are willing to reaffirm that the undertakings contained therein apply to compounds as well as to pigments. Furthermore, I believe that similar assurances can be obtained from C.I.L. with respect to any information concerning compounds which may have been acquired inadvertently or otherwise from C.T.P.

I would much appreciate any comments you may have concerning the situation as here presented, particularly with respect to alternative D. If, in your opinion, the situation envisioned in alternative D would be acceptable to Titan Company, Inc. and its European associates, then I will endeavor to obtain the acceptance in principle of National Lead Co. I then plan to go to Canada with these comments and, if in the meantime Mr. Asselin has obtained the approval, in principle, of C.I.L. and C.T.P., Mr. Asselin and I will undertake to revise the present agreements accordingly.

Yours very truly,

NATIONAL LEAD COMPANY

CFK:JL
Encs.

Exhibit 698

MEMORANDUM

The alternatives outlined on the attached sheets result from consideration of the desirability of amending the existing agreements between National Lead Company, Canadian Industries Limited and Canadian Titanium Pigments Limited with a view to making available to C.T.P. all the information freely exchanged among all the members of the National Lead Group.

Alternative A indicates the present situation which it is now desired to alter.

Alternative B would appear to be the most favourable to C. T. P. but does not seem feasible.

Alternative C would appear especially favourable to C-I-L but is probably not feasible under the existing circumstances.

Alternative D appears to be at present the most equitable to all parties.

It is realized that although the operating field of C.T.P. may be enlarged to include compounds, the non-exclusive rights that are reserved for du Pont in the case of developments by C.T.P. or C-I-L will remain limited to pigments.

It must be noted also that the addition of compounds to the field of C.T.P. will not include the grant by C-I-L to C.T.P. of any rights regarding titanium tetrachloride and titanated lithopones or the relinquishment by C-I-L of its rights to manufacture and sell such products in Canada and Newfoundland.

Exhibit 698

In the consideration of the above-mentioned alternatives, the varying shares of profits derived by National Lead and C-I-L under the respective alternatives have been disregarded.

21st July, 1938.

C.F.K.
J.C.A.

Exhibit 698

ALTERNATIVES CONCERNING THE MANUFACTURE AND SALE IN CANADA AND NEWFOUNDLAND OF TITANIUM COMPOUNDS (WHICH CANNOT PROPERLY BE CONSIDERED AS PIGMENTS) AND EXCLUDING TITANIUM TETRACHLORIDE AND TITANATED LITHOPONES.

21st July, 1938.

Exhibit 698

ALTERNATIVE A

If the present arrangement is left unchanged, that is, remains limited to pigments:

1. Both National Lead and C-I-L will be free to manufacture and sell compounds in Canada and Newfoundland.

2. The exchange of information between the N. L. Group and C.T.P. will be complicated to the extent of the difficulty involved in segregating the information regarding pigments from that regarding compounds.

3. C. T. P. will be placed in a less preferable position as compared with the other members of the N. L. Group on account of the basis of co-operation necessarily having to be different.

4. By the terms of the present arrangement, C. T. P. does not appear to be prohibited from engaging in the manufacture and sale of compounds in Canada and Newfoundland but, if it engages in such field, it will then be subject to the competition from National Lead and/or C-I-L and will be deprived of the benefit of the inventions and information of the N. L. Group and/or C-I-L on compounds.

Exhibit 698

ALTERNATIVE B

If C-I-L undertakes to refrain from the manufacture and sale of compounds in Canada and Newfoundland and undertakes to transmit to C.T.P. the inventions possessed by it on compounds for use by C. T. P. in Canada and Newfoundland:

The transmission of inventions and information by C-I-L to C.T.P. (even if limited to those developed by C-I-L) would in all probability involve or embody information originating from either du Pont or I. C.I., which would give rise to the following complications:

a) The information of du Pont and I.C.I. may possibly become known to the N. L. Group through C. T. P. and under these circumstances du Pont and I. C. I. would have to be consulted before this undertaking is given by C-I-L;

b) du Pont and I. C. I. may consent to this undertaking by C-I-L provided that they are assured that the information disclosed by C-I-L to C. T. P. will not become known to the N. L. Group, but it may be practically impossible for C. T. P., in its exchange of information with the N. L. Group, to segregate the information received from C-I-L from that received from the N. L. group;

c) The consent of I. C. I. and du Pont, and especially that of the latter, may be conditional upon their being entitled to C. T. P.'s developments on compounds, which condition might be objectionable to the N. L. Group on account of the fact that such developments might embody information and experience derived by C. T. P. from the N. L. Group.

Exhibit 698

ALTERNATIVE C

If C-I-L retains as at present the right to the inventions and information possessed by it on compounds with the right to manufacture and sell compounds in Canada and Newfoundland even though the field of C. T. P. and the exchange of information between C. T. P. and National Lead is extended to compounds:

1. C-I-L will then be in a position to use du Pont's and I. C. I.'s inventions (at present withheld from the N. L. Group) which otherwise would not be practised in Canada and Newfoundland.

2. C-I-L would then be in a position to compete with C. T. P. with compounds competitive to compounds manufactured by C. T. P.

3. Du Pont may be inclined to favour the manufacturing of compounds by C-I-L as it may result in a greater activity in research work by C-I-L on compounds and consequently developments resulting from such research work would be of benefit to du Pont.

4. However, the retention by C-I-L of the privilege to manufacture compounds would favour the belief that it would be rather difficult, despite any assurance given by C. T. P., for C. T. P. to withhold from C-I-L, which is its parent company, information derived from the N. L. Group so that the result might be a possible curtailment of the flow of all information from the N. L.

Group to C. T. P. and an adverse effect on the general co-operative relationship.

5. Furthermore, the retention by C-I-L of the privilege to manufacture and sell compounds would no doubt induce National Lead to reserve the similar privilege to manufacture and sell compounds in Canada and Newfoundland.

Exhibit 698

ALTERNATIVE D

If C-I-L retains the inventions possessed by it on compounds but undertakes to refrain from the manufacture and sale of compounds in Canada and Newfoundland except through or at the request of C. T. P:

1. The position of C-I-L toward C. T. P. will be substantially similar to that of I. C. I. toward B. T. P.

2. The field of C. T. P. may then be extended to compounds with the benefit of exclusive rights from the N. L. Group on compounds (probably without reservation by the N. L. Group as to titanium tetrachloride and titanated lithopones.)

3. C. T. P. will then be accepted as a full-fledged member of the N. L. Group.

4. The inventions of C-I-L on compounds may be practised in Canada and Newfoundland pursuant to arrangements with C.T.P.

5. The relinquishment by C-I-L of its rights to manufacture compounds may tend to diminish C-I-L's research work on compounds and to this extent deprive du Pont of possible developments that might result from such research work.

N. L. - C-I-L AGREEMENT

Field of Co-operation

Titanium compounds as now defined, but extended to all uses, and to include titanium tetrachloride subject to reservation by C-I-L.

Note:

1) Determine whether titanated lithopones should remain excluded.

2a) Determine meaning of simple mixtures.

b) Whether such mixtures should remain included as at present or excluded as in case of B.T.P.

c) No mention is made of such mixtures in du Pont - N. L. Agreement.

d) Simple mixtures not included in agreement with Germans.

Clause 1

Both parties will purchase from C.T.P. their requirements of titanium compounds.

This undertaking will not apply to tetrachloride required by C-I-L. and its associated and subsidiary companies.

Clause 11

For the purpose of this Clause neither du Pont nor I.C.I. shall be deemed associates of C-I-L.

C-I-L will reserve for itself and its subsidiary and associated companies the right to manufacture and/or sell titanium tetrachloride.

Note:

I.C.I. - I.S.C. - G.W. - Titaninc. Agreement.

This undertaking might be said to extend even to titanium compounds containing less than 2% titanium.

2556

Exhibit 698

2556

C-I-L - C.T.P. AGREEMENT

Field

1. Processes relating to titanium compounds.
2. Titanium compounds according to revised scope.

Exchange of Rights

1. *Grant of rights by C-I-L.*

Same rights as at present except:

1) Obligation of C.T.P. to grant sub-licenses to du Pont (a) shall be limited to titanium compounds which can be used as pigments, and (b) shall not apply to titanium tetrachloride.

2) The privilege of C-I-L to reserve for itself and to grant to I.C.I. non-exclusive rights under its own inventions relating to titanium tetrachloride.

3) Privilege for C-I-L to grant non-exclusive rights to I.C.I. on its own inventions relating to titanium compounds which may be adapted to uses other than pigments.

1. *Grant of rights by C.T.P.*

Alternative A.

Grant to C-I-L of sub-licenses, if possible, for Canada and Newfoundland under inventions licensed to C.T.P. relating to titanium tetrachloride.

Grant of non-exclusive rights to C-I-L for itself and I.C.I. under inventions of C.T.P. relating to titanium tetrachloride.

Alternative B.

Grant of non-exclusive rights to C-I-L for itself and I.C.I. under inventions of C.T.P. relating to titanium tetrachloride which are considered to be improvements of inventions previously licensed to C.T.P. by C-I-L.

Exhibit 698 2557

2557

Exchange of Rights

1. *Grant of rights by N.L.*

Alternative A.

Same rights as at present.

Note: Since C.T.P. has right to grant sub-licenses if N.L. was entitled to confer such right, C.T.P. will be in a position to grant sub-licenses to C-I-L for Canada and Newfoundland on patents relating to titanium tetrachloride.

Alternative B.

Same rights as at present.

Note: It will probably be necessary to review the wording of the agreement in order to make it clear that such rights shall be limited to C.T.P. and shall not pass on to C-I-L.

1. *Grant of rights by C.T.P.*

Alternative A.

Same rights as at present except:

1) The obligation of N.L. to grant sub-licenses to du Pont (a) shall be limited to titanium compounds which can be used as pigments, and (b) shall not apply to titanium tetrachloride.

2) C-I-L and I.C.I. shall be entitled to non-exclusive rights on inventions of C.T.P. relating to titanium tetrachloride.

Alternative B.

Same rights as at present except:

1) Obligation of N.L. to grant sub-licenses to du Pont (a) shall be limited to titanium compounds which can be used as pigments, and (b) shall not apply to titanium tetrachloride.

2) C-I-L and I.C.I. shall be entitled to non-exclusive rights on such inventions of C.T.P. relating to titanium tetrachloride which are considered improvements of inventions on such product which were previously licensed to C.T.P. by C-I-L.

Exhibit 698 2558

Exhibit 699

November 21st, 1938

J. C. Asselin, Esq.
Secretary Department
Canadian Industries, Ltd.
Box 126
Montreal, Canada

Dear Mr. Asselin:—

On July 26th I wrote to Dr. Jebsen of Titan Co., Inc. sending him a copy of our memorandum of July 21st, 1938 in regard to the alternatives for reconciling the Canadian agreements with those of the other members of the National Lead group.

I have just received a reply to that letter. Dr. Jebsen states that he has discussed this matter with the English and German associates, and that they are in agreement that the principal idea suggested in Alternative D. He makes one point regarding this alternative which I herewith quote:

"The C.I.L. can, according to this alternative, take up the manufacture and sale of titanium compounds in Canada and Newfoundland at the request of C.T.P. As, however, C.I.L. has 51% of the shares, the position is different from I.C.I.'s position in the British Titan Products Co., where I.C.I. has 17% of the shares.

The permission for C.I.L. should only be given by C.T.P. with the approval of the National Lead Company, which I assume is also the intention.

When the corresponding clause was formulated in the B.T.P. agreement, we had in mind that the selling or-

ganisations of the mentioned companies might come in useful for the sale of B.T.P.'s products—a manufacture was not contemplated and I assume that National Lead Co. will be very cautious if giving any permission of that kind, taking into consideration the possible effect this may have not only on the market position but also on the patent position of our associated companies.

I note that C.I.L. is willing to take the obligation not to compete in Titanium compounds outside Canada and Newfoundland. An unpleasant situation may, though, arise if a competition as regards patent rights should take place. I suppose, though, that at the time such a matter will become of actual interest a solution can be found. It will also partly be dependent on the character of the compound to be manufactured.

You may remember that Goodlass Wall and Lead Ind. for instance, have been given the permission by B.T.P. to manufacture a titanium Lead Frit under a patent of Goodlass Wall under which B.T.P. has the right to an exclusive license.

This could be done 1) because the invention, although leading to a Titanium compound, chiefly is an application of TiO2, and the manufacture was more within the range of Goodlass Wall's activities than B.T.P.'s; 2) because B.T.P. has the right to exclusive licenses under all patents of Goodlass Wall covering the manufacture of titanium compounds."

It now appears, that you and I should get together with a view to working out the actual mechanism for applying the principle of Alternative D.

Exhibit 699

I should be pleased to come to Canada at some mutually convenient date in the near future, or if you have in prospect a trip to New York, we could discuss it at that time.

With very kind regards,

Yours very truly,

NATIONAL LEAD COMPANY

Re: Agreement Re. Extension of the Exchange of Patent Licenses between the Associated Titanium Companies.

Dear Dr. Jebsen:—

In connection with the Agreement between Canadian Titanium Pigments and National Lead Company, copy of which was sent you with my letter of today's date, I beg to submit to you two questions which have arisen as between ourselves and Canadian Titanium Pigments in connection with this matter:

1.) Our Canadian friends suggested an arrangement which would include an affirmation, in the Agreement, that upon execution of this new Agreement the provisions would apply retroactively, placing at the disposal of Canadian Titanium Pigments any inventions which to date had been exchanged between the associated companies but which had not been offered to Canadian Titanium Pigments. Mr. Garesché felt that such a clause should not be included in the Agreement; it would be contra to the whole spirit of the Agreement which is a broad affirmation of the general cooperative spirit. He stated that it was the intention that everything possible would be made available to our Canadian friends, but to include such statement in a broad agreement such as the present might induce some of our other

associates to question why such a confirmation would be deemed necessary.

We do not know of any cases to which this question, raised by our Canadian friends, would apply but we would like your opinion as to whether or not we can assure our Canadian friends that everything of interest, envisioned by the new Agreements, in existence at the present time is at their disposal.

2.) Our Canadian friends noted in the British Agreement the expression "unless reservations are made". They have asked us the meaning of this. We note that you touched upon this in the third paragraph, on page 2 of your letter to Mr. Rockwell of December 29th, 1938. We gave as our opinion to the Canadians that this whole arrangement was a voluntary one on the part of the associated companies, there being no obligation on their part under their previous contracts to follow the procedure set forth in the new Agreement. Therefore, we believed Mr. Stopford was contemplating a situation where, for some reason or other not now evident, it might be necessary for him to make certain reservations on the rights which he conveyed under the new arrangement. In other words, we thought that this expression was largely a matter of precautionary safeguard. Would you please confirm our opinion, or make whatever comments you care to, so that we may reassure our Canadian friends on this point.

With kind regards, I remain,

Yours very truly,

CFK:JL

Charles F. Kaegebehn Esq.
National Lead Company
Patent Department
111 Broadway
New York City, U.S.A.

Dear Mr. Kaegebehn,

Re: agreement re extension of the exchange of patent licences between the associated titanium companies.

Many thanks for your letter of February 28th enclosing a draft of the agreement between National Lead Company and the Canadian Titanium Pigments, Ltd., regarding the above matter.

The draft seems quite all right to me.

As regards the question you put forward, whether the manufacture of extender pigments, viz. calcium sulfate and barium sulfate, come within the Licensed Field of the agreement of 1920, we have considered on this side that such is the case—however, only to the extent the process and the products are employed in the production of the substances within the Licensed Field. You will note that this limitation is also made in the extension agreements.

However, as I do not see any harm in the National Lead Company making the arrangement with Titan Company Inc., as you suggest, and as you have already practically everything prepared, I think, to remove any doubt, it is

well to follow your proposal and have executed a similar arrangement between the National Lead Company and Titan Company Inc.

I also acknowledge receipt of your second letter of February 28th, regarding the above.

Ad question 1.) The intention is that the agreement should apply to inventions of the past as well as future.

I think Mr. Garesché's point of not including a clause as suggested by our Canadian friends is well taken, although we have not had that particularly in mind when drafting our agreements on this line.

You will note that in the German agreement it is expressly said that it covers also licences offered in the past. In the English agreement it was left out I believe because I was informed that there were no cases of the kind to which the agreement would apply.

The matter was not of very great importance, in view of the spirit of the agreement, as Mr. Garesché has very well expressed it.

Ad. question 2.) You will find in the German agreement also the expression "unless reservations are made".

This was not put in by Mr. Stopford but by myself, as a general precautionary safeguard, when I made the proposal to our associated companies.

I may add: These extension agreements do not represent a change or a widening of the spirit of cooperation between our companies, but is more to be considered as a confirmation of the existing spirit and lays this down more formally.

I had in mind that in view of the good spirit between the companies the handling of these licence matters had be-

come I may say a little "sloppy", and wished to put the responsibility on the licensors, so that they had to make the reservations when offering the licences, instead of having the licensee not knowing definitely what was meant when licences were offered.

The agreement does not put anybody under a contractual obligation to offer licences on inventions the scope of which goes outside the Licensed Field, but the companies would be interested to do so in view of the reciprocity and I do not think that the Canadian Titanium Pigments need have any fear of our associates quibbling in these matters, as long as they act in the same spirit, which I also have no doubt that they will do.

I trust that this will be satisfactory to our Canadian friends.

With kind regards,

Yours very truly,

G. JEBSEN

Canadian Agreements

Dear Dr. Jebsen:

I now revert to my letter of July 26, 1938 and your reply thereto of August 25, 1938, relative to arrangements with our Canadian associates in order to reconcile the existing disparities in the various agreements.

We are happy to learn that you had obtained from our English and German friends the agreement in principal to the idea suggested in Alternative D, sent with my letter of July 26th. Subsequent to the receipt of your letter and up to the present time I have had several conferences with Mr. Asselin of the legal department of C.I.L., in which we considered various ways of putting Alternative D. into effect; for instance, rewriting the agreements, or merely executing a supplementary agreement. We believed the latter to be preferred.

During the actual drafting of a supplementary agreement, certain questions arose which were laid before our respective companies by Mr. Asselin and myself. We have gotten an agreement in principle to what we believe goes even further than Alternative D. That is to say, we have obtained from C.I.L. agreement to turn over to C.T.P.

rights in titanated lithopones, titanium tetrachloride when this material is to be used in producing titanium pigments, and wherever possible, rights and information with respect to titanium compounds.

With respect to titanium compounds particularly, which are not useful as pigments, we did not desire to develop a situation where any particularly valuable development would remain unexploited. For instance, we have provided that wherever possible, C.I.L. will turn over information and rights with respect to titanium compounds to C.T.P. but if, in the event I.C.I. or DuPont insist that C.I.L. exploit in Canada a development given C.I.L. by either I.C.I. or DuPont, C.I.L. reserves the right to undertake this manufacture. C.I.L. cannot in any event compete in compounds outside Canada due to its prior agreements. We have further endeavored to provide that where C.I.L. places at the disposal of C.T.P. rights in titanium compounds, National Lead must agree to the transfer, thus placing National in the position of safeguarding the interest of its associates with respect to any improvements which C.T.P. may make, using experience and knowledge acquired by C.T.P. from National.

C.I.L. is willing to make a commitment in the agreement that it will not use its voting power in C.T.P. to obtain from C.T.P. or to have C.T.P. request C.I.L. to engage in the manufacture of titanium compounds. Personally, I do not think we should have such a definite commitment in writing. It seems to me to go a little beyond the spirit of the co-operation for which we are all working, and which is based upon a mutual confidence and respect in the good faith of all the associates. A letter, similar to Mr. Haslett's letter to Mr. Garesché of May 21, 1938, might

better cover the situation, if considered desirable. However, if it is your opinion that our European associates would feel better satisfied with such a commitment written into the agreement, the Canadians are willing to do this.

I enclose some notes, both by Mr. Asselin and myself, relative to the draft agreement, in which I have endeavored to express the principles underlying the various provisions of the draft agreement. Mr. Asselin has secured the approval of C.I.L. and Canadian Titanium Pigments, and I have the approval of Mr. Garesché for the execution of an agreement substantially on the lines expressed in this draft. I would appreciate it very much if you would let us have your comments and suggestions, and particularly your opinion as to whether or not, in your judgment, the draft itself adequately expresses the principles of agreement as set forth in the notes and further whether these principles themselves should prove acceptable to our European associates. I have the impression that the principles should be acceptable because they embody all that was embodied in Alternative D. and something more.

Yours very truly,

NATIONAL LEAD COMPANY

C. F. KAEGEBEHN

Exhibit 704

Letterhead of

TITAN COMPANY, INC.

GJ/AK Paris, June 17th 1939.

C.F. Kaegebehn Esq.
p.t. 26, rue de la Pépinière
Paris (8e)

Dear Mr. Kaegebehn,

Canadian agreements.

Many thanks for your letter of June 6th.

I am very glad to see the results you have arrived at and, as far as I can see, the proposed agreement will be acceptable to our associated companies in Europe.

I beg, though, to draw your attention to a matter which chiefly concerns the National Lead Company.

The definition of "Titanium compounds" includes all substances containing 2% or more of Titanium, with exclusion of the alloys.

This means that the National Lead Company for the period of the agreement, which is of a considerable length, is bound to work in Canada through the Canadian Titanium Pigments Ltd. with regard to any production where the product contains more than 2% of Titanium.

It lays down a line of policy for the National Lead Co., as far as Canada is concerned, of a very broad nature. If National Lead Co. should desire to develop or acquire an industry of this kind, which may cost N.L.Co. a considerable amount of money or may involve large profits, it has

to leave the whole market of Canada to the Canadian Titanium Pigments Ltd., even if Titanium is a relatively small factor in this industry.

The Canadian Industries Ltd. are not in the same position. Without knowing their prior engagements, one must assume that they are fairly broad towards I.C.I. and Du-Pont, and that these firms will request C.I.L. to exploit such matters themselves. The Canadian Industries may, however, be such an important factor in Canada, that the National Lead Company will under any circumstances prefer to cooperate with them on the basis of leaving 51% to them and 49% to National Lead Co. and National Lead Co. may reckon that in such cases the entrance of the Canadian Titanium Pigments Ltd. in such an industry will prevent the C.I.L. to start a competition.

There are many aspects to this matter, which it will take too long to discuss in a letter, and much to be said pro and con. It is not up to me and it is not my intention to give an advice in the matter, but I feel I ought to point out that the definition involves engagements influencing very broadly the lines of policy of the National Lead Company for a considerable time, as regards the Canadian market and possibly indirectly as regards the United States and the European markets.

The definition provides for cooperation in a field very similar to that of the 1920 agreement, in which case such a broad line of mutual obligations was quite justified for various reasons in which it would be too long to enter here. The English and the German agreements are, as you know, not going so far.

Let me repeat that I am writing this not in the interest of Titan Company Inc. or its European associates which,

as far as I can see, could have no objection—rather the opposite—but only as a matter which should be carefully considered by the National Lead Company from a broad point of view of their policy as regards the future for a long period ahead.

I refer to our conversation of to-day, in which we went into this matter more in detail and according to which you will take the question up for discussion on your return to New York.

In the meantime, as agreed upon, I am not going to present the agreement to our European associates to the purpose of getting their approval, but will await to hear further from you after you return to New York.

With kindest regards,

Yours very truly,

G. JEBSEN

Copy to Mr. Rockwell
" " Garesché

Exhibit 705

Mr. J. C. Asselin, Legal Section,
Canadian Industries, Ltd., Paris, July 5, 1939.
Montreal, Canada.

Dear Mr. Asselin:—

During my conversations here in Paris I took up the two questions of definitions as arise from the various agreements and which you put forward. The following comments may help clear up the situation which affects these:

1.) As to the Phrase "above 2.0%" as it appears in the agreement of 1920, and the phrase "2.0% or more" as appears in certain other agreements, both defining a titanium compound.

The slight disparity between the two expressions is recognized here on this side. It is considered, however, to be of such slight importance as not to justify the trouble which would be required to reconcile the disparity. No questions have thus far arisen where this disparity has been involved as a basis for withholding any information regarding titanium compounds nor is it expected, in view of the cooperative spirit which exists between the companies over here, that it will be invoked in the future.

2.) Regarding the definition of "simple mixtures."

The difficulty of exactly defining this term is appreciated over here. This phrase developed in the course of the negotiations leading up to the formation of Titangesellschaft due to the objections of I. G. Farbenindustrie to limit itself to respect such a wide field as defined in the 1920 Agreement. The term "titanverbindungen" as em-

ployed in the I. G. Agreement to define its obligations is generally recognized over here to mean "titanium compounds" where the word "compound" carries its chemical connotation implying an actual chemical combination of titanium. The exclusion of simple mixtures was apparently designed to give emphasis to this meaning of "titanium compounds" and was carried thru into the British Agreements.

There have been no difficulties over here arising from the fact that, on the one hand, National Lead Company and Titan Company, Inc. exchange information and patent rights regarding simple mixtures whereas, on the other hand, these are excluded from certain of the other agreements. The question of whether a given material constituted a "simple mixture" or a "titanium compound" has come up from time to time but it has in each case always been settled amicable. It is expected that future questions of the same nature will be similarly settled.

My trip has been most interesting and, I am sure, valuable. I will have much to tell you when I see you again, particularly about the cooperation which exists over here and the manner by which it works.

Best regards to you and all my friends in C.T.P. and C.I.L.

Very truly,

C. F. KAEGEBEHN

Mr. Rockwell
Mr. Garesche
Mr. Jebsen

Exhibit 705

NOTES RE AMENDMENTS TO EXISTING AGREEMENTS BETWEEN NATIONAL LEAD COMPANY, CANADIAN INDUSTRIES LIMITED AND CANADIAN TITANIUM PIGMENTS LIMITED

I. *Comparison of Licensed Fields*

a) *Basic Licensed Field — 1920 Agreement*

The Licensed Field in the 1920 agreement between Titan Company Inc. and National Lead Company is described as comprising substances, etc., containing *above 2%* of titanium. This 1920 agreement is the basis on which the other members of the Titanium Group were established, but the Licensed Fields of such other titanium companies are described as comprising substances, etc., containing *2% or more* of titanium. There appears, therefore, to be a slight discrepancy between the basic agreement and the consequent agreements.

What is the meaning of the words "consisting of or containing above two per cent (2%) of titanium, or a compound, or compounds, thereof," which appear in the definition of the Licensed Field of the 1920 agreement?

In Dr. Jebsen's letter to Mr. Rockwell of 29th December, 1938, he states that the Licensed Field by the 1920 agreement (which applies also to Société Industrielle du Titane) is the widest one. In what way is that Licensed Field the widest one? Is it only because it includes simple mixtures?

b) *Simple Mixtures*

I understand that simple mixtures might be described as mechanical mixtures, the component parts of which could be detected by mechanical means.

Simple mixtures are specifically included in the Licensed Fields of C.T.P. and DuPont and are presumably also included in the Licensed Fields of National Lead and Titan Company Inc., since they are not specifically excluded. They are also presumably included in the Licensed Field of Société Industrielle du Titane, since it has a Licensed Field similar to that of Titan Company, Inc.

What is the reason for the exclusion of simple mixtures from the License Fields of British Titan and Titan Gesellschaft?

c) *Inventions for use of Titanium Products*

The inventions relating to the use of titanium products are specifically included in the Licensed Fields of C.T.P. and DuPont and presumably also in the Licensed Fields of Titan Company Inc., National Lead and Société Industrielle du Titane.

Such inventions, however are apparently excluded from the Licensed Fields of British Titan and Titan Gesellschaft.

d) *Titanium Tetrachloride*

I understand that titanium tetrachloride is a compound which per se cannot be used as a pigment.

It is specifically excluded from the Licensed Field of C.T.P., and it is presumably automatically excluded from the Licensed Field of DuPont as it is limited to pigments.

Titanium tetrachloride, however, is presumably included in the Licensed Fields of Titan Company Inc., National Lead and Titan Gesellschaft and also in the Licensed Field of British Titan, subject, however, to British Titan's not being entitled to inventions from I.C.I. on such product. It is probably also included in the Licensed Field of Société Industrielle du Titane.

e) *Titanated Lithopones*

I understand that titanated lithopones are pigments.

Whilst they are expressly excluded from the Licensed Field of C.T.P., they are presumably included in the Licensed Fields of the other companies, since they are not mentioned in the definition of such Licensed Fields.

f) *Certain Titanium Compounds Containing more than 5% of another Metal*

Such compounds are specifically excluded from the Licensed Fields of Titan Company Inc., National Lead, British Titan, and presumably Société Industrielle du Titane.

No mention, however, is made as to the exclusion of such compounds from the Licensed Fields of C.T.P., Titan Gesellschaft or DuPont, except that the Licensed Field of DuPont excludes alloys which probably fall within the class of such compounds but may not, however, comprise all such compounds.

Exhibit 705

II. *General Remarks*

Is my understanding correct that I.C.I. transmits to British Titan only patents and information relating to titanium oxide and titanium pigments? If so, it transmits patents and information on titanated lithopones (which are pigments) but not on titanium tetrachloride and other compounds which cannot be used as pigments. Is it accurate to say that, as the Licensed Field in the agreement between DuPont and National Lead is limited to pigments, the exchange of patents and information between these two parties will apply to titanated lithopones but not to titanium tetrachloride?

It would appear that the undertaking of I.C.I. and others in Clause 11 relating to the organization of British Titan could be interpreted as applying even to compounds containing less than 2% of titanium.

Exhibit 706

Letterhead of

CANADIAN INDUSTRIES LIMITED

18th July, 1939.

Mr. Charles F. Kaegebehn,
Manager — Patent Dept.,
National Lead Company,
111 Broadway
New York City.

Dear Mr. Kaegebehn:

I wish to thank you for your letter of 5th July in which you outlined the principle which you have discussed in France and Germany whereby Canadian Titanium could handle the prosecution of patent applications originating from Titangesellschaft and possibly from other members of the Titanium Group and eventually take title to the patents issued on such applications upon paying all expenses connected with prosecuting such applications and securing patents thereon, and provided, however, that Canadian Titanium is prepared to apply this principle reciprocally to its own patent applications in foreign countries.

The proposed arrangement would appear to meet adequately the wishes of Canadian Titanium and the preliminary reaction of Messrs. Haslett and Beck is favourable to the idea but naturally its definite adoption will depend upon the full consideration of the manner in which, and the extent to which, it will operate. I presume, therefore, that it is your intention to arrange upon your return for a detailed discussion of this matter in the light of the information which you have gathered in your talks abroad.

Exhibit 706

Mr. Walley is away on vacation and I am leaving myself at the end of this week, so that this conference will probably take place sometime in August if it is satisfactory to you.

I still believe that this arrangement, if adopted, can be worked out satisfactorily without amending the existing agreements except possibly in cases (which you intimated might happen) where one party should wish to retain ownership of a certain patent which had potential value beyond the titanium field and as a result only an exclusive license is available, and in the event that it is decided that in such cases the licensee should pay only one-half of the expenses connected with such patent instead of the full expenses, an amendment to the existing provisions relating to this question of expenses may thereupon be desirable.

Yours very truly,

J. C. ASSELIN

Paris—VIIIe—France

Re: Canadian Agreements.

Dear Dr. Jebsen:—

During the past week I had the opportunity to discuss with Mr. Rockwell and Mr. Garesché the Canadian Agreements in general, and particularly the points brought forth in your letter of June 17th. I found that Mr. Garesché and Mr. Rockwell had given some thought to this matter upon receipt of their copies of your letter.

It is felt here, taking all things into consideration, that it probably would be better to align ourselves with C. I. L. in Canada and operate through C. T. P. than to endeavor to establish for ourselves any possible new titanium industry. It is felt here that it would be difficult to foresee in the future the development of a new titanium industry where we would not be assisted by our present association in Canada. In the meantime, it is believed that we have protected the future by broadening the cooperation with C. T. P. in association with C. I. L.

I may mention to you that shortly after my return Mr. Beck was in to see me. He is rather anxious that C. T. P. receive copies of Research Reports distributed amongst the associated companies, and stated that C. T. P. was not on the list of parties receiving such reports. I told him that I thought the request for such copies should be made by

Exhibit 707

C. T. P. to Mr. Garesché after the adjustment of the outstanding differences which we expect to resolve along the lines I discussed with you in Paris. Does my suggestion conform with your ideas on the subject of sending copies of Research Reports to C. T. P.?

I am going to Montreal about the 29th of August to finally clean up this question of the agreements, bring up to date the information on Canadian "T" cases, and will write you shortly thereafter.

With kindest regards,

Yours very truly,

CFK:JL

Exhibit 708

MEMORANDUM

re: Amendments to 1937 agreements.

1) Du Pont is negotiating a new agreement with National Lead providing for exchange of only licences under patents relating to pigments and ingredients used in the production of extended pigments.

   a) Such exchange will not include any technical information.

   b) It is not clear to us yet whether the exchange of licences will extend to titanated lithopones.

   c) As a result of this new agreement, the right of du Pont under the 1937 agreement to sub-licences under C.T.P.'s and C-I-L's inventions relating to pigments should probably be limited to sub-licences under patented inventions only without including any technical information.

2) Du Pont expects that C-I-L will be free to grant to du Pont exclusive rights under its own inventions relating to titanated lithopones(?) and compounds other than pigments in accordance with the Tri-party Agreement.

3) Du Pont expects that C-I-L will not commit itself to transmit information or issue licences to C.T.P. under du Pont's patents or processes relating to titanated lithopones and compounds other than pigments.

4) Whilst C-I-L may not pass on technical information to C.T.P. on titanated lithopones, it is probable that it will be in a position to issue licences for Canada under patented inventions of C-I-L and du Pont relating to titanated lithopones.

5) Du Pont raises the point that even if inventions of C-I-L and du Pont relating to compounds other than pigments were made available to C.T.P., the inventions of C.T.P. in that field would not be available to du Pont through C-I-L even though C.T.P. may be regarded as a subsidiary of C-I-L in accordance with the Tri-party agreement.

6) Du Pont queries whether C-I-L would be prevented from obtaining in Canada on behalf of DuPont and exporting to du Pont titanium ore.

7) In Articles 2 (a) and 5 (a) of the proposed agreement, it should probably be stated that commitments by C-I-L to C.T.P. of titanated lithopones are limited to licences for Canada under patented inventions and do not extend to technical information. This is in view of the fact that our information might include some information which du Pont might decide to transmit to us.

8) In Articles 2 (b) and 2 (c), should it not be clearly stated that rights which C-I-L may transmit to third parties on titanium tetrachloride and compounds other than pigments are exclusive?

22nd May, 1940
J.C.Asselin:GM

Exhibit 709

Letterhead of

CANADIAN TITANIUM PIGMENTS LIMITED

23rd May 1940.

Dear Mr. Garesché:

For some time it was felt that it would be in the best interests of Canadian Titanium Pigments Limited, National Lead Company and its European associates if the various patents under which Canadian Titanium has an exclusive license to operate were owned by Canadian Titanium. It is believed that ownership by Canadian Titanium of the various Canadian patents of our associates would put us in a more favourable position to oppose any grant for a compulsory licence, particularly as we have made definite preparations to operate on a commercial scale in Canada when conditions justify it.

We are pleased to note that National Lead Company concurs in our views and has accordingly, by resolution of its Board of Directors adopted 4th April, 1940, authorized the assignment from time to time to Canadian Titanium of any and all Canadian patents and patent applications as acquired or developed by National Lead Company and falling within the scope of the Licensed Field as defined in our agreement of 1st January, 1937.

We are therefore in agreement to assign from time to time to National Lead Company any and all the patents and patent applications of Canadian Titanium falling within the above-mentioned Licensed Field and pertaining to countries which are not reserved to National Lead Company's associates, upon the understanding, however, that du Pont shall, as already agreed, remain entitled to non-

exclusive licences for North and South America (excluding Canada and Newfoundland) under patented inventions relating to titanium compounds which can be used as pigments.

We are also prepared through you as intermediary to extend this arrangement to any associate of your company whenever such associate is agreeable to permit the assignment to Canadian Titanium of the Canadian patents and patent applications originating with it.

It is our understanding that this general arrangement will embody all the patents and patent applications falling within the Licensed Field when broadened as contemplated.

It is understood, of course, that this arrangement pertains only to those patents and patent applications full title to which is vested in the parties concerned.

Yours very truly,

L. W. HASLETT.

Exhibit 710

Letterhead of

CANADIAN TITANIUM PIGMENTS LIMITED

Mr. C. F. Kaegebehn,
National Lead Company,
111 Broadway,
New York City, U.S.A.

May 27, 1940.

Dear Mr. Kaegebehn:

Mr. Stopford, of British Titan Products, has recently asked if we cannot sell his Blanc Fixe in Canada. This possibility, however, raises a number of questions, as Canadian Industries Limited at present hold all Blanc Fixe business in this country.

It will therefore be necessary for us to have a strict interpretation of our license field, and also that of British Titan Products, with respect to the following questions:

(1) Does our license field entitle us to deal in Blanc Fixe as such?

(2) Does British Titan Products' agreement with National Lead, Imperial Chemical Industries, etc., allow them to sell Blanc Fixe as such, in Canada? For instance, in the event that we are excluded from dealing in this product, could British Titan Products appoint another Canadian agent?

Inasmuch as you are very familiar with all of these agreements, I wonder if you would be kind enough to let us have your thoughts with regard to this problem?

Yours very truly,

CANADIAN TITANIUM PIGMENTS LIMITED

R. G. BECK

RGB:N

R. G. Beck, Manager.

Exhibit 711

June 4th, 1940

Mr. R. G. Beck—Manager
Canadian Titanium Pigments, Ltd.
P. O. Box 10
Montreal, Canada

Dear Mr. Beck:—

The questions raised in your letter of May 27th, 1940 are rather complex and the only opinions I can express are based solely upon the agreements as written.

As to your first question: The Licensed Field of the Canadian agreements, as also those of the other agreements, has never been construed as including extender pigments, as such, although it has been interpreted as including extender pigments when these are to be incorporated with titanium dioxide to form composite pigments. With respect to the agreements as limiting the field of activities of C. T. P., it must be borne in mind that the Licensed Field merely sets forth a field in which the partners who own C. T. P. (National and C. I. L.) will refrain from dealing in Canada except through C. T. P. and in which C. T. P. is entitled to receive from the partners information and patent rights. C. T. P. was formed to carry on in Canada the activities within the Licensed Field relinquished by the partners, but, since extender pigments per se, are not included within the Licensed Field, the partners have given no undertakings to refrain from dealing in these

materials in Canada or to pass on to C. T. P. information and patent rights concerning them. Conversely, there is nothing in the agreements which specifically prohibits C. T. P. from dealing in extender pigments or in any other articles of commerce. However, it is possible that the corporate charter of C. T. P. might contain a limitation as to the activities which C. T. P. is permitted to undertake. And, in view of the fact that C. I. L. holds at present all the Blanc Fixe business in Canada, I am rather inclined to believe that C. T. P.'s charter may contain some such limitation.

As to your second question: As with the Canadian agreements I find nothing in the B. T. P. agreements which specifically prohibits B. T. P. from dealing in extender pigments, although these are not included in the Licensed Field of the B. T. P. agreements. Hence, as far as I know from merely examining the agreements, B. T. P. may actually be competing with one or more of the owners of B. T. P. However, I am inclined to believe that if B. T. P. is dealing in Blanc Fixe within its territory it is doing so with the permission, previously obtained, of its owners.

It would appear to me that the possibility of C. T. P. selling B. T. P.'s Blanc Fixe in Canada might be investigated also by first ascertaining whether C. T. P.'s charter would permit doing so. If there was no prohibition in the charter, C. T. P. might then ascertain whether the owning partners had any objections. Presumably, C. T. P. would undertake to sell B. T. P.'s Blanc Fixe only with consent of its Board of Directors and that body, in all probability, would want to know the attitude of C. I. L. and National.

I hope the foregoing observations will be helpful to you. Please do not regard them as more than opinions based

solely upon my examination of the written word of the agreements, without reference to any commercial considerations.

If I can be of any additional service in this matter, please call on me.

Yours very truly,

NATIONAL LEAD COMPANY

TITANIUM PIGMENTS

C-I-L will grant to C.T.P.:

a) Licences for the world under patented inventions.

b) Information for the world.

c) Licences under du Pont's Canadian patents.

du Pont will grant to C-I-L:

a) Licences under du Pont's Canadian patents (under Tri-party agreement).

C.T.P. will grant to du Pont through National Lead:

a) Sub-licences for North and South Americas (except Canada and Newfoundland) under C.T.P.'s patented inventions only.

b) Sub-licences for North and South Americas (except Canada and Newfoundland) under C-I-L's patented inventions only.

TITANIUM TETRACHLORIDE

C-I-L will grant to C.T.P.:

a) Non-exclusive rights for Canada and Newfoundland only to patented inventions and information for the production of pigments.

C-I-L reserves:

a) The right to manufacture, use and/or sell in Canada and Newfoundland under patents and information owned or acquired by it.

b) Right to sell outside of Canada and Newfoundland.

c) Right to grant exclusive rights outside of Canada and Newfoundland to its own patented inventions and information.

TITANATED LITHOPONES

C-I-L will grant to C.T.P.:

a) Non-exclusive licences for Canada and Newfoundland under patented inventions.

b) Non-exclusive licences for Canada and Newfoundland under du Pont's patented inventions.

N.B. C-I-L will transmit no information.

Du Pont will grant to C-I-L:

a) Exclusive licences under du Pont's Canadian patents (under Tri-party agreement).

C.T.P. will grant to du Pont through National Lead:

a) Sub-licences for North and South Americas (except Canada and Newfoundland) under C.T.P.'s patented inventions.

C-I-L reserves:

a) Right to manufacture, use and/or sell in Canada and Newfoundland under patents and information owned or acquired by it.

b) Right to transmit exclusive rights outside of Canada and Newfoundland to its patented inventions and information.

Letterhead of

TITAN COMPANY, INC

Stockholm, the 29th July 1940

ADDRESS FOR CORRESPONDENCE:
Sigurd Andersen.
Stora Nygatan 31
Stockholm.

Dr. G. Jebsen Esq.,
c/o National Lead Co.
111 Broadway,
New York U.S.A.

Dear Dr. Jebsen,

Suggested arrangement Titanine C.T.P.
Regarding reciprocal patent assignment

I have received from Mr. Kaegebehn copy of his letter to you of the 25th June as well as copies of his memo of the 2nd of April, Leadco's board resolution of the 4th of April, C. T.P. /Mr. Hallett's/ letter of the 23rd of May and Mr. Kaegebehn's letter to Mr. Henry of the 3rd of June.

I appreciate that the suggested understanding Titaninc-C. T. P. would be a step in harmony with the principle that each Titanium Company owns the patents in its territory and I understand that the arrangement would be of particular importance to C.T.P. in view of stipulations in the Canadian patent law and the war situation.

I take the liberty to make the following remarks as to the position of the suggested arrangement in an intercompany policy following the above principle:

p.t.o.

Exhibit 713

In my understanding steps towards realisation of the principle of ownership of patents by the territorially interested Companies should preferably follow the agreement-structure of the concern, in other words the arrangements should be based on excisting license agreements.

The suggested understanding between Titaninc and C.T.P. would be a departure from the lines mentioned as a license agreement between Titaninc and C.T.P. does not exist, the rights of C.T.P. under Titaninc patents being derived from C.T.P.'s agreement with Leadco, to which latter Company Titaninc has obligations concerning its patent rights in Canada,—by virtue of the license agreement of 1920. This involves the complication of Leadco's participating in any direct arrangement between Titaninc and C.T.P.

Would it not be a preferable arrangement that Titaninc and Leadco come to an understanding regarding reciprocal assignment of patents,—/excepting U.S.A. where Titaninc prefers to retain ownership to its patents in view of its exchange of licenses with D./—and that Leadco upon such understanding with Titaninc endeavours to extend their understanding with C.T.P. to include the assignment to Leadco of all C.T.P. patent rights outside Canada?

In this connection I note that according to Leadco's Board Resolution of the 4th of April 1940 the assignment of Leadco's Canadian patents and applications should be in exchange of C.T.P.'s agreement to assign to Leadco *or its nominee* all patents and applications outside Canada and New Foundland—while according to Mr. Hallett's letter of the 23r of May C.T.P. will assign to Leadco only in such countries which are not reserved to Leadco's associates. C.T.P. will, however, extend the arrangement

p.t.o.

to associates willing to permit the assignment of their Canadian patents and applications to C.T.P.

It seems thus that Leadco's intention has been to make an arrangement with C.T.P. for all countries—presumably for the benefit of Titaninc in countries outside Leadco's territory—and perhaps this can be reached in the mentioned way.

As to the consequences of an arrangement obliging Titaninc to assign—direct or via Leadco—patents and applications to C.T.P. this would involve the assignment to C.T.P. of Canadian patents on two T.G. inventions, namely, cases T.187 and T.227 mentioned in Mr. Kaegebehn's letter of the 25th of June. These were assigned to Titaninc by T.G. in the beginning of this year and I presume that you find an assignment of these patents to C.T.P. to be hardly adviseable in the present situation.

Our understanding with T.G. regarding assignment of patents does not include the assignment of T.G.'s patents and applications in France and the British Empire and thus not Canada—this question having been left in abeyance—nevertheless T.G. offered to assign to us the above mentioned Canadian patents, which offer we accepted.

It seems to me that an understanding involving assignment of Titaninc patents to C.T.P. should contain the reservation that patents on inventions of T.G. and I.G. and possibly also S.I.T. should be excepted from assignment until further.

I am aware that an understanding involving reciprocal assignments C.T.P.-Titaninc would also have as a consequence that we have to assign to T.G. patents and applications in T.G.'s territory on C.T.P. inventions in view of our arrangement with T.G. I take it, however, that no such

p.t.o.

patents would be applied for in the present situation during which T.G. would not be notified of C.T.P. inventions—in view of the principle not to pass any information from one belligerant party to the other.

In the event of an arrangement between C.T.P. and Titaninc being contemplated the mode of operating could, as far as I can see, be similar to that suggested in Mr. Kaegebehn's letter to Mr. Henry of the 3rd of June, however, in case with reservations as to assignment of Titaninc patents and applications on T.G., I.G. and S.I.T. inventions. Under these C.T.P. would get exclusive licenses and it would have to be agreed upon how their cost should be shared. As a possibility I might indicate the arrangement that Titaninc pays half of the costs and C.T.P. the other half against a corresponding arrangement for sharing of costs on C.T.P. patents, which might be excepted from assignment and under which Titaninc or associates /other than Leadco/ have exclusive licenses. Leadco is not obliged to pay more than 50% of the costs of Titaninc's and associates' Canadian patents under which they have exclusive licenses and assuming that C.T.P. reimburses only Leadco's share, it seems equitable that C.T.P. gives exclusive licenses to Titaninc under corresponding conditions.

An exception would have to be made for licenses procured C.T.P. by Titaninc under patents belonging to Companies with which Titaninc has no direct agreement, for example I.G. patents. It seems to me that in such cases the rule should be that Titaninc is reimbursed for their expenses for such licenses.

I presume that Leadco has acquainted C.T.P. with the conditions agreed upon with I.G. for our licenses under I.G. patents viz. that the exclusive licensee should pay costs

p.t.o.

with 100% for patents within the licensed field while for patents of which an important part of the scope is beyond the licensed field the exclusive licensee pays 50% and I.G. 50% of the costs.

In paragraphs 2a and 2b of Mr. Kaegebehn's letter to Mr. Henry of the 3rd of June it might for clearness sake be preferable to insert "within the licensed field of this said agreement" after "exclusive license" in line 4 from the bottom of each of the paragraphs. I understand that the licenses are meant to be only for those features of the patents which are within the licensed field. I would mention this for the event that a similar wording is used in a possible arrangement between C.T.P. and Titaninc. I presume that the licensed field governing such arrangement would be that of the Leadco-C.T.P. agreement.

As you may perhaps wish a review of the present situation with regard to ownership of licensed field patents outside the inventor Company's territory, I enclose a brief note regarding this.

Hoping that the above remarks may be of some interest for your consideration of the matter I am,

Yours sincerely,

SIGURD ANDERSEN
Sigurd Andersen

Encl. note

Exhibit 713 2615

Letterhead of

TITAN COMPANY, INC.

Enclosure to letter to Dr. G. Jebsen
from Mr. Sigurd Andersen,
dated 29th July 1940.

NOTE RE

OWNERSHIP OF "LICENSED FIELD" PATENTS AND APPLICATIONS OUTSIDE INVENTOR COMPANY'S TERRITORY

With *T.G.* Titanine has an understanding regarding reciprocal assignment of patents and patent applications of the parties to the territorially interested Company. In this understanding is not included an assignment of T.G.'s patents in the British Empire and France. This has been left in abeyance until further.

An assignment of *I.G.* patents is not foreseen in the agreements but they have agreed to study the question of assigning certain of their patents outside T.G.'s territory to Titanine. We have as yet no further news on this question.

As to *Leadco, B.T.P. and S.I.T.*, the usual practice has been and is that these Companies do not retain ownership to their patents outside their territories but leave it to Titanine to apply for patents in Titanine's name and on its cost, wherever Titanine finds this desirable.

Patents in the territories of these Companies on Titanine's inventions and inventions for which Titanine has got the right to apply in the countries in question, have been taken out by Titanine in cases which we consider more important while we in less important cases have not retained ownership but have applied on behalf of the territorially interested Company for patents desired by it. In U.S.A. Titanine has however in the last years retained ownership to all patents on such inventions—with a view to using them in an exchange of licenses with D.

Exhibit 714

COPIES

Memorandum to the Executive Committee
April 2, 1940
Mr. R. W. Rockwell, Chairman
Mr. C. F. Kaegebehn

Gentlemen:

Concerning the division of cost of obtaining patents within the titanium field, all agreements between the associated companies, with one exception, provide that the inventor company (licensor) if it wishes to keep title to a patent, shares 50 per cent of the expense with the exclusive licensee. It is further provided in the agreements that the inventor company may relieve itself of any share of the expense by delivering title to the licensee, in which case the licensee becomes the owner and pays 100 per cent of the expense.

The one exception above referred to is our agreement with Canadian Titanium Pigments, Limited. In that agreement it is provided that the exclusive licensee will pay 100 per cent of the cost of obtaining a patent while the inventor company keeps title. This means that we are not in a position to deliver to our European associates, pursuant to our other agreements, more than an exclusive license for which under their agreements with us they are chargeable with only 50 per cent of the expense. Hence, the situation may arise where we will be in the disadvantageous position of being expected to pay 50 per cent of the cost of obtaining foreign patents on inventions of Canadian Titanium Pigments, Ltd.

Since the execution of the Canadian agreements the Patent Department has cooperated with the Patent Depart-

Exhibit 714

ment of Canadian Titanium Pigments, Ltd. to obtain Canadian patents as requested by Canadian Titanium Pigments, Ltd. but has, in accordance with the Canadian agreements, retained title to the patents for National Lead Company.

Recently the Patent Department has been approached by representatives of Canadian Titanium Pigments, Ltd. on the question of whether or not it would be possible to assign the Canadian patents now owned by National Lead Company to Canadian Titanium Pigments, Ltd. It was pointed out that to do so would materially strengthen the patent position of Canadian Titanium Pigments, Ltd.; it would better enable Canadian Titanium Pigments, Ltd. to resist any request for compulsory licenses which is permitted under Canadian law; it would permit a better enforcement of the Canadian patents if they were owned by a Canadian company.

It was the attitude of the Patent Department in the conversations which have taken place in this matter that any possible assignment of Canadian patents to Canadian Titanium Pigments, Ltd. should be in connection with a reconciliation of the variance in their agreement to effect a reciprocal passing of title. The Canadian Titanium Pigments, Ltd. has expressed its willingness to furnish a written statement of its intention when in the future it develops any patentable inventions to pass title to any patents outside Canada to National Lead Company.

Such an arrangement would, of course, mean our passing title to Canadian Titanium Pigments, Ltd. of a group of existing patents in exchange for a promise on the part of Canadian Titanium Pigments, Ltd. to relinquish title to any future developments they may make when they begin operating a plant.

Exhibit 714

However, the recent drift of the international cooperation is all toward permitting each of the associated companies to take title and to control patents within their territory, regardless of the company originally making the development. This tendency was noted when the writer was in Europe last year and has been mentioned in his reports. It was furthered in conversations at Paris, Billingham, Leverkusen and Le Zoute. Recently the Executive Committee and the Board of Directors approved an assignment of patents standing in our name in Germany to Titangesellschaft in exchange for the assignment of United States and other foreign patents of Titangesellschaft to Titan Co., Inc. To permit the reciprocal exchange of title to patents between ourselves and Canadian Titanium Pigments, Ltd. is, therefore, a step in accordance with the trend of the international cooperation. Mr. Garesché authorizes me to state that he is in full agreement with the reciprocal passing of title to patents to the associated companies operating in the territory covered by the patent.

Recommendation is, therefore, made to the Committee that its approval be given to assign our Canadian patents in the titanium field to Canadian Titanium Pigments, Ltd. in exchange for their promise to assign to us title to patents outside of Canada covering their inventions and to permit the Patent Department, under the supervision of Mr. Garesché, to arrange the details and to effect the actual transfer.

Respectfully,

CFK:JM

Manager—Patent Dept.

BOOK E—pages 1311, 1312 & 1313

Minutes of Meeting of the EXECUTIVE COMMITTEE held April 4, 1940.

PRESENT: Messrs. Rockwell, Geatty, Simon and Warshow, (also H. O. Bates, Secy.)

ABSENT: Messrs. Croft, Garesche, Rowe and Sidford.

The minutes of the meeting of March 28, 1940 were duly approved.

On separate motions the following resolutions were each unanimously adopted:

RESOLVED, that in furtherance of the interests of both parties to that certain License Agreement between this Company and Canadian Titanium Pigments Ltd. dated January 1, 1937, the officers of the Company be and they hereby are authorized and empowered in its name and behalf to assign to said Canadian Titanium Pigments Ltd. from time to time as acquired or developed any and all patents and patent applications of this Company, within the "Licensed Field" as defined in said Agreement, in the Dominion of Canada and the Colony of Newfoundland, against an agreement on the part of said Canadian Titanium Pigments Ltd. to assign to this Company or its nominee from time to time as acquired or developed any and all patents and patent applications of said Canadian Titanium Pigments Ltd., within said "Licensed Field", in countries other than the Dominion of Canada and the Colony of Newfoundland, and upon the understanding and condition that such reciprocal assignments shall in no way alter or limit the

general intent and operating effect of said License Agreement or any of the several other rights and obligations of the respective parties thereunder; and that the Patent Department of the Company, under the supervision of the Manager of the Titanium Division, be and it hereby is instructed to make the necessary arrangements for effecting the foregoing exchange of assignments on the part of this Company.

On motion the meeting then adjourned.

H. O. BATES
Secretary

May 7th, 1940

Re: Assignment to C. T. P.

Dear Mr. Henry:—

Your letter of April 26th, 1940 was received.

When I tried to check the lists you had enclosed, I found that apparently it has been the practice for C. T. P. to retain in Canada original Letters Patents and assignment documents of those cases which, since the conclusion of our agreements, have been filed by Mr. Smith. Hence, I was not able to check title of a good many cases included in your lists and, accordingly, I wrote you on May 6th, asking for a list of such documents as you may have in Canada. At this time I shall try to give you as much information, in response to the questions contained in your letter, as is possible.

First, it is my feeling that the patents to be transferred should be those falling within the scope of the Licensed Field of January 1, 1937, broadened according to the arrangement which is now nearing completion. The supplementary agreement of February 27th, 1939 provides for an exchange of rights under patents which are outside of this Licensed Field but which may have an application within the field. It would appear better for the present not to transfer title under such patents. However, this point could be considered later on in collaboration with all the associated companies.

Exhibit 716

As to the lists of patents sent with your letter, I shall take these up in a separate communication.

As to patent No. 314,856 (T. 138), I have in my possession assignments transferring title to this patent from the Metal & Thermit Corporation to Titanium Pigment Co., Inc. and from them to the National Lead Company.

As to Canadian application, Ser. No. 455,022 (Case T. 188) I have an assignment vesting title in National Lead Company. Mr. Taylor of Fetherstonhaugh & Co. is prosecuting this application. This is the case, not case T. 180, (Canadian Ser. No. 438,935), which is in interference with with the United States Deyrup application. Fetherstonhaugh & Co. have a stop-order against the Canadian application, pending the outcome of the United States interference. At present it appears that Deyrup will get one claim and Read, our inventor, will also get one claim so that two patents will issue.

Case T. 180 (Canadian Ser. No. 438,935) is an application covering an improvement on the Louisville Drying Machine. When this case originated in the United States there was some dispute between ourselves and the Louisville Drying Machinery Co. which was amicably settled on the basis of Louisville taking the patent and we an exclusive license within the titanium field. The Canadian patent has already issued but I do not know its number. I have written to the attorney of the Louisville Drying Machinery Co. for this information.

With respect to Case T. 111 (Canadian Patent No. 349,030) as with cases T. 128 and T. 119, and possibly others, I am inclined to regard these as cases which fall within the purview of the supplementary agreement of February 27th, 1939. Hence, it is my opinion that title to

these should not be transferred but that C. T. P. should have an exclusive license to practice the processes and use the products within the Licensed Field of the Agreement of January 1st, 1937 as it will be broadened.

Regarding the patents and applications of the I. G. Farbenindustrie and Titangesellschaft, we will first be in a position to transfer title to the Titangesellschaft cases. As yet no understanding has been reached with respect to the I.C. Farbenindustrie cases and these latter cases will have to wait until such time as the international situation permits further consideration. In my opinion, I think we should proceed first to transfer only those patents and applications which now stand in the name of National Lead Company. Thereafter we can transfer those which stand in the name of Titan Co. A/S, Titan Co., Inc. and Titangesellschaft. In each of the latter cases we shall, of course, have to work more slowly since the transfer will have to be done in collaboration with thos companies.

Regarding the filing of Canadian application in Case T. 240 and others touched upon in the penultimate paragraph of your letter, there is really no objection to filing these in the name of C. T. P. However, for the sake of order, I recommend that they be filed in our name and subsequently transferred. Before the exchange of title will be effected, we shall receive from C. T. P. a letter announcing the intention of C. T. P. in the future to assign to us its patents and applications for countries outside of Canada. I have still to consider the form letter submitted by Mr. Asselin, which I hope to do in the near future. I should like to have this more or less formal matter disposed of before initiating the procedure of filing our cases in C. T. P.'s name.

Exhibit 716

I think it might be well before actually recording our assignments if I came to Canada for a final check on the entire situation.

Yours very truly,

NATIONAL LEAD COMPANY

C. F. KAEGEBEHN

Re: Assignment to C. T. P.

Dear Mr. Henry:—

As to the lists sent with your letter of April 26th, we have the following comments:

As to page 1 of the list, all patents on this page stand in the name of National Lead Co. except Cases T. 62, T. 64, T. 65, T. 71-A and 71-B. These stand in the name of the I. G. Farbenindustrie. Two years ago I took up with Titan Co., Inc. the reason why these cases have been designated in the List of T-Cases as "Transferred to Titanium Pigment Co., Inc." At that time we endeavored to get a formal transfer of these patents but the I. G. Farbenindustrie was rather reluctant to transfer title. You have through us under these cases an exclusive license and it is possible that in the future the I. G. Farbenindustrie will consent to transfer title to you through us.

As to page 2, there is nothing in my files which will indicate the title to the patents listed as being owned by Titan Co. A/S and Titan Co., Inc. These are early patents, handled by attorneys other than ourselves and I presume that the original letters patents and assignment documents are in the European files of Titan Co., Inc.

As to page 3, Case T. 227 listed under the I. G. Farbenindustrie applications, is in reality a Titangesellschaft case. This together with Case T. 187 is being transferred to Titan Co., Inc.

Exhibit 716

As to page 4, et seq. I am able to confirm that the first 13 patents, Case T. 25 through Case T. 173 and T. 165 and T. 154-B stand in the name of National Lead Company. Apparently you have the original letters patents in Case T. 165 and Case T. 154-B. You also apparently have both assignment documents and letters patents in cases T. 130-B, T. 179 and T. 162.

As to all other cases listed on these pages with the exception of Case T. 188, discussed in my other letter of today's date, these all apparently stand in the name of National Lead Company. I note that the applications listed on these pages include cases, e.g., T. 115-C, T. 125-C, which originated with European companies. If I receive from you a list of assignment documents and original letters patents which you have obtained in Canada, I can give further attention to the applications listed.

Yours very truly,

NATIONAL LEAD COMPANY

C. F. KAEGEBEHN

CFK:JL

c.c. Mr. C. F. Garesché

Exhibit 717

COPY

June 25, 1940

Dr. G. Jebsen
c/o Titan Company, Inc.
26, Rue de la Pépiniere
Paris—8e—France

Dear Dr. Jebsen:

You are aware that the agreement with our Canadian associate, Canadian Titanium Pigments Limited, provides that the party who obtains from the other an exclusive license, is chargeable with 100 per cent of the cost of obtaining the patent. Thus, it is possible under this agreement for the inventor company to retain title to patents covering the inventions of that company without sharing any of the cost of obtaining the patent. To this extent the agreement is somewhat at variance with the other agreements existing between members of our titanium group.

From the beginning of the Canadian Company, we have followed the practice set forth in the Canadian agreement, namely, we have filed Canadian patents at the request of the Canadian company and have retained title to these patents while charging the Canadians with the entire cost of the prosecution of the applications. Lately, we were approached by the Canadian Titanium Pigments Limited with a proposal to assign to them Canadian patents within the Licensed Field, title to which resided in National Lead Company. Various reasons were advanced by the Canadians why such assignment should be effected. The matter was discussed with Mr. Garesché and at his suggestion, on April 2nd I presented the proposal to our Executive Committee.

Exhibit 717

Copy of my memorandum of April 2nd is enclosed herewith. On April 4th the Board of Directors of National Lead approved this transfer. Copy of the notification by Mr. Bates to Mr. Garesché is enclosed herewith.

Having obtained National Lead's consent, it was necessary to consider with Canadian Titanium Pigments Limited how to effect this transfer in order to place C. T. P. in the reciprocal position of giving title to their future patents to National Lead Company for National Lead's territory. We had several conferences with Mr. Asselin of the Legal Department of the Canadian Company, and with him worked out the procedure which was followed.

On May 23rd Mr. Haslett, as President of Canadian Titanium Pigments Limited, addressed a letter to Mr. Garesché, affirming the intention of C. T. P. to assign its patents outside of its territory to National Lead Company and to act in a similar manner with respect to National Lead's associates whenever such associates would assign their Canadian patents to Canadian Titanium Pigments. A photostatic copy of that letter of May 23rd is enclosed herewith. In order to avoid modification in the agreement, we then consulted with Mr. Henry of the Patent Department of Canadian Titanium Pigments and developed a modus operandi for handling future patents. Copy of my letter of June 3rd to Mr. Henry is enclosed.

I should like now to present for your consideration the possibility of assigning to Canadian Titanium Pigments Canadian patents owned by Titan Company Inc. in consideration of the assurance on the part of the Canadian Company to assign to Titan Company Inc. its future patents within the territory of Titan Company Inc. In this connection also should be considered the assignment of Titan-

gesellschaft's Canadian patents which have recently been assigned to Titan Company Inc., namely, patents in Cases T. 187 and T. 227. Furthermore, the question of the title to the I. G. patents comes up. We understand that the assignment of I. G. patents is to be left for future consideration. With respect to British Titan Products Ltd., we note that they do not at this time hold title to any Canadian patents. Hence, the arrangement with respect to this company would be in the nature of exchange of promises.

With respect to the patents now owned by Titan Company Inc., title to which may have been derived either from Titangesellschaft, British Titan Products, or any other of the associated companies, from the strictly legal viewpoint, Titan Company Inc. could assign these to the Canadian Company without any consultation with the original inventor company. However, if Titan Company agreed to enter into this reciprocal arrangement with the Canadian Company, it would appear that the various associated companies should be informed that Titan Company Inc. intends to transfer title to patents which Titan Company Inc. obtained from the associate to Canadian Titanium Pigments and at the same time to assure the associated company that Titan Company Inc. was now in a position to deliver to that associate full title to patents for its territory covering inventions originating with the Canadian Company.

On the whole, it is our view that this step brings the Canadian Company in closer harmony with the arrangements existing between the other members of the titanium family and is a step in the direction of permitting each associate to own and control the patents within its respective territory which was mentioned at Le Zoute last June and which has been put into effect recently with respect to as-

signing Titangesellschaft's patents within Titan Company Inc.'s territory to Titan Company Inc. and Titan Company Inc.'s and National Lead's patents within Titangesellschaft's territory to Titangesellschaft. We are, therefore, presenting this matter to you with our favorable recommendation. Your comments will be much appreciated.

With very kind regards,

Yours very truly,

C. F. KAEGEBEHN

[Sections 84 through 90, eliminated.]

No. 91: It was considered desirable that the various patents of National Lead Company and its associates in the titanium industry, under which the Company has an exclusive licence to operate within its territory, should be owned by the Company in order to assist it in safeguarding its e...sive use of such patents against third parties who may seek compulsory licences, and as the acquisition of such ownership by the Company was predicated upon an undertaking by the Company to assign its similar patents to National Lead Company and such of its associates that become parties to this reciprocal arrangement for their respective territories, it was

Exhibit 718

RESOLVED—That the Company is hereby authorized to assign from time to time, as acquired or developed, any and all patents and patent applications of the Company falling within the scope of the "Licensed Field" now defined in the License Agreement dated 1st January, 1937, between National Lead Company and the Company, or hereafter broadened as contemplated.

(a) to National Lead Company for countries other than Canada, Newfoundland and those countries which are reserved to National Lead Company's associates in the titanium industry subject however to the understanding that E. I. du Pont de Nemours & Company shall remain entitled to non-exclusive licences for North and South America (excluding Canada and Newfoundland) under such of the said patents and patent applications which relate to titanium compounds that can be used as pigments;

(b) to such associates of National Lead Company in the titanium industry, for their respective countries, who have undertaken reciprocally to assign to the Company for Canada and Newfoundland the patents and patent applications originating with them,

provided that such reciprocal assignments shall in no way alter or limit the general intent and operating effect of the said Licence Agreement or any of the other rights and obligations of the respective parties thereunder.

TITAN COMPANY, INC.

GJ/AK

Paris, September 21st, 1934.

Dr. G.W. Thompson
National Lead Company
Research Laboratories
105 York Street
Brooklyn, N.Y.

Dear Dr. Thompson,

I acknowledge receipt of your favour of August 20th and am glad to note the cooperation established between Messrs. Dorsey & Cole and Mr. Kaegebehn.

The patent applications of Titangesellschaft are handled by I.G.'s Patent Department in Leverkusen and through them by Dr. Duisberg in New York. It will presumably be very useful if the suggested cooperation could be established with Dr. Duisberg. He has also handled Titanium patents applied for in the name of I.G. Farbenindustrie.

I shall take up your proposal with Dr. Kühne who will, I trust, welcome the suggested cooperation.

I presume that it can only be to the good if you take up the matter with Dr. Duisberg direct already now.

For your information, I may mention that in the first years there was some confusion in these matters as some of Titangesellschaft's patents were applied for in the name of I.G. Farbenindustrie, but this seems to be satisfactorily corrected now. As Titangeselschaft and its associated companies have the right to an exclusive license under I.G.

Exhibit 719

Farbenindustrie's Titanium patents, as far as the Titanium industry is concerned, no particular harm has been done through the confusion.

Mr. Raynestad informs me that case T 114 concerns the subject matter dealt with in the Titanium Pigment Co.'s U.S.A. Appl. Ser. No. 736,045 and refers to a letter from here of August 31st this year.

Looking forward to see you in the latter part of October, I am

Yours very truly,

G. JEBSEN

Exhibit 720

November 1, 1934

Dr. G. Jebsen
Ste. Industrielle du Titane
26 Rue de la Pepiniere
Paris, France

Re: Our Cooperation with Respect to
U. S. Appls. of the Titangesellschaft.

Dear Dr. Jebsen:

This letter reviews the relations which have been established with Dr. Duisberg, Attorney for the I. G. Farbenindustrie in the United States, who has handled applications for the Titangesellschaft.

From the T. Case lists which were sent to Dr. Thompson on March 28, 1934, it was shown that certain applications under which the Titanium Pigment Company would receive exclusive license, were being prosecuted by Dr. Duisberg.

On August 20, 1934, Dr. Thompson wrote to Dr. Jebsen informing him of the cooperation established between Messrs. Dorsey and Cole and Mr. Kaegebehn, and asking approval for establishing similar relations with Dr. Duisberg. Dr. Jebsen replied on September 21, stating that he believed such relations could well be established with the approval of Dr. Kuhne. Accordingly, relations with Dr. Duisberg were established at a conference in Dr. Duisberg's office between him and Mr. Kaegebehn.

Dr. Duisberg welcomed such cooperation and, in fact, carried the proposal further than was expected by the Titanium Pigment Company. He outlined four proposals for future relations, namely:

Exhibit 720

1) Dr. Duisberg will send a copy of all applications, Patent Office actions, and amendments thereto, concerning Titanium Pigment Company. (Copies have already been received in three cases which Dr. Duisberg is prosecuting; Cases T.108, T.111, and T.112).

2) Dr. Duisberg wishes us to consider the advisability of consolidating the prosecution of all titanium applications which will eventually be controlled by the Titanium Pigment Company, into one agency.
In working out this arrangement, the matters will receive as much attention as Dr. Duisberg now devotes to them, while, at the same time, the Titanium Pigment will be in a position of assisting and cooperating in the prosecution of the cases.

3) Dr. Duisberg is willing to gradually withdraw the filing of these application from the firm of Washington attorneys who now handle the cases, and to file through whatever agencies the Titanium Pigment Company might think best.

4) The Titanium Pigment Company, if it be thought desirable, will send to the European associates copies of all Patent Office actions, citations, and amendments to United States applications filed by the Titanium Pigment Company, which are being prosecuted in the respective license fields of the European companies. This suggestion is made with the idea that such papers may be of assistance to the European companies in prosecuting their applications.

These proposals were discussed with Dr. Jebsen at a meeting in Dr. Thompson's office October 30, 1934, at

which were present Drs. Thompson and Jebsen and Messrs. Turner and Kaegebehn. Dr. Jebsen expressed his approval of what had been done thus far and the proposals reached with Dr. Duisberg outlined above. He suggested that the matter of future relations and the manner in which they could be worked out should be left to the discretion of Dr. Duisberg and the Titanium Pigment Company. He expressed himself as believing that what would be decided upon would meet with the approval of the Titangesellschaft.

As regards future applications, it is suggested that copies of the initial communication instructing Dr. Duisberg to file a United States application be sent to Mr. Kaegenbehn, thus informing him of the matter and enabling him to establish connections with Dr. Duisberg and to cooperate in the matter along the lines of the above outlined proposals in whatever ways will best assist in the prosecution of the case.

Very truly yours,

TITANIUM PIGMENT CO., INC.

Gentlemen:

Re: U.S. Applications of the Titangesellschaft m.b.H and Patent Expense

We have your very informative letter of January 22, 1935 and thank you for the trouble you have taken to explain the situation to us. We wish, however, to go into certain phases of this matter somewhat more in detail.

We observe that our letter of January 4, we have used the term "Titangesellschaft" in places where perhaps we might have used Titan Company, Inc. more accurately. This, however, has not been confusing to us, since we are clear on the point that the rights which we secure in United States Patents of the Titangesellschaft come to us as a result of our Agreement with the Titan Company, Inc.

We understand the situation regarding patent expense to be somewhat as follows:

A. Where we do not desire an exclusive license and the Titan Company, Inc. decides to file in our territory, we obtain a non-exclusive license but are not charged with any portion of the expense.

B. Where we desire an exclusive license and the Titan Company, Inc. wishes to file in their own behalf in the

United States, we obtain an exclusive license and are charged with 50% of the expense.

C. Where we request filing on our behalf and the Titan Company, Inc. does not care to file on their behalf in our territory, we are charged with 100% of the cost.

We are clear on A. and B. above, and the latter's relation to Article VI, Section 2, Paragraph (d) of the Agreement of 1920.

We have interpreted Article V, Paragraph (e) to refer specifically to *"expense of* MAINTAINING AND DEFENDING *any Letters Patent"* which has already been issued. We do not find any specific reference to the expense of prosecuting an application. We note, however, the obligations incurred by the contracting parties with respect to filing applications as specified in Article V, Sections A. and B. as amended, but in these paragraphs find no reference to expense. As we are able now to interpret Paragraph (e) of Article V., in the light of your letter of January 22, 1935, we would assume, then, that a United States Patent issuing from an application originating from the Titangesellschaft under which we desired exclusive license but which the Titan Company, Inc. had no desire to file in their own behalf, would be fully and completely assigned to the Titanium Pigment Company as to all rights, title and interest in the invention, and we would be charged with the entire cost of the prosecution. Can you inform us whether such has been the case with respect to any cases considered to come within the license field of the Agreement between the Titan Company, Inc. and the I.G., that is the Titangesellschaft applications which are referred to by you as "T" cases.

We have assumed, however, that in cases where we have requested an exclusive license and the application was

prosecuted to patent in the United States and, as issued, showed the I.G., or the Titan Company, Inc., or the Titan Company A/S or, in the future, will show the Titangesellschaft or British Titan Products Company as assignee, and, consequently, under United States Law as owners, such application and patent would be construed as showing the desire on the part of the Titan Company, Inc. to apply for patent in the United States, the expense of which would be 50% chargeable to us.

As we have interpreted Article VI, Section 2, Paragraph (e) of the Agreement of 1920, we have understood that where the inventor company or, as is the case, the Titan Company, Inc., does not wish to file in our territory, they will *on request by us, ... execute and deliver to us,* papers necessary to the preparation, filing and prosecution of the application for patent. This paragraph of the 1920 Agreement, as we have understood it, provides for our taking over complete filing and prosecution of the case. If we are correct in this assumption, then we would be in a position to entirely supervise the prosecution in the United States.

You will note that in recent cases where we have requested an exclusive license, as for example, cases T.108, 118, 120, and 121, we have not desired that you execute to us papers necessary for the prosecution of these cases, and have understood that it was your desire to file on your own behalf in the United States.

With respect to Cases T.118, 120, 121, which, according to our letters of February 1, 1935, we requested exclusive license, this request was predicated on the assumption that the Titan Company, Inc. intended to file in the United States in our territory. We noted, however, that you had informed us that you had not reached a decision in the

matter. Accordingly, in view of the above, in any of these cases should you come to a decision not to file in your own behalf, we beg of you to advise us in order that we may reconsider the case in the light of being charged with the entire cost of the prosecution.

With respect to the filing of the Titangesellschaft cases in the United States under which, through the Titan Company, Inc., we obtain exclusive license, you will note that we have not yet received the comment of the Titangesellschaft to paragraphs 2 and 3 of our letter of November 1, 1934 to Dr. Jebsen.

Since, as you point out in your letter of January 22, 1935, the expense of filing an application in our territory depends upon the decision of the Titan Company, Inc. and ourselves, it would appear that points 2 and 3 of our November 1st letter are particularly pertinent. If the Titan Company, Inc. and ourselves are only concerned, then there appears to be no reason why the Titangesellschaft should have any objection to the points raised in these two paragraphs. Should there be no objections, it appears that the prosecution of these cases might well be handled by the Titan Company's United States attorneys, Messrs. Dorsey and Cole, with the understanding, of course, that the expense involved will not be greater than the present arrangement. In considering such a suggestion, it can be pointed out that much of the actual detail work in connection with the literature searches, preparation of the application, amendments, etc. could be undertaken by our office, with Messrs. Dorsey and Cole acting in a consulting and supervisory capacity and filing the application and amendments in their name. Such an arrangement, consequently, should not involve added expense over the present arrangement.

We are not quite clear on one possible situation. Suppose, for example, the Titangesellschaft files an application

in Germany which, through the Titan Company, Inc., is called to our attention for decision regarding our desires with respect to it. Assuming that the Titan Company, Inc. did not wish to file on their behalf, would the Titangesellschaft have the right to file on their own behalf and in their own name in our territory, regardless of the Titan Company's decision and, in such case, what would be the interest of the Titanium Pigment Company in such application?

In the future, when informing you of our desire for exclusive or non-exclusive license, we shall be careful to take into consideration in our decision whether we are prepared to accept the entire cost of the prosecution of the application, or whether our decision is based upon the assumption that the Titan Company, Inc. will also desire to file on its own behalf in our territory. It would be very helpful to us if we could be informed of your decision at the time you transmit to us copy of the application for our consideration.

We trust that our remarks will not be considered in any critical light whatever. We are endeavoring only to establish a meeting of the minds between all interested parties with a view to establishing a modus operandi whereby these cases will receive the detailed attention they deserve.

Very truly yours,

TITANIUM PIGMENT CO., INC.
Sec'y.—Patent Committee

JLT

Exhibit 722

Letterhead of

TITAN COMPANY, INC.

Titanium Pigment Co. Inc.
105 York Street
BROOKLYN N.Y.

Paris, 14th May 1935

Att. Mr. C.F.Kaegebehn

Dear Sirs,

Patent Expenses on U.S.applications under Agreement

We revert to your letter of 5th February this year and beg to apologize for the delay in giving our comments to the questions raised by you, the reason being that the writer has been abroad for a long period.

We are in agreement with your understanding of the situation as expressed under items A, B, C of your letter.

As to item C, we fear we did not express ourselves very clearly with regard to our interpretation of the Agreement in our letter of the 22nd January this year.

As you rightly remark, Article V (e) does not refer specifically to the expense of prosecuting an application. However, your item C follows of article VI (d) providing for equal division of expenses between the Parties, also in case of obtaining Letters Patent, and the release from this charge can be had under conditions stated

1. In Article V (b) for the licensor
2. " " V (d) " " licensee

It may be questioned whether an expense in obtaining Letters Patent provided for under Article V (a) is not in any case to be shared according to Article VI (d) if any of

the Parties will keep strictly to the words of the Agreement, but we do not think it worth while to raise this question as this has never been practised and seems unreasonable in view of the preceding paragraph.

As to Article VI (e), you are right in assuming that this paragraph provides for your taking over the complete filing and prosecution of cases in which Titan Company Inc. and/or the inventor company does not wish to obtain patents in your territory. In this connection we may mention that according to the practice followed between the associated companies up to now, the inventor company has, in most cases, for the sake of convenience, taken care of the prosecution of the cases.

Article VI (e) does, in our opinion, not provide a right for the licensees to ask for papers re the prosecution of applications in case the licensor applies himself. (We refer to last paragraph page 2 and 3rd paragraph page 3 in your letter.)

In reply to your question at the end of the 3rd paragraph page 2 of your letter, you will find from our correspondence that the following cases which have been taken entirely over by you have been assigned to you and the patents have issued in your name:

T.41	U.S.patent	No.	1.773.727
T.44	"	"	1.831.852
T.54	"	"	1.738.765
T.63	"	"	1.758.472

In some other cases originating from Titangesellschaft (I.G. Farbenindustrie), in which cases the Titan Company Inc. did not wish to apply for patents, you expressed the wish to become the owner, and this matter was arranged

between you and Dr. Duisberg's office (see your letter to us of July 19.1932). The cases are the following:,

T.55	U.S.patent	No.	1.891.911
T.64	"	"	1.850.154
T.65	"	"	1.849.153
T.71A	"	"	1.941.285
T.71B	"	"	1.934.778

We are aware that the patents in these cases have issued in the name of I.G.Farbenindustrie.

With reference to the last paragraph on page 3 of your letter, you have now received our letter of 23rd March 1935 informing you of the approval by Titangesellschaft of the proposal contained in your letter of 1st November 1934, and we understand from correspondence with you that you are arranging with Dr. Duisberg's office the details with regard to the future cooperation in the prosecution of the Titangesellschaft's U.S.patent applications.

With regard to cases T.108 and T.118 and upwards referred to in the 2nd and 3rd paragraph on page 3 of your letter, we will inform you later on in separate letters regarding our decision as to applications in your territory.

We now refer to paragraph 2 on page 4 of your letter. The inventor company has the right to file patent applications in its name in all countries. We interpret paragraph V (a) of our Agreement in this manner. In the case of an application originating from the Titangesellschaft, this company has thus the right to file an application in its name if it so wishes. If the Titangesellschaft does not wish to file such application, the Titan Company Inc. may file in its name according to agreement with Titangesellschaft. If again, Titan Company Inc. does not wish to file an application, the right to file will pass on to you, according to your

Exhibit 722

agreement with us. As to exclusive licences, the Titangesellschaft is, according to its agreement with us, under obligation on our request to give us such licences in all countries outside their territory and we are, according to our agreement with you under obligation, at your request to provide and to hand on to you this right to exclusive licences in countries of your territory. Consequently you could in the case you suppose, always obtain an exclusive licence from us (See Article III, Agreement of 1920). Your right to non exclusive licence under such patent develops from the agreements in the same manner as your right to exclusive licence. Your interest in a patent applied for and owned by the Titangesellschaft in the "Licensed Field" and in your territory would thus—dependent on your wish—amount to either an exclusive or a non exclusive licence under the patent.

We have noted your wish to be informed of our decision when we transmit to you a copy of an application under the Agreement. We will do our best to have this done and will also call the attention of the Titangesellschaft to your wish. We may, however mention that, in most cases, this will be very difficult, as the copies of the applications are forwarded on from here without delay.

We welcome the opportunity to discuss this matter with you and we quite agree that it will be of mutual interest to establish the best possible way of proceeding in the handling of the "T" Cases between our companies.

We should be pleased to receive any further remarks which you might wish to make in connection with the above.

Yours very truly,

Per TITAN COMPANY INC.

RE. Titangesellschaft U. S. Patent Applications.

Gentlemen:

We thank you for your letter of May 14, 1935.

We wish to assure you that we fully appreciate the difficulties you encounter in securing more detailed information from the I. G. relative to Patent applications, and understand the special circumstances from which these difficulties arise.

We have no doubt that our recently established cooperation with Dr. Duisberg's office, which is progressing most satisfactorily coupled with your own efforts to adjust this situation, will eventually bring about an arrangement satisfactory to all parties.

We agree that the matter has to be handled with some care, and will welcome further information from you.

Very truly yours,

TITANIUM PIGMENT CO., INC

Secretary,
Patent Committee.

Re: Patent Expense on U. S. Applications Under Agreement

Gentlemen:

This will acknowledge the receipt of your very instructive letter of May 14th. Please accept our thanks for the trouble you have taken in so painstakingly answering the various questions raised in our letter of February 5th. This exchange of correspondence has resulted, we believe, in a complete understanding of the situation. We do not believe there remains any important differences between us with respect to the interpretation of this feature of the Agreement of 1920.

Having reached this understanding, we feel that we can now discuss the alternatives which confront us when we receive an application from you which has originated either from yourself, Titangesellschaft, or the British Titan Products Company.

1). In these cases regarding which you are able to tell us definitely at the time you send us the application that both yourself and the inventor company have decided not to file in our territory.

In this situation we are faced with only one alternative; namely, to decide whether we wish a corresponding application to be filed on our behalf and at our expense. In acquainting you of our decision we will say either that *we do*

not wish a corresponding application filed on our behalf or that *we wish a corresponding application to be filed on our behalf and at our expense.*

If the application we wish filed originates with the British Titan Products Company or yourself, we expect that the U. S. application will be filed through Messrs. Dorsey & Cole and that we shall have virtual control over the prosecution of the application, working with Messrs. Dorsey & Cole and keeping you fully advised.

If the application we wish filed originates with the Titangesellschaft, we expect that the U. S. application will be forwarded, as at present, to Dr. Duisberg's office. In cases coming under this heading, we will have the privilege of designating the attorneys through whom the application will be filed; and, in other ways, virtually controlling the prosecution of the case, keeping you fully informed thereof.

Such cases, originating with yourself, the British Titan Products Company, or Titangesellschaft, will be assigned to us so that the patent will issue in the name of the Titanium Pigment Company.

2). In those cases regarding which you are able to tell us definitely at the time you send us the application that either yourself or the inventor company has decided to file a corresponding application in our territory.

In this situation, we are faced with only one alternative; namely, to decide whether we wish an exclusive or non-exclusive license. In acquainting you of our decision we will say either that *we wish only a non-exclusive license* or that *we wish an exclusive license and are prepared to stand 50% of the cost of prosecuting the U. S. application.*

If we request only a non-exclusive license, we have no right to share in or control the prosecution of the U. S.

application, except as you or the inventor company may wish to avail yourselves of our cooperation which will be always at your disposal.

If we request an exclusive license, then we expect to share in the prosecution of the application, cooperating with the U. S. attorneys, i.e. Messrs. Dorsey & Cole (for yourself or British Titan Products Co.) or Dr. Duisberg's office (for Titangesellschaft,) who may be handling the case. Patents issuing from applications coming under this heading will issue in the name of the inventor company.

3). In those cases concerning which you are unable to acquaint us with the decisions of either yourself or the inventor company.

In this situation we are faced with the following three alternatives:

(a) To request only a non-exclusive license should either you or the inventor company decide to file in our territory. This would be tantamount to saying that we had no interest in having a corresponding application filed. Accordingly, should neither you nor the inventor company decide to file in the U. S., then no application would be filed. On the other hand, should either you or the inventor company decide to file, then the U. S. application would be handled as described in that section of No. 2 above dealing with non-exclusive licenses.

(b) To request an exclusive license but only dependent upon the understanding that either yourself or the inventor company will also wish to file. We do not anticipate that the situation will arise very frequently and, in general, we will endeavor to state our decision as per 3 (a) above or 3 (c) below. Should we be forced, however, to make a

decision of this kind, we will say in acquainting you of our decision that *in the event you or the inventor company decide to file a corresponding application in our territory we will want an exclusive license and are prepared to accept a charge of 50% of the prosecution of the application.* Should you or the inventor company decide to file in our territory, then the matter would be handled as described in that section of No. 2 above dealing with exclusive licenses.

(c) To request an exclusive license and to inform you that in the event neither you nor the inventor company would wish to file in our territory, we are prepared to have the application filed on our behalf and at our expense. In cases of this nature, we will say in advising you of our decision that *we desire a corresponding application to be filed on your behalf.* We will not know whether such cases will be handled according to that part of No. 2 above dealing with exclusive licenses or that part of No. 1 above dealing with the filing of an application on our behalf until we are informed of the decisions reached by you and the inventor company. Accordingly, we understand you will advise us of these decisions as soon as possible after receiving our decision. If you decide to file then the case would be handled as under No. 2 above, relating to exclusive licenses or, in the event you decided not to file, as under No. 1 above, relating to filing on our behalf.

The import of the discussion under No. 1 and No. 3 (c) above is that where we are charged with the entire cost, we will want to assume virtual control of the prosecution of the application and to have the patent issue in the name of the Titanium Pigment Company. We note from your letter of May 29th that you have already taken steps

to have the patents in Cases T. 108, 111, 112, and 115 issue in the name of the Titanium Pigment Company. We intend to write separately at a later date regarding how we will want the further prosecution of these cases handled.

If the suggestions contained in this letter conform with your ideas, please advise us. Then, we believe, a modus operandi will have been established with respect to handling U. S. applications originating abroad which will be as efficient and workable as that which prevails with respect to our applications handled by you.

We again thank you for your cooperation in this matter.

Very truly yours,

TITANIUM PIGMENT CO., INC.

Secretary,
Patent Committee.

CFK:AL

Exhibit 725

INTER-OFFICE CORRESPONDENCE
TITANIUM PIGMENT COMPANY, INC.
RESEARCH LABORATORIES
105 YORK STREET BROOKLYN, N. Y.

DATE June 10, 1935.

SUBJECT Exchange of Licenses with our Foreign Associates and Cost of the Same.

TO Patent Committee.

FROM C. F. Kaegebein

REFERENCE

As a result of protracted correspondence with Dr. Ravnestad of Titan Co., Inc., I am now in a position to report definitely regarding the cost of obtaining licenses in U. S. patents originating from our foreign affiliates.

The right to file a U. S. Application rests primarily with the inventor company; e. g. Titangesellschaft or British Titan Products Company. If the inventor company does not exercise this right it passes to Titan Co., Inc. If Titan Co., Inc. also declines to file in our territory the right to file then passes to us.

In the event that either the inventor company or Titan Co., Inc. decides to file, then we may obtain either a non-exclusive or an exclusive license. Where we request an exclusive license, we are charged with 50% of the cost of obtaining the patent. Regardless of whether we want an exclusive or non-exclusive license, the patent will issue in the name of the inventor company or Titan Co., Inc.

In the event that neither the inventor company nor Titan Co., Inc. wish to file, then our request for an exclusive license is tantamount to authorizing the filing of the U. S. application on our behalf and at our entire expense.

The confusion in the past has resulted from the fact that we have been called upon to reach a decision before we were in possession of the decisions of Titan Co., Inc. and the inventor company. In some instances where we had requested an exclusive license, believing we would be charged with only 50% of the cost of prosecuting the application, our European affiliates subsequent to our decision came to the conclusion they did not wish to file. Consequently, the application was filed on our behalf and at our expense. The prosecution was controlled from abroad and the patent issued in the name of either the Titan Co., Inc. or the European affiliate.

We have agreed with Dr. Ravnestad on a course of procedure which we believe will eliminate future misunderstandings. This procedure may be summarized as follows:

Titan Co., Inc. will endeavor to inform us of their decision as well as that of the inventor company at the time they send us an application. We will then only have to decide whether we wish to authorize the filing of a corresponding application on our own behalf and at our expense.

In those cases where Titan Co., Inc. find it impossible to inform us of their decision or that of the inventor company, prior to submitting an application to us, we will reach our decision bearing in mind that our request for an exclusive license may be, in effect, an authorization to file on our behalf and at our expense. Titan Co., Inc. will later, as soon as possible, advise us of their decision and that of the inventor company. Should they decide to file, then the application will be jointly prosecuted, the cost equally divided,

Exhibit 725

and the patent will issue in the name of the European company.

In the future, in all cases where we are chargeable with the entire cost of the case, we will control the prosecution and the patent will issue in the name of the Titanium Pigment Company.

C. F. KAEGEBEHN
Secretary,
Patent Committee.

1,816,388	July 28, 1931	A. Mittasch et al.
1,850,286	Mar. 22, 1932	"
1,878,013	Sep. 20, 1932	K. Staib
1,891,210	Dec. 13, 1932	H. Wolff

The question of the rights arose in connection with our agreement with the American Zirconium Corporation.

I have today, been officially informed by the Titan Co., Inc. that the I. G. Farbenindustrie considers these patents to fall within the license field of the various agreements and accordingly, rights have been granted to us in the above U. S. patents. Thus, we are in a position to grant sub-licenses to any of our cross-licensees.

Please advise me if I can be of any further service in this matter.

Yours very truly,

TITANIUM PIGMENT COMPANY, INC.,

Charles F. Kaegebehn
Secretary,
Patent Committee.

TITAN COMPANY, INC.
Wilmington, Delaware, U.S.A.

G. Jebsen,
Vice President

Paris, February 18th 1936.

GJ/AK

Titangesellschaft m.b.H.
Leverkusen I.G. Werk

Dear Sirs;

Re Patent Application in the territories of associated companies.

It has been suggested that the filing of a patent application by the company who has made or is controlling an invention (the inventor company) should not be undertaken in any country outside its territory, without consulting the associated company which has the right to be licensed for the country in question, thus giving this company an opportunity to express its view as to the advisability of such filing.

There have been cases where such filing has been feared to cause inconvenience and where possibilities of obtaining a satisfactory patent have been so small that by nearer consideration an agreement may have been reached as to refraining from such application.

Such a consultation may also bring forward points for the improvement of the application in cases where changes from the basic application are permitted.

Exhibit 727

I propose therefore that it be agreed in principle that such practice be established reciprocally between the associated companies who are in agreement with the above suggestion.

Yours very truly,

(sign.) G. Jebsen.

Exhibit 728

March 5, 1936

The Titan Company,
26, rue de la Pepiniere,
Paris, 8e—France.

Subject: Patent Applications in Territories of Associated Companies.

Attention: Dr. G. Jebsen

Gentlemen:

Dr. Jebsen's letter of February 18 has been referred to us for reply.

As we understand the proposal contained in Dr. Jebsen's letter, the associated companies are asked to agree in principle that applications will not be filed in territories outside of that of the respective companies without consulting the associated company in whose territory it is proposed to file an application.

We believe that such an arrangement is actually in operation at the present time, although, perhaps no expressed agreement has been made as to the principle involved.

For example, when the Titanium Pigment Company files an application in the U. S., the question of filing applications in the territories of Titan Company Inc. and its associates is left entirely to the discretion of the Titan Company Inc. and its said affiliates. At the same time applications originating with Titan Company Inc. and its affiliates are always presented to Titanium Pigment Company before filing in our territory.

A distinction, however, exists in this: that whereas Titanium Pigment Company has adopted a practice of per-

mitting Titan Company and its affiliates to decide in what countries outside the territory of Titanium Pigment Company applications are to be filed, Titanium Pigment Company is only consulted as to the nature of licenses it may desire in applications of Titan Company and its affiliates. We therefore believe that the principle of the proposal contained in Dr. Jebsen's letter is desirable if thereby the Titanium Pigment Company will secure, in addition to the right of choosing the nature of the license it desires, the privilege of expressing its opinion on the desirability of filing applications in its territory. It is presumed that such an opinion will have considerable weight in deciding whether such applications should be filed, if not actually determining the question.

If these considerations are correct we believe there will be no difficulty in securing the approval of Titanium Pigment Company to the proposal contained in Dr. Jebsen's letter. However we should like a reply commenting on our remarks before presenting the proposal to our executives for their approval.

Yours very truly,

TITANIUM PIGMENT COMPANY, INC.,

Attention Mr. Charles F. Kaegebehn
Secretary of the Patent Committee.

Dear Sirs,

Subject: Patent Applications in Territories of Associated Companies.

We acknowledge receipt of your letter of March 5th and agree with your interpretation of the writer's letter of February 18th, with the comment however that it is left open to the "inventor company" to put such weight on the opinions expressed by the associated company (licensee) as the inventor company may find advisable.

It is assumed that practice will develop this matter and the writer considers that it goes without saying that such opinions will be given due consideration.

The proposal has been brought forward because it has happened that inventor companies have applied for patents in countries outside their territory, without consulting the respective associated company beforehand. Such incidents may occur still, but, as the European associates have agreed to the above and it has in fact been the practice of the Tita-

nium Pigment Co, and the Titan Company Inc., it may be assumed that these will be rare exceptions.

As the writer has understood from Mr. Ravnestad that the suggested practice has not always been followed by our European associates as regards U.S.A., he notes with pleasure that you have not been inconvenienced in matters of this kind and shall be glad to receive your approval of the suggestion made.

Yours very truly,

Re: Patent Applications in Territories of Associated Companies.

Gentlemen:

Your letter of March 20th, 1936 was received and the matter was at once laid before Mr. Beschorman with the recommendation that the proposal contained in your letter of February 18th, 1936, be approved.

With Mr. Beschorman's consent, we are happy to inform you of our approval of the suggestion.

In handling matters relating to patent applications of the associated companies, the writer enjoys a most satisfactory relationship with Mr. Ravnestad and a cooperation has been established in this country with Messrs. Hutz and Joslin, successors to Dr. Duisberg, on matters pertaining to the United States applications of Titangesellschaft. We expect that the suggested proposal will even further strengthen these relations.

Very truly yours,

TITANIUM PIGMENT COMPANY, INC.,

Secretary,
Patent Committee.

Dear Sirs,

Patent Situation Canada

We beg to acknowledge the receipt of your letter of the 14th.ult. and are much obliged for the information given therein regarding patent applications filed by you in Canada in some of your recent patent cases.

With reference to the last paragraph of your letter, we beg to inform you that an application was filed in France in Case T.128 on the 4th. February 1936, and it may be expected that a patent will be published about August this year.

If, for some reason, you wish us to try and delay the publication of this patent, please inform us by return.

Yours very truly,

Subject: Case T.128—French Patent

Gentlemen:

Your letter of June 12 was duly received.

We would very much appreciate your obtaining a delay in the publication of the French patent for as long a time as is possible under the French law.

This request is promoted by the fact that we are encountering some difficulty in the prosecution of the U. S. application and would prefer not to have any disclosure of the subject matter of this case published until after we have had some further actions by the United States Patent Office.

Yours very truly,

TITANIUM PIGMENT COMPANY, INC.

Titanium Pigment Co.Inc.
P.O. Box 58
South Amboy N.J.

Att. Mr. C.F.Kuegebehn

Dear Sirs,

T. 128 French Pat.Appl. No.396.043 (Pat.No.803.198)

We acknowledge with thanks the receipt of your letter of the 22nd ult. in the above.

Immediately upon receipt of your letter we examined the possibility of having the publication of the above patent postponed. The French Patent Office usually refuses all requests for delay of publication of patents upon applications filed under the Convention. For non-convention applications filed in France a delay of 6 to a year is generally granted. In the above case it turned out that the application had already advanced at a stage where any possibility of a request for the delay of publication being granted was quite excluded. We accordingly filed no such request, and have now just been informed that a patent has been granted under No.803.198 and will be published by the middle of September this year.

The circumstances were thus unfortunately such as not to permit our being of assistance to you in this matter. We hope that the publication of the French patent will not inconvenience too much the prosecution of your U.S.application.

Yours very truly,

Per TITAN COMPANY INC.

ANDREAS RAYNESTAD

Exhibit 734

Dr. G. Jebsen,
For Mr. Andreas Ravnestad,
c/o Titan Company, Inc.,
26, rue de la Pepiniere,
Paris, Se—France.

Subject: Case T.128—French Patent No. 803,198.

Gentlemen:

We have your letter of July 15th informing us that it was not possible to delay publication and that consequently, the patent issue is due the middle of September, this year. The publication of the French patent will not inconvenience us in the prosecution of United States application. Our intention was that in the event U. S. application was disallowed, then there would be no other publication of the subject matter.

With the French patent issuing in September, there now no longer exists any reason for delaying the prosecution of our Canadian application and we are, accordingly, informing Messrs. Fetherstenbaugh to resume prosecution of the Canadian case.

Very truly yours,

TITANIUM PIGMENT COMPANY, INC.

Secretary,
Patent Committee.

26 rue de la Pepiniere
Paris—8e—France

Re: Canadian applications corresponding to U. S. applications of Titangesellschaft—particularly Cases T. 115, T. 118, T. 120, and T. 125-B.

Gentlemen:

We have just completed an investigation of the status of Canadian applications corresponding to American applications of Titangesellschaft in which we have an exclusive license, and for which we are defraying the entire cost of prosecution.

In this connection we have had some correspondence with Messrs. Hutz and Joslin.

The result of our correspondence with Messrs. Hutz and Joslin and our individual study discloses that there are in some cases pending Canadian applications, and in others none have been filed. A table showing the status of the situation is enclosed herewith.

We feel that the question of filing Canadian applications in certain of these T. Cases should be considered. For example, we believe that Canadian applications should be filed in Case T. 115, Case T. 120, and Case T. 125-B.

As to Case T. 118, the U. S. application was abandoned, and we do not feel the case is of sufficient importance to justify the Canadian application. Furthermore, the sub-

Exhibit 735

ject of Case T. 134 filed by the American Zirconium Corporation, we believe, substantially covers the subject matter of Case T. 118. (On September 22nd we wrote you concerning Canadian applications of the American Zirconium Corporation.)

We recommend filing Canadian applications in Case T. 115, T. 120 and T. 125-B on our behalf. In connection with the preparation of these applications we believe that they should be prepared in the United States because changes have been made in the specifications and claims to strengthen the cases, particularly in Case T. 125-B. We suggest that the applications be prepared by us in conjunction with Messrs. Hutz and Joslin or Potter, Pierce and Scheffler, and sent to Titangesellschaft for execution.

We urge you to consider this matter, and to let us hear from you as soon as possible. Please bear in mind that we will give these cases the same careful attention that we are trying to give to the U. S. applications of Titangesellschaft filed on our behalf.

Yours very truly,

TITANIUM PIGMENT COMPANY, INC.,

Secretary,
Patent Committee.

Exhibit 736

Letterhead of

TITAN COMPANY, INC.

No. 28.

GJ/AK

Paris October 18th 1937.

William C. Beschorman Esq.
Executive Vice President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. Beschorman,

The I.G. Farbenindustrie has requested Titangesellschaft to submit the following question:

" With regard to the possible development of the sales of
" Titanium alloys, we would suggest to obtain the agree-
" ment of Dr. Jebsen that also in general metallurgical
" products containing Titanium, with more than 2%
" of Ti, will be excepted from the Licensed Field as
" regards production and sale. This should so much
" more be possible as we already in 1932 were permit-
" ted to produce 40% Ferro-Titanium.
" Besides Ferro-Titanium the following materials are
" first of all to be considered:
"
" Ferro-Titanium-Carbon,
" Titanium Carbide, as well as perhaps also
" hard alloys containing Titanium Carbide,
" Titanium-Manganese-Aluminium,
" Titanium-Aluminium".

I have answered this today as per enclosed translation, to which I trust you will agree.

Exhibit 736

I beg, though, to mention that this matter in part was up for consideration in the meeting of April 20th (please see minutes No. 30, point 6.-) At the same time was raised the question of Titanium Silicite, Titanium Phosphite and similar products.

These questions are likely to come up again and I would therefore appreciate to have National Lead Company's standpoint in this matter.

I enclose a memorandum I wrote on May 1st 1933, as to the contractual position as far as the agreements between Titan Company Inc. and Titanium Pigment Company (National Lead Company), Titangesellschaft and British Titan Products Company are concerned.

With kindest regards,

Yours very truly,

G. JEBSEN.

Exhibit 736

MEMORANDUM

re the question raised by the I.G. Farbenindustrie Akt. Ges. whether the I.G. is free to manufacture Titanium Metal and Titanium Carbide, Titanium-Silicite, Titanium Phospite and similar products.

This matter is to be studied not only from the point of view of our agreement with the I.G., but also with a view to our other agreements, with Titanium Pigment Company, British Titan Products Co. and Société Industrielle du Titane.

All the "Licensed Field" definitions include Titanium Compounds and as such must be considered the above products with the exception of Titanium metal.

It is therefore beyond doubt that the I.G. is bound not to manufacture the above mentioned products ex metal without our permission, and this cannot be given without the consent of the other above mentioned associated companies.

It is a question to be studied, whether these products should be excluded of the "Licensed Field".

With regard to Titanium metal, the agreements are as follows:

Agreement with the Titanium Pigment Company.

This includes the Titanium metal (as long as it does not contain by weight more than 5% of a metal other than Titanium in its purely metallic state) and, according to article XIV, no license can be given by us on the production of Titanium metal, without abiding to the conditions of this article XIV of the 1920 agreement.

Exhibit 736

Agreement with the I.G. and our associates in B.T.P.

In these two cases the agreement establishing the co-operation mentions the manufacture and sale of Titanium and Titanium Compounds.

The License Agreement annexed thereto defines the "Licensed Field" as including only Titanium Compounds, etc., but not the Titanium metal. This definition of "Licensed Field" pertains also to the License Agreement between the Titangesellschaft, resp. the B.T.P., and the other associates in the respective companies (with the exception of I.C.I.).

A strict interpretation of this seems therefore to be, that a cooperation with regard to Titanium metal is foreseen between ourselves and our German, as well as our English associates, but the conditions as to such cooperation are not established.

Our agreement with B.T.P. art. XIV, puts the Titan Company Inc. under restrictions as to the licenses which Titan Co. Inc. can give (restrictions similar to those of art XIV in the 1920 agreement), but this article XIV of the B.T.P. agreement does not include Titanium metal, and we should consequently be free to act as we wish towards the I.G. Farbenindustrie as regard our relations with the B.T.P.

Article XIV of the 1920 agreement includes, however, Titanium metal, so that any cooperation with I. G. or Titangesellschaft, including a grant of licenses, will have to take regard to our agreement with the Titanium Pigment Company.

It goes without saying, that in any cases, according to the spirit of the agreements, the matter will have to be considered with all parties concerned.

May 1st, 1933.

Exhibit 736

Translated from German.

Paris, October 18th 1937.

Titangesellschaft m.b.H.
Leverkusen I.G. Werk

Attention Dr. Raspe.

In connection with the inquiry of the I.G. Farbenindustrie concerning the attitude of the Titangesellschaft, respectively Titan Company Inc., with regard to the manufacture of metallurgical products, I beg to state the following:

The definition of the "Licensed Field" in the agreement of 1927, amongst other things, says the following:

"Excluded are such materials which contain more than "5% of a metal other than Titanium in its purely "metallic (i.e. chemically uncombined) state."

I do not know the exact composition of the products in question, but I believe that products like Ferro-Titanium-Carbo Titanium-Manganese-Aluminium and Titanium Aluminium would come under the above exception, while Titanium Carbide and metal Titanium are covered by the "Licensed Field".

This is in full accord with the opinions expressed by the various parties present at the meeting of September 11th, as to the products which are of interest to Titangesellschaft for its manufacturing field—without going any further into the contractual definition of the Licensed Field.

I therefore trust that this will have satisfactorily answered the question asked and furnished the necessary data in reply to I.G. Farbenindustrie's inquiry.

Yours very truly,

(sign.) G. JEBSEN

Exhibit 737

October 26, 1937

Dr. G. Jebsen, Vice President
Titan Co. Inc.
26 Rue de la Pepiniere
Paris, France.

Dear Dr. Jebsen:

Replying to your No. 28 of October 18th, the subject matter of this letter was read to the Titanium Pigment Company Board today at their monthly meeting. It was the concensus of opinion that before a positive reply was made to the request of I. G. Farbenindustrie both you and ourselves should know the composition of the products—Ferro-Titanium Carbon, Titanium-Manganese-Aluminum and Titanium Aluminum.

If the analyses prove that these products are outside of the License Field we, of course, cannot object to their manufacturing and selling, but would it be possible to arrange in such cases for an exchange of information between the I. G. and all of our associates on the production of these products, and further to restrict the sale of them to the territorial lines provided for materials which do come under the License Agreement.

With kind regards,

Very truly yours

Executive Vice President.

Paris, January 11th 1938.

GJ/AK

William C. Beschorman Esq.
Executive Vice President
National Lead Company.
111 Broadway
New York City, U.S.A.

Dear Mr. Beschorman,

I refer to your letter of October 26th in which you enquire whether it would be possible to arrange for an exchange of information between the I.G. and all of our associates on the production of Ferro-Titanium-Carbon, Titanium-Manganese-Aluminium and Titanium-Aluminium if these products were outside of the Licensed Field, and further to restrict the sale of them to the territorial lines provided for the materials which do come under the License Agreement.

I took up the matter with Dr. Kühne on his return and reminded him of it again last Tuesday, January 4th, at the meeting we had in Leverkusen.

Dr. Kühne has been very busy since his return from U.S.A. and has evidently had no time to attend to the matter. Dr. Raspe has been requested to inquire at the I.G. works in Bitterfeld, which have this matter in hand.

I am writing you this as I wanted you to know that the matter has not been forgotten.

Exhibit 738

Personally I do not think that I. G. Bitterfeld will be inclined to do this without a compensation or knowledge that experience on the same line (Titanium alloys) is available within the associated companies suggested. The British Titan Products Company has nothing to offer on this line; neither has the Titanium Division of the National Lead Company, as far as I know.

I do not know what you may have in mind and if some sort of cooperation with the Titanium Alloy Manufacturing Company has been thought of.

I should appreciate any information you will give me in this respect.

With kind regards,

Yours very truly,

G. JEBSEN

2681

Exhibit 739

January 24, 1938

Dr. G. Jebsen, Vice President
Titan Co., Inc.
26 Rue de la Pepiniere
Paris, France

Dear Mr. Jebsen:

In reply to your letter No. 3 of January 11th referring to my letter of October 26th and asking what I had in mind at the time.

In your letter of October 18th regarding the question of the I. G. Farbenindustrie to Titangesellschaft, you asked as to the composition of the products—Ferro Titanium Carbon, Titanium Manganese Aluminum and Titanium Aluminum—before you passed definitely on their question. We did likewise; we certainly could not pass intelligently on their request until we knew the compositions.

Further than this I visualized the possibility of working up some kind of cooperation between the Titanium Alloy Manufacturing Company and our European associates. For that reason I suggested in my letter that the territorial lines should be the same for these products as those provided for materials which do come under the License Agreement.

With kindest regards,

Very truly yours

Executive Vice President.

Dear Mr. Beschorman,

Referring to my letter of January 11th, I beg to inform you that Dr. Raspe writes me in a letter of January 27th that he has taken up the matter with Director Meyer-Küster, the commercial manager for metal matters, who answered him that he has received the enquiry with interest. As at present a reorganization of this department of the I.G. is under consideration, he will revert to the matter later on when he is in a position to do so.

With kindest regards,

Yours sincerely,

G. JEBSEN

Exhibit 741

[COPY]

Dr. G. Jebsen
For Mr. Andreas Ravnestad
c/o Titan Company Inc.
26 rue de la Pepinere
Paris—8e—France

December 14, 1937

Re: Assignment of Titangesellschaft's (I.G. Farbenindustrie's) U. S. and Canadian Patents

Gentlemen:

Confirming the writer's recent conversations with Mr. Ravnestad, we beg to present for your consideration the following:

1. There are five United States patents and five Canadian patents in Cases T.55, T.64, T.65, T.71A, and T.71B, which stand in the name of I. G. Farbenindustrie in the Patent Offices of the respective countries although in the "List of T. Cases" it is stated that these patents have been transferred to Titanium Pigment Company. As you know, there exists no documentary evidence that these patents have, in fact, been transferred to us.

Accordingly, if I.G. Farbenindustrie regards these patents as transferred to us, as is indicated by the "List of T. Cases", i.e., has no desire to maintain these patents on their own behalf, then assignment documents should be executed. These assignment documents should be as follows:

a) A separate document transferring title from I.G. Farbenindustrie to Titangesellschaft; and

b) Another separate document transferring title from Titangesellschaft to Titan Company Inc.

This procedure is in accord with the existing agreements and follows that set forth in those agreements. The ques-

tion of whether or not Titan Co. Inc. will in turn assign the patents to us is one which can be settled between ourselves. Attached hereto are forms for these assignments. Instruction for the execution of these documents are attached to each document.

2. If, on the other hand, I.G. wishes to keep title and to maintain these U.S. and Canadian patents on their own behalf, we understand that since they fall within the Licensed Fields of the various agreements we are entitled to an exclusive sub-license under them through Titan Company Inc., and are in a position with respect to the Canadian patents to grant a sub-license thereunder to our affiliate—Canadian Titanium Pigments, Ltd. If the understanding is correct, then we desire from I.G. Farbenindustrie a statement to this effect. This statement should be made directly to Titan Company Inc. and acknowledge that Titan Company Inc. enjoys an exclusive license under these patents by virtue of the agreement between I.G. Farbenindustrie and Titangesellschaft, on the one hand; and the agreement between Titangesellschaft and Titan Company Inc. on the other hand. Titan Company Inc. will then be in a position to inform us that we enjoy an exclusive license under the Agreement of 1920. A letter in the form of the enclosure marked No. 1 will serve for this purpose.

We trust that we have made our position in this matter clear to you and that you will be able to conclude the matter with I.G. Farbenindustrie.

Yours very truly,

NATIONAL LEAD COMPANY

encls.

Exhibit 742

Letterhead of

HUTZ AND JOSLIN

December 27, 1937

Re: Proposed U. S. appln. corresponding to German applns. T. 48,568; T. 49,296 and T. 49,448

Mr. Charles F. Kaegebehn, Manager,
Patent Department, National Lead Co.,
111 Broadway,
New York City.

Dear Mr. Kaegebehn:

We enclose herewith one copy each of the above mentioned German applications filed by Titan Gesellschaft m.b.H. Leverkusen advises us that the process described in these applications has proven to be of considerable technical importance, because it is possible thereby to obtain titanium pigments of very high covering power and excellent whiteness. It is, therefore intended to file a corresponding U.S. application (or several, if necessary).

Leverkusen states that they have forwarded copies of these applications at the request of the Titan Co. Inc., in order to give you an opportunity to familiarize yourself with the situation and to draft one or more U.S. applications. Leverkusen asks that we also give some thought to the drafting of the U.S. case and that we inform them as soon as possible of your and our proposals with respect thereto. Leverkusen had originally intended to prepare a draft of a U.S. application and to submit it to you for your comments. However, they are still awaiting results of

further investigations which will probably form the subject matter of a further German "Zusatz" application. They, therefore, decided to forward the German applications at this time, so that you would have sufficient time to consider the question of drafting the U.S. case. Leverkusen has promised to send us a copy of the further German "Zusatz" application as soon as it has been prepared.

We are also forwarding, for your information, copies of several reports by Dr. Tillmann regarding the process. These consist of a summary of the reports Nos. 37/19, 37/20, 37/21 and 37/22, as well as the complete report No. 37/23.

We have not yet given much thought to the proper drafting of a U.S. application. At first glance it appears desirable to combine the subject matter of all three German applications in a single U.S. case. The first German application was filed April 29, 1937, consequently the U.S. application should be filed not later than April 29, 1938.

We have noted that the process is in some respects similar to that described in your U. S. P. 2,029,799. This patent should, therefore, be kept in mind when drafting the proposed U. S. patent application. We believe it advisable for us to discuss the matter of drafting the proposed U. S. application in the near future. Kindly advise us when it would be convenient for you to have such discussion take place.

Very truly yours,

HUTZ AND JOSLIN

encls.

Re: New T. case—T. 217
British Application No. 18,646

Gentlemen:

This letter supplements ours of September 13, 1938.

We beg to inform you that we desire the corresponding United States application to be filed here, under which we shall enjoy an exclusive license.

In the event you wish us to prepare the United States specifications and to take over the prosecution of the same, we should like some additional information, as follows:

1) A description of several distinctive experiments in which tantalum or columbium (niobium) is used, which will serve as specific examples for the United States specifications.

2) Specific data showing the improvement obtained by calcination in the presence of these elements; a direct comparison of the properties of pigments calcined with and without columbium or tantalum would be valuable.

If you would furnish us this information as soon as possible we will endeavor promptly to draft the United

Exhibit 743

States specifications for the approval of British Titan Products, Ltd.

As soon as we have heard from our Canadian associates we will write you further.

Yours very truly,

NATIONAL LEAD COMPANY

Letterhead of

TITAN COMPANY, INC.

GJ/GK

Paris, 26th. October 1938

Mr.C.F.Kaegebehn
National Lead Company
Patent Department
111 Broadway
New York

Dear Mr. Kaegebehn,

Concerning: Exclusive Licences to the National Lead Co. Titanium Divison under patents belonging to I.G.Farbenindustrie

These exclusive licences are given to National Lead Co. by Titan Co. Inc. which has received them from the Titangesellschaft which, in turn has received them from the I.G.Farbenindustrie.

The National Lead Co. has, for these licences, been charged with 100% of the expenses in obtaining and maintaining the patents. The National Lead Co. has objected to this considering that under the Licence Agreement National Lead should only pay 50%.

Taking this matter up with the I.G.Farbenindustre Patent Department, Leverkusen, they maintain their position of 100% charge referring to Article 5 (e) of the Licence Agreement which says that a party can relieve itself of its obligation to pay its share in any Letters Patent controlled by it by delivering to the other party an assignment

of all the right, title and interest of such party in and to the same.

The rights which Titan Co. Inc. and Titangesellschaft have to this patent consists in an exclusive licence. The I.G.Farbenindustrie writes further that the Titangesellschaft is prepared formally to transfer these rights, i.e. exclusive licence to National Lead Co. and therefore should be freed of any of the above-mentioned expenses. The same applies to Titan Co. Inc.

When no formal transfer of exclusive licence has been requested, this is due to the extra expense involved.

The National Lead would anyhow not receive an assignment of ownership.

Our agreements with the I.G.Farbenindustrie by which the Titangesellschaft obtains the licences from the I.G.Farbeniindustre provides that Titangesellschaft shall carry 100% of the expense.

To me it seems perfectly fair that the Titangesellschaft and Titan Co. Inc. are free of sharing in the expense.

The Licence Agreement between Titangesellschaft and I.G.Farbenindustre, as agreed upon in 1927 is not an agreement based on reciprocity as regards exchange of licences and the contributions which the I.G.Farbenindustrie is making is due to many other considerations and not to matters (Article XIV) which Titan Co.A/S. respectively Titan Co. Inc. was obliged to arrange on the basis of the 1920 Agreement. In other words, those contributions, is an extra advantage which Titan Co.A/S. thought desirable or proper to secure for the Group.

I talked this matter over with Mr. Garesché during his visit and he was inclined to think that the contractual interpretation of the agreements as above-mentioned was

right but made a reservation that he wanted to consider it with his legal advisors.

I note that we have forgotten to put it into the Memo. Mr. Garesché had prepared before he left. Will you please therefore bring it to his attention and see if we can get the matter definitely settled?

With kind regards,

Yours very truly,

G. JEBSEN

Paris-8e-France

Re: Exclusive Licences to the National Lead Co. Titanium Division under patents belonging to I.G.Farbenindustrie

Dear Dr. Jebsen:

Shortly after the receipt of your letter of October 26th we put the matter to Mr. Garesché.

It does not appear to us that Article 5 (e) of the Agreement of 1920, which is between Titanium Pigment Company, National Lead respectively and Titan Company A/S, Titan Company, Inc. respectively, furnishes the I. G. with a basis for contending that we should pay 100% of the cost of obtaining I. G.'s patents in our territory. We believe that since our contractual arrangements are not with the I. G. but with Titan Company, Inc. there is basis for maintaining that we should only be chargeable with 50% of the cost where I.G. Farbenindustrie retains title.

However, in view of the concessions made by I.G., as stated in the last paragraph, page 2, of your letter and in the interest of promoting a friendly and reciprocal cooperation between all the members of the family we are pleased to advise you that we will accept the entire cost for obtaining patents of the I.G. Farbenindustrie in our territory under which we have an exclusive license. This, of course, applies only to the I. G. patents but not to those of Titange-

sellschaft or the other members of the family who enjoy a reciprocal arrangement with Titan Company, Inc.

The costs of patents which relate to subject matters within, as well as outside the Licensed Field have not been considered. We suggest, if this meets with your approval, that such future cases be considered individually as they arise.

With very kind regards,

CFK/rd

GJ/AK

C.F. Kaegebehn Esq.
National Lead Company
Patent Department
111 Broadway
New York City, U.S.A.

Dear Mr. Kaegebehn,

Re: exclusive licenses to the National Lead Company, Titanium Division, under patents belonging to I.G. Farbenindustrie.

Many thanks for your letter of November 16th.

You seem to have overlooked that Article V e) of the agreement of 1920 between the Titanium Pigment Co. (respectively National Lead Company) and Titan Co. A/S (resp. Titan Company Inc.) is the same as Article V e) of the agreement of 1927 between Titangesellschaft and Titan Co. A/S (resp. Titan Company Inc.)

I. G.'s standpoint is of course based on the latter agreement and whatever interpretation is given to Article V e), the same should be applied in both cases. It is not reasonable that Titan Company Inc. should accept one interpretation towards Titangesellschaft and I. G., and another between Titan Company Inc. and National Lead Company; resulting in Titan Co. Inc. carrying the expenses in such a case.

Exhibit 748 —

I appreciate the intention as expressed in the penultimate paragraph of your letter. However, the reservation made in the last paragraph will, I am afraid, cover quite a number of the cases in question. It is namely likely that I. G. will leave more or less developments, which are exclusively within the Licensed Field, to Titangesellschaft to work on, and I. G.'s developments more relate to subject matters which are of interest both within and outside the Licensed Field.

It seems to me that when the National Lead Company is interested in a protection and wishes an exclusive licence within the Licensed Field, the value of the protection can be considered sufficient to justify the payment of the 100% of the cost. If the value does not justify this then a non-exclusive license will presumably be sufficient for the National Lead Company in order not to be prevented from making use of the invention.

Looking forward to your news, I am, with kindest regards and my best wishes for a happy New Year.

Yours sincerely,

G. JEBSEN

Copy to Mr. Garesché.

GJ/AK Paris, February 8th 1939.

C.F. Kaegebehn Esq.
National Lead Company
Patent Department
111 Broadway
New York City, U.S.A.

Dear Mr. Kaegebehn,

Re: exclusive licences to the National Lead Company, Titanium Division under patents belonging to I. G. Farbenindustrie.

I revert to my letter of December 24th, regarding the above.

You will remember that I. G., according to the agreement, charged 100% to Titangesellschaft of the costs incurred in obtaining letters patent in National Lead Company's territory on inventions regarding which the National Lead Company wishes an exclusive license or, if possible, the transfer of the patent, and that Titangesellschaft has charged Titan Company Inc. correspondingly, which in turn has charged the National Lead Company.

Further, according to your letter of November 16th, the National Lead Company agreed to accept that charge, if the subject matter of the invention wholly falls within the Licensed Field. The National Lead Company made, however, a reservation for patents falling partly outside the Licensed Field.

Exhibit 749

I felt that Titangesellschaft, which is only acting as an intermediary, should not have to carry any charges in this connection, and did not like to take the matter up with the I. G. expressly to the purpose of an alteration in the agreement of 1927 concerning their grant of licences to Titangesellschaft.

About two weeks ago I had a conference with the I. G. Patent Department, Leverkusen, straightening out various questions re patent matters, and found an opportunity to mention the above point.

I am glad to say that I found quite a good understanding of the question, and the Patent Department agreed that in cases where the protection of the patent covered subject matters outside the Licensed Field they were willing to charge Titangesellschaft only 50% of the costs, provided the part outside the Licensed Field represented an important part of the scope of the patent. In judging this question the real inventive idea of the case should be guiding and if only a relatively small part of the invention goes outside the scope of the Licensed Field, this should not lead to I. G. carrying 50% of the costs.

You will appreciate that this is a considerable concession from the I. G.

In making this concession, the head of the Patent Department, Dr. Redies, remarked that he assumed that matters of this kind, when they come up, will be treated in a broad spirit, to which I agreed.

I suppose this will meet the views of the National Lead Company, which you expressed in your letter of November 16th.

I will write you later when the matter is definite. It will not be dealt with as a change of the agreement but

as a mode of operation agreed upon between the Departments. I do not think it will be wise to suggest that it should be carried further.

With kindest regards,

Yours very truly,

G. JEBSEN

Copy to Mr. Garesché

Exhibit 750

Dr. G. Jebsen
c/o Titan Co., Inc.
26, Rue de la Pépiniere
Paris—VIIIe—France

February 20th, 1939

Re: Exclusive Licenses to the National Lead Co. Titanium Div. under patents belonging to I. G. Farbenindustrie

Dear Dr. Jebsen:—

Thank you very much for your letter of December 24th, 1938 and your letter of February 8th, 1939. We had just had a conference with Mr. Garesché last week, and were about to reply to your letter of the 24th of December when your letter of February 8th was received.

We had not intended that the last paragraph of our letter of November 16th, 1938 should constitute a serious or paramount reservation to the proposed arrangement regarding the I. G. Farbenindustrie's patents in our territory. It was our intention rather to call your attention to the possibility of such cases arising in the future in which cases a substantial and important part of the patent protection might lie outside the Licensed Field. I had in mind, for instance, Case T. 123, in which case the United States patent covered the preparation of pigmentary compositions by thermal combination of metallic oxide. Zinc oxide was the only metal oxide common to all combinations of the patent; titanium dioxide being an incidental and occasional constituent. Under the patent National Lead Company, under the agreements, would be entitled to an exclusive license within the Licensed Field, yet an important part, namely

the manufacturing of pigment compositions containing no titanium dioxide remain entirely the property of the I. G. Farbenindustrie to dispose of. We were suggesting in our letter of November 16th that cases covering subject matters both inside and outside of the Licensed Field be considered as they arose, feeling sure that the broad basis of coöperation between the companies would in every instance lead to a satisfactory division of course. Your letter of February 8th assures us that such is the case.

We also believe that it would not be wise to try to effect any change of agreement, but rather to leave the matter on the basis of a mode of operation between the Departments.

We appreciate the understanding attitude displayed by the I. G. Farbenindustrie and beg you, if you deem it expedient, to convey the same to Dr. Redies with the assurance that National Lead Co. will always endeavor to approach these matters in a broad spirit of mutual coöperation.

With very kind regards,

Yours very truly,

NATIONAL LEAD COMPANY

Attention Mr. C. F. Kaegebehn.

Paris, March 10th, 1939.

Dear Sirs,

We enclose in English translation extracts of a memorandum from a conference between Dr. Jebsen, Mr. Andersen, Dr. Raspe and Dr. Redies (manager of the I. G. Patent Department, Leverkusen), regarding certain lines concerning the cooperation between Titangesellschaft-I. G. and Titan Company Inc. in patent matters.

You will note that certain of the arrangements which have been agreed upon as desirable and to be aimed at are also of interest to you, and we should much appreciate if you will join us in these lines regarding the handling of patent matters.

Looking forward to your comments and, in case, your approval, we are

Yours very truly,

SIGURD ANDERSEN

P.S.—We enclose two copies of the extracts, signed by Dr. Jebsen, and would appreciate, in case you are in agreement, if you will return one copy marked "approved" with your signature.

P. P. S.—You will note that point 4.) is in accordance with Dr. Jebsen's letter to Mr. Kaegebehn of February 8th. Copy to Mr. Garesché—Not received by 3/23 '39.

Translated from German.

EXTRACT OF

NOTE OF CONFERENCE IN LUDWIGSHAFEN BETWEEN DR. JEBSEN, MR. ANDERSEN, DR. RASPE AND DR. REDLS, ON JANUARY 19TH, 1939

1.) In the case of inventions in the titanium field, the practice up to now has been that the inventor company files patent applications in all countries and prosecutes the applications before the Patent Offices. The Titangesellschaft decides for itself in which countries of its territory applications should be filed, while—as far as the territory of Titan Co. Inc. is concerned—the Titangesellschaft asks Paris to what extent patents are desired by Titan Co. Inc. Foreign applications desired by Paris are prosecuted by the Titangesellschaft at Titan Company Inc.'s expense. Some exceptions from this rule have already been made. Dr. Jebsen now raises the question whether it would not be convenient that the titanium companies take over the responsibility for the prosecution of patent applications each in their territory, to a greater extent than has been the case up to now. Dr. Jebsen bases himself on the fact that the titanium company to the territory of which the country in question belongs is the one most directly interested in the fate of the patent application and will therefore also be the most concerned with the application in question. Perhaps also in certain cases a saving of costs would be obtained, as the applicant company—when not carrying the cost itself but charging it to an associated titanium company—may be

inclined to defend certain patent rights further than may be justified.

Dr. Jebsen suggests that in all cases in which the inventor company does not give an exclusive license but assigns the entire ownership of the patent to the firm to which the territory in question has been reserved, this latter company take over the entire responsibility for the prosecution of the application. Thus, in these cases the company to which the territory in question has been reserved would be directly in touch with the Patent Office. It is left to that company to ask the inventor company for information in individual cases.

The persons present are in agreement with Dr. Jebsen's suggestion.

2.) According to the agreement, the inventor company is under obligation to exchange within a certain term new patent applications filed, and later on to ascertain in which countries the associated companies wish foreign applications. In Dr. Jebsen's opinion, the letters which are exchanged between Leverkusen and Paris and vice versa in this connection, are frequently written in a schematic form. Dr. Jebsen is of the opinion that it would be in the interest of all titanium companies if all parties would endeavour to give as complete information as possible in this connection, whereby the other titanium companies would have a more substantial basis in support of their decisions than they had before. Particularly not enough attention had, in the past, been paid to the question whether the exchanged patent applications really are within the frame of the titanium agreements or are only partly

covered by these agreements. In the past, frequent cases had taken place in which exchange of licences had been agreed upon although the patent right partly does not come under the titanium agreements.

The persons present welcome this suggestion. It is agreed that all parties will develop future correspondence in accordance with this suggestion.

4.) In those countries in which the Titangesellschaft (on its own initiative or upon request of the Titan Co. Inc.) wishes to secure a patent right on inventions of the I. G., the Titangesellschaft has to carry as a rule 100% of the costs involved. In such cases in which the patent right does not come entirely within the licensed field but falls outside this field for a substantial part, the costs in future are to be charged 50% to the Titangesellschaft and 50% to the I. G. Whether a substantial part of the right falls outside the licensed field is to be established for each individual case. In this connection it is to be borne in mind that the real inventive idea should be guiding in judging this question and the fact that an unimportant part of the invention falls outside the licensed field should not lead to one half of the costs being charged to I. G.

Dr. Jebsen calls attention to License Agreement D/V (e) in which it is stated that each party can free itself from the obligation to carry its share of the costs for maintaining or defending a patent which it controls, etc., by sending the other party the necessary documents for a formal assignment of the first party's right to the patent.

Dr. Jebsen points out that in this paragraph only the costs "to maintain" are mentioned and that the

costs for obtaining a patent right are not covered by the term "maintain a patent".

This results in a charge to the Titangesellschaft from which that company cannot free itself in the cases where Titan Co. Inc. takes a licence.

As will be known, the Titan Company Inc. hands these licences on to its other licencees for their respective territories, and the Titan Co. Inc. has refunded the costs to the Titangesellschaft in the cases where Titan Company Inc. was itself reimbursed, as well as with regard to the countries in which Titan Co. Inc. does not hand on the licences.

The National Lead Company has objected to these charges, but has, upon the initiative of Titan Co. Inc., declared itself willing to accept this charge in the cases in which the invention comes entirely within the licensed field, but has made reservations for the cases where the invention falls partly outside the licensed field.

It is expected that it will be possible to settle the matter in a satisfactory manner in view of the above arrangement between the Titangesellschaft and the I. G. regarding the charging of the expenses.

6.) It may happen that one of the associated titanium companies wishes an invention to be kept secret. As it is of no use to keep the invention secret in one territory while it is published in other countries, it must in such cases be agreed upon in due time between the associated titanium companies, whether it is generally considered convenient to keep the method secret so that either all companies renounce taking

out patent, or the obtaining of patents is made possible for all companies. In cases where it comes into question to keep the method secret the inventor company or other company who wishes to keep secret the method should therefore as soon as possible get in touch with all associated companies (generally through Titan Company Inc.) in order to ascertain whether the method should be kept secret. To be taken into consideration in this connection are processes where an infringement of the patent is difficult to ascertain.

The above agreement does not affect situations in which the method, on account of government regulations, has to be kept secret and acordingly a disclosure to third parties cannot be considered.

8.) Dr. Jebsen refers to the arrangement between the associated companies, according to which the inventor companies are not to file patent applications within the territories of the associated companies without having consulted the company which disposes of the territory in question.

It is considered desirable that the I. G. collaborates in this agreement to the extent that is possible.

G. JEBSEN

Paris, December 2nd 1938.

Dear Mr. Kaegebehn,

On June 20th we prepared a "Memorandum concerning Procedure re U. S. Patent Applications and their Prosecution to Patents for Inventions of Titangesellschaft and I.G. Farbenindustrie—Conference between Dr. G. Jebsen and Mr. C.F. Kaegebehn", which expressed your wishes as regards the handling of these patent applications to the extent I thought it possible to carry them through in a practical way considering the conditions existing in the Titangesellschaft and the I. G. Farbenindustrie.

Dr. Raspe personally accepted the memorandum, subject to the approval of I. G.'s Patent Department, Leverkusen.

I have now been advised in a letter of November 30th from Dr. Raspe, as per enclosed copy.

You have thus got an opportunity to try out a modus of cooperation as suggested, and I hope this practice will prove to be satisfactory.

I enclosed a copy of the memorandum in question.

With kindest regards,

Yours very truly,

G. JEBSEN

My dear Dr. Jebsen:—

3. *Memorandum.*

MEMORANDUM CONCERNING PROCEDURE RE U.S. PATENT APPLICATIONS AND THEIR PROSECUTION TO PATENTS FOR INVENTIONS OF TITANGSELLSCHAFT AND I.G. FARBENINDUSTRIE.

In connection with the above matter, our Patent Department wishes to say that they see no objection to having the National Lead Co. work out the final text of the United States application with the assistance of Hutz & Joslin. From practical experience which Leverkusen has had in connection with cooperation of this type, Leverkusen thinks it very likely that National Lead Co. will have quite a great deal of difficulty in working out the American text as they

will not immediately be in possession of the inventor's point of view.

In conclusion we wish to state that we are in agreement with the memo as it stands.

Yours very truly,

TITANGESELLSCHAFT m.b.H (signed) Raspe

(signed) (i.A.) Maus

Exhibit 752

MEMORANDUM

CONCERNING PROCEDURE RE U.S. PATENT APPLICATIONS AND THEIR PROSECUTION TO PATENTS FOR INVENTIONS OF TITANGESELLSCHAFT AND I. G. FARBENINDUSTRIE

CONFERENCE BETWEEN DR. G. JEBSEN AND MR. C. F. KAEGEBEHN—June 20th, 1938.

In order to obtain the best possible patents, it is desirable that the National Lead Company's patent department is informed of technical data which constitutes the basis for the patent application soon after the German patent application has been filed, and copy thereof sent to the National Lead Company through Titan Company Inc.

In view of the different manner of handling the prosecution of patent applications in the U.S. and in Germany and the great interest National Lead Company has in obtaining the strongest possible patents, it is suggested that the development (drafting) of these applications be handled by the National Lead Company's patent department in cooperation with Messrs. Hutz and Joslin. It should be investigated whether the above way of handling the matter can be done as regards Titangesellschaft. It may be that the I.G. Farbenindustrie's patent department in Leverkusen, as regards the U.S. applications of Titangesellschaft, in this way will be left out with the possible exception of formal notification to Messrs. Hutz and Joslin through the I.G. Farbenindustrie's patent department of Titangesellschaft's desire to file a patent application in the U.S. and the authorization of Messrs. Hutz and Joslin to do so, and also the transmission by Messrs. Hutz and Joslin

Exhibit 752

to the I.G. Farbenindustrie's patent department of formal papers to be executed together with information as to the allowance of patent. The rest will be a matter of cooperation between the National Lead Company's patent department, the research department of National Lead with Messrs. Hutz and Joslin on the one side and Titangesellschaft, through Dr. Jebsen's office, on the other side.

As regards the patent applications covering inventions emanating from the I.G. Farbenindustrie, it will be impracticable to make general arrangements of the above kind because:

1. Such patents will generally be of interest in other than titanium matters and, therefore, of interest to the I.G. Farbenindustrie.

2. The organization of the I.G. Farbenindustrie is so wide and has so many ramifications that it will be impracticable to have exceptions made as a general rule from their own way of handling patent applications. Dr. Raspe's attention may, however, be drawn to patent applications from the I.G. Farbenindustrie which may represent a specific and a strong interest to the National Lead Company, and also to lines of development where there is a cooperation between Titiangesellschaft and other departments of the I.G. Farbenindustrie, leading to patent applications taken out by one or the other. Dr. Raspe may here be able to arrange for such treatment of these cases as regards the U.S. with a view to more cooperation with the National Lead Company in the hope of permitting National Lead Company possibly to act in an advisory capacity. (Mr. Kaegebehn mentioned that he already has this.)

Case T. 123.
Re: Proposed License under U. S. Patent No. 2,068,294—I. G.

Dear Mr. Garesché:

In connection with the translation of I. G.'s letter to Titan Company, Inc. of April 19th, 1938 in the above-identified case, you will be interested in the background of this matter.

The original U. S. application from which U. S. Patent No. 2,068,294 issued was filed in the United States on February 3rd, 1932, by I. G. who, under their agreements should have brought this case promptly to the attention of Titan Company, Inc., who could then have informed us thereof. However, we were not aware of the existence of the U. S. application until the beginning of January 1935. The then existing Patent Committee, on the recommendation of Mr. Barton, decided to request only a non-exclusive license for the United States. Thereby we were relieved of any part of the cost of prosecution of the United States application. However, I. G. actually billed Titan Company, Inc. for expenses in connection with the application and Titan Company, Inc. has billed us in the case. (Cf. Titan Company's invoice of March 31st, 1937). It is only in connection with grant of an exclusive license that charges are justified. To the extent, therefore, that we have been charged with a share of the prosecution of the United States application, we are, in effect, an exclusive licensee

under the patent for as far as the subject-matter relates to the Licensed Field of the 1920 Agreement.

C. K. Williams Company, some time last summer, approached Messrs. Hutz and Joslin, attorneys for I. G., for terms for granting them a license under the patent. On October 31st, 1937, Dr. Jebsen wrote to Mr. Beschorman stating that I. G. had had an offer to grant licenses under the patent. I do not have a copy of that letter, but it is my recollection that it was understood by I. G. that the license contemplated for C. K. Williams was not to include the right to make pigments containing titanium dioxide.

It did not appear to Mr. Beschorman to be desirable that another U. S. company should have any rights in this patent and he instructed me to write to Dr. Jebsen asking that the license we enjoyed be acknowledged or be changed to be an exclusive one and what sum of money I. G. would expect to make our exclusive license applicable for the entire scope of the patent.

I enclose herewith a copy of my letter to Dr. Jebsen of November 17th, 1937 in answer to his of October 21st.

I. G.'s letter of April 29th indicates that they would consider $5,000.00 to grant us an exclusive license. However, the last sentence of the German letter does not state that if we should accept this offer, we would be the sole arbiters for the grant of license to C. K. Williams or anybody else, but appears to indicate that they would expect to be a party to the consideration of conditions for grant of sub-licenses under the exclusive license we might obtain for the $5,000.00.

Yours very truly,

CFK:lo
enc.

Exhibit 745

Paris, 30. July 1938.

MEMO.

for Mr. Rockwell.

1) *Zinnwerke Wilhelmsburg.*

Dr. Jebsen will inform Mr. Rockwell of Dr. Kühne's preliminary reply as to I. G.'s possible interest in this matter.

If I. G. are interested, Dr. Jebsen will start negotiations with the I. G. in September, with a view of developing a proposal for I. G. to take an interest in Zinnwerke Wilhelmsburg, and take over the responsibility for the management, alternatively I. G. taking over the National Lead Co.'s interests.

Included in N. L. Co.'s interests are Patino's interest—and will be, possibly Kohn-Speyer, resp. Mr. Brindley's interests.

Mr. Rockwell will leave a Memo. with Mr. Henriksen giving the result of his conference with Patino regarding this matter.

Mr. Rockwell will, on his return to the United States, send Dr. Jebsen information as to the cash amounts which have been invested by N. L. Co. and partners from the beginning, including the dates of investment as well as the amounts, which they have got out in cash in free value. He will further inform Dr. Jebsen of the amount which stands in N. L. Co.'s books, and the interests which have been booked, with specification as to what has been paid in German Marks, and what has not been paid, resp. credited.

Exhibit 745

2) *Dupont.*

In view of Titan Company Inc.'s obligation towards our associated companies in this matter, the licence agreements between DuPont and Titan Company Inc. shall be exclusively signed in the Paris Office by Dr. Jebsen (or his assistants), unless he specifically requests to have them signed in New York. The licence agreements will have to be drawn by Mr. Kaegebehn in cooperation with the Dupont people, and sent us to Paris for signature.

Mr. Rockwell will see Mr. Rupprecht and inform him of our European companies' attitude in these matters, and particularly mention the I. G.'s and T. G.'s questions arisen as regards the South-American markets.

3) *Kuhlmann.*

It was considered desirable that Dr. Jebsen continues negotiations with Kuhlmann regarding cooperation in France with a view of the erection of a factory. As a basis for cooperation was considered a 50/50 participation as regards cash investment and voting power, and a compensation for Sté Industrielle du Titane's position in the form of a part of the profit, after a reasonable interest or dividend has been given to the cash investment (7%):

4) *Norwegian Ilmenite.*

Mr. Rockwell is aware of the desirability of taking over ilmenite from Norway as soon as possible, and further to have pushed the investigations regarding an extensive use of the ore. This refers to the use in the

present qualities as well as to the development of the Rutiox pigment.

Dr. Jebsen did draw his attention to the indications resulting from certain experiences in Billingham of the Norwegian ore being particularly suitable for the production of Rutiox. Whether the Travancore or the Quilon ore are equally suitable will be of special interest in connection with the question of Dupont eventually taking up production of Rutiox. If namely the last mentioned ores are less suitable, we may get a request from Dupont for deliveries of Norwegian ore—and the possible difference in the ores may influence the price.

5) *Lead Titanium Frits—Goodlass, Wall & Ass. Lead Industries' development.*

Mr. Rockwell had a talk with Mr. Tasker, without arriving at any definite conclusion regarding this matter.

Mr. Rockwell has seen Kaegebehn's letter of June 24th to Dr. Jebsen and will inform Dr. Jebsen as soon as possible about N. L. Co.'s standpoint.

At the request of N. L. Co., Goodlass, Wall & Ass. Lead Ind. applied for a Canadian patent and instructed their agents to have it assigned to N. L. Co. and send it to them.

The application was filed on the 5th of July 1938.

6) *Exclusive licence under the I. G. Patent U. S. P. 2,068,294,* for which C. K. Williams Co. Inc. had expressed an interest and I. G. had given N. L. Co. a first call, suggesting $5.000.- compensation. To N. L.

Co.'s reply through Dr. Jebsen, that this sum was so far above what the N. L. Co. could have in mind, that they would refrain from making an offer, the I. G. has answered, that in view of the friendly relations, they were quite prepared to consider a different proposal.

Mr. Rockwell will arrange that Garesché discusses this matter with the I. G. on his forthcoming visit in September.

C.F. Garesché Esq.
National Lead Company
Titanium Division
111 Broadway
New York City, U.S.A.

Dear Mr. Garesché,

I write to advise you that I have now been informed by Titangesellschaft by a letter of November 30th, that the arrangement agreed upon with Dr. Kühne and Dr. Brüggemann in our meetings of October 10-13 in Leverkusen, as laid down in our note of October 14th, has passed and been accepted by the various instances in the I.G.

I have now handed the matter to Mr. Ravnestad and Mr. Andersen, to take care of the further steps of formal nature.

Enclosed please find copy of the note of October 14th.

With kindest regards,

Yours very truly,

sign. G. JEBSEN

Copy to Mr. Kaegebehn.

2722

Exhibit 756

Note

ON LEVERKUSEN MEETINGS OCTOBER 10th-13th 1938.

Dr. Weise's patent covering Reduction of Copperas and incidentally the manufacture of Iron Oxide Pigment was discussed with Dr. Kühne, Dr. Brüggemann and Dr. Raspe, and it was agreed that I.G. would give National Lead Company, through Titangesellschaft and Titan Company Inc. without compensation, an exclusive license in the titanium field for the use of this patent, restricted however to the manufacture of sulphuric acid from copperas, and not to be used by National Lead Company for the production of an iron oxide pigment.

At a later date National Lead Company, should they desire to use this patent to produce an iron oxide pigment, may negotiate the matter with the I.G., but it was specifically agreed that this should not be understood as an option on such a license.

In other words, the patent would be treated as coming within the License Agreement between I.G., Titangesellschaft and Titan Company Inc. with a limitation as regards the production of red iron oxide.

U. S. Patent No. 2,068,294 (Case T. 123).—C. K. Williams has been negotiating for a license under this patent).

It was agreed that the I.G. would give National Lead Co., through Titangesellschaft and Titan Company Inc., an exclusive license with no compensation for the use of this patent, insofar as it had to do with the use of titanium, but that they would be free to license in any way they might see fit, other companies to produce other pigments not containing titanium.

Dictated by: Mr. Garesché and Dr. Jebsen
14/10 1938.

Mr. C. F. Kaegebehn, September 15, 1939.
Patent Department
National Lead Company,
New York City.

Dear Mr. Kaegebehn:

With regard to the present war situation and its affect on the international cooperation as to exchange of patents, experience, etc., I have in mind that we until further should apply the following principle, and have instructed our people to do so:

No exchange takes place communicating information from the belligerent countries on one side to the belligerent countries on the other side, but the exchange continues between the neutral countries and the belligerent countries on each side.

This is relatively easy to observe as regards patent applications and licenses, but care will have to be taken as regards exchange of technical experience.

As regards the attitude of our associated companies in the belligerent countries, I have no information as yet, and will have to give them some time, until conditions more or less adjust themselves to the new situation. I should much appreciate to have information from your side concerning the patent situation in this matter.

Hoping that Mrs. Kaegebehn and yourself are well, I am, with kindest regards,

Yours very truly,

G. JEBSEN

Dr. G. Jebsen
c/o Titan Co. A/S
Fredrikstad, Norway

October 5th, 1939

Dear Dr. Jebsen:—

Your letter of September 15th, 1939, with regard to the present war situation and its effect on the international cooperation as to exchange of patents, was received. I trust that the following information concerning the patent situation on our side is what you seek, and will be of interest to you.

1. *Applications of Titangesellschaft and I. G. Farbenindustrie, Respectively.*

On August 29th, in the course of a conference I was having with Mr. Hutz of the firm of Messrs. Hutz and Joslin, attorneys for the I. G. Farbenindustrie, Mr. Hutz received a cable from the I. G. Farbenindustrie to the effect that they feared that communications would be interrupted for a considerable time, and asking Mr. Hutz to do whatever he could to keep the I. G. Farbenindustrie's United States cases alive. Mr. Hutz and I presumed that this request applied equally to the patent applications of both Titangesellschaft and the I. G. Farbenindustrie, relating to subject matters within the Licensed Field. We agreed between ourselves to cooperate even more closely in doing whatever we could to maintain and, if possible, to issue into patents the now pending United States patent applications of Titangesellschaft and the I. G. Farbenindustrie. Accordingly, Mr. Hutz and I will have to use our best judgment regarding the drafting of amendments in response to Patent Office actions, and to avail ourselves wherever pos-

sible of the research and experimental facilities of the National Lead Company. In any event, we are working very closely with Mr. Hutz, and will do whatever possible to minimize the effect of the war situation on the United States patent applications of Titangesellschaft and the I. G. Farbenindustrie, the latter insofar as we have an interest in them.

2. Canadian Patent Situation.

In Canada, the Dominion Parliament has already passed a "War Measures Act". This act is of very broad, general nature, and the power vested in the government to control alien property, including patents, is very sweeping. The Canadian Secretary of State has been designated as the Custodian of Alien Property. In this general act, the only specific reference to patents is a short section which provides that the Custodian may, if he sees fit, cause an allowed, but not issued, patent of an enemy alien inventor to be issued to himself as patentee. Our Canadian legal advisers inform us that this act, being directed in general to all forms of enemy property, is applicable to patents, and they anticipate, following the course of procedure in the last war, that the Canadian Parliament will issue in the near future regulations specific to patents.

The "War Measures Act" provides that there shall be no dealing with the enemy, either directly or indirectly, for example, with people whose relationships present or past with the enemy might place them in the light of being an agent of the enemy. The purpose is, of course, to prevent the flow of capital to the enemy and also information.

By virtue of the passage of this act, the title to those patents of Titangesellschaft and the I. G. Farbenindustrie

which have issued in Canada and under which Canadian Titanium Pigments, Ltd., through us, enjoy an exclusive license, becomes, in the opinion of our legal advisers, vested in the Custodian of Alien Property. The Custodian has the right to declare any enemy patent null and void; to grant licenses to any Canadian company who may apply for a license, regardless of whether there are any existing outstanding licenses to a Canadian company which have been obtained from the enemy; to declare any existing license agreement, by virtue of which a Canadian company has obtained a license from an enemy, null and void, and, in general, to act very drastically in any way he sees fit to dispose of enemy property.

During the past week I have been in Canada for a series of conferences with the legal people of Canadian Industries Limited and Canadian Titanium Pigments, Ltd. and our own advisers on the best course of procedure to adopt. It was agreed that some representation should be made promptly to the Custodian before he takes any irrevocable steps and before any legislation is enacted specific to patents. In representing this matter to the Custodian, the endeavor will be made to show him that the logical party in Canada to hold licenses under the patents of Titangesellschaft and the I. G. Farbenindustrie, relating to subject matters within the Licensed Field, is C. T. P. It is anticipated that the Custodian may inquire into the relations of C. T. P. and National Lead Company out of which comes the exclusive license to C. T. P. If he does make such inquiry, it is to be anticipated that National Lead Company will have to represent that no part of the profits derived from C. T. P. finds its way into Germany. C. T. P. by virtue of the act itself is, of course, prohibited from having

and direct or indirect dealings with the enemy, and it may be expected that the Custodian will even require that C. T. P. refrain from passing any information regarding technical or patent matters to National Lead Company, regardless of any assurance National Lead Company could make that such information would not find its way to the enemy, because National Lead Company is not within the jurisdiction of the Canadian government. We are, of course, prepared to cooperate with C. T. P. as far as necessary to protect their licenses in Canada. You will appreciate that if we are successful, the effect will be to actually protect the patents of Titangesellschaft and the I. G. Farbenindustrie in Canada.

With respect to the now pending applications of Titangesellschaft and the I. G. Farbenindustrie in Canada, the Canadian Patent Office is withholding issue of these patents. Steps will be taken to ascertain whether it is desirable to request the Custodian where possible to issue the patents in his name and grant licenses to C. T. P.

Mr. T. W. Smith, manager of the Patent Department of C. I. L., expects in the near future to have a personal, informal conference with the Canadian Commissioner of Patents regarding the proper and most effective way to present our case. We have also had a discussion with Hutz and Joslin, United States patent attorneys for the I. G. Farbenindustrie, who are cooperating whole-heartedly with us. They have advised their Canadian attorneys, Messrs. Fetherstenbaugh and Co. of Ottawa, to cooperate with Mr. Smith. As soon as Mr. Smith has had his first conference he will communicate with me regarding the steps which should be taken, and I, in turn, will write you further.

To sum up, the Canadian situation appears to be crystallizing in the direction similar to that existing in Great

Britain, as described in Mr. Tasker's letter. It may be expected that if C. T. P. is able to protect its licenses in Canada, National Lead Company will have to forego its right to receive technical and patent information from Canada. This latter point is not of practical importance. As a matter of fact, the Canadians are not manufacturing or experimenting and very little information could be expected, in any event, from them. However, it indicates that as far as Canada is concerned, as in England, even the flow of information to neutrals will probably be cut off by Government regulations.

With respect to the cooperation between ourselves and C. T. P., regarding the prosecution of patent applications, we will continue as far as possible to place at their disposal our inventions and such other inventions of the associated companies, for example, British Titan Products Co., Ltd., Titan Co. A/S, etc. as may come to us. We appreciate, of course, that we will not be able to do this with respect to any invention which may possibly originate from Germany during the present hostilities.

3. United States and Canadian Applications of British Titan Products Co.

The war situation has in no way altered our practice with respect to the United States and Canadian applications originating with British Titan Products Co., Ltd. The former are being prosecuted by this department in the same manner as in the past and the Canadian applications are being prosecuted by Canadian Titanium Pigments, Ltd. in cooperation with us. Except for some inconvenience in getting inventors' comments and remarks, we do not expect that the war situation should materially affect this cooperation.

Exhibit 758

4. Cooperation with Titan Co., Inc.

We are following exactly the same procedure as in the past, addressing all communications regarding patent matters, which were formerly sent to Paris, to Fredrikstad, Norway. We are being more careful that *all* correspondence go directly to Titan Co., Inc. at Fredrikstad, rather than to endeavor to establish direct communication with any inventor company. For instance, with respect to several matters affecting British Titan Products Co., Ltd. we could have endeavored to communicate directly with British Titan Products Co., Ltd., thus possibly saving some time, but we considered, in view of the war situation, that it was best to send our communications directly to Titan Co., Inc. As long as the present situation exists, we will refrain from endeavoring to establish any direct communications with associated companies in belligerent countries, unless advised by you to change our procedure.

5. Du Pont Cooperation.

We have not altered our method of cooperating with Du Pont concerning foreign patent matters in any way as a result of the war situation. All matters affecting the Du Pont cooperation have been taken up with Titan Co., Inc. at Fredrikstad, and we will continue to do so until such time as you advise us to alter our procedure. We expect, however, that as a result of the war situation the exchange of rights between ~~Du~~ Pont and the associated companies through Titan Co., Inc. and the filing of foreign patent applications corresponding to Du Pont's United States applications may be somewhat retarded but it is yet too early for us to form an opinion as to how the war situation may affect the Du Pont cooperation.

Exhibit 758

The foregoing represents the situation here at the present time. We shall be most interested in having any suggestions and advice you may care to give us regarding our procedure in handling patent matters as a result of the present war situation.

Mrs. Kaegebehn and I are very well indeed, but we are sick at heart at the contemplation of what may happen to those lovely places in Europe, particularly Paris, which we liked so well. We trust that you and Mrs. Jebsen, as well as your sons, are all very well.

With very kind regards,

Sincerly,

C. F. KAEGEBEHN

Letterhead of

HUTZ AND JOSLIN

Re: Tillmann et al.
Serial No. 204,838
Lev. 1481 T. 187
Titan #20

October 26, 1939.

Mr. Charles F. Kaegebehn
National Lead Company
111 Broadway
New York City

Dear Mr. Kaegebehn:

Enclosed herewith you will find your copies of the amendment which I prepared in response to the Office action of April 26, 1939 and forwarded to the Patent Office yesterday. Unfortunately I was not able to send you the amendment earlier, partly due to the fact that I just received a proposed amendment from Leverkusen and wished to embody some of their suggestions into my amendment. Leverkusen's proposals turned out to be quite similar to the course of action decided upon in our recent discussions.

I would appreciate it if you would carefully consider the amendment and let me know whether it meets with your approval. Should you have any suggestions as to additional claims or arguments, I would be glad to embody them in a supplemental amendment.

You will note that I canceled all of the claims and replaced them by new claims 24 to 33, inclusive. I intentionally restricted the number of claims so far as possible.

27382

Exhibit 759

Should we receive favorable action on these claims, it will be possible to insert additional specific claims if it is considered advisable, in order to more adequately protect the subject matter of the case. While I do not expect that the application will now be allowed without further ado I do hope that the Examiner will drop most of the references and objections mentioned in the last Office action.

As you know, I have spent considerable time in connection with the interview and the amendment. Ordinarily we would charge I. G. for these services. I understand, however, that under your arrangements such charges would ultimately have to be borne by National Lead Co. If I am correct in this assumption, it would seem the simplest thing to do, particularly under the prevailing circumstances, for us to charge National Lead Co. directly for these services.

Please let me know whether such procedure would be agreeable to you.

Very truly yours,

W. H. HUTZ

encls.
cc-Lev.

Exhibit 760

Tillmann et al.—Ser. No. 204,838—Case T. 187
October 31st, 1939
Mr. J. L. Turner—Director of Research
Mr. C. F. Kaegebehn—Patent Department

Dear Mr. Turner:

As you know, we are billed through Titan Co., Inc. for the services of Messrs. Hutz and Joslin in prosecuting United States applications filed by the I. G. Farbenindustrie and Titangesellschaft in which we have an exclusive license. These services are on the whole always very reasonable, and we have had no objection in the past to the amounts involved.

In view of the present war situation, Hutz and Joslin are finding it increasingly difficult to get returns from Germany and they have asked me whether it would be proper for them to bill us directly for their services. I have replied that such procedure would be proper with respect to one case only, namely the Tillmann Rutiox nuclei application, Case T. 187. In this case, as you know, I conferred at length with Mr. Hutz and met him in Washington for an interview with the Examiner. Mr. Hutz prepared the amendment which was filed on October 26th on the basis of our conferences and some notes received from the I. G. Farbenindustrie. Therefore, it may be expected that in this case the charge for services would be somewhat higher than ordinarily, but as yet I do not have the bill.

It would be possible to save some expense by taking over the prosecution of the I. G. Farbenindustrie and Titangesellschaft applications now on file and being prosecuted by Hutz and Joslin. However, this would require the

consent of the I. G. Farbenindustrie and Titangesellschaft. Dr. Redies himself had suggested such a procedure when I was in Leverkusen, but the war has interrupted all further action on this proposal. Furthermore, Hutz and Joslin have a better source of contact with the I. G. Farbenindustrie for obtaining information regarding amendments, and I do not see what else we could do except for the present to work closely with Hutz and Joslin and do as much work as we can ourselves in order to keep the charges as low as possible.

Yours very truly,

CFK:JL

Werner H. Hutz, Esq.
Hutz and Joslin
521 Fifth Avenue
New York, New York

Re: Tillmann et al. Ser. No. 204,838
Lev. 1481—Case T. 187—Titan 20

Dear Mr. Hutz:—

Thank you for your letter of October 26th, 1939, enclosing copies of the amendment filed in the above identified case.

We have no comments to add to what has been stated in the amendment. It appears to cover what you and I discussed together and with the Examiner.

It will be quite proper for you to bill us directly in this case. As a matter of fact, this is a simpler procedure than going through the I. G. Farbenindustrie and Titangesellschaft before reaching us.

Yours very truly,

CFK:JL

c.c. Dr. W. W. Plechner

Exhibit 762

Letterhead of

TITAN COMPANY, INC.

GJ/HS.

C. F. Kaegebehn Esq.,
Manager, Patent Department,
National Lead Company,
111 Broadway,
New York, N. Y., U. S. A.

Fredrikstad, Norway,
9th November 1939.

Dear Mr. Kaegebehn:

My very best thanks for your letter of October 5th.

I much appreciate the full description you have given as to the patent situation on your side.

Re: 1. I am glad to see the steps you have taken and hope to be able to write you nearer in a not very far future.

Re: 2. You have given a very good picture of the situation. I have no suggestions to make in the matter and look forward to hear further from you as soon as there are any new developments.

Re: 4. The course you will follow as regards communications and patent matters is for the time being no doubt the best one and quite in line with our arrangements on this side.

As you know, the British Titan Products Co.'s patents have been dealt with by a committee consisting of Stopford, Oppegaard, Ravnestad and Andersen. Ravnestad and Andersen have been doing the work for B. T. P. —at the same time as they are doing the patent work Titan Company Inc. on this side—and have constituted so to say the Patent Department of B. T. P. Shortly after the war broke out, Stopford wrote and suggested, that this

Exhibit 762

should continue, and the Patent Committee to continue to be constituted as formerly—the work being done by correspondence along certain lines.

We will advise you if circumstances should necessitate a change.

Re: 3. I have no special comments to make with the exception that if you should find it an advantage to have the Canadian Titanium Pigments Limited corresponding direct with British Titan Products Co. regarding Inventors' Comments and Remarks"—we see no objection to this and would not consider it as an interference of importance with the lines for general communication, as mentioned under point 4.

Re: 5. Du Pont Corporation.

I agree with you that this matter will have to be subject to further experience.

With regard to France we are informed that the French Government has issued certain War Regulations re Patent Matters on October 15th 1939. We have not received them yet but shall inform you as soon as we have got them. We only know that they are not quite so sweeping as the English and Canadian Regulations.

Mr. S. J. Henrikssen, who left Frederikstad on the 30th of Septbr. for France, and who has also paid a visit to England for a few days, is expected back here on Saturday the 11th inst.

Everybody is well over here, and things are developing as well as there can be expected under the present circumstances.

Hoping Mrs. Kaegebehn and yourself are well, I remain, with very kind regards to both of you,

Yours very sincerely

G. JEBSEN

Mr. Garesché.

Exhibit 763

Dr. G. Jebsen
c/o Titan Co. A/S
Fredrikstad, Norway

December 27th, 1939.

Dear Dr. Jebsen:

This will acknowledge your letter of November 9th, 1939 and serve to bring you up-to-date on subsequent developments occasioned by the war situation as these may affect the international cooperation.

1. Applications of Titangesellschaft and I. G. Farbenindustrie, Respectively.

There is very little now to report. We have not received any patent applications filed in Germany by either the T. G. or the I. G. since the war, and believe this is probably due to a diminishing research activity, war regulations and interruption of communications, etc. With respect to one case—T. 236, German Patent Application J. 64,030, originating with the I. G. at Frankfurt—received by us before the war, we have announced our desire to have corresponding applications filed in the United States and, if possible, Canada. Canadian War Regulations, as pointed out later, permit the filing by enemy aliens under certain conditions, but we are not aware that German regulations will permit this. Our Canadian associate, C. T. P., has not been advised of this case.

2. Canadian Patent Situation.

Since writing you on October 5th last, we have had several conferences both here and in Montreal on this subject. In the meantime, the Canadian Government has

enacted and published certain war regulations dealing generally with the war situation. Copies of these are enclosed as follows:

1. Defence of Canada Regulations.
2. Regulations Respecting Trading with the Enemy.
3. The Patents, Designs, Copyright and Trade Mark (Emergency) Order, 1939.

These constitute all regulations I know of which Canada has enacted as a result of the war.

Shortly after my last letter, Mr. T W. Smith paid his expected call upon the Canadian Commissioner of Patents and Custodian of Alien Property. He met with a very sympathetic attitude to the effect that the Canadian Government is anxious to cooperate with all legitimate parties to protect their interests in Canadian patents and applications owned by the enemy. Mr. Smith was advised to file statements setting forth C. T. P.'s interest in specified Canadian patents and patent applications of T. G. and I. G. and he was informed that these statements would be kept on file. Mr. Smith was assured that if this be done the Custodian would not be favorably inclined to granting license to any third parties who might apply. By the time this letter reaches you, such statements will have been filed. A separate statement will be presented for each patent and application and will follow closely the draft enclosed. No information regarding the relationship between National Lead Company and C. T. P., or the relationship between National Lead Company has been requested.

Messrs. Hutz and Joslin, attorneys for the I. G. have been constantly consulted and informed in these matters

and have fully coöperated, directly and through their Canadian agents.

Regarding such Canadian applications as were pending in the Patent Office awaiting response to a Patent Office Action, we agreed with Messrs. Hutz and Joslin and C. T. P. that the Canadian agents of Hutz and Joslin be instructed to prepare and file such responses as were necessary to hold the cases, that National Lead Company would accept charges for the same and that C. T. P. would, in turn, reimburse us. This procedure has been followed as responses become due.

With respect to any new patent cases which may be developed in Europe, there will, of course, be no difficulty in filing those of B. T. P. in Canada. Canadian applications may be filed by T. G. and I. G. according to the regulations, but these applications will be held by the Custodian in the same manner as applications filed before the war. Were it possible to do so, we should prefer that Canadian applications be filed in Canada by T. G. and I. G. in those cases which we elect such filing during the duration of the war, it being understood that we will pass no information concerning such cases to C. T. P. However, we can foresee difficulties arising in Germany toward carrying out such a program

There is nothing new at present to report concerning coöperation with B. T. P., Titan Co., Inc. and Du Pont. Should anything develop, I will promptly inform you, together with any further news from Canada.

With very kind regards,

Yours very truly,

CFK:JL

Fredrikstad, Nodway

Re: I. G. Farbenindustrie Patents
U. S. Pat. Nos. 2,161,290—2,161,319

Gentlemen:—

We enclose copies of the above identified patents. Both of these patents of the I. G. Farbenindustrie appear to relate, at least in part, to titanium dioxide, in such manner as to come within the Licensed Field of the Agreements.

We presume, therefore, that we enjoy a license under these patents to the extent to which the patents relate to the Licensed Field. At this time we merely call these patents to your attention, and beg you to confirm our understanding that we enjoy licenses thereunder.

Yours very truly,

NATIONAL LEAD COMPANY

c.c. Mr. C. F. Garesché

Exhibit 765

Letterhead of

TITAN CO. INC.

SA/HS. Fredrikstad, 30th Novbr. 1939.

C. F. Kaegebehn Esq.,
Manager, Patent Department,
National Lead Company,
111 Broadway,
New York, N. Y., U.S.A.

Dear Mr. Kaegebehn:

RE: I.G. FARBENINDUSTRIES' U.S. PATENTS
Nr. 2161290 and 2161319.

I thank you for your letter of the 28th of September [illegible] copies of the above mentioned patents, and note that you consider these patents to come within the license field of the agreements—at least in part.

As the patents are owned by I.G. Farbenindustrie, it is the license field definition in the agreement between I.G. Farbenindustrie and T.G. (which is identical with the license field of the agreement between T.G. and Titan Company Inc.), which must be taken into consideration when considering this question.

As you are aware, it is expressly stated in this licensed field definition that "simple mixtures" do not come under the definition.

The above patents relate both to coating compositions having phosphoric acid as a vehicle, and in which the pigment may be Titanium Dioxide.

Exhibit 765

As far as I understand the specifications, the coating compositions are prepared by mechanically mixing the constituents, and it seems to me that the product is a "simple mixture" in the sense of the agreement.

If I am correct in this, the patents do not come under the licensed field of the agreement between I.G. Farbenindustrie and T.G. (and between T.G. and Titan Company Inc.), but—to the extent they relate to the use of Titanium pigments in the coating compositions in question—come under the stipulations in this agreement relating to "finished products," i.e. the I.G. have to put on their licencees the obligation to buy titanium pigments for use in the manufacture under the patents from the asosciated Titanium companies—in this case from the National Lead Company.

I am awaiting your comments to the above before taking further steps in the matter.

With kind regards,

Yours sincerely

SIGURD ANDERSEN

Re: I. G. Farbenindustrie's U. S.
Patents Nos. 2,161,290 and 2,161,319

Dear Mr. Andersen:—

Thank you for your letter of November 30th, 1939.

I am inclined to agree with your interpretation of the Licensed Field of the I. G. Farbenindustrie-Titangesellschaft Agreement, and also with your conclusion that the above identified patents would come within such licensed Field. We had not consulted the Agreement before writing you our letter of September 28th and evidently considered the cooperation to relate both to the use as well as manufacture of titanium compounds.

Such a stipulation as is contained in the I. G. Farbenindustrie-Titangesellschaft Agreement, relating to "finished products", namely that in this case the I. G. would have to put upon American licensees under these two patents the obligation to buy their requirements of titanium pigments from us, would clearly be illegal. Only recently it has been decided by the Supreme Court that to do just what is contemplated in the stipulation respecting "finished products" is an unjustifiable extension of the patent monopoly. The theory upon which this interpretation of the law is based is that a patent is only good to protect the monopoly as defined in its claims. These two patents of the I. G. do not cover, per se, titanium dioxide pigments and, hence, any attempt on the part of the I. G. to require a licensee

to buy their pigment requirements from us, would, it appears, certainly be contra to the present legal situation in the United States.

I believe I mentioned this situation rather briefly to Dr. Jebsen and others during my visit to Paris. It seems to me that as a result of this interpretation of American law, the provisions in the various agreements with respect to "finished products" would become inoperative, at least with the United States, and that as a result there possibly should be some reconsideration of this aspect of the agreements.

With respect to the present question, namely these two German patents, I would suggest that the I. G. be informed that we have noted them and, in view of the legal situation in America, in the event they considered granting a license under them in the United States, we should like to be informed and possibly to consider with the attorneys of the I. G. the question of how to protect our interests, as contemplated by the "finished products" provision of the agreement.

Should you wish me to discuss more fully the decisions which have brought about the present legal situation in the United States, I shall be glad to do so.

With kind regards,

Yours very truly,

C. F. KAEGEBEHN

Titangesellschaft m.b.H.
z/H: I. G. Patent Deparment
Leverkusen—I. G. Works

As a result of a conference had with Dr. Jebsen we take the liberty of making the following suggestion: Due to the difficulty of communicating with the United States and the resulting delays and possible future disturbances, we ask you to handle the below enumerated patent matters by direct correspondence with Titan Company, Inc., attention Mr. C. F. Kaegebehn, 111 Broadway, New York.

As far as we are able to determine at the present time, the following matters could be handled directly between you and Titan Co., Inc., in New York. We would like to remark that the suggested change will cover matters which have already been under active consideration:

A. *Information from Titangesellschaft to Titan Co., Inc., New York:*

1) Sending new applications of T. G. and I. G. inventions to be filed in the name of National Lead Company. (We ask you to keep us informed of these applications, as previously done, by writing us at Fredrikstad and by sending copy of the application in question.)

2) Giving National Lead Company agreed upon information and possibly also additional information with regard to the above mentioned new applications.

3.) Giving information regarding the wishes of Titangesellschaft and Titan Kogyo K. K. regarding Licenses and new applications in connection with patent matters which originate with National Lead Company (and The American Zirconium Corp.), as well as questions and other information destined for National Lead Co. in the matters in question.

4.) Information concerning licenses which may be desired by Titangesellschaft and Titan Kogyo K. K. in Du Pont applications, as well as questions and other information concerning such matters to the extent that they have to be forwarded to National Lead Company.

5.) Giving National Lead Co. specific information regarding possible other T. G. and I. G. patents and patent applications as those mentioned under A. 1) and A. 2).

B. *Information from Titan Co., Inc., New York to Titangesellschaft.*

1.) Sending new applications of National Lead Inventions (and The American Zirconium Corp.) destined for Titangesellschaft.

2.) Sending copies of Du Pont applications destined for Titangesellschaft and Titan Kogyo.

Regardless of the fact that the above provide for the sending of new applications to Titangesellschaft, National Lead Co. must in the usual manner inform us of these inventions and send directly to us copies of the same, by addressing

them to Fredrikstad. (Applications mentioned under B.1) and B.2) above.)

3.) Information meant for Titangesellschaft and other information regarding applications mentioned under B. 1) and B. 2).

4.) Information concerning wishes of the National Lead Co. regarding licenses and new applications in patent matters, which originate from T. G. or I. G., as well as questions meant for T. G. and other information in such matters.

It might be possible for you to ask Mr. Kaegebein to send in duplicate letters of Titan Co., Inc., addressed to you.

We hope that our suggestion will meet with your approval, and that you will carry on in the best manner possible the mailing of correspondence between you and Titan Co., Inc. in New York, and are looking forward to your reply.

Yours very truly,

(signed) SIGURD ANDERSEN

Dear Mr. Kaegebehn,

Re: *Patents No. 2.161.290 and 2.161.319.*

I thank you for your letter of the 20th of December, 1939, to which Dr. Jebsen has already replied in his letter of the 24th of January, 1940, to the question you raise in connection with the "Finished Product" Clause of the agreements.

In accordance with your wishes we have notified the patentees that you wish to be informed in the event of their considering to grant licenses under these U.S. patents, so that you may in case consider the question of how to protect the National Lead Company's interests according to the agreements.

With kind regards,

Yours sincerely,

SIGURD ANDERSEN

New York, U. S. A.

Re: U. S. Patents Nos. 2,161,290 (156094 Lu)
and 2,161,319 (76769 Lu)

Gentlemen:—

Titan Company Inc., Fredrikstad, wrote us on March 5, 1940, calling our attention to the above identified U. S. patents, which patents, in their opinion, are subject to our agreements, inasmuch as they relate to the use of titanium pigments.

We are in agreement with the view of Titan Co., Fredrikstad, that our U. S. patent No. 2,161,290, dated June 6, 1939, and No. 2,161,319, dated June 6, 1939, and the corresponding patents in other countries are subject to the Titan Agreements (Article III, Paragraph 3 of agreement D. and paragraph 9 of agreement C), inasmuch as they relate to employment of titanium compounds.

We own corresponding patents:

(a) in the following countries of Titangesellschaft

Germany—No. 641,725, dated March 13, 1934
Sudeten, Bohemia-Moravia—No. 60,299 dated July 15, 1937 and 65,013, dated Jan. 15, 1939
Japan—No. 126,224, dated May 16, 1938, and No. 131,301 dated April 15, 1939

Exhibit 769

(b) In the following countries of Titan Co.

Belgium	—No. 415,206, dated April 25, 1936 and No. 422,809, dated July 23, 1937
England	—No. 465,945, dated April 29, 1935 and No. 481,969, dated Sept. 28, 1936
France	—No. 805,474, dated April 25, 1936 and No. 824,517, dated July 19, 1937
Holland	—No. 42,815, dated Feb. 16, 1938 and No. 46,728, dated Aug. 16, 1939
Italy	—No. 341,152, dated April 14, 1936 and No. 353,063, dated July 21, 1937
Canada	—No. 379,106, dated Jan. 24, 1939 and No. 379,108, dated Jan. 24, 1939

No licenses have as yet been issued under these patents. According to information which we have received from our factory in Ludwigshafen, which is the inventor of these patents, the question of distributing licenses in these patents is, at this time, not yet ripe for discussion. Of course, we shall safe guard your rights should we distribute licenses. All our patents will, for the present time, be maintained.

Respectfully yours,

Exhibit 774

AIR-MAIL May 24th, 1940

Mr. Andreas Ravnestad
c/o Titan Co. A/S
Fredrikstad, Norway

Dear Mr. Ravnestad:—

We acknowledge receipt of your cable, dated May 22nd, reading as follows:

> "PATENT CASE T 202 WILL REVERT TO QUESTION OF DISTRIBUTION UPON RECEIPT OF COPIES OF APPLICATION EXPECT AIRMAIL TRANSMITTED MORE FREELY THAN ORDINARY LETTERS" (Letter No. 20c)

Under separate cover we have sent today five copies of Divisional Application in Case T. 202, as requested in your previous cable of May 21st.

We are somewhat confused regarding the present situation with respect to handling correspondence. A short time ago we received from the I. G. Farbenindustrie copy of Mr. Andersen's letter to them, dated March 5th, in which a procedure for handling correspondence had been agreed to. In that procedure it was suggested that the I. G. would send directly to us in New York copies of newly filed applications and that we should, in turn, send copies of our applications directly to them. The I. G.'s letter included the statement that they were in agreement with this suggestion and we replied to the effect that we were also in agreement. Your cable of May 21st, however, indicated to us that you wished us to send copies of patent applications to you and

we wondered whether you were familiar with Mr. Andersen's letter of March 5th. Accordingly we cabled you to that affect on May 21st.

While we have had no specific suggestions with respect to British Titan Products Co., Ltd. it has been indicated that we should also carry on direct correspondence with them as a result of conversations between Mr. Stopford and Dr. Jebsen.

Today we received a cable from Mr. Andersen from Stockholm which says that he will consult Dr. Jebsen regarding arrangements for correspondence. This further suggests that the situation is somewhat unsettled. We can well understand that this is so in view of recent developments.

We will endeavor to follow any suggestions received from you regarding the handling of correspondence. We especially wish to have you consider the situation with respect to Titangesellschaft inasmuch as they have, on their part, already written us directly in several matters. Our correspondence with the I. G. Farbenindustrie has been confined to replying to their letters but we have not yet initiated any direct correspondence with them.

Since March a considerable number of letters, which would ordinarily have been sent to Fredrikstad, have accumulated. We have held these pending instructions as to where they should be sent. Will you please consider this question and advise us.

Yours very truly,

CFK:JL
c. c. Dr. Jebsen—Paris
Mr. C. F. Garesché

Exhibit 775

Letterhead of

TITAN COMPANY, INC.

GJ/AK. Paris, May 29th 1940.

Charles F. Kaegebehn Esq.
National Lead Company
Patent Department
111 Broadway
New York City, U.S.A.

Dear Mr. Kaegebehn,

I confirm my cable of yesterday, as follows:

"REQUESTED ANDERSEN CABLE YOU COUN-
"TRIES HE CONSIDERS BEST YOU TAKE OVER
"PATENTWORK AND CONTACT AGENTS
"DIRECTLY STOP FURTHER COUNTRIES
"WHERE PATENTEXPENSES MUST BE PAID
"DIRECTLY FROM NEW YORK STOP EXPENSES
"PAID BY ASSOCIATED COMPANIES FOR
"TITANINC MUST BE REIMBURSED BY
"NEWYORK."

I cabled also Mr. Andersen as per enclosed copy.

My contact with Mr. Andersen is still only by cable and I am rather ignorant as to what extent he is able to do his patent work. I think therefore it is best that he cables you directly regarding the work he wishes you to take over. With regard to expenses, he cabled me as follows:

"SUGGEST UPON CONFERENCE ANKER TO
"REDUCE TITANCOS PAYMENTS THAT

Exhibit 775

"TITANINCS PATENT EXPENSES SWEDEN
"FINLAND ITALY BRITISH EMPIRE FRANCE
"AND COLONIES JAPAN NORTH AMERICA BE
"PAID FROM NEWYORK OR PARIS
"WHICHEVER CONVENIENT STOP DESIRABLE
"INCLUDE ALSO HOLLAND BELGIUM BUT
"YET UNCERTAIN WHETHER POSSIBLE STOP
"ASSOCIATED COMPANIES PAY BILLS ABOVE
"COUNTRIES BELONGING THEIR
"TERRITORIES AND TITANINCS SHARE
"REMITTED THEM STOP KINDLY CABLE
"WHETHER YOU APPROVE AND IN CASE
"WHETHER NEWYORK OR PARIS SHOULD
"REMIT.".

You will realise that this is due to New York's and my rejection of sending money to Titan Co A/S.

The request is only reasonable. I presume it will be difficult to provide the money from Scandinavia and Titanic being an American company will have to provide it from New York. We could not provide that money from Paris with reimbursement from New York, without considerable formalities complicating matters.

As regards the associated companies making payments, you will note that Sté Industrielle du Titane can deal with the French and Belgian expenses. Our agents for these two countries are

Messrs. Emmanuel Bert & G. de Keravenant
115, Boulevard Haussmann
Paris

and in case of evacuation their address will be

Questembert près Vannes
Morbihan.

This firm will attend to the payments for these two countries and be reimbursed by Sté Industrielle du Titane, with which Company Titan Company Inc. has a small credit balance sufficient for these purposes.

The British Titan Products Co. will take care of the patents for the British Empire and send us a bill for Titan Co. Inc.'s part of the expenses.

Messrs. Bert & de Keravenant can of course not receive any instructions from Mr. Andersen except by cable and consequently the technical side of the patentwork cannot be attended to towards them in view of the difficulty of corresponding with Sweden by letters.

They have been instructed by Mr. Andersen and myself to apply for a patent on case T-237 where the inventor company is B.T.P., which will send them all the technical information and take care of that development. The patent application is supplementing the Antimony addition cases.

If you have any new patent application in U.S.A., which you think should be applied for in France and/or Belgium, I suggest you send a request in Titaninc's name to Messrs. Bert & de Keravenant together with the necessary papers and information.

You will realise that under the present circumstances it is better that you communicate direct with Andersen, concerning the division of the work and other information, and what I am saying above is subject to any request and information from Andersen.

With regard to the question of decisions concerning new patent applications, the following may serve you as a guidance:

We generally follow the wishes of associated manufacturing companies, as regards securing patent rights within their territories.

In France we apply sometimes for patents simply for the sake of publication, that is where we do not think a patent protection of sufficient strength and interest is obtainable but at the same time we will not run the risk of having competitors apply for these patents. We further apply for patents in France where they are or may develop to be of importance of the first order.

The same applies to Belgium, Holland, Norway and Sweden and we are here particularly interested in patents regarding which infringements can be proven without entering into the factories. In other words, where the infringement can be characterised by the product, as for instance the patent containing antimony.

With regard to Belgium and Holland we have always in mind the possibility of competition turning up from Noury v.d.Lande or Pisart. Lately I think this may also be taken into account as regards Sweden and Norway, although there are no direct signs of this as yet in these two countries.

Application patents are of interest if they are of primary importance, in order to prevent somebody else to monopolise a market. We are, however, not interested in minor application patents in the way you are, with a view of giving your salesmen a talking or selling point.

You will realise that we are trying to keep expenses down without hurting vital interests.

In this connection, I hope that you will be able to do the work direct with our patent agents in the same way as Ravnestad has been doing.

Previously, as you may know, the expenses for patents applied for by the Titanium Pigment Co. in our countries were extremely high because the Titanium Pigment Co.

used a special firm in New York, dealing with the European business, which to us seemed unnecessary.

I enclose copy of a letter of even date to Messrs. Bert et de Keravenant, concerning possible relations with you.

I have sent you yesterday copy of my letter of May 29th to Mr. Rockwell, giving certain addresses, for your information. (Part of paragraph stricken out in copy.)

What is going to happen with regard to the patent situation in Holland, I am unable to tell you. As to Belgium, I understand from Messrs. Bert et de Keravenant that they expect the Belgian Government to establish an administration outside of Belgium.

Generally speaking, as regards the countries at war, I think that, as far as losses of priority rights are concerned, due to difficulties re correspondence or otherwise, these priority rights will be recovered after the war.

With kindest regards,

Yours very truly,

G. JEBSEN

PS. Untill New York receive cable information that I have left for Hossegar, I suggest you send letters which are intended for me to Paris with a copy to the address in Hossegar.

Copy to Mr. Garesché.

New York City.

Attention: Mr. Kaegebehn.

Dear Sirs:—

Patent Annuity T-170.

We have received copies of your correspondence with Messrs. Carpmeels & Ransford (dated March 28th and April 18th, 1940), from which we note that the current annuity on patent No. 194.162 has been paid, and that the Official Receipt has been sent to you.

This patent stands in the name of the I.G. Farbenindustrie, and the maintenance of the patent was taken over by us at the beginning of this year.

The amount required in connection with the payment of the current fee, has already been remitted to the Patent Agents in the month of March 1940 by our Bookkeeping Department, and the matter is in so far quite clear.

I would suggest that you keep the Official Annuity Receipt in your files until further.

Yours very truly,

Exhibit 777

Stockholm, the 14th October 1940

Temporary Arrangement of Patent Work Europe

(during Mr. Andersen's stay in Stockholm)

We have agreed as follows:

Fredrikstad takes care of:

1. *Renewals* of Patent and Trade Marks excepted in the British Empire and France

2. *Other Routine Matters* such as Patent specification files (Card Index)

3. *Matters re Patent Expenses* (Sharing of Expenses. Information to Bookkeeping Department, excepted for British Empire, France (America Spain & Portugal taken care of by Mr. Kaegebehn)).

4. *Prosecution of Pending Patent Applications*, however with the arrangement that Mr. Andersen, upon notification from Fredrikstad for each particular case, takes over cases Mr. Ravnestad finds it desirable that he takes over.

Mr. Andersen takes care of:

1. *Intercompany* Patent Matters, and patent matters relating to cross license agreements Inc. D.—including correspondence with Dr. Jebsen regarding such matters.—

2. *BTP Patent Matters* to the possible extent.

Exhibit 777

3. Particular Office Actions re *Prosecution of Patent Applications* to the extent mentioned under (4) above.

Cooperation:

1. *Proceedings in Patent Matters* "Patent Protokoll".

Proposals for decision:

In new Patent Cases (T-Cases) as to in which countries patent applications should be filed.

In which countries licenses should be asked for in DK-Cases as to which patents should be abandoned or which licenses should be relinquished.

Re action against competitor's patents and patent applications (opposition).

Re trade mark matters and *other matters* calling for decision.

Mr. Andersen will prepare drafts for the memoranda which will be discussed in correspondence with Mr. Ravnestad and signed by both when agreed upon, signed copy of each memorandum will be sent Dr. Jebsen.

2. *Preparation and Filing of Patent Applications:*

Mr. Andersen will prepare drafts for the applications and send them to Mr. Ravnestad for consideration where necessary and the final form of the application will be agreed upon by correspondence.

In this connection is to be noted that the particular cases will already have been discussed between

Exhibit 777

Mr. Ravnestad and Mr. Andersen before the preparation of the draft—in connection with the proposal for decision ("Patent Protokoll") mentioned in the foregoing paragraph.

3. *List of Patents T-Cases and Report Patent Situation.* Preparation and checking in hand.

The question as to whom should take care of our and SIT's patent matters in France will be taken up when the situation as to France becomes clearer.

Re: Case T. 241—Ser. No. 298,400

Dear Mr. Andersen:—

Your letter of November 29th, 1940 was duly received and we will endeavor herewith to give you our comments.

The subject matter of Case T. 241 is, we understand, quite practical and is from time to time being used in our various plants. The application which we filed as Case T. 241 followed some nine months after the filing of the United States application in Case T. 235 by the American Zirconium Corporation. The purpose in our filing the application on our own behalf, aside from the desire to protect the subject matter, was to provoke an interference in the United States Patent Office between the United States application of ourselves and the American Zirconium Corporation, so that the question of first inventorship could be settled. Since we enjoy friendly relations with the American Zirconium Corporation, such procedure is regarded as quite ethical and justifiable. The American Zirconium Corporation were previously advised of our contemplated filing and since that time we have coöperated fully with the attorney for that corporation toward the settlement of the interference, which has just been declared by the Patent Office.

From the point of view of Titan Company, Inc. and its associates, it does not appear to us that it makes any difference at all in what manner the subject matter is pro-

tected, that is to say, the patents which have been applied for in Case T. 235 are perfectly adequate, in our opinion, to protect the situation within the territory of Titan Co., Inc. and its associates. Therefore, as far as we see it, there would be no reason to file corresponding applications in T. 241 unless, per chance, the validity of the foreign patents and applications would be affected in the event the outcome of the interference in the United States showed that Dr. Nelsen—our inventor,—really completed the invention before Dr. Allan—inventor for American Zirconium.

We trust these remarks will be of interest to you and have, as you suggest, sent a copy of this letter to Mr. Ravnestad.

Yours very truly,

NATIONAL LEAD COMPANY

New York City.

Attention: Mr. Kaegebehn.

Dear Sirs:—

German Patent Application U 13.876—Interchemical Corporation.

We thank you for your letter of November 18th, 1940 (29K) informing us of the correspondence between you and Titangesellschaft regarding the German application No. U 13.876, Interchemical Corporation.

In September 1940 the I.G. Patent Department asked us to supply them with information as to prior literature on which an opposition against the above German application could be based.

We made a search, but were not able to find any prior literature in which the treatment of titanium solutions with activated carbon or cotton fibres is disclosed. We were, however, of the opinion that an opposition might be based upon the fact, that it is generally known to use the claimed substances as clarifying agents and informed I.G. accordingly.

Exhibit 781

A few days ago we were informed that Titangesellschaft has filed an opposition, and we enclose a copy of the opposition argument which we think might interest you.

We presume that you have already received from Tg a Copy of the German application U 13.876.

We shall be glad to keep you informed of the progess of this matter.

Yours very truly,

H. ECKHOFF

Re: Cases T. 254, T. 255, and T. 256
Le. Nos. 2930, 2753, 2754, Respectively
Filing Corres. U. S. Applications

Gentlemen:—

Your letter of March 25th, 1941, enclosing copy of German application No. 754,041 IV/41, Case T. 254, and your letter of March 27th, 1941, enclosing German applications in cases T. 255 and T. 256, were received. On May 27th, we cabled you as follows:

"DESIRE FILING UNITED STATES APPLICATION CASES T.255 AND T.256 PROMPTLY AND ALSO CORRESPONDING CANADIAN APPLICATIONS IF POSSIBLE"

On June 3rd, we cabled you as follows:

"DESIRE FILING UNITED STATES APPLICATION CASE T.254 AND CORRESPONDING CANADIAN APPLICATION IF POSSIBLE STOP SUGGEST AVOID EXPENSE AGENTS FEES UNITED STATES APPLICATION THIS CASE AND T.255 AND T.256 BY FILING THROUGH KAEGEBEHN REGISTER NUMBER 1461 AS ATTORNEY"

Exhibit 783

Inasmuch as we note from your letter of March 29th, 1941 to Titan Co., Inc.—Fredrikstad that your American Attorneys charge a filing fee of $75.00 per application, and since we are to assume all expenses connected with the prosecution of the United States applications in these cases, we made the suggestion, as stated in our cable of June 3rd, that the United States applications be filed through Mr. Kaegebehn as prosecuting attorney. In this way it will be possible to avoid the agent's filing fees as well as any fees which might arise in connection with the prosecution of the United States applications.

Yours very truly,

TITAN COMPANY, INC.,
C. F. KAEGEBEHN

Dear Mr. Kaegebehn,

Notification to Associated Companies Re. T-Cases

Certain T-Cases are not, as you are aware, circulated in the normal manner during the present situation. This leaves open T-numbers in the records of those companies, which do not receive copies of all new applications. In order to avoid possible confusion or misunderstanding for this reason, I think it would be well if such companies could be informed in each case that the numbers in question have been assigned to patent cases, the normal circulation of which we have to postpone in the present situation. It would perhaps be preferable that the sending of such information be taken care of from your side.

I should be glad to have your comments to the above,—or if you would do the necessary in the case of your agreeing to my proposal.

Exhibit 784

According to my records the following of the present T-Cases have not been circulated in the normal manner: T.237, T.238A, T.238B, T.249, T.254, T.255, T.256 and T.257. I have as yet no definite information re. what has been done as to the circulation of Case T.250.

With kind regards,

Yours sincerely,

SIGURD ANDERSEN
Sigurd Andersen

Dear Mr. Andersen:

Re: Notification to the Associated Companies re T. Cases

Your letters of June 4th and June 9th were received. We have given the matter considerable thought.

As the situation is developing here, we consider that we can most practically advise only Mr. Stopford and C. T. P. and have undertaken to do so.

We suggest that notification of the other associates be taken care of by yourself and/or Mr. Ravnestad.

With very kind regards,

Very truly yours,

NATIONAL LEAD COMPANY

By air-mail.

C. F. Kaegebehn Esq.,
National Lead Company,
Patent Department,
111 Broadway,
NEW YORK U.S.A.

Dear Dr. Kaegebehn,

Notification of the Associated Companies regarding T-Cases

I acknowledge with thanks receipt of your letter of the 30th of June.

I have communicated Mr. Ravnestad your suggestion that we notify the associated companies other than B.T.P. and C.T.P. of the matter in question. As the situation is, I believe, however, that it would be preferable if such communications to T.G. be made from your side. I will revert to the matter when I have Mr. Ravnestad's reply.

At this opportunity I would mention the question of circulating in the present situation T-Cases originating from Fredrikstad. We have two recent cases of this kind, namely, T.261 and T.262, of which I understand that you have received copies from Mr. Ravnestad.

Exhibit 788

In my understanding such cases should be considered as originating with Titan Company Inc. and so far, should be treated in the same manner as cases originating with the other American companies i.e. they should be circulated to all associated companies. There may, however, be arguments in favour of not circulating them to B.T.P. As to cases originating with B.T.P., we cannot in my understanding notify Fredrikstad of such cases.

No doubt, you have considered these questions and probably arrived at a conclusion, particularly as to the circulation of cases T.261 and T.262. I thought it, however, well to inform you of my consideration of the matter. For clearness sake I mention that B.T.P. has not been notified by me of cases T.261 and T.262.

As to S.I.T., the situation as to notifying them of cases originating with other companies seems to be similar to that of Fredrikstad. New cases originating with S.I.T. cannot probably be expected in the present situation. It should not, therefore, be necessary to consider now the question of their circulation.

If you can send me your comments to the above, this would be very much appreciated.

With kind regards,

Yours sincerely,

SIGURD ANDERSEN
Sigurd Andersen

Dr. G. Jebsen

Mr. C. F. Kaegebehn — Patent Department

Dear Dr. Jebsen:—

Attached are two translations of letters recently received from the I. G. Farbenindustrie.

You will note that the Titangesellschaft desires applications to be filed in Germany corresponding to United States applications in Cases T. 259 and T. 260, copies of which were sent them before the imposition of export control regulations.

We cannot comply with I. G.'s wishes without obtaining permission from the United States Treasury and I would like to consider with you the nature of the reply we should make to these letters.

RE: Notification of the Associated Companies regarding T-Cases

Dear Mr. Andersen:—

Your letter of August 8th, 1941 has just been received.

We regret that due to the present situation we must repeat our position as expressed in our letter of June 30th, namely, that it is not practicable for us to endeavor to advise T. G.

With respect to Cases T. 261 and T. 262, we have asked the United States Government for permission to advise B. T. P. of these cases. It is now forbidden to export any technical data, which includes patent applications, either originating in the United States or elsewhere, without a special license from the Government. The situation as it is developing here is making it more and more difficult for us to be of assistance in connection with the distribution of copies of patent applications, no matter where originating, or the distribution of any technical information relative to patent applications.

With respect to Cases T. 255 and T. 256, you will note from my letter of September 25th that we did not undertake to inform B. T. P. of these cases.

With kind regards,

Yours very truly,

CFK:JL

Stockholm, the 6th December 1941

By air-mail.

C. F. Kaegebehn Esq.
National Lead Company,
Patent Department,
111 Broadway,
NEW YORK U.S.A.

Dear Mr. Kaegebehn,

Notification of the Associated Companies regarding T- and DK-Cases.

I beg to refer to your letter of the 26th of September regarding the above matter.

I appreciate your difficulties as to the distribution of new patent applications in the present situation and understand that I cannot expect to receive regularly copies of such patent applications originating on your side or distributed by you.

The exchange of patent applications on the conditions stipulated in our agreements with the associated companies have, as you are aware, already been suspended to some extent,—I refer to cases T.237, 238A&B, 249, 252, 254, 255, 256 and T. 257 which were not circulated in the normal manner. I take it that the situation referred to in your letter will involve suspension to a further extent of this exchange.

Exhibit 794

In this situation I should like to have an indication of what lines you propose to follow.—with a view to the right normally due to the associated companies,—in the handling of patent cases which are not circulated in the normal manner. Possibilities of obtaining valid patents in countries outside that of the basic application may, as you are aware, be kept open by delaying publication of the basic application. It is of course not possible to say at present, whether publication can be delayed until it again will be possible to circulate information in the normal manner and have filed applications which might be desired by the particular companies, but I believe that the question of delaying publication should be considered for applications of the mentioned kind.

In Norway and other European countries, with similar patent practice the publication of patent applications and resulting patents may be delayed for a considerable period and I understand that this is the case also with regard to issuance of patents on United States applications. I appreciate, however, that you may have reasons for not wishing to delay for a long period the publication of patents on your U.S. applications. I also appreciate that DK-case applications must be considered apart not being prosecuted by yourself.

To what extent we can count on particular regulations by the various governments, such as moratories as to Convention terms and decisions re. the effect of foreign publications, keeping open possibilities for obtaining valid patents in cases of the mentioned kind is of course impossible to foretell at present.

In connection with the situation as to the circulation of the T- and DK-cases there also arises to me the ques-

tion of how our registers of theses cases could be kept complete and up to date. This would particularly be of interest with a view to a later readjustment of the inter-company situation. I would be able to carry on the lists here if you could inform me of the application dates, serial numbers and preferably also titles of applications, originating with the American companies or B.T.P., of which you cannot send me copies. In the present situation I am able to send you copies of the applications of which I am informed, but should the situation become such that this would not be possible I hope to be able to inform you of the numbers and dates of such applications so that a complete list might be carried on also on your side.

As to cases T.261 and T.262, referred to in your letter of the 26th September I understand that you are awaiting the decision of the Government regarding export licenses and should be glad if you would inform me whether copies are sent B.T.P. when such decision has been made.

At this occasion I would mention that I have as yet no information regarding the case to which the reference number T.257 was given. Should it be possible for you to let me have any information regarding the case this would be much appreciated.

With kind regards,

Yours sincerely

SIGURD ANDERSEN

Re: Maintenance Titan Co., Inc.'
Foreign Patent Rights

Dear Mr. Andersen:—

We confirm the receipt of Mr. Ravnestad's cable of November 19th, 1941, reading as follows:

"WE MAKE NO COMMENTS ANDERSENS LETTER JULY FOURTH REGARDING MAINTENANCE PATENTRIGHTS STOP PLEASE CABLE"

To which we replied: (On December 8th, 1941)

"CONCUR ALL RECOMMENDATIONS ANDERSENS LETTER JULY 4 STOP DUPONT AGREES ABANDONMENT DK23 HOLLAND DK29 AND DK51 FRANCE STOP RELINQUISH T123 T124 FRANCE T131 HOLLAND STOP ABANDON T200 FRANCE ITALY AND T219 FRANCE STOP SUGGEST CONSIDERATION FOR ABANDONMENT CASES T79 ITALY T130 NORWAY HOLLAND BELGIUM ITALY DK26 DK42 DK56 AND DK61 FRANCE DK61

Exhibit 795

HOLLAND BUT DECISION LEFT YOU AND ANDERSEN LETTER FOLLOWS"

And on December 9th we followed this cable up, as given below:

"SUPPLEMENTING OUR CABLE DECEMBER 8 SUGGEST CONSIDERATION FOR ABANDONMENT CASE T104 FRANCE AND ITALY T119 HOLLAND T139 T159 FRANCE BUT DECISION LEFT YOU AND ANDERSEN"

Your letter of July 4th, 1941 was received in good time but we have been prevented from giving consideration to this matter due to the pressure of intervening work.

After careful consideration, the recommendations contained in that letter were concurred with by us. We further agreed to relinquish the exclusive licenses under French patents in cases T. 123 and T. 124 and the abandonment of the Dutch patent in case T. 131.

From the point of view of commercial value of the products covered by case T. 200 (DK 1) we further directed the abandonment of the French and Italian patents in this case and the French patent in case T. 219.

We have taken up with our American licensee and obtained their consent to the abandonment of the Dutch patent in case DK 23 and the French patents in cases DK 29 and DK 51. We are holding this and will transmit a copy subsequently. We are also proceding to obtain the consent of the same party to the abandonment of the French and Italian patents in case T. 200.

We gave further consideration to the maintenance of other foreign patents as set forth in the lists sent us with

Exhibit 795

Mr. Ravnestad's letter No. 239 and No. 240, dated June 16th and June 23rd, respectively, receipt of which is acknowledged herewith and suggest that you consider with Mr. Ravnestad the desirability of further maintenance of certain patents, as follows:

T. Case	*Country*	*Patent No.*
T. 79	Italy	295,579
T. 130	Norway	56,780
T. 130	Holland	44,997
T. 130	Belgium	410,745
T. 130	Italy	334,998
T. 104	France	763,013
T. 104	Italy	322,919
T. 119	Holland	42,944
T. 139	France	760,035
T. 159	France	819,086
DK 26	France	
DK 42	France	
DK 56	France	
DK 61	France	
DK 61	Holland	

According to our views over here, it would appear that these patents might be abandoned, or exclusive licenses relinquished, as the case may be, without materially weakening our patent position. We feel, however, that we should not take this decision here, since there may be other con-

siderations of which you and Mr. Ravnestad may be aware not known to us, which would justify their further maintenance. Therefore, the decision with respect to the further maintenance of these cases is left to you and Mr. Ravnestad.

Yours very truly,

NATIONAL LEAD COMPANY

Re: Future Correspondence

Dear Mr. Andersen:—

Since the entry of the United States into the present war, the Trading with the Enemy Act of 1917 has been enforced with respect to transactions and communications with countries and nationals regarded as enemies. In this latter category are included, by definition, the countries presently occupied by the Axis nations and the citizens of such countries who are residing therein are defined as enemy nationals.

Under this act various Presidential Proclamations have been issued, either regulating transactions and communica-

tions with enemy nationals, or delegating authority to various agencies of the Government to control such matters. The last of these regulations affecting communications was issued March 18th, 1942 and made effective as of that date. The effect of these regulations, as regards communications, is to prohibit all communications intended for, or to be delivered directly or indirectly to an enemy national.

Correspondence from our side since the outbreak of the war has followed the laws and regulations. You will appreciate that it has been and will continue to be impossible for us to transmit to you any information regarding patents or other matters which would be intended or might be ordinarily transmitted by you, directly or indirectly, to any one else in an Axis or Axis dominated country. In the future, therefore, it will be only possible for us to communicate to you such information as is intended only for your own information and advice. We shall endeavor to keep you informed of any future developments.

With very kind regards to you and Mrs. Andersen from Mrs. Kaegebehn and me.

Yours very truly,

CFK:JL

Exhibit 799

Titan Company, Inc.'s Present Situation

April 18th, 1940.

Mr. C. F. Garesché.

Mr. C. F. Kaegebehn—Patent Department

Dear Mr. Garesché:—

A letter addressed by the firm of Carpmaels & Ransford, English patent agents, to Titan Co., Inc. in Wilmington has just been forwarded to me. It relates to the payment of annuities on British patent, No. 494,102, our Case T. 170, which was originally an invention of the I. G. Farbenindustrie.

This patent is evidently being maintained in England by Titan Co., Inc. on behalf of British Titan Products Co., Ltd. Apparently Titan Co., Inc. at Fredrikstad has authorized the payment of the annuity, which has amounted to £ 6. 0. 0., but for some reason or other, the remittance has been delayed. The British patent agents have now written to Titan Co., Inc. in America. I have replied, asking them for further particulars in the case.

This situation raises the following rather disturbing question: If Titan Co. Inc.'s records are now nearly all in Fredrikstad, with some in Paris, and if our Norwegian people are in the army, or not actively engaged in the business of Titan Co., Inc., and if they cannot carry on their international correspondence, who will take over the maintenance, prosecution and handling of the patent matters formerly conducted at Paris and then at Fredrikstad? There are so many patents being maintained by Titan Co., Inc. that there is considerable work looking after these. At this

time I have no suggestion to make, but simply to bring the matter to your attention against the possibility that Dr. Jebsen may ask us to do what we can and if so, you may have formulated some ideas along this line.

Yours very truly,

CFK:JL

Exhibit 800

April 29th, 1940

AIR MAIL

Mr. C. J. Stopford
British Titan Products Co., Ltd.
Burlington House, Yarn Road
Eaglescliffe,
Stockton-on-Tees, England

Dear Mr. Stopford:—

As a result of the recent Norwegian developments it is apparent that the English patent agents handling the affairs of Titan Co., Inc. have not been able to carry on their normal correspondence and have communicated directly with us in three cases. We cabled you today with respect to these cases, as follows:

> "RE MAINTENANCE BRITISH PATENT 493,871 T157 FIFTH ANNUITY PAYMENT DUE AMOUNT SIX POUNDS STOP IF YOU WISH MAINTENANCE AUTHORIZE CARPMAELS & RANSFORD 24 SOUTHHAMPTON BUILDINGS CHANCERY LANE LONDON WC2 TO MAKE PAYMENT STOP ADVISE US TITANCOS SHARE ALSO INVESTIGATE SITUATION REGARDING BRITISH PATENTS 494,102 T170 388,978 T85 SAME AGENTS"

It appears that Carpmaels and Ransford are London agents for the I. G. Farbenindustrie who have filed the patent applications and are maintaining them on behalf of Titan Co., Inc. It was my impression that Boult, Wade and

Tenant were the ordinary London agents for Titan Co., Inc. On April 17th we received from the firm of Carpmaels and Ransford a letter, copy of which is enclosed. On April 18th we replied by Air-Mail and are awaiting a response. On April 29th we received another communication from this firm with reference to Case T. 157, copy of which is enclosed, and on the same day a further notice concerning Case T. 85 was received, copy of which is also enclosed. Accordingly we cabled you as per the above quoted cable.

Apparently maintenance of patents by Titan Co., Inc. and the prosecution of applications in the various European countries which were formerly conducted by Titan Co., Inc. at Paris and later at Fredrikstad has now been interrupted. We are anxious that nothing detrimental to the patent situation in the various countries be allowed to transpire. We have written to Dr. Jebsen, asking for his suggestions as to how we can be of service in this situation.

With respect to patent applications being prosecuted in England and other countries within the licensed territory of British Titan Products, Co., Ltd., as well as patents already issued in that territory which were being maintained by Titan Co., Inc. on your behalf, what would be your suggestions? Possibly you could take over the maintenance of patents and the prosecution of the applications, paying such expenses as may accrue in connection therewith and informing us of Titan Co., Inc.'s share; or, on the other hand, you might prefer that we do this from America. In the latter instance it will be necessary for us to know the various cases being handled by different London agents and, as we do not have copy of the files related to the prosecution of any applications within the countries in your territory, we think it would be most expedient if these matters were

handled by you and we were informed of the cost connected therewith.

We shall welcome any suggestions and comments you have to make in this situation.

In the meantime, Mrs. Kaegebehn and I send to you and Mrs. Stopford and your family, and to all our friends in Billingham our very best regards and our most sincere wish that when this very disagreeable situation is over we will meet again under pleasant circumstances.

With my kindest regards,

Very truly yours,

CFK:JL

c c. Dr. G. Jebsen

Mr. C. F. Garesché

Exhibit 801

Letterhead of

BRITISH TITAN PRODUCTS COMPANY, LIMITED

CJS/SL/14585

C. F. Kaegebehn Esq., 6th May 1940
National Lead Company,
Patent Department,
111, Broadway,
New York, N.Y.

Dear Mr. Kaegebehn,

TITAN CO. INC. PATENTS IN AMERICA

Since events in Norway have made it impossible for Titan Co.Inc. patent organisation to operate fully on our behalf we have arranged with Dr. Jebsen, with whom we can communicate readily in Paris, and with Mr. Andersen, with whom we can communicate by cable only in Sweden, that we will look after the British patent position on behalf of Titan Co. Inc. and pay all fees etc., in so far as we are able.

A difficult position arises, however, in regard to patents in the names of Titangesellschaft and the I.G., as whilst we are entitled to rights under these patents through an agreement with Titan Co.Inc., actually licences have not been registered and, therefore, at the present time, we have no status on these matters in the eyes of the Patent Comptroller.

There are several complications which stand in the way of a British firm paying annuities on German-owned patents, so much so that we have asked Mr. Andersen to try and arrange for Titan Inc. to pay the fees on all I.G. and T.G. patents.

Exhibit 801

I enclose herewith a copy of a letter from Carpmael & Ransford, the I.G. patent agents.

I confirm my cable of to-day as follows:—

"YOUR CABLE 29th AFRAID BTR CANNOT PAY FEES ON GERMAN PATENTS HAVE ASKED ANDERSEN TO ARRANGE TITANINC DO SO STOP T.157 HAS BEEN ABANDONED T.170 DUE FOR RENEWAL APRIL 17th 1941 T.85 DUE FOR RENEWAL JUNE 15th 1940 WRITING"

which is, I think, self explanatory. Mr. Anderson has offered to take action in regard to these patents, but I do not know what type of action he is taking. I am assuming from your cable that he has been in communication with you.

I understand that one of the difficulties in the way of a British Company paying renewal fees on German-owned patents is that the Custodian of Enemy Property is not prepared to accept British currency in payment of these fees.

Yours sincerely,

C. J. STOPFORD

Encl.

Re: Titan Co. Inc. Patents In U. S.

Dear Mr. Stopford:—

Your letter of May 6th, 1940 was received together with your letter of May 10th, 1940.

I take it that the letter of May 10th supersedes the letter of May 6th and that the complications described in the letter of May 6th were overcome at the time you wrote your letter of May 10th.

Regarding the attitude of the British Custodian Enemy Property in refusing to accept British currency in payment of fees, I think it might be possible for us to place at your disposal United States currency to make these payments. If there is anything we can do in this direction, please advise and we will at once take up the situation here to see what can be done.

Yours very truly,

CFK:JL

c.c. Titan Co., Inc.—Fredrikstad
Mr. C. F. Garesché

Exhibit 803

Letterhead of

BRITISH TITAN PRODUCTS COMPANY LIMITED

AIR MAIL

CJS/SL/14694

C.F.Kaegebehn Esq., 10th May 1940
National Lead Company,
Patent Department,
111, Broadway,
New York, N.Y.

Dear Mr Kaegebehn,

T. G. AND I.G. PATENTS

It has now been decided that we, as a British company, may maintain T.G. and I.G. patents in which we are interested. We are, therefore, paying the renewal fees on all such patents which come within our ordinary T. cases and will settle accounts with Titan Company Inc. at a later date. I enclose herewith copy of the cables sent to you and Andersen to-day to this effect. As we shall both be working through Carpmaels and Ransford in these cases, there should be no chance of any confusion, and I enclose herewith copy of my letter of to-day to Carpmaels & Ransford.

In regard to your letter of April 29th, the position in regard to Boult Wade & Tennant and Carpmaels & Ransford is that Boult Wade & Tennant are Titan Inc's and our patent agents, whereas T.G. and I.G. always worked through Carpmaels & Ransford. The position at the moment is that we shall use Boult Wade & Tennant as in the past on all our general patent matters, but that the main-

tenance and prosecution of T.G. and I.G. patents will be handled by Carpmaels & Ransford, who will look to us for instructions, in the absence of instructions from T.G. and I.G.

Now that the point in regard to the payment of renewal fees on T.G. and I.G. patents is cleared up, you may take it that we will take over full responsibility for the British Empire patent position until Titan Company Inc. patent organisation is in a position to function normally again. This, of course, is in line with the agreement reached with Dr. Jebsen and Mr Andersen immediately after the German invasion of Norway.

This, I think, should answer the question raised in the third paragraph on page 2 of your letter of April 29th and is, I think, the simplest method of dealing with this matter. It would be rather difficult for you to take this detail over to handle it from America, but if you have any other views on the matter, please do not hesitate to let me know.

The sorting out of expenses to determine what portion of them should be paid by us and what portion by Titan Company Inc. has not been settled yet, as we have not as yet a Patent Department in operation here, but the amounts involved are not considerable, so that we are quite happy to look after the whole thing for the time being and settle up expenses at a later date.

Mrs Stopford and I much appreciate the good wishes contained in the last paragraph of your letter, which we heartily reciprocate. Nobody is enjoying life very much over here at the present time, and I think we must take it that this morning's news of the invasion of Holland and Belgium means that a very active phase of the war has now started and my own impression is that this is the real

reason why we had to withdraw from Norway. I do hope that your people will take a hand in protecting the Dutch East Indies. I should hate to see these fall into the hands of one of the smash and grab merchants.

With kind regards,

Yours sincerely,

G. STOPFORD

Copy to Dr. Jebsen.

Re: T. G. and I. G. Patents

Dear Mr. Stopford:—

Your letter of May 10th, 1940, regarding the handling of T. G. and I. G. patents, has been received.

As far as we here are concerned, we are sure that the arrangement whereby you will take over maintenance of the I. G. and T. G. patents in the British Empire will work most satisfactorily. We have no other views to offer at this time. If you can avail yourself of our services in any way in this emergency, please call on us at once.

We have had some correspondence from Dr. Jebsen, who indicates that he may call upon us to take over the handling of patent matters for some countries and we will try to do what we can in this situation.

With very kind regards,

Yours very truly,

C. F. KAEGEBEHN

Exhibit 805

August 23rd, 1940

Mr. F. W. Rockwell
Mr. C. F. Garesché
Mr. C. Simon
Mr. C. F. Kaegebehn

Memo. Re. Expenses Connected with U. S. Patents Originating from Titan Co., Inc.'s Non-American Associates.

Gentlemen:—

The trend of developments is in the direction of assigning titanium patents to companies in whose territories these patents are taken out. There was a tendency in this direction before the war broke out, and the legal situation during the war has given impetus to it. Assignment of the patents has, as a consequence, that the assignee carry all the expenses.

With regard to patents in the United States originating from Titan Co., Inc. and its non-American associates, the ownership must be retained by Titan Co., Inc. in view of the arrangement with Du Pont by which licenses are exchanged with Du Pont. The provisions of the Agreement of 1920 were such that Titan Co., Inc. would have had automatically the benefit of exclusive licenses under any Du Pont patents outside the territory of North America and this independent of Titan Co., Inc.'s owning United States patents, or in which, under the existing arrangement, Titan Co., Inc. must maintain its ownership in order to give licenses to Du Pont.

Exhibit 805

Considering the history of the developments between Du Pont, on the one side, and Titan Co., Inc. and its non-American associates, on the other side, it seems fair that an adjustment be made in the relations between Titan Co., Inc. and National Lead Company by which National Lead Company pays all the expenses (instead of 50%), leaving ownership to Titan Co., Inc.

Yours very truly,

G. JEBSEN
G. Jebsen

Exhibit 807

MEMORANDUM RE TEMPORARY ARRANGEMENT FOR HANDLING PATENT MATTERS OF BRITISH TITAN PRODUCTS COMPANY LIMITED

During the present situation, Titan Company, Inc., New York (Mr. Kaegebehn's organization) will, upon request of British Titan Products, do everything possible to assist in the handling of patent matters of British Titan Products Company, Limited.

I With Respect to Inventions Coming From National Lead Company

With respect to inventions coming within this category for which British Titan Products wishes patent applications filed in countries within its territory, Titan Company Inc. can follow either of the following procedures:

a.) Upon receiving the wishes of British Titan Products regarding the countries in which it desires to have patent applications filed, Titan Company Inc., New York, can have prepared in the United States all necessary papers to permit the filing of the desired applications. If either National Lead Company or Titan Company Inc. have come to the decision to take out the patent in their name, necessary signatures on behalf of the respective company can be obtained and the applications filed by U. S. patent agents of Titan Company Inc. through the usual agents representing British Titan Products. If neither National Lead Company nor Titan Company Inc. desires to file the application in their name, then

it will be necessary to obtain signatures on behalf of British Titan Products. In which case, under this procedure, Titan Company Inc., New York, can prepare the papers for signature and forward them to British Titan Products, who in turn, will have the applications filed through their regular patent agents.

b.) When British Titan Products has come to the decision that it desires to have corresponding applications filed in countries within its territory, it will request its patent agent to prepare necessary documents to permit the filing of these applications and to forward them to Titan Company Inc., New York for execution, leaving blank the name of the company who will take title to the application. Titan Company Inc., New York, will have executed all necessary papers by the inventor and if the case is to be filed in the name of National Lead Company or Titan Company, Inc., papers on behalf of the respective company. These will be returned to British Titan Products's patent agent. If neither National Lead Company or Titan Company Inc. wish to file the application in their names, the petition document will be returned to the patent agent so that it may be executed on behalf of British Titan Products.

Regarding the prosecution of the patent applications, regardless of whether a.) or b.) is followed, the patent agent filing the case can communicate directly with Titan Company Inc., New York, regarding information and advice necessary to answer the Patent Office Action.

Exhibit 807

II With Respect to Inventions Coming From British Titan Products

In the past it has been the practice of British Titan Products to leave to Titan Company Inc. the question of filing corresponding applications in countries outside of the territory of British Titan Products. If this practice is continued as is expected, Titan Company Inc., New York, will take over the filing of patent applications as may be desired by Titan Company Inc. to the extent the present circumstances prevent Mr. Ravnestad or Mr. Andersen acting as formerly. Titan Company Inc., New York, can forward to British Titan Products all documents requiring execution by British Titan Products to permit the filing of patent applications in various countries in which it (Titan Company Inc.) desires to have such applications filed. If British Titan Products files a patent application during the present situation and is unable to follow the regular procedure of sending a copy to Mr. Ravnestad or Mr. Andersen, these may be sent to Titan Company Inc., New York.

III Inventions Coming From Other Sources

To the extent it may be possible under the present situation to inform British Titan Products of such inventions and in the event Mr. Ravnestad and Mr. Andersen are unable to do so, this information may come from Titan Company Inc., New York. Should British Titan Products desire to have corresponding applications filed in countries within its territory, provided it is possible to do so, either procedure a.) or b.) given above under Heading I can be followed for the duration of the present circumstances.

Re: Patent Expense — B. T. P. —
Titan Company, Inc.

Dear Mr. Stopford:—

Dr. Jebsen has asked me to reply to your letter of February 7th, 1941.

Regarding the item of £872.0.0, the only information we can give you at this time is that we were informed of it by Mr. Andersen but have not yet received particulars concerning it. As soon as these are received, we shall forward them to you at once.

Considering now the individual invoices dealt with in my letter to Dr. Jebsen of January 14th and discussed in your letter of February 7th, the present situation, in view of the information contained in your letter, appears to be as follows:

We are now accepting an additional amount of £21.14.9 made up of the item of £1.15.5 from Invoice No. 203 for Case T. 237, which was incorrectly designated on the original invoice, and the item of £19.19.4 from Invoice No. 207, details of which were requested by Mr. Andersen. You have agreed with us that a reduction of £9.5.9, made up of items in Invoices Nos. 201, 203 and 332 is in order. This leaves an amount still to be considered of £10.10.0 made up of items from invoices Nos. 205 and 208, each for renewals of I. G. patents within the Licensed Field, and

an item of £4.10.0 from Invoice No. 206, covering renewal of British patent in Case T. 109. (Please note that in my memo to Dr. Jebsen I incorrectly set down this adjustment for T. 109 as £3.10.0.)

Regarding the payment of 100 percent of the maintenance of I. G. patents, coming within the Licensed Field, i.e., items of £3.0.0 each for renewal of I. G. patents (Cases T. 186 and T. 156), the following remarks will be, we trust, of interest to you.

The patents which we get from the I. G. have been obtained through special arrangements under which the T. G. gets certain rights. They are really acquired from an outside firm. These I. G. patents have been provided for through the agreement between Titan Co., Inc. and I. G. leading to the formation of T. G. However, T. G. has no right to the ownership. A consequence of this is that T. G. cannot transfer ownership to Titan Co., Inc. and B. T. P. If, consequently, T. G. would have to pay 50 percent for so long as Titan Co., Inc.'s associates wished an exclusive license, this would cause, in our opinion, an undue hardship on T. G., particularly in view of the fact that they have no opportunity to transfer ownership. It has, therefore, been considered equitable that 100 percent should be paid by the company who has the benefit of the license. This has been accepted by National Lead Co. as far as the United States is concerned. We had the impression that this point was taken up during our conversations at La Zoute and accepted on behalf of B. T. P. If this is not the case, we beg you to consider this in the light of our comments and trust that you will come to the same conclusion.

When taking up this question, it is important to keep in mind that these patents are really not developments of Titan Co., Inc. and associated companies, but are a result of a favorable arrangement with I. G., bringing in inven-

tions from outside sources similar to the opportunities which have occasionally been given us by I. C. I. with the distinction that the I. G. is under a definite obligation to do so.

Perhaps it should have been specified in the agreements referred to above that the licensee under I. C. I. patents would have to carry the expense of obtaining and maintaining the patents, but we think you will agree that provisions of this kind would have led to an excessive multiplicity of details. The essence of the situation appears to us to be that, since it is not in the power of T. C. to deliver ownership by transfer of title to the patent, it would impose an unreasonable hardship to expect them to bear 50 percent of the cost.

If there are any specific questions, which you should like to put to us in connection with the situation, we will endeavor to discuss them for you.

The foregoing remarks with respect to the I. G. patents, are related to the disputed items of Invoices Nos. 205 and 208 of £ 3.0.0 each. We note that you are unable to verify that Titan Co., Inc. ever informed B. T. P. that it no longer was interested to maintain the British patent in Case T. 109. The expense involved in this item amounts to £ 4.10.0.

We are writing Mr. Andersen at this time, asking him to investigate how, and in what manner Titan Co., Inc. might have informed B. T. P. and as soon as this information is received by us, we shall advise you of it.

Yours very truly,

TITAN COMPANY, INC.

By air-mail.

C. F. Kaegebehn, Esq.
National Lead Company,
Patent Department,
111 Broadway
New York, U. S. A.

Dear Mr. Kaegebehn,

B.T.P. Invoices
Titan Company Inc.s share patent expenses in Great Britain

I thank you for your letter of the 13th of March in which you communicate me Mr. Stopfords comments to the questions raised by us with respect to B.T.P. invoices No.s 81, 200-209, 332 and 333.

I understand that the item of £ 1.15.5. on invoice No. 203 relates to documents required for the French application in case T.237, which was filed by the Titan Company Inc. As we reserve the Société Industrielle du Titane exclusive licenses under our French patents half of this amount should be carried by them and the other half by ourselves.

Of the item of £ 19.19.4. on invoice No. 207 for renewal of patents under cases T.176/T.178, the expenses to Dutch patent No. 44.815 should be carried by Titan Company

Exhibit 810

Ind., and the expenses to renewal of German patents Nos. 643.995 and 638.197 should be carried by the Titangesellschaft.

With reference to the penultimate paragraph of my letter of the 26th of November 1940, I have just received a communication from Titan Co. A/S in which they suggest that the expenses to maintanenance of patents in Titangesellschaft's territory in Cases T.175 to T.178 inclusive be settled with the Titangesellschaft from your side.

The understanding regarding payment by us with 100% of expenses on I. G. patents within the Licensed Field under which we or our associated companies have exclusive licenses was reached in a conference in Ludwigshafen the 19th of January 1939 between Dr. Jebsen, Dr Raspe Dr. Redies and myself. It was further agreed that expenses to such patents which in addition to Licensed Field-matter cover other matter of importance should be paid with 50% by the I. G. and with 50% by us/the exclusive licensee/. As far as I can recollect extracts of the minutes of this conference, /in which also other matters were discussed/ including the minute re. expenses on I. G. patents were sent B.T.P. and N.L.Co. and accepted by them. Unfortunately I have not in my files here information enabling me to verify the matter in details and refer to data re. correspondance, the above is chiefly based on memory. I note from the copy received of your letter of the 13th of March to Mr. Stopford that you have fully explained to him the situation regarding the I. G. patents, but am mentioning the above as it may perhaps be of help in the event of the question being discussed further.

As regards the sharing of expenses on the British patent in Case T.109, my record re. share of expenses on the

particular patents indicates that the expenses to this patent should be carried with 100% by the B.T.P. and this is in accordance with our "List of T. Cases", in which is indicated that B.T.P. is the owner of the patent. The patent issued in Titan Company Inc.'s name and a formal assignment to B.T.P. was probably not executed but as in several similar cases the matter was arranged by correspondence. As I have not here the complete records of Case T.109 I am not, unfortunately, able to check the matter further at the time being, but will have to wait until I can get acces to the papers in our main files. I have however asked Mr. Ravnestad to investigate whether there should be further data in the files in Fredrikstad and will write you again when I have his reply.

Yours sincerely,

SIGURD ANDERSEN

Paris,

GJ/AK
Fletcher W. Rockwell Esq.
President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. Rockwell,

Agreement re the extension of the exchange of patent licences between Titan Company Inc. and its associated titanium companies.

The "Licensed Fields" in Titan Company Inc.'s various license agreements with its associated companies vary somewhat, as you may remember.

Between the National Lead Company, Titanium Division, and Titan Company Inc. (agreement of 1920) the Licensed Field is the widest one and this field applies also to Société Industrielle du Titane.

Our agreements with Titangesellschaft and British Titan Products Company contain definitions of the Licensed Field, which are more narrow and the same for both.

Titangesellschaft has developed from time to time inventions leading to patents covering subject matters outside the Licensed Field of their agreement, which subject matters, however, were and are of interest to the associated companies within their activities, and they have I may say

generally been sent to Titan Company Inc. for exchange under the conditions of the agreement, without discussing the Licensed Field. In the same spirit Titan Company Inc. has given licenses to Titangesellschaft under patents with subject matters outside the Licensed Field of the respective agreement.

Through this a somewhat irregular situation has arisen, as it has not been formally defined whether or to what extent the licences obtained under these patents would permit the use of the invention outside the Licensed Field as defined in the respective agreement.

In order to bring this practice in a formally more satisfactory form, I have got from Titangesellschaft and British Titan Products Company the enclosed papers.

The wording was originally the same for both, and Dr. Brüggemann of Titangesellschaft saw no objection to this. After nearer consideration he has, however, changed the wording in German slightly. I am informed over the telephone that the intention is the same, but that he has had to make changes partly in view of legal regulations and partly because when calling it an agreement it would have to be submitted to I.G.'s Board, which he did not think necessary.

You will note that the agreement with B.T.P. foresees that the company, if they think it advisable, can make reservations as regards any specific future case. The changes made by Dr. Brüggemann do therefore not seem to be strictly necessary and, as regards past cases, we are, I think, covered, apart from possible legal regulations to which we will be subject in any case.

I will arrange for a similar agreement to the one of the B.T.P. to be approved by the Board of Societé Industrielle

Exhibit 812

du Titane at our next Board Meeting. As we have the majority there, I expect no difficulties.

The arrangements do not cover all subject matters which may come up, but it seems impossible to provide for a definition which covers all cases. They have the advantage of laying down more formally the broader spirit which has been practiced and exists between the companies, and will facilitate the work of the various patent departments. They will give Titan Company Inc. a more free hand as regards the exchange of licenses outside the Licensed Field. The firms have the right at any time to withdraw from this wider exchange of licenses with one or more of the associated companies, if they find that the spirit of reciprocity in that quarter has not been adhered to, but Titan Company Inc. can act until an expression of dissatisfaction has taken place, and will consequently in all probability be able to exercise its influence in time to maintain the good cooperation.

I hope the arrangements will meet with your approval and, if you are in agreement, I shall appreciate to have them submitted to the Board of Titan Company Inc. for its approval.

National Lead Company's agreement with the Canadian Titanium Pigments Ltd. is, with regard to the Licensed Field, compared with the German and British agreements, in certain directions wider and in other directions more narrow.

I suggest therefore that the Canadian Titanium Pigments Ltd. be informed about the above agreements and asked to join us by signing a corresponding agreement to be made between the National Lead Company and the Canadian Titanium Pigments Ltd.

Exhibit 812

The Licensed Field in the 1920 agreement between the National Lead Company and Titan Co A/S, resp. Titan Company Inc., is so wide that I do not see that the extension foreseen will go beyond this Licensed Field, but I should appreciate the National Lead Company's approval anyhow for the sake of conformity as far as possible in the handling of these matters, and particularly that the National Lead Company, Titanium Division, will handle these matters in their relations with their licensees in accordance with the lines of this new additional agreement.

With kindest regards,

Yours sincerely,

Sign. G. JEBSEN

Encl.

Copy of the agreement between:
Titan Co.Inc. and B.T.P.
Titan Co.Inc. and T.G. (with translation).

Copy to Mr. Garesché
" Kaegebehn

Exhibit 813

Translated from German.

Between the Titan Company Inc. and its associated Titanium companies the practice has developed to exchange licenses in patent cases covering subject matters which are beyond the licensing obligation determined by contracts between the companies, but which are of interest for the production, use and sale of products within the Licensed Field, as for instance:

Recovery of materials used in the titanium industry (e.g. sulphuric acid), utilization of by-products (e.g. copperas), production of extenders, apparatus and the use of titanium pigments and compounds as well as of by-products and extenders.

It is agreed between the contract firms that when a firm offers such a licence outside its contractual obligation, it means—unless reservations are made—that the inventor company (respectively the company granting the licence), as far as it is within its power and not contrary to legal regulations, is willing to give to the other companies, on current agreement conditions, the rights to the use of the invention for the purposes of the production, use and sale of products within the Licensed Field under any patents outside its territory.

It is forseen that in cases where the receiving company (licencee) is not interested in an exclusive licence for the purposes mentioned above, it will be reserved a non-exclusive licence for these purposes.

This provision shall apply both to offers of licences made in the past and to those to be made in the future.

Exhibit 813

This arrangement is only to be applied to associated companies which in general act or will act reciprocally.

The expression "associated companies" as used above is meant to cover any company which has or will acquire a licence of the character described in Article XIV, paragr. a) of the agreement of 1920, and further the firm E.I. Du Pont de Nemours & Co., Wilmington, Delaware, U.S.A.

Exhibit 814

" APPROVAL OF THESE AGREEMENTS AND
" UNDERTAKE TO HANDLE THESE MATTERS
" IN THE SAME SPIRIT, STOP LETTER FOL-
" LOWS".

The agreements concerning the extension of the exchange of patent licences can be divided up in two different questions.

The one is the exchange of licences between Titan Company Inc. and the associated company in question, concerning the patents owned by these two companies.

The other is the grant of sublicences. You will note that the first paragraph on page 2 says: "This agreement is only to be applied to associated companies which in general act or will act reciprocally".

The Licensed Field in the agreement of 1920 between Titan Company Inc. and National Lead Company is so wide that the extensions mentioned in the agreements now under consideration are, as far as I can see, not likely to go beyond the Licensed Field in the 1920 agreement. If, however, New York, is of a different opinion, then it would be advisable to make an agreement as regards this matter. If not, better leave it out, as it might seem incongruous.

The second matter involves an obligation for Titan Co. Inc. only to give sublicences—on subject matters outside the Licensed Field as defined in the agreement between Titan Company Inc. and its licensor—if the sublicencee in general acts or is willing to act reciprocally.

Between the National Lead Company and Titan Company Inc. there cannot be any question of this, if the Licenced Field, as I take it, covers the subject matters dealt with in the extension arrangements.

Exhibit 814

However, it is in the spirit of the extension agreements that this condition of reciprocity, as regards inventions which are outside the Licensed Field as defined in the respective agreements, applies also for sublicences to be given; for instance National Lead Company should only give the Canadian Titanium Pigments (or any other of its licencees) sublicences under any such patent under which it is licenced, provided the Canadian Titanium Pigments is willing to reciprocate.

Whether this second matter should be dealt with by a formal agreement or by a letter amounting to an agreement, I leave to New York to decide. It seems to me that a letter from National Lead Company to Titan Company Inc., in which National Lead Company takes note of the agreement for the extension of the exchange of patents, expresses its approval of the arrangements and declares that they will handle their licences in the same spirit, will be sufficient, particularly if this letter is based on a board resolution.

The next matter to attend to for the National Lead Company seems to me to be an agreement between National Lead Company and Canadian Titanium Pigments on the same lines as the extension agreements between Titan Company Inc. and the European associates, now under consideration.

You will note that on page 2, paragr.5 of my letter to Mr. Rockwell I have said :

" The firms have the right at any time to withdraw from
" this wider exchange of licences with one or more of the
" associated companies, if they find that the spirit of

Exhibit 814

"-reciprocity in that quarter has not been adhered to, but "Titan Co. Inc. can act until an expression of dissatisfac- "tion has taken place, and will consequently in all proba- "bility be able to exercise its influence in time to main- "tain the good cooperation."

You will appreciate that if Canadian Titanium Pigments or any other licencee, resp. sub-licencee, of National Lead Company does not reciprocate, this will in time provoke a reaction on the part of our associated companies and lead to a reservation from these as regards the grant of licences under patents with subject matters outside the Licensed Field of their agreements with us, i.e. outside their present obligations.

The whole arrangement is, as you will note, elastic, as it is voluntary whether such patent applications or patents (outside the respective Licensed Field) are offered or not, and also voluntary, by offering the same, whether reservations are to be made or not, but nevertheless the arrangement has its advantages, as it lays down more formally a broader spirit and a willingness to cooperate beyond the Licensed Field.

With kindest regards,

Yours very truly,

G. JEBSEN

Copy to Mr. Rockwell
" Garesché.

Exhibit 815

February 17th 1939.

SJH/AK

Société Industrielle du Titane
26, rue de la Pépinière
Paris

Dear Sirs,

Re the extension of the exchange of patent licences between Titan Company Inc. and its associated titanium companies.

Referring to conference, we beg to confirm the following:

It has been the practice to exchange licences in patent cases covering subject matters which are partly or wholly outside the Licenced Field as defined in the respective Licence Agreements, but which are of interest for the production, use and sale of products within the Licensed Field, as for instance: recovery of materials used in the titanium industry (e.g. sulphuric acid), utilization of by-products (e.g. copperas), production of extenders, apparatus and the use of titanium pigments and compounds as well as of by-products and extenders.

It is agreed that when such patent applications or patents are offered by one associated company to the other associated companies, it means—unless reservations are made—that the inventor company (respectively the company granting the licence) as far as it is within its power is willing to give, on current agreement conditions, to the other companies, rights to the use of the invention for the purposes of the production, use and sale of products within the Licenced Field under any patents outside its territory.

Exhibit 815

It is specifically understood that in cases where the receiving company (licencee) is not interested in an exclusive licence for the purposes mentioned above, it will be reserved a non-exclusive licence for these purposes.

This agreement is only to be applied to associated companies which in general act or will act reciprocally.

The expression "associated companies" as used above is meant to cover any company which has or will acquire a licence of the character described in Article XIV, paragr.a) of the agreement of 1926, and further the firm E.I. Du Pont de Nemours & Co., Wilmington, Delaware, U.S.A.

For the sake of order we should be obliged if you would kindly confirm your agreement to the above and remain

Yours very truly,

TITAN COMPANY INC.

(Sign.) G. JEBSEN
Vice President

Exhibit 816

CONVERSATIONS—LE ZOUTE—JUNE 28th 1939

DR. JEBSEN
DR. RASPE
MR. STOPFORD
MR. KÆGEBEHN

It was suggested that, when one of the associated companies open up a new field of development and apply for patents and circulate research reports covering their initial work within that new field, the other associated companies consult with the first company (for purpose of these notes hereinafter called "the original inventor company") before applying in their respective territories for patents on improvements made by them in the new field opened up by the original inventor company.

This suggestion was discussed in Le Zoute on June 28, 1939.

It was put forward, on behalf of the National Lead Company, (Tit. Div.) that, although this company wished always to respect the priority of a new development opened up by one of the associated companies and to afford proper credit to the individual inventors of those companies, certain special considerations applied in the United States particularly those arising from the Patent Laws and Patent Office Procedure which made it desirable to apply for patents in the United States rather promptly after completion of the invention and in the name of the individual American inventor, or inventors. For instance a technologist of National Lead Company (Tit. Div.) might make an inventive (i.e. patentable) improvement in a field open up by one of the

European associated companies. In such case two important considerations existed why the United States patent application should be applied for in the name of the American inventor and on behalf of the National Lead Company:

a) One of the bases of validity of a United States patent is that it must be filed in the name of the actual inventor or inventors. Hence, it would not be possible for National Lead Company to hand over the improvement invention to be patented in the United States in the name of Technologists of the "original inventor company".

b) Should National Lead Company hand over the improvements to be filed as a patent application by the original inventor company in its territory before applying for a patent in the United States, then if an interference developed in the United States the improvement application would have to stand on the date of the filing of the first Convention date and not upon the actual completion of the invention in the United States by National Lead Company which latter date would, in every case, be earlier than the former, i.e. Convention, date.

Furthermore, it was noted that two disadvantages might develop if such the foregoing suggestion was applied:

a) Fewer patents might be applied for because it was concievable that the original inventor company might not desire to have the improvement patent applied for, or did not regard it as patentable in their territory.

b) Differences of opinion, which might best be avoided, might arise as to whether or not a given subject matter developed by one of the associated companies was, in fact,

an improvement in some field open up by another of the associated companies.

It was submitted that the interests of all the associated companies was best promoted (1) by permitting the developments of each member to stimulate every other member to make new improvements in these developments and (2) by each company taking out in its own territory as many and as strong patents as could be secured.

It was, therefore, proposed that, in the future, each of the associated companies should be free to apply for patents, in its territory, on improvements made by its technologists in fields opened up by other associated companies but that the company applying for the improvement patent would not apply for patents in the territory of the original inventor company without first consulting the original, inventor company and should, for any reason, the original inventor company desire that the improvement be not applied for in its territory, the application would not be filed. It was further proposed that this principle be applied to fields of development suggested, i.e. opened up, by means of the research reports which are circulated throughout the associated companies as well as to the fields of development suggested by the patent applications of the associated companies which are applied for in their respective territories.

It was agreed that the principle described in the preceeding paragraph s... ild be approved by the associated companies and put into effect.

Mr. Stopford mentioned, on behalf on the British Titan Products Company, not, however, as proposal but merely to air the view, that it might be desirable that each of the associated companies take over entire control of the patent

Exhibit 816

situation within their respective territory, deciding which applications should be applied for, the preparation of the patent applications, the prosecution of the applications etc., and taking title to the patent. Dr. Jebsen pointed out the trend of the international cooperation between the associated companies was wholy in this direction and that such an arrangement might well develop in the not too distant future.

Sign. C. F. KAEGEBEHN

Paris, July 11, 1939

iab

Exhibit 817

RESOLUTION

RESOLVED, that this Corporation hereby approves of the principle of handling patent applications relating to improvement inventions made by any of the associated companies on the basis of original developments of a different associated company, as contained in the minutes of that certain conversation which took place at Le Zoute, Belgium on June 28th, 1939, attended by Messrs. Jebsen, Raspe, Stopford and Kaegebehn, the minutes of which conversation, signed by Mr. Kaegebehn, dated Paris, July 11, 1939, were read at this meeting.

TO WIT: In the future, each of the associated companies shall be free to apply for patents in its territory on improvements made by its technologists in fields opened up by other associated companies but that the company applying for the improvement patent will not apply for patents in the territory of the original inventor company without first consulting that original inventor company, and should, for any reason, the original inventor company desire that the improvement patent be not applied for in its territory, the application will not be filed; it being understood that this principle will apply to fields of development suggested, i.e. opened up, by means of the research reports which are circulated throughout the associated companies, as well as to the fields of development suggested by the patent applications of the associated companies which are applied for in their respective territories, copies of which are circulated throughout the associated companies.

October 5th, 1939

Dr. G. Jebsen
c/o Titan Co. A/S
Fredrikstad, Norway

Re: Conversations in Le Zoute
June 26, 1939 — Patent Matters.

Dear Dr. Jebsen:—

Your letter of September 15th, 1939 was duly received, and I wish to thank you for your effort to clear up the difference in interpretation between Mr. Stopford and myself, regarding the disputed passage in my notes on the Le Zoute conversations.

Within the past few days, I have discussed with Mr. Cole the draft of resolution to make official the acceptance of the principle of the Le Zoute conversations by Board resolutions of both National Lead Company and Titan Company, Inc.

In the meantime, copy of Mr. Tasker's letter to you with respect to the effect of the British war regulation on the exchange of information between British Titan Products and even a neutral party, such as yourself, has been received. I may mention that Canadian regulations follow the British very closely, and there is being created here a situation which will, I am afraid, act to prevent exchange of information from the Canadians to ourselves. (This situation is more fully discussed in a separate letter).

Mr. Cole and I are of the opinion that since this war situation is apparently going to exert a very considerable effect upon the coöperation between the associated com-

panies, it might not be desirable at this time to pass resolutions between the Boards of National Lead Company and Titan Co., Inc. regarding the principle of the Le Zoute meeting. This principle deals with cooperation between a group consisting of several companies, some of which are neutrals and others belligerents, which principle, in view of the present situation, cannot be applied as between belligerents. It would further appear that the present restrictions in Great Britain and Canada will probably militate against even applying the principle as between certain belligerents and the neutral members of the group. In view of this we considered it better to withhold entering the approval in the minute books of the Boards of National Lead Company and Titan Co., Inc. at this time. Mr. Cole has placed notice of this matter, together with the draft resolution, in the minute book of Titan Co., Inc., and it will be held there until such time as we are able to advise him that in view of a changed situation the principle can formally be approved by the respective Boards of Titan Co., Inc. and National Lead Company.

If, contrary to our opinion, you think that the resolution should be put through at this time, I am sure the matter could be attended to promptly. Will you please let us have your comments.

With kind regards,

Yours very truly,

CFK:JL

c.c. Mr. M. D. Cole

Mr. C. F. Garesché

Exhibit 818

RESOLVED, that in consideration of the like agreement on the part of National Lead Company (as successor in interest to Titanium Pigment Company, Inc. under that certain Agreement dated July 30, 1920, between the last named company and Titan Co. A/S, (predecessor in interest of this corporation), and on the part of the various licensees and sublicensees of this corporation and of said National Lead Company within the "Licensed Field" as defined in said Agreement dated July 30, 1920, or as otherwise defined in any given case with the consent of the other party to said Agreement, (said parties to said Agreement and all such licensees and sublicensees being hereby referred to collectively as "associated companies"), this corporation agrees to adopt the following procedure with respect to the patenting of any invention conceived by it which is in the nature of an improvement on any new development within said Licenced Field suggested and communicated to it by any other of said associated companies, whether in the form of specific patent applications or of research reports circulated among said associated companies: that it will, and shall have the right to, apply in its own name for patent on any such improvement invention conceived by it, in any country within the territory of its exclusive patent rights within said Licensed Field which it may elect, but that it will not, without the prior approval and consent of the original inventor company which conceived such new development, apply for patent on such improvement invention in any country within the territory of the exclusive patent rights of said original inventor company.

Dr. Bruggemann
I. G. Farbenindustrie Akt. Ges.
Leverkusen I. G., Werk

Dear Dr. Bruggemann:

At the last meeting on Friday the 17th I made a request that care would be taken also to bring formally into order the agreed extension of the territory of Titangesellschaft.

In connection with this I have to specify the countries which since the agreement was made have been included in the territory of Titangesellschaft:

Poland and Portugal—since 1930
Danzig — " 1931.

In addition to this we have given to Titangesellschaft the right to sell in the below mentioned South American countries.

As you know special agreements are prevailing agreeing to the contract of 1920 between the Titanium Pigment Company and the Titan Company concerning South America, concerning patent rights, etc., and both of these firms have the right to sell in South America. The transfer of our rights regarding the below mentioned South American countries remain subject to the conditions of this agreement (the agreement of 1920).

Exhibit 819

Argentina—since	July 25, 1932
Brazil	March 1930
Bolivia	
Columbia	
Ecuador	
Peru	beginning 1933.
Paraguay	
Uruguay	
Venezuela	
Chili	

I shall be much obliged if you will let me have your proposal as to an exchange of formal letters or a supplement to the agreement for the purpose of the formal regularization of our contracts.

With kindest regards,

Yours very truly,

JEBSEN

Titan Co. Inc.
Att. Dir. Dr. Jebsen
Paris

Referring to our conference with Dr. Jebsen, held at Leverkusen, March 18th and 19th 1933, we beg to confirm herewith, for the sake of order, that the countries enumerated below are to be considered the territory of our Company:

Germany, Russia, Austria, Hungary, Czechoslovakia, Switzerland, Roumania, Jougoslavia, Bulgaria, Greece, Turkey, Japan, China, Spain, Portugal, Poland, Danzig, South America (excl. Guiana).

The rights resulting from the agreement of 1920 between the Titanium Pigment Company and the Titan Co. A/S, concerning South America, are not affected by our arrangement with your Company.

Kindly confirm your agreement to this arrangement in writing.

Yours very truly,

TITANGESELLSCHAFT m.b.H.

Dear Sirs,

We beg to acknowledge receipt of your letter of September 25th and to confirm, that the countries enumerated and as below specified are to be considered the territory of your company, but that South-America (exclusive of Guiana) is included only to the extent that such inclusion is compatible with the provisions of the agreement of July 30th 1920 between the Titanium Pigment Company Inc. and this corporation, as successor in interest of Titan Co A/S.

Territory:

Germany, Russia, Austria, Hungary, Czechoslovakia, Switzerland, Rumania, Jougoslavia, Bulgaria, Greece, Turkey, Japan, China, Spain, Portugal, Poland, Danzig, South-America (exclusive of Guiana).

Very truly yours,

TITAN COMPANY INC.

Dear Mr. Cole,

For your files, please find enclosed copy of Titangesellschaft's letter of September 25th, together with English translation, as well as copy of Dr. Jebsen's reply in the name of Titaninc of October 10th, fixing the present territory of Titangesellschaft, that is the previous territory to which has been added Portugal, Poland and Danzig, and, with certain reservations, South America, in accordance with the authorization given Dr. Jebsen by the Board of Titan Co.Inc.

Yours very truly,

S. J. HENRIKSSEN

Copy to Mr. Beschorman.

William C. Beschorman Esq.
Executive Vice President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. Beschorman,

Enclosed please find, translated from German, minutes No. 19 from Board Meeting in Titangesellschaft, held January 17 and 19, 1935.

Yours very truly,

S. J. HENRIKSSEN

Same letter sent Mr. Cornish.

Exhibit 823

Minutes No. 19. January 21, 1935.

MINUTES FROM CONFERENCES RE TITANIUM WHITE MATTERS IN BERLIN, 17.1.1935 AND IN LEVERKUSEN, 19.1.1935.

Present:	Dr. Kühne	(17 and 19.1)
	Dr. Jebsen	(17 and 19.1)
	Dr. Brüggemann	(19.1.)
	Weber-Andreae	(17.1.)
	Borgwardt	(17.1.)
	Iuell	(19.1.)
	Raspe	(17 and 19.1)
	Koziol	(
	Hanssen	((Part time 19.1.)
	Schwenk	(

1.) The British Titan Products Co. is authorized to supply the Unilever factories in the territory of Titangesellschaft, provided the business remains within the present frame and at the prices fixed by Titangesellschaft for the countries in question. The profit on this business is to be credited Titangesellschaft.

2.) Mr. Borgwardt's proposal for an agreement regarding Japan is approved. With regard to the pool-contract, Mr. Borgwardt will submit a new draft on account of certain changes.

3.) Krebs Coloured Pigment Patent Application (U. S. Appl. No. 714.685)

Dr. Jebsen reported about his negotiations with Mr. Rupprecht of Krebs Pigment and Color Corporation. He had asked Mr. Beschorman to inform Mr. Rupprecht that Titangesellschaft could not accept to rep-

resent the Krebs Pigment & Color Corporation with regard to the patent application. They would, however, be glad to discuss more fully the question of a license when a patent is granted.

It was agreed, in case of a patent application by Krebs, to be as considerate as possible. However, T.G. must reserve itself the right to formally raise opposition in order to protect its opposition rights. It is intended, however, to start with, to word the opposition so that it can be withdrawn at any moment without prejudice for the possible grant of a patent. It would then be a question of awaiting the developments of the negotiations with Krebs, started by Dr. Jebsen, regarding a general interchange of patents. It was agreed that in principle a free interchange of licenses was desirable. Dr. Jebsen requested that this matter be treated confidentially, also towards members of the Blumenfeld group.

William C. Beschorman Esq.
Executive Vice President
National Lead Company
111 Broadway
New York City, U. S. A.

Dear Mr. Beschorman,
Re: HONG-KONG.

You may remember that B.T.P. claimed the right to sell in Hong-Kong, as the city belongs to the British Empire. T.G.m.b.H. has been selling there, considering it part of China. T.G.m.b.H. acknowledged that it does belong to the British Empire, but an unsatisfactory situation could arise, Hong-Kong being an important port to China and goods easily trespass the Chinese frontier.

After various discussions with the B.T.P. people, I was authorised to inform T.G.m.b.H. that B.T.P. was willing to give them the Hong-Kong market. Compensations on various lines were suggested, particularly a royalty payment or the right for B.T.P. to deliver to Pinchin Johnson's factories in China. I suggested that it should be left to the Germans to offer a compensation, as both Dr. Kühne and Mr. Weber-Andreae were reasonable people and sensitive to a gesture—and this was accepted.

Taking it up with Kühne, Brüggemann and Borgwardt, on these lines, I found that Borgwardt was not in favour

Exhibit 824

of the mode of compensation which had been considered within the B.T.P. He was afraid that the deliveries to Pinchin Johnson's Chinese factories might develop into a request of deliveries also to the firm's factories in other parts of T.G.m.b.H.'s territory. Borgwardt suggested as compensation either

1). The profits on the sales to Hong-Kong to be paid to B.T.P., similar to the arrangement we have for deliveries by B.T.P. to Unilever's factories in T.G.m. b.H.'s territory; or

2). The profit on B.T.P.'s deliveries to Unilever's factories in T.G.m.b.H.'s territory.

B.T.P.'s board has accepted the first alternative, and the matter will now be settled on these lines.

The discussions which took place about this matter were all in a friendly spirit.

With kindest regards,

Yours very truly,

G. JEBSEN

New York City, U.S.A.

Dear Mr. Beschorman,

Sales Development Committee B.T.P.

The sales are developing well in United Kingdom.

January sales in	*1933.*	*1934*
Standard T	98 tons	163 tons
Extra T	24 "	51 "
TiO2	36 "	70 "
	158	284

Oversea sales are small, chiefly due, I think, to the agencies not having been appointed. The committee considered these, and accepted I.C.I.'s offer to take Egypt, Palestine and Straits Settlements: for Straits Settlements it was considered advisable to make an arrangement with Arnold Meyer, our present representative,—giving him a preference price,—and prevent him from taking over Laporte's agency. Goodlass Wall people have reported favourably on Titan Co A/S' South-African agents; the firm is good,

Exhibit 827

but I thought somebody could be found who was more familiar with the trade. Re Australia and New Zealand, further investigations are considered necessary. Greeff put forward their New Zealand connection but not the Australian.

Mr. Thompson and Mr. Stopford submitted a proposal to reduce all oversea prices as per enclosed copy—to be based on the present English prices before duty paid.

This will mean a considerable reduction of the profit, but, what is worse, the profit Greeffs thus calculates is based on B.T.P.'s cost price from Leverkusen (without interest on capital) and this is lower than B.T.P.'s will be for quite some time in Billingham.

The estimated cost of TiO2 pigment in Billinghan (1600 t.p.a.) is £46.0.0. Assuming same freight from Billingham as from Rotterdam to for instance South Africa (and it will be higher) the suggested price will only leave a gross profit of 38% of cost price.

With these prices established—the next thing will be—the English customers, when Billingham starts, to request a price giving B.T.P. the same price ex Billingham as for oversea deliveries.

The Australian prices for TiO2 are already so low, due to specific competition, and I pointed out that this was used against the Germans, by an English firm asking for quotation for a daughter-company in Brazil. Thus, the Germans find sales of their own product used as argument against the German prices.

All seemed to agree that this ought not to be so.

Last autumn Mr. Thompson asked permission to deliver to Lever Bros' factory in Switzerland, under their contract

based on English prices. The Germans agreed to this, provided the profit was turned over. I find now, that Thompson has calculated in the same way and not used a price equivalent to the English inland price, but a cif price, duty unpaid. Such low price was entirely unnecessary and I am surprised of Thompson's action and way of reasoning, which can have most unfortunate results. The Germans are probably not aware of this yet, but I do not look forward to their comments with pleasure, if they find it out.

It was agreed by the committee, and later by the Board (Tasker not being present in the committee), to retain prices and only lower them if competition made this necessary.

Thompson asked me somewhat suddenly and heated: "Do you mean, Dr. Jebsen, that B.T.P. is dependent on Titangesellschaft for the fixation of its prices"? I answered: "No, with the exception that we all live in the same world." Major Barley agreed and pointed out that there is quite some talk of a devaluation of the German Mark with 40%, in which case the Germans would be able to sell very cheap.

In my opinion, the Germans should be more tempted to reduce prices, with their low costs, the new extension and the British market dropping out. They had, though, not found that the possibilities of extensions with the present prices were exhausted, and, with out present developments, I did not see that we should start an unnecessary reduction of the prices.

Thompson pictured a future with large sales and lower prices. I told him that we had fixed that policy when we planned the factory, which provides for an extension to 3000 tons TiO2 with an extra investment of only 8 to

10.000 £. The price reduction should, though, be made gradually, as we exhausted the possibilities of the markets which can pay higher prices. I asked them also to have in mind that the new factory is not likely to produce at £46.0.0 per ton TiO2, immediately. We must be prepared for higher costs in the beginning and, with the considerable overhead and propaganda expenses—not included in the production costs—we will do well in not precipitating price reductions. I am inclined to think the low costs in Leverkusen have made things too easy.

I enclose two memos regarding the formation of international committees for cooperation on sales, and will suggest to have formed similar committees for manufacture and research—these last to work in line with the scheme for cooperation I understand is developing on your side and which I very much welcome.

These two suggestions were much welcomed by all, except Mr. Thompson, who asked if it was my intention that the parties should let open entirely their various sales methods and experience, etc. I thought it would be a matter of "give and take" and development of mutual confidence. Tasker meant that, with sales territories divided, there should be no objection to a full exchange. Mr. Stopford later informed me that Thompson afterwards has tried to enlist him for a policy of B.T.P. acting without regard to the continental firms, which he had opposed.— I do not see anything else in Thompson's attitude than agency firms usual disinclination to give information away re their business, and a desire to have the largest possible turnover,

and think Thompson will cooperate all right, once the situation is established.

I hope a cooperation can be established between the Titanium Pigment Co. and these international committees. They will have to develop their field of work and cooperation. My proposals for reports are only meant as suggestions for a start.

Exchange of technical sales service experience takes, as you know, already place—it was established when Mr. Hagar was over—and this forms a very good basis for further development.

Reports on the subjects 1, 2 and 3 (memo I) are given by me for the most parts in my annual reports.

Please consider if similar information from Titanium Pigment Co. could be sent us.

With kindest regards,

Yours very truly,

G. JEBSEN

P.S.—

February 6th

I enclose copy of my letter of even date to R. W. Greeff & Co.

Exhibit 826

INTERNATIONAL SALES COMMITTEE.

MINUTES FROM MEETING HELD IN PARIS MARCH 1st and 2nd 1934

Present: Dr. Jebsen (chairman) Mr. Thompson
Dr. Kühne (partly) " Stopford
Dr. Raspe " Gilbert
Mr. Borgwardt " Anker
" Henriksen
" Ravner (secretary)

1. Election of Chairman and Secretary.

Following Mr. Thompson's proposal, Dr. Jebsen was unanimously elected Chairman of the Committee. Mr. Ravner was elected Secretary.

2. Sales and Price Statistics.

The following statistics were distributed:

a) Annual deliveries in the last 5 years in the most important markets.

b) Diagram of deliveries 1922-1933.

c) Lowest official prices of "KRONOS" pigments in various countries with corresponding net prices fob Leverkusen per January 1934, as well as prices of competitive products and the ratio of Standard T and TiO2 prices to the price of Lithopone.

d) Cost of mixtures of TiO2 with Blanc Fixe to give a product of the same tinting strength as Standard T and Extra T in various countries.

Exhibit 826

e) Distribution of the deliveries of Titanium pigment over the various kinds of industries in the most important countries.

f) Data regarding the artificial silk industry

3. General Review of Market Conditions.

Mr. Thompson	representing	B.T.P.
" Borgwardt	" "	T.G.
" Gilbert	"	Sté Ind. du Titane
" Ravner	"	Titan Company Inc.

gave a general review of the conditions and their experience from the sale in the respective markets.

4. Price Policy.

Mr. Ravner outlined the experience in the various markets as to the price-value of "KRONOS" pigments compared with the other white pigments.

The indication is that at the same price per unit of tinting strength as in 30% Lithopone, resp. 60% Lithopone and Zinc Sulphide, a large market can be expected but a considerable development is still to be foreseen at higher prices.

In the Scandinavian countries which chiefly use Zinc Oxide and where pigments are chiefly consumed by the master-painters and the public, Standard A can expect a very extensive general use at a price equal to Zinc Oxide. At the higher prices hitherto applied and up to 30% above Zinc Oxide a smaller but not inconsiderable part of the market is held.

The business depression of the last years and the unstable exchange situation have led to very irregular prices

Exhibit 826

for the competitive pigments in the various markets, which have in turn led to a discoordination also between the prices for the "KRONOS" pigments.

The situation was thoroughly reviewed, all members contributing to the discussion and generally approving Mr. Ravner's exposé.

Laporte's beginning competition at very low prices on the British Oversea markets, Holland and Belgium were particularly mentioned.

In Great Britain a price agreement between Laporte and B.T.P. Co. exists.

It was agreed that it was desirable to aim at a coordination of prices, but under the present unsettled international conditions and the different stages of development of the sales in the various countries, it was necessary for each company to have a considerable liberty in the fixation of prices.

However, it was by all considered advisable to avoid as far as possible price quotations which could have a disturbing effect on prices in other countries.

Dr. Jebsen put forward the following proposal which was approved by all members:

a) Prices for deliveries—duty unpaid—should be based on a price F.O.B. Leverkusen not below:

for TiO_2	Mk. 900.—
" Extra T	" 525.—
" Stand.T	" 335.—
" Stand.A	" 331.—

These prices to be calculated by deducting from the actual sales price 5% commission on sales price, freight and insurance.

b) Prices for deliveries with duty paid can be made correspondingly lower, if competition with other pigments makes it necessary.

c) The above minimum price to apply also for large contracts. Quotations below these, only to be made, when forced by competition from other Titanium manufacturers, or if the exchange situation brings price reductions, which can not at once be recovered. Such quotations and cases to be reported immediately to the Paris office for information to all members.

d) These basic prices to be rediscussed at the request of any member of the Committee.

5. *Future Exchange of Statistical Information.*

Mr. Borgwardt and Mr. Ravner had been asked to propose standard schedules for sales statistics.

It was agreed that Mr. Ravner should prepare and circulate among the members the proposals for such schedules which were discussed and agreed upon in principle, and which should contain the following information:

a) *Deliveries.*

The schedule should specify the deliveries of each quality, calculated as TiO2, separately for each country, in which deliveries exceed 20 t. (as TiO2), while the countries where deliveries amount to less should be grouped together. The schedule to contain a column of the preceding year.

b) *Prices.*

The schedule should give the lowest prices generally applied for "KRONOS" and competitive pigments. The

Exhibit 826

prices to be stated in the currency of the country in question as well as in German Marks; with indication of rate of exchange.

c) *Quantities delivered to the different industries.*

The division of groups of industries was carefully considered and agreed upon.

The above-mentioned statistics should be established for the periods January 1st to June 30th and January 1st to December 31st of every year and sent to the Paris office for distribution among the members.

In addition the members will immediately advise the Paris office, for notification of all members, of any change in the prices amounting to more than 5%.

6. *Possible New Outlets.*

Possible new outlets were discussed and particularly were considered the following, mentioned by Mr. Borgwardt and Dr. Raspe:

a) *Electrical welding.*

In Germany there are two customers for Titanium Oxide for this purpose, using 1 to 2 tons a year. In Belgium Ilmenite Black has been sold for the same purpose.

b) *On roads.*

There is a demand for products to make the edges and division lines of automobile roads white, a product that could be incorporated in the road material. Titanium White has been tried and is partly used in road paints in various countries.

It is though probably still too expensive for these purposes.

c) *In the porcelain industry*, as insulating material, particularly for the radio industry. The high dielectric constant of titanium oxide looks promising.

According to Landolt-Boernstein (1912) the constants are for the following products:

Rutile	89 to 173, in powder 110
Brookit	78
Zirconium	12, 8
Quartz	4, 69

A German firm has ordered 10 tons for test purposes. The price will presumably have to be reduced considerably.

d) *In the glass industry.*

Tests in Germany have shown that glass containing up to 40% TiO2 has a specially high light refractive index, and forms together with lead compounds a good raw material for crystal glass and glass of high brilliancy.

Titanium oxide in the glass prevents ultra violet rays to pass through. It should therefore have possibilities in equatorial climate where the destruction of goods would be hindered if kept in containers made of such glass.

The possibilities of the calcium base pigments were also discussed, Dr. Jebsen and Dr. Raspe pointing to the results obtained in America, and the specific properties of these pigments. There is, however, no opportunity for manufacturing this pigment before towards the end of the year.

Exhibit 826

7. *Propaganda.*

Messrs. Thompson, Borgwardt and Gilbert gave a short outline regarding the propaganda work in the respective countries.

Dr. Jebsen, in making a résume, stated that the propaganda had been made chiefly along two lines:

a) industrial consumers,

b) master-painters and the public.

As general experience it can be said, that personal propaganda, was the most important and gave the best results, whereas printed matters and publications were only useful as an aid to personal propaganda, unless a very wide and extensive advertising campaign was undertaken in newspapers, as done in Norway and Finland and partly in Sweden and Denmark. This form for propaganda would, however, presumably be too expensive in other countries.

8. *Future meetings*

It was left to the discretion of the chairman to arrange for subsequent meetings of the Committee as and when desirable.

In principle a meeting should be held at least once every year.

C. J. RAVNER

Exhibit 825

INTERNATIONAL SALES COMMITTEE.

Minutes of the Second Meeting

Held in London, October 3rd & 4th, 1934.

Present: Dr. G. Jebsen (Chairman)
Mr. E. Anker,
Mr. H. Borgwardt,
Mr. P. Gilbert,
Dr. F. Raspe,
Mr. C. J. Stopford,
Mr. A. J. Thompson
Mr. O. Ravner (Secretary).

9. Co-operation With Titanium Pigment Co.

Dr. Jebsen informed the Committee that the Titanium Pigment Co., was willing to be represented at the annual meetings and the Committee welcomed this co-operation very much.

Dr. Jebsen put on record the resolutions passed by the Board of the Companies represented, according to which each Company has agreed to the formation of the Committee to the purpose of discussing sales questions of mutual interest and promoting co-operation and particularly to send in reports to the annual meetings concerning:

1. Sales results : Quantities and prices.
2. Statistics specifying the distribution to the various kinds of industries.
3. A general review of the market conditions, dealing with the price policy for our pigments in relation to competitive products

as well as the development of sales in specific important industries.

4. Possible new outlets.

5. Propaganda methods.

10. Review of the Market Conditions in Each Company's Sales Territory.

Dr. Jebsen asked the representatives from each Company to give their reports re market conditions.

Mr. A. J. Thompson : England.

The Sales figures which are before us in the statistics circulated previously to the members all indicate that the deliveries of Titanium show a steady increase.

In the *paint trade* it may be expected that the increase will continue but there is always the outstanding difficulty of chalking. We should be very much interested to hear whether any progress has been made in the direction of limiting this—to know of any special lines of research that are being followed. In parts of the American continent and in Australia we believe it is reduced to a minimum but under the conditions of climate of the United Kingdom it has so far prevented the general use of Titanium as an outside paint, and has limited it for the most part to undercoats or to admixture in limited quantities for top coats.

Linoleum. The situation in the linoleum industry is mainly a question of economics. They are fully alive to the merits and advantages of using Titanium pigments but find the cost prohibitive apart from a few special uses. Opinions differ in regard to the relative values of lithopone and

titanium oxide. In some directions we are advised that the price of Titanium Oxide must not be in excess of £60 per ton whereas we are told by others that the pigment affords distinct possibilities at a price of £70-£75 per ton.

Artificial Silk. The patent situation appears to have resolved itself and silk manufacturers in this country, with the exception of North British Rayon Co. Ltd. are using Titanium Oxide regularly. Courtaulds and Celanese are by far the largest individual users and of these Courtaulds are also using important quantities of Rayox. The consumption of other makers is so far less important but Titanium may be expected to have a steady development.

Paper. Considerable attention has been devoted to this industry during recent months. All the mills have been written to and most of the important mills have been called on personally. The progress made so far is not particularly encouraging although a number of mills have the product under test. There is only one firm in this country to our knowledge which is using Titanium on an important scale at the present time.

In the United States the paper industry has adopted Titanium much more extensively. One of our representatives who has recently returned from America suggests the following as an explanation. In this country the best writing and printing papers are made from cotton rag. This gives the paper good colour and opacity without the use of any loading. Esparto grass is also used for good quality papers and though inferior to rag, produces paper of good colour and opacity without the addition of opacifying agents. Mills that have been called on in the United Kingdom who make high-class papers of these types have given

Exhibit 825

the assurance that they obtain all the whiteness and opacity required without loading. Wood pulp is mainly used in this country for papers of lower quality, the price of which is cut so fine as to preclude the use of expensive loading materials. Practical trials made in collaboration with mills handling such types of paper (e.g., typewriting, manifold and general correspondence paper) have indicated that the increase of efficiency obtained by the substitution of a small percentage of Titanium Oxide for the ordinary loading is not comparable with the increased cost (the average price of ordinary loadings being £3. per ton). The point made by our agent is that in America, rag and esparto are not used to any extent. Wood pulp is used almost exclusively, even for high class papers where cost is not such a vital consideration. There is therefore greater scope for the introduction of Titanium Oxide to mask the comparative transparency and ready discolouration of wood pulp so as to produce with this cheap fibre the high quality obtainable with the more expensive fibres used in this country.

Deliveries for 9 months January/September 1933 and 1934 were:

	TiO2	70%	Extra	Standard	Calculated as pure
1933	454.6	62.4	315.7	996.9	904.12
1934	753.6	60.1	492.15	1165.4	1333.19

showing an increase in terms of Pure of 47½%.

Mr. P. GILBERT: FRANCE

In spite of the rather accentuated crisis, which we are undergoing, the sales are progressing.

Compared with the first six months of 1933, the sales effected during the same period in 1934 have increased by

Exhibit 825

14% calculated as TiO_2. The fact, that through the price agreement established with Thann et Mulhouse, we are both quoting the same prices for titanium oxide, the French make is to a certain degree favoured by many buyers.

The progress of sales is not due to any particularly important new uses, but rather to an increase in the consumption by certain buyers—as well as some new clients.

On the other hand we have noticed a reduced consumption by other clients (for instance, Valentine), who have reduced the percentage of titanium in their formulae in order to diminish the disadvantages through chalking.

It can be mentioned, that the use of Titanium in the leather industry is becoming more general. In this direction we have had the satisfaction to carry out tests in an important tannery and to establish a method for use, which has facilitated its introduction into other tanneries or leather dressers.

In the paper industry, in spite of the fact that titanium makes it possible to obtain an amelioration of the quality with regard to whiteness and opacity - the high prices of titanium pigments compared with other fillers generally used, limit the use of same to high class papers only.

The firm Priou has established its mark "Ideal" with a percentage of titanium, and it is easy to appreciate the difference by comparing the publicity brochures, which we have just published - one part of which has been printed on paper without titanium, and the other one on paper marked "Ideal" containing titanium.

However, the firm Priou informs us, that the mark "Ideal" containing titanium, is very little asked for, as only few buyers are willing to pay the price asked.

Exhibit 825

Other tests made by the Papeteries Navarre on letter paper show a result, but with a percentage of 10% of Standard T. which is exorbitant and increases too much the price of the paper.

A development in this industry can only be arrived at through lower prices of Standard T. or TiO_2, and more accurate indications as to their use in the different qualities of paper.

With regard to the production of paper for electric insulation, a paper manufacturer seems to have obtained satisfaction, in as much as he has already passed three orders, totalling 2000 kgs.

The use of titanium in artificial silk is also becoming more general, and silk factories which hitherto had taken no interest in the production of flat silk are now making tests.

Cloth-printing is a new source for the use of Titanium in France. Some trials of little importance had been effected, but during the last months the interest for the use of titanium has increased, and we have supplied 4600 kgs. during the first six months of this year. We can thus expect a development from this side.

Titanium is to-day adopted for the production of paints and varnishes in quite an important number of formulae as a pigment basis, but principally in products of good quality and at rather high prices. In order to arrive at a more rapid increase in the consumption, the prices will have to be more in concordance with competitive products such as Lithopone and Zinc Oxide.

It must not be forgotten, that the use of 1000 kgs. of TiO_2 replaces about 4/5000 kgs. of zinc white as tinting strength.

Exhibit 825

An industry which could utilize Titanium to a larger extent is vitreous enamel. Quite recently an engineer specialized in this industry, wrote us, that he is convinced about the possibility of using it in all categories of enamel, for which the heating temperature is below 850°C. Above this temperature there is nearly always a combination of Titanium with the other elements of the enamels. The engineer in question is investigating whether it is possible to render TiO_2 more stable in order to be able to use it in all current enamels, and he asks us if we have already some indication to give him, and if we have had good results in this direction.

We are now introduced to the Navy, to the State Railway Companies, to the East Railway Company, to the Paris-Lyon-Mediterranée, and we are on the point of being accepted by the Railway Company Paris-Orleans and Alsace-Lorraine. These administrations have accepted to attribute a higher purchase co-efficient for Titanium White than for that attributed for Zinc White owing to the more important hiding power of Titanium White.

Mr. E. ANKER : BELGIUM & HOLLAND.

The Sales during the first 9 months of the year, calculated as TiO_2 have been:

In Belgium

123 tons, increase 22% over same period in 1933

" Holland

196 " " 32.5% " " " " "

Total 319 " " 28% " " " " "

Exhibit 825

In both countries the increase occurs in TiO_2, the sale of Extra and Standard being nearly the same as last year. The reason is that our prices for the composite pigments are too high compared to the very low price of Lithopone and zinc oxide in the countries to allow any increase in the consumption.

Thus, the price of Standard T. in Belgium is 257% over 30% Lithopone and in Holland 250% over 30% Lithopone, that is to say higher than in any other country.

On the other hand, the sale of TiO_2 has been able to develop nicely, this pigment not being in such direct competition with lithopone and zinc oxide.

In both countries the sales to the artificial silk manufacturers has increased, in Belgium these sales represent 33% of the total and in Holland 51%.

The most interesting sale as to possibilities in the future has been to the paper industry in Holland. In this country one big paper factory has worked regularly with Standard T. and wanted to place a contract for 20 tons—as we had already given our rock-bottom price, the Company did not give us this contract as they did not get any lower price. They have however, taken out 15 tons Standard T. this year, used chiefly in a ledger paper of high quality to improve whiteness and opacity.

The technical directors of this Company have asked us for a pigment containing china clay instead of blanc fixe, as the blanc fixe is heavy and has a rather low retention. A pigment containing 25% TiO_2 and 75% china clay has been prepared in Fredrikstad and 200 kg. have been sold to this firm for trials—the results are not yet known.

A pigment containing china clay ought to interest us for the following reasons:

1. better retention than a blanc fixe pigment
2. lower production price
3. possibility of selling a pigment to the paper industry at a low price without interfering with our price policy for the other pigments and to the other industries.

Two other paper mills in Holland are buying regularly small quantities of TiO_2, prefering to work with the pure pigment and do the mixing themselves.

A trial order for TiO_2 has been placed by an important cement factory wanting to use our pigment for white cement, in order to avoid the greenish shade which the white cement usually gets when submitted to high pressure, for example. when used for cement tiles.

Mr. H. BORGWARDT : GERMANY.

During 1934 we have increased our sales by 46% as compared with the same period in 1933. This increase refers not only to TiO_2 but also to all the other qualities even Standard A. although the increase in the latter amounts to about 30% only.

Business with the master painters still suffers from the influence of chalking and therefore it will grow rather slowly.

In the industrial sales we have made good progress in the linoleum industry, in which the Betburg people have taken Standard T. at a monthly average of 40 tons, at a price of M. 35.75. We have good prospects to extend our sales to the big trust too, the Chairman of which has told us that after finishing their present tests which are satisfactory

Exhibit 825

in every respect up to now, they will take more quantities. The price offered by us of M.34 would suit them.

In the industry of artificial silk we have had a small increase but have not yet reached the figures of the beginning of last year. All the factories buy our product but they use it in a smaller percentage than they did formally.

In the paper industry, we have made no progress worth mentioning.

We have some clients who buy titanium oxide or Standard T. for waxed paper, Bible paper, paper serviettes, air mail paper, coated paper etc., but the quantities consumed are extremely small.

We have succeeded, some days ago in making a big contract with the porcelain factory for the production of insulators. They have contracted for 200 tons of TiO_2, out of which 100 tons will be delivered by the end of July next but they have told us that they expect to take much bigger quantities.

With regard to price we still maintain our policy of giving different prices to different customers and are not sticking to list prices. We have reduced the official basis price on the 1st October, and shall probably make another reduction on the 1st January next, when our lowest possible price will probably be

M. 100 per 100 kilo. of TiO_2
M. 65 " " " " Extra T.
M. 40 " " " " Standard T.

For Standard A. we have not made a reduction recently, and do not intend to make one in the near future. By reducing these prices the price difference will be more and more level now.

Exhibit 825

As regards competition, we have met with some competition from Laporte in Spain, but we have held our business by reducing the respective prices. In Japan, they have made some imports from sources which we have not yet been able to trace. We suppose that they come from Laporte too.

MR. RAVNER : SCANDINAVIA.

From the table "Quantities delivered" see "Statistics circulated re Sales and Prices first six months 1934" will be seen, that the sales have increased by 28% calculated as TiO_2. Especially on account of the sales to the rubber factories, which prefer to use Titanium Oxide, the sales of this pigment have increased considerably. The rubber industry in Norway and Sweden has in the first 6 months of this year bought 43 tons TiO_2. The most important rubber factory in Norway has now decided to replace lithopone with TiO_2 together with chalk and other extenders.

Also the linoleum industry seems to be more interested to use titanium pigments. The reason for this is, that there is an increasing market for bright inlaid linoleum qualities (marmorated, jaspe, and so on) and it seems that such qualities when containing titanium pigments are more flexible and resist better the variation of temperature in these countries (from much below zero up to 30°C.) without showing any tendency to crack, which has been the case with bright qualities containing lithopone. Bright inlaid linoleum containing 30% lithopone seem to contain too much pigment in relation to linoleum cement and therefore the quality is not so flexible and durable as qualities containing titanium pigment where less pigment can be used.

The paper industry has bought ca. 7 tons as TiO_2. In order to develop the sales to the paper industry in a some-

Exhibit 825

what faster way, we have to work out technical methods, *which will give better retention of titanium pigments in paper and thereby reduce the costs.* Due to the good retention of china clay in paper we have produced a mixed pigment for trial tests in Norway, which contains 25% TiO_2 and 75% china clay. Tests are running with this product in Holland and will also be tried in Scandinavia, as soon as we have results from these tests, they will be circulated to the members of the Committee.

Two porcelain factories are making tests with TiO_2 for insulating material, and we await their results which may take a little time because they have to make mechanical and electrical tests with the insulators.

The paint industry—and especially the sale of Standard A. to painters—is the chief market in these countries.

In Norway the sales to this industry have been 78% of total sales
" Sweden " " " " " " " 76% " " "
" Denmark " " " " " " " 87% " " "
" Finland " " " " " " " 97% " " "

PRICE SITUATION:

The prices ruling at the end of June will be found in the circulated "Statistics, Section B.".

On account of the very low prices of zinc oxide as well as the unstable exchange situation, our prices for Standard A. have been from 35 up to 48% above zinc oxide prices. English zinc oxide has found an increasing market in these countries on account of low quotations. In spite of the important difference in price, we have been able to increase our sales of Standard A. in Sweden, Denmark and Finland.

Exhibit 825

Messrs. Laporte started a more active sale in Sweden at the end of June this year. The company quoted the following prices:

A) Grade 223 (25% TiO_2) B) T.o8. (50% TiO_2) C) Grade T. 82% TiO_2

5 ton parcels			
30/6/34	£29/15/0 cif	£44/15/0	£63/15/0
	=Sw.Kr. 578.-	Kr. 868.-	Kr. 1236.-
Our lowest price	Sw.Kr. 575.-	Sw.Kr.1.000.-	

The price of Extra T. was reduced to the same price as that of Laporte in order to meet this competition. Laporte are thus selling these products far below the English inland prices. The prices in England for 5 ton lots, carriage paid, are:

St.T. £33/5/Od.. Extra T. £54/5/Od. TiO_2 £90/5/Od.

Dr. Jebsen thanked the representatives for the very interesting reports.

As regards the difficulties of chalking and the research to be pursued in this respect, we should bear the following in mind. We are all in agreement that the prices for the titanium pigments will gradually come down particularly in order to extend their application in a wider range of industries. The lower the prices are the greater will be the interest in the paint industry to make use of titanium pigments for outside paints. It is therefore to be expected

that the paint industry with increasing interest will join us in the research work on the problem of chalking.

This research work can be done on two different lines:

(a) By improvement of the chalking in the preparation of paints, choice of vehicles etc.

(b) By improvement of the pigment.

This last line of research will fall entirely upon ourselves, whereas in the first line we will have the paint makers joining us. In addition to this we should also have the manufacturers of the vehicles very interested in solving this problem.

On the basis of the reports submitted an extensive general exchange of views took place.

---

11. Future Price Policy.

Referring to the minutes of the meeting in March, it was agreed that the prices to be fixed according to the resolution under 4 (a) should no more be on the basis "reduced back to f.o.b. Leverkusen", but should in the future be the prices applied in each country to the customer including duty. These prices are not binding on the Companies but are the minimum prices under which the Companies will not go without immediately thereafter sending information to the Paris office for distribution to the other associated companies.

It was generally agreed that it was considered advisable to go in for price reductions amounting to 10/15%, and the representatives of the various companies intimated that these price reductions would probably be carried out dur-

ing the autumn, the early winter and the beginning of the new year.

It was agreed that in cases where contracts were made or orders accepted at prices below

for TiO_2	950 M.
" Extra T.	540 M.
" Standard T.	340 M.
" Standard A.	340 M.

—Prices based on goods delivered to customer duty paid— the Paris office to be immediately informed for the purpose of informing the associated companies.

It was approved that exchange fluctuations which would bring the prices in the countries' currency below the agreed figure in RM. should be reported to the Paris office if they cause a reduction seriously below the agreed figures, such information to be reported to the members of the Committee.

It was agreed that the Paris office should be informed of all changes *in the prices generally applied*, and the Paris office to inform the associated companies if these changes should in their opinion, be of sufficient importance to interest the associated companies.

In the case of foreign shipments, the parties selling the goods shall assure themselves, by the best possible means, that the goods actually go to the destination to which they are forwarded.

———oOo———

Laporte's competition and position was discussed.

Laporte's competition in Great Britain has not been felt, but they are placing their material on the market and

are presumably selling it at a rate of about 60% of their capacity.

Mr. Thompson and Mr. Stopford informed the Committee shortly of a recent conversation with representatives of Laporte. They had the impression that the contemplated price reduction by B.T.P. was not welcomed by Laporte, who had said that they would follow a reduction of 10% and also of 15% if necessary, but this latter unwillingly.

Mr. Stopford touching on the question of a price arrangement also for the countries outside Great Britain, was met with reserve. Laporte has been conducting a price cutting competition in several countries outside Great Britain, particularly in Holland, Sweden and Spain and possibly in Switzerland. Also in Australia Laport has offered at considerably low prices.

From remarks during the conversation with Mr. Thompson and Mr. Stopford it seems that Laporte, as to these countries, intends to establish a nuisance value. A price and a quota arrangement with Laporte in these markets would strengthen the position of Laporte.

According to Mr. Thompson and Mr. Stopford, Laporte's demands as to a share of the business in Great Britain was very exaggerated, having mentioned a 50% share. It was generally agreed, that the situation was not ripe for any arrangement.

---

12. Exchange of Views Re the Schedules of Statistics Distributed.

The form of the schedules was generally agreed upon by the Committee to be satisfactory, but it was suggested that as the prices given are the lowest prices generally applied at the 30th June and 31st December, a note should

be made on the schedule of any outstanding exception to the prices given.

13 PAPER EXPERT FOR MUTUAL WORK WITH PROBLEMS FOR INTRODUCTION OF TITANIUM PIGMENTS IN THE PAPER INDUSTRY.

After consideration of the proposal put forward by Mr. Borgwardt, Dr. Jebsen thanked Mr. Borgwardt for the offer, and remarked, that the Committee appreciated the attitude taken by the I.G. in this matter.

After prolonged discussion, the matter was adjourned for further consideration at the next meeting.

14. CALCIUM BASE PIGMENTS.

Dr. Jebsen read the report from the International Technical Sales Committee held in Leverkusen, July 17th and 18th of this year, and informed the members that the Titangesellschaft would, during this winter, produce C.50 as well as C.30 pigment in such quantities that the pigment would be available for general sale.

15. POSSIBLE NEW OUTLETS.

Mr. Rayner referred to the increasing quantities of TiO_2 sold to the textile industry for cloth printing and sized or dressed cloth (calico, silk, woollen and cotton goods). The titanium oxide is used to whiten portions of designs when colours have been removed by discharging and bleaching. The oxide has also been successfully used in inks for pigment-printed cloths, which seem to be fashionable at the present time.

In order to fix the pigment to the fibres we have sometimes recommended our "Tisotex", but it appears that this

product does not fix TiO_2 sufficiently to the cloth. The question therefore is to find a glue or binder, which can fix the TiO_2 better to the fibres. This will also be the case if TiO_2 finds an outlet to brighten up linen, duck and so on.

On account of the use of TiO_2 in the textile industry, this industry has taken an increasing interest in the use of *Titanium Salts*. We know that small quantities of titanium chloride and sulphate have been tried in the textile colouring industry—particularly as a stripping or discharging agent in the treatment of dyed and printed goods of cotton, silk woollen and shoddy. (The titanous sulphate serves as a reducing agent and becomes oxidized to titanic compound). Titanium sulphate and fluorides can also serve as mordanating materials for certain qualities of dyes.

Titanium potassium oxalate, fluoride and tartrates have been tried for dyeing and staining of leathers. By direct action on vegetable-tanned leathers the compounds give a fast yellow-brownish shade without addition of dyestuff.

Titanium-gluconate and lactate seem to be of interest for tanning of white luxury leathers.

As far as I understand, we do not know what quantities can be sold of such salts, and I believe it would be advisable to try and ascertain in the various countries if there will be a real demand for such salts - and what quantities would be required.

Dr. Jebsen remarked that although the sale of titanium salts seem to be small, it was of interest that the Committee's attention was drawn to these questions and it was desirable that the associated companies ascertain what the consumption of these salts might be for the information of the technical organisations in view of a possible production.

Exhibit 825

16. PROPAGANDA METHODS.

Mr A.J. Thompson remarked that in his opinion, personal contact was the best method.

Mr Stopford partly agreed with this remark, but added that in the case of British Titan Products it was necessary to have pamphlets for propaganda abroad and that they were having such pamphlets prepared. The first would be with special reference to the paint trade and others would follow.

Mr Borgwardt told the Committee of their special propaganda in the paint trade, in which five or six master-painters had been engaged to visit the master-painters and discuss their individual problems and suggest methods of over-coming them.

Mr. Gilbert distributed a new pamphlet which had been prepared. A few of these had been printed on coated paper containing Titanium. Mr. Gilbert was congratulated on the pamphlet by the other members of the Committee.

17. DATE & PLACE OF NEXT MEETING.

Dr. Jebsen remarked that during his forthcoming visit to America the question of a representative of the Titanium Pigment Co.'s presence at the next meeting would probably be considered and it was agreed that the date be left for him to fix at his discretion.

Mr. Borgwardt extended a cordial invitation to the Committee to hold its next meeting at Frankfurt.

At the close of the meeting, Dr. Jebsen thanked British Titan Products Co. for their hospitality, and asked Mr Stopford to convey the Committee's appreciation and thanks for the facilities extended to them by Imperial Chemical Industries Ltd.

TITAN COMPANY INC.

Paris, February 21st 1936.

/AK

William C. Beschorman Esq.
Executive Vice President
National Lead Company
111Broadway
New York City, U.S.A.

Dear Mr. Beschorman,

Enclosed please find, translated from German, minutes No. 22 and 23 from Board meetings in Titangesellschaft, held at Leverkusen.

Yours very truly,

S. J. HENRIKSSEN

Same letter sent Mr. Cornish.

Exhibit 828

Translated from German
December 27th 1935.

Minutes Nr.23.

Minutes from conference re titanium white matters at Leverkusen December 3rd, 1935.

Present: Dr. Kühne
Dr. Jebsen
Dr. Brüggemann
Borgwardt
Splittgerber
Dr. Raspe.

1.) The visit of the Japanese engineer in Leverkusen shall not take place before the signature of the agreements with Blumenfeld. The agreements with Blumenfeld and with Japan shall be completed as soon as possible. If these agreements are available in Japan in the middle of January, Mr. Splittgerber is of the opinion that they will be signed by the Japanese within 3 or 4 days. The visit of the Japanese engineer can then take place.

2.) At the meeting of the International Sales Committee, July 3rd and 4th 1935 in Frankfurt, it was agreed not to go below the following minimum prices without informing Dr. Jebsen's office in Paris, who will advise the associated companies accordingly:

RM. 775.—per 1.000 kg. TiO_2
" 450.— " " " Extra T
" 285.— " " " Standard T.

For Standard A is to be taken as a basis the Standard T price plus the market price for Zinc Oxide. All the prices apply to goods delivered freight and duty paid.

Exhibit 828

3.) Titangesellschaft will try again, with the aid of Leverkusen, to obtain the permission for Titan Company Inc. to pay in Sperrmarks 100% of its share in the costs of the paper expert.

4.) The change in prices for Standard A and the other pigments shall be again discussed in January 1936, in connection with the new pigment for inside use.

5.) The British Titan Products Company has agreed not to exercise its sales right in Hongkong and accepts the proposal that, as a compensation, the profit on sales to Hongkong be transferred to the B.T.P.

6.) Dr. Jebsen reported about the conclusion of a 3 years delivery contract between the B.T.P. and Pinchin Johnson & Co., London, for the requirements of the latter firm's branches in the British Empire, with the usual clause against export and possible cancellation of the contract in case of transgressing this stipulation. He further stated the reasons that brought about this contract.

From statements made by Pinchin Johnson, export outside of the British Empire, to the branches of Pinchin Johnson, is to be feared. As a cancellation of the contract in such case could have far reaching consequences due to circumstances which have been explained, it was suggested, if necessary, to permit such an export to the territory of Titangesellschaft on the condition that B.T.P. buy the corresponding quantities from Titangesellschaft at the same prices as those obtained from Pinchin Johnson for these deliveries.

The Titangesellschaft declared itself willing to accept this proposal as a solution in case of need. It was, how-

Exhibit 828

ever, emphasized that Titangesellschaft was anxious to be in direct contact with the overseas consumers and to supply them with its own goods.

Dr. Jebsen agreed to discuss the question in the above sense with the B.T.P. and mentioned at the same time that this would be in the interest of B.T.P., even after the above proposal is accepted, as the goods which the latter company has to take over are to be disposed of somewhere in the British Empire and would therefore imply extra duty expenses.

INTERNATIONAL SALES COMMITTEE.

Meeting Brighton June 28-30, 1937.

REVIEW

COMPETITION.

The activity of Laport has in certain cases led to price cutting. Their Swedish agent in technical pigments was very well introduced in the Rubber Industry with chemicals, and in this industry the competition was very keen. A blended mix : 90% "KRONOS" TiO2 + 10% C.30, succeeded in one case to be introduced to one of Laporte's most fidele customers. The effect of this pigment in rubber was considered to be similar to the effect of TiO2. Laporte has also offered a quality similar to "KRONOS" St. A, but no important sale was observed.

According to arrangement with Laporte they withdrew from Titan Co. A/S' market in May 1937.

With regard to the sales development of competing white pigments, the increase in the consumption of Lithopone in Norway and Sweden is remarkable. Lithopone is finding an extensive use in Paint, Rubber, Linoleum, Wall Paper and Plastics—industries to which we hope by and by to increase our sales by intorducing TiO2-Dolomite pigments.

It has been observed that Timonox has, particularly in Sweden, come into a general use in Varnish and Cellulosic Lacquers—in most cases together with TiO2 in the proportions from 2:3 to 3:2—for the purpose of reducing chalking. The manufacturers desirous to limit the number of raw materials are examining with interest "KRONOS" Aluminium-covered TiO2, hoping by this product to be able to reduce the chalking without using Timonos.

Exhibit 830

SOCIETE BELGE DU TITANE S.A.

MARKET REPORT.

International Sales Committee.

Fifth Meeting, June 1937.

BELGIUM — HOLLAND.

In Belgium we do not meet with the competition of other manufacturers outside Tr/Thann, to whom we have been obliged, as pointed out previously, to transfer a certain number of our customers.

In Holland the position is the same as regards Tr/Thann.

The recent arrangement with the National Titanium Pigments (Laporte) has eliminated the competition of that firm. There remains Noury van der Lande; but their work is scarcely to be felt. They seem to encounter great difficulties in obtaining a high quality make.

INTERNATIONAL SALES COMMITTEE.

Minutes

of V. Meeting held at Brighton, 29. and 30. June 1937.

——oOo——

PRESENT:

Members:	Dr. G. Jebsen (Chairman)	
	Mr. H. Borgwardt	T.G.
	Mr. P. Gilbert	Sté Ind. du Titane
	Mr. S. J. Henrikssen	Titan Company Inc.
	Dr. F. Raspe	T.G.
	Mr. C. J. Stopford	B.T.P.
	Mr. A. J. Thompson	"
	Mr. J. de Vleeschouwer	Sté Belge du Titane
	Mr. B. W. Bommen (Secretary)	Titan Company Inc.

In Attendance:

Mr. E. R. Barber	B.T.P.
Mr. D. W. Edgerly	Titanium Pigment Corp.
Mr. B. Gilbert	Sté Ind. du Titane
Mr. B. T. Minter	B.T.P.

Exhibit 831

33. DISCUSSIONS ON MARKET REPORTS.

Referring to the report on the Belgian Market, *Dr. Jebsen* mentioned that probably Noury van der Lande is seriously working on developments in the Titanium field, and it is likely to prove very difficult to stop him from manufacturing in Holland, as our group has only a few patents there, and the Blumenfeld group has none. *Dr. Raspe* had recently been informed by their agent for Copperas, that he would have 1000 tons of Copperas to sell in the future from a factory in Holland, and it might be that this factory is Noury van der Lande. *Mr. Bommen* reported that in a Dutch paper recently Noury van der Lande had invited inquiries for Titanium.

Referring to Sté Belge's report, where an offer was mentioned of TiO2 at £60 in Holland, *Mr. Stopford* suggested that this TiO2 was of Montecatini make and was offered by the same people who earlier in the year had imported the Montecatini brand into England at a still lower price.

Mr. Edgerly added to his report that the sales as TiO2 for the first 5 months of 1937 were about 12,000 short tons, and the total sales from the producers in U.S.A. for the same period was approximately 26.000 short tons. The sales of N.L.Co. and Dupont will average say about 60.000 short tons.

34. COMPETITION.

Dr. Jebsen introduced the discussion, remarking that in view of the agreements with the Blumenfeld Group—and the fact that prices of white pigments other than Titanium are going up—there is nothing outstanding to report as re-

gards the continent with the exception of the situation which may arise from yesterday's devaluation of the Franc. He invited the representatives of the different companies to put forward their views regarding competition.

In regard to England *Mr. Stopford* reported, that Laporte have brought out a water dispersent type of TiO2 pigment; which has had a good reception and has been accepted as a rather better pigment than the B.T.P. Co.'s. "E-grade" in the Paper industry and Leather Finishes. It is thought that Laporte's pigment is more apt for universal use—apart from bad yellowing in synthetic resins. It is a very good product on tinting strength.

Mr. Edgerly stated that in America they give the Paper Makers a dry milled product because of the saving in cost.

Mr: Stopford proposed that as regards actual sales, every country should furnish statistics on imports and exports, which could be sent to the Paris Office for distribution to the companies concerned.

It was stated that the Paris Office from time to time has collected information regarding imports and exports from France, Belgium, Holland, Scandinavia and Germany, these figures having on several occasions proved very useful. It was pointed out, however, that in some countries it might be very difficult to obtain separate figures for the import and export of Titanium pigments, these often being included in the statistics giving white colours. The case is the same in regard to Ilmenite, which is included in the official statistics giving export and import of iron ores, and it was thought that a check on ilmenite exports and imports might prove useful.

Mr. Stopford emphasized the difficulties in checking the quantities sold by Laporte. Although Laporte's home

market has been thoroughly investigated by R.W.Greeff & Co., there seems to have been delivered from Laporte quite important lots which, so far, they have been unable to trace. *Mr. Edgerly* added in this connection that the tracing of deliveries of their competitors proved almost impossible in America. Incidentally, when they had learned the correct figure of the sales of Titanated Lithopone, these proved to be about three times as big as was expected by Titanium Pigment Corporation. *Mr. Thompson* stated, that in his belief the whole market was known by them, and that all the customers of Laporte and an estimate of their consumption was made. It was not impossible that there could be one or more consumers untraced, but it was highly improbable that if the figure about by-product and milling did indicate a much larger production than we had supposed, he was confident that the goods were not sold within the United Kingdom.

35. PRICE POLICY.

Dr. Jebsen said it is puzzling that the development of the consumption of Titanium in those industries where it is competitive with Lithopone, does not in the various countries seem to co-ordinate with the price ratios, the outstanding case being Linoleum in Holland. The policy had always been followed by reducing prices as consumptions increased and new outlets were found. As on the Continent, the sales exceed the production capacity, and as the prices of other white pigments are increasing, there is no call for a price reduction at present. On the other hand, by reducing the price possibly quite a number of applications would show a considerable increase, particularly the Paper industry and possibly the Linoleum industry.

Exhibit 837

Mr. Stopford stated that in England they had recently considered the price policy for the immediate future and had decided that any reduction of 5% or less would have a negligible effect on the rate of sales, so they had decided to make no reduction for the present. They were also influenced by the fact that the prices of other white pigments had gone up; and although some have since come down, they are still higher than they were at the beginning of the year. They have decided to increase the allowance on pigments in bags from 10/-d per ton less than the list price in barrels to 20/-d per ton as from July 1st.

According to *Mr. Borgwardt* they have in Germany different prices for the home trade and for the export trade. As the White Lead and Zinc Oxide production is limited, they are not likely to take away any business from Titanium. With regard to the Lithopone producers, there is no likelihood of an increase in their capacity, although they are sold out, so this condition will help the development of Titanium. In view of this, it was not found necessary to reduce prices at the present time. The uncertainty of currency and the possible development of the price of raw materials of other white pigments are factors against price reduction. With regard to export prices there is no urgent need for a price reduction except occasionally in countries such as China, where they have to compete with the very cheap Japanese pigments. The export prices of T.G. are practically in line with those in England.

Mr. Gilbert outlined the position in France, stating that Sté Ind. du Titane's price agreement with Thann prevented them to a certain degree from following strictly the general price policy of our Group. Thann's price policy is dependent upon the gouvernemental regulations and restric-

tions concerning price raising; this firm thus not being able to follow freely a price policy according to their own desires.

In October 1936 after the devaluation of the Franc they increased their prices ab. 10% (in French currency), and in March 1937 a new increase was effected—ab. 5-10% according to quality—in order to partly compensate for the devaluation at that time. The price ratio to Zinc Oxide and Lithopone was very unfavourable to the Titanium pigment, but as prices of Zinc and Lithopone have increased now, the position of Titanium pigments is more favourable.

Owing to the fact that the increase in the production cost in the different industries is very much felt, the customers are now more than ever particularly desirous to benefit from any rebates, and consequently their demand for deliveries in bags (Frs.7.50 reduction) has increased considerably during 1937.

Supra P is so far not offered by Sté Ind. because of their agreement with Thann, this firm not being desirous to make a special grade for the Paper industry, but rather offer TiO2 to the Paper industry at a lower price than generally applied. However, no important result has so far been observed in this industry.

Mr. De Vleeschouwer was of the opinion that a price reduction in Belgium and/or Holland was not necessary now since Laporte has been forced to withdraw from these markets. The question of Noury van der Lande was discussed, but no definite and reliable information as to their plant has been received.

With regard to the Paper industry he emphasized the desirability of reducing the price of Supra P. *Mr. Borgwardt* said in this connection that in one particular case they had, in order to facilitate the introduction of Supra P,

given a Cigarette Paper manufacturer 20% of the tonnage sold free, the rest being sold at RM. 75.-. This was temporary for introduction purpose.

With a view to the English market *Mr. Thompson* said, that many buyers had expressed their opinion that in adopting Titanium in their formulae, they might place themselves in the hands of a monopoly, which would be in the position to put prices up against them. This fear is not removed by the existence of Laporte, because they know that we are working together. We have always given the assurance that we would never be parties to such an action. Another point we have stressed in selling has been the non-speculative character of the trade in Ti-pigments in contrast to Lead, Zinc and Sb-products, which fluctuate wildly with the movement of metals. Buyers have therefore felt assured that there will be no advances in prices except on very good reason shown. We have gone further, and we have told buyers, that it is the policy of B.T.P.Co. that they should share in the advantages of reduced costs on increased production. Mr. Thompson therefore considered that the price structure should be stable, that small reductions would be valueless to us, and he thought that consideration of important price changes is likely to arise naturally either from new competitors—should it come—or when there is a definite demand for a new large output contingent on reduced prices.

Referring to an earlier decision (Minute 20. Francfort Meeting), *Dr. Ichsen* recalled that minimum prices were established under which no company should go without informing the Paris Office. These prices are :

RM. 775.- per 1000 kgs. for TiO_2,
" 450.- " " " " Extra T,
" 285.- " " " " Standard T,

and for Standard A a price based on the Standard T price plus the market price of Zinc Oxide. These prices apply to goods delivered customer, duty paid.

All the members were of the opinion that these minimum prices covered the immediate position and should continue to be applied.

The question was raised about a special price for the aluminum treated TiO2. B.T.P.Co. have not put any premium on their wet milled TiO2, nor on the chromium treated pigment, and in U.S.A. the prices were not changed, even in view of the additional cost of manufacture when they changed over from dry milling to wet milling.

Dr. Raspe thought that there was no need of a special price for special pigments in Germany as long as the prices of Titanium remain as high as they are at present.

The following discussion proved that the general opinion was that it be desirable not to apply a special price on a special grade of TiO2 now, but this should be considered when price reductions were contemplated, at which time we would have learned more about how the various materials are appreciated by the consumers.

Dr. Raspe proposed that a new name for S.1129 should be found. *Dr. Jebsen* thought that a number would not be liable to stick in people's mind, and that a proprietary real name would possibly prove to be a considerable advantage later on, although a difficulty in such a name was the fact that it would not be referred to in specifications. *Mr. Barber* mentioned that many customers only mention "KRONOS" and not Titanium. As no appropriate name could be found at the moment it was decided that each firm should send in proposals to Paris and exchange opinions.

Exhibit 831

39. Policy Re Titanated Lithopone in Europe.

Mr. Stopford raised the question of our interest in the manufacturing of Titanated Lithopone in Europe. *Dr. Jebsen* said that this question had come up from time to time. In his opinion the Ti-interests as a whole are better served by a non-development of Titanated Lithopone on the European markets. The manufacture of this product will naturally be in the hands of the Lithopone maker, and we will be interested in effectuating the deliveries of TiO2. The Lithopone makers do not have between themselves marketing arrangements covering the world to such an extent as we, and there exists fairly strong outsiders. We would not be able to influence the Lithopone makers' sales policy as regards Titanated Lithopone, and as this product is in a more direct competition to the Ti-pigments than the pure Lithopone, the sales of the Titanated Lithopone may cause a considerable disturbance as regards the boundaries of the Ti-markets. A development of the Titanated Lithopone would no doubt increase our sales in Belgium and Holland in view of the very important Lithopone industry in these countries, from which a very important export takes place. If these manufacturers take up the manufacture of Titanated Lithopone, we cannot prevent them from doing so, and will rather be interested to make the deliveries, as these manufacturers would try to get the material from other sources. If we tried to put on restrictions as to the marketing, this will lead to the same result. We are therefore not encouraging this development, but are keeping in touch with the manufacturers. We know that Dutch/Belgian manufacturers are experimenting with the matter. *Mr. Hendriksson* said that Blumenfeld had some Titanated

Exhibit 831

Lithopone made for him by Pisart in France, but it did only amount to small quantities. *Mr. Stopford* asked if it would not be possible to have the Lithopone manufacturers make marketing arrangements concerning Titanated Lithopone. *Mr. Borgwardt* replied, that he considered this hopeless.

It was generally considered that it was desirable to follow the policy outlined by Dr. Jebsen.

GJ/AK

William C. Beschorman Esq.
Executive Vice President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. Beschorman,

We had a very successful meeting here in Paris on December 14th. I enclose copy of a memorandum concerning the results of the discussions which took place.

There was quite some discrepancy in the standpoints at the beginning of the meeting, as Tasker and Barley particularly emphasized the desirability of putting *Rutiox* on the market at a price equal to that of the present Kronos Titanium Dioxide, whereas the Germans were inclined to a higher price corresponding to the higher value. Mr. Tasker, supported by the other gentlemen of the B.T.P., laid, though stress upon the obligation they felt to be under, that Titangesellschaft having developed the new pigment ought to have the first say in the matter.

Great satisfaction was expressed from all sides as regards the cordial tone of the meeting and the good cooperation.

Personally I expected the results to be on the lines achieved, which I think are wise for the time being.

Exhibit 832

The situation of the various companies is shortly the following:

The Germans are rather reluctant in reducing prices, as they have considerations to take in various directions:

1) Government control may force prices down and make great difficulties in allowing an increase in prices.

2) A too sharp reduction of prices may create a panic within the Lithopone circles with the risk of unwise actions on their part.

They contend that their official prices do not interfere with the development of the consumption in fields where lower prices are necessary, because there they make special prices, which is also the case in the Lithopone industry. This is no doubt partly true, but it is of course very difficult to see whether it is done to a full extent.

Anyhow Titangesellschaft have had a very nice increase in their sales in Germany this year, about 30% above last year, calculated as TiO_2, and our stock in Leverkusen is very small, so that the situation does not call for any price reduction at present.

When we have got a Rutiox production of 500 Kg. to 1 ton a day, starting in January or February, and distribute this among a limited number of customers, we will be able to know considerably more as to production costs and particularly as to the qualities of the pigment, and during the summer the price policy can then be reconsidered on a much better basis. At that time our capacity in Leverkusen will also be considerably increased, as we expect then to be able to make between 45 and 50 tons TiO_2 per day.

In England the situation is quite different.

The sales for the first 10 months in the British Empire, excluding Canada, show an increase of 13%, and in the whole market it is less.

Exhibit 832

Further there is a desire of Tasker and Barley to bring Laporte to our heels with a view to our quota arrangement, and the relation of prices between our Titanium products and Lithopone is not by far so favourable as in Germany where Lithopone is very much higher in price.

You may remember that W. S. Robinson last year was somewhat disagreeably touched by Thompson repeatedly arguing for lower prices. The question of a price reduction in relation to Robinson's interests would of course be much easier to deal with by putting the new product on the market at the same price as the old one or with an increase equal to the higher production costs. However, it seems to me that, as the increase in production costs at present is more or less of a guess as we do not know what the wear and tear expenses will represent, the best line to be taken is a more conservative one.

Both Leverkusen and Billingham expect to start their pilot plant production at the end of January or beginning of February, and to be able to produce Rutiox in the main plant some time in June or July, in Leverkusen probably at at a rate of about 10 tons a day and in Billingham at a rate of 15-20 tons a day. These figures are of course somewhat of a guess, as we do not have the experience from the pilot plant yet.

I have just received your letter of December 9th, mentioning Mr. Turner's tests of the samples of the pigment we sent over. This was from a production of 2-300 Kg. under rather difficult circumstances, particularly regarding calcination, so better results should be expected from the pilot plant, respectively the main plant. Billingham has confirmed the results of the tests concerning hiding power and tinting strength, and you will note from my letter to

Exhibit 832

Mr. Turner of December 15th, that his test figures are not far behind.

As regards the price policy for the countries outside of Germany, with the exception of France and the Scandinavian countries, this will have to more or less follow the English prices. This is particularly the case with Holland and Belgium. In these countries Noury v.d.Lande has renewed its activities lately, offering pigments at prices about 12% below ours, and we have had to reduce our prices in certain cases but not quite so low. Noury v.d.Lande is also trying to sell in Scandinavia. The sample we have had shows a colour not quite as good as ours and a tinting strength nearly the same as ours, so that the quality is quite good for a product from a starting plant. Apparently, however, the plant they have is very small, unless they have erected one in a different place. One customer, who ordered 1000 Kg. has returned these as not being up to the sample he had received and, as the goods were requested to be returned to Deventer, indications are that this is still the place where they have their factory.

As regards France, the devaluation has forced down our prices considerably as the Government does not allow Thann & Mulhouse to increase their prices more than a fraction of the devaluation. We expect that we can put the new pigment on the market at a relatively higher price than in the other countries and in this way partly recover the lost ground.

I take the opportunity to send Mrs. Beschorman and yourself, as well as all my friends in the National Lead Company, my best wishes for the coming year.

With kindest regards,

Yours very truly

G. JEBSEN

Exhibit 832

P.S. I returned last Saturday from a Board Meeting in London.

You may have noted in the minutes from the previous Board Meeting, that it was decided to distribute the antimony oxide containing pigment to a limited number of customers, without notification of the content. As the draft of the minutes was sent me, I called up Mr. Stopford and told him that it had slipped my attention that it should be done "without notification" a policy which I considered rather dangerous. If anything happens as regards its use and the pigment is blamed, our position will be considerably weakened if a change to a content of 1% antimony oxide has not been mentioned.

As nothing had been done, Stopford postponed the distribution and in the last meeting it was decided to notify the customers.

I did not have in mind the poisonous quality of the antimony, as timonox has been freely used for years without any complaints of that kind, and the antimony contained in the Titanium Dioxide pigment is less soluble, but my standpoint was on general grounds.

Sales in England have, as you will note, been low in November—below last year's sales,—and everybody feels rather puzzled. There has of course been a set-back in the general consumption in England, but still this does not seems to explain the matter fully.

P.P.S.—I have just received a letter from Mr. Tasker informing me that we have got a contract for next year with Lever Bros, a customer we had lost to Laporte. Tasker pointed out that this is particularly due to efforts on the part of I.C.I. — Barley.

Exhibit 833

INTERNATIONAL SALES COMMITTEE.

Minutes

of VI. Meeting held in Francfort a/M
March 2nd and 3rd 1939

PRESENT:

Members: Dr. G. Jebsen, Chairman
Mr. Erik Anker, Titan Co. A/S
Mr. H. Borgwardt, T.G.
Mr. S. J. Henrikssen, Sté Ind. du T.
Dr. F. Raspe, T.G.
Mr. C. J. Stopford, B.T.P.
Mr. A. J. Thompson, "
Mr. J. De Vleeschouwer, Sté Belge du T.
Mr. B. W. Bommen, Secretary, Titan, Inc.

In attendance: Mr. E. R. Barber, B.T.P.
Mr. B. T. Minter, "

43. *Dr. Jebsen* informed the represenatives about the access of Canadian Titanium Pigments Ltd. to the international collaboration and proposed the company's membership in I.S.C. This was welcomed.

47. COMPETITION.

Mr. De Vleeschouwer outlined the competition in Holland of *Noury & v. d. Lande*, who have tried to get in by price cutting. So far Sté Belge du Titane has met them by lowering its prices where necessary and has generally taken the business at higher prices

than those asked by Noury & v. d. Lande, N. & v. d. L. have only been able to dispose of small quantities—in 1938 ab. 15 t. *in Holland* delivered mainly to customers, whom *we had transferred* to Thann & Mulhouse. This will necessitate a change in the manner of co-operation with Thann. *In Belgium* N. & v. d. L.'s activity and sales have been practically none. The firm has recently charged their agent, Mr. Camerlinck, Brussels, to deal with Titanium pigments.

49. PRICE POLICY.

Dr. Ivbsen outlined the present price situation which has been stable during the last year in Germany, England, Scandinavia and Belgium, while in Holland Noury & v. d. Lande's competition has influenced our prices, and in France the situation has been disturbed frequently by the fluctuations of the exchange.

50. MINIMUN *Prices.*

According to Minutes No. 20 and 27. the Paris Office should be informed when any company quote below the following prices:

TiO2	RM.	775.—per tonne,
Extra "T"	"	450.— " "
Standard "T"	"	285.— " "

and for Standard "A" a price based on the St. "T" price and the market price for zinc oxide.

These prices apply to goods delivered to customers duty paid.

The lowest prices generally applied in England, France and Holland are now below these. It was agreed

to establish a new minimum price schedule as regards the information to be sent to Paris, as follows:

TiO_2	RM.	700.—per tonne
Extra "T" and C.50	"	430.— " "
Standard "T" and C.30	"	285.— " "

and for Standard "A" a price based on the Standard "T" price and the market price for zinc oxide.

These prices apply to goods delivered customers, duty paid.

TRANSLATION

TITANGESELLSCHAFT, m.b.H.

Leverkusen I.G.Werk
October 4, 1941

To: Titan Co. Inc., 111 Broadway, New York
From: I.G. Farbenindustrie Aktiengesellschaft, Leverkusen
We herewith invite you to a Partnermeeting to be held on October 15, 1941 at 10 o'clock in the Administration Building of I. G. Farbenindustrie A/G Leverkusen with the following agenda:

1) Resolutions concerning an increase of the capital - with RM 2,500,000 - from RM 3,000,000 to RM 5,500,000 in accordance with the regulation for distribution of dividends of June 12, 1941 and the alterations of the statutes connected therewith.

2) The election of an examiner (Auditor ?) in accordance with the rules of Paragraph 25 of the first regulation for the distribution of dividends of August 18, 1941.

GJ/KL.

G. W. Thompson, Esq.
National Lead Company
111, Broadway,
New York.

Dear Mr. Thompson,

I refer to your letter of July 5th regarding a license from the Krebs Pigment and Color Corporation. We have now received a preliminary opinion from the Titangesellschaft and the British Titan Products Company, Ltd., These companies share our opinion that the patent does not seem to be of very great value, and the German company believes that no patent can be obtained in Germany. Both companies, though, agree with us that we all should try to secure a patent and have a licens. The Germans suggest an exclusive license, alternatively a non-exclusive, whereas the B.T.P.C. does not specify any particular request in this respect.

The T. G. m.b.H does not find it possible at present to express an opinion as to what payment could be made, whereas B.T.P.C. offers to pay the application and maintenance fees and if Krebs desire some payment in addition they would like to know on what conditions Krebs are prepared to grant a license.

These licenses concern as regards B.T.P. C. only England and regarding Titangesellschaft only Germany.

Exhibit 835

I presume, with you, that what Mr. Rupprecht has written regarding our German and British associates, also applies to the residual territories of Titan Company Inc., and suggest that your negotiations include a license for France to Ste. Industrielle du Titane and for Norway to Titan Company Inc.

The situation is the following:

We all over here are anxious to co-operate to the fullest possible extent in connection with the patent applications of the Krebs Pigment and Color Corporation. We do not consider this patent particularly interesting, but would like to use this opportunity to establish a practice of co-operation.

You mention in your letter only the acquisition of non-exclusive rights, as does Mr. Rupprecht. You are, no doubt, aware that in the correspondence with Mr. Beschorman last summer, Mr. Rupprecht very definitely expressed that the mentioning of non-exclusive licenses in the agreement does not in any way prevent exclusive licenses being granted and assured Mr. Beschorman, that in case of exclusive licenses being found desirable, also such can be negotiated to the satisfaction of the Titanium Pigment Company's foreign associates.

Please consider if this occasion is suitable for discussion also of exclusive rights. Such would give us a clearer or more definite view as to the practice of Dupont in such cases.

You will probably know from Mr. Beschorman that our negotiations with Mr. Blumenfeld have come to the point of an agreement on two contracts, one concerning France,

Belgium and Holland and another concerning all countries outside of the British Empire and North America, both are subject to the last contract being accepted by Montecatini and Titangesellschaft. The agreements concern only a commercial co-operation, a technical co-operation with Mr. Blumenfeld not being considered advisable.

Mr. Blumenfeld has during these negotiations expressed the hope and intention to establish a regular technical co-operation with Dupont, by exchange of patents and experience. Understanding to be in accordance with Mr. Ruprecht's wishes, I have not informed Mr. Blumenfeld of our relations with Krebs. I take it for granted that Blumenfeld's possible proposal to Krebs will not be accepted. It will, though, be of interest to know if Krebs, in case we take only non-exclusive licenses from them, they have in mind or may give Blumenfeld also a non-exclusive license.

In these matters of technical co-operation, we have, as you know, laid down and established very definite rules between our various associated companies. The basis for co-operation with Dupont is somewhat different and by far not so defined. I trust that it will work out very well, but it would be a great help if we on this side knew more as to the views and practice of Dupont in these patent matters. I shall appreciate to hear from you as to your further negotiations with Krebs.

With my best regards,

Yours very truly,

G. JEBSEN

Exhibit 835

P.S. I hope that my visit to New York in the latter of October will give us an opportunity to develop the above matter more definitely.

Mr. Ravnestad informs me that it would be desirable within the middle of November to have reached a decision to the extent it is necessary for him to take actions towards the various patent offices as regards

Exhibit 836

December 4, 1934.

Mr. W. C. Beschorman, Executive Vice President,
National Lead Company,
111 Broadway,
New York, N. Y.

Dear Mr. Beschorman:

Upon thinking over the question of the Krebs Company contract and their possible infringement of Titan Company patents, it occurs to me that this phase of the thing presented itself to me when I was studying the cross-licensing agreement: I had in mind then that what we would have to do would be to buy from the Titan Company, or get the Titan Company to assign to us, their United States patents. No effort was made to bring about this assignment although the matter, I know, was talked over with some of us. You might consider the advisability of bringing about such an assignment, presumably for a consideration. This would mean that the Titanium Pigment Company would have to pay the Titan Company some sum of money and, as Dr. Jebson would benefit by such a transaction, he would naturally want to make the consideration large. That might be obviated, however, by tactful presentation to him. It might be that the Krebs Company would be willing to pay part of the consideration, say an amount equal to what would normally go to Dr. Jebsen.

This same problem will come up in our negotiations with Joyce and it may be desirable to get this phase of the subject cleared up.

All this I am offering to you for your consideration.

Yours very truly,

GWT.EA

Exhibit 837

December 12, 1934

Mr. W. C. Beschorman, Executive Vice-Pres.
National Lead Company
111 Broadway
New York, N. Y.

Dear Mr. Beschorman:

Re: License Agreements Involving the Titanium Pigment Company, Titan Company A/S, Titan Company, Inc., and the Krebs Pigment & Color Corp

Supplementing our conversation of December 10, last, with respect to the above Agreements, I beg to submit, herewith, an analysis of the situation as it appears to me at the present time.

Article XIV of the 1920 Agreement defines specifically our rights with regard to future licenses under our own patents or sub-licenses under patents owned by the Titan Company A/S under which exclusive license has been granted to us. Under this Agreement, our right to license under our own patents is identical with our right to sub-license under patents owned by the Titan Company A/S, and both rights are subject to the explicity-stated limitation that the license or sub-license can be granted only under conditions identical with those under which the Titan Company A/S licenses us, or we license them. In other words, neither we, nor the Titan Company A/S can grant licenses or sub-licenses to any company without making that company virtually a party to the 1920 Agreement, with the same obligations and duties as the two contracting parties.

The substance of Article XIV is incorporated into the Agreement between the Titan Company, Inc., on the one hand, and the Imperial Chemical Industries, Imperial Smelting Corporation, and the Goodlass Wall and Lead Industries, on the other hand, as a result of which the British Titan Products Company came into being, and also into the Agreement between the Titan Company A/S and the I.G., which created the Titangesellschaft G.m.b.H.

The Agreement between the Titanium Pigment Company and the Krebs Pigment and Color Corporation, on the contrary, omits this Article. At the time this Agreement was negotiated, the attorneys for the Krebs Corporation were familiar with the limitations imposed upon us by our Agreement with the Titan Company A/S and, therefore, the Krebs Corporation should be conversant with the situation to the extent of possible infringement by them of the Titan Company's patents enumerated in a letter submitted to you by Mr. Kaegebehn and me under the date of November 15, 1934.

In order to correct the situation with regard to this condition, agreement supplementary to that of July 30, 1920 was proposed. The purpose of this supplementary Agreement was to give us the right to license and sub-license Krebs without imposing upon them the obligations contained in Article XIV, particularly with reference to licensing our foreign associates under the Krebs' foreign patents. This supplementary Agreement was virtually a nullification of Article XIV. Our files fail to reveal that this supplementary Agreement was ever executed and, according to information received from Dr. Jebsen, was never agree to. According to Dr. Jebsen, Article XIV has never been altered in any respect whatever.

Exhibit 837

This supplementary Agreement was transmitted to Dr. Jebsen, together with a letter dated February 2, 1933, approximately one month after the date of execution, January 1, 1933, of the Krebs' Agreement. In other words, it appears that the Agreement with the Krebs Pigments and Color Corporation was executed in direct violation of our contractual obligation as set forth in our Agreement with the Titan Company A/S.

It is true that the Krebs Agreement provides that they shall offer to our foreign associates, before offering to anyone else, the opportunity to acquire, *on mutually satisfactory terms and conditions*, a non-exclusive license under any patent which may be owned by, or be otherwise at the disposal of, Krebs.

This may appear to satisfy the conditions of Article XIV to a certain degree, if "mutually satisfactory terms and conditions" cover a payment of one dollar in hand to satisfy legal requirements. However, in the first case arising from this provision (Krebs Ti-Tint Patent), I understand that they have asked for what amounts to a substantial royalty.

Speaking generally, the feeling created in our foreign associates will be to the effect that through our exchange of technical information with them, on the one hand, and with Krebs, on the other, important technical data originating with our foreign associates will be disclosed to Krebs. The information so obtained may readily lead to further investigation by the Krebs Laboratories of a process or method so suggested, and result in a patent, which, if granted, will exclude our foreign associates from any rights in the invention without paying a substantial royalty.

A case of a slightly different nature, which is now developing, will also inevitably affect our relations with our

European associates. The Krebs Corporation has applied for a patent on the Manufacture of Composite Pigments by Blending. The patent application is drafted in such a way that I believe there will be no great opposition to having it granted in this country. Undoubtedly, the Krebs Corporation will attempt to secure foreign patents as well, and probably will succeed. It so happens that the British Titan Products Company is beginning to manufacture Titanox-B by blending instead of co-precipitation. As yet I have no means of knowing whether their product will fall within the scope of Krebs' invention, but if it is of satisfactory tinting strength and hiding power I assume it will comply with the specifications of Krebs' patent. Under the present arrangement, the British Titan Products Company will be given an opportunity to acquire this process under the Krebs' patent upon payment of satisfactory license fee. No doubt they will refuse to pay such license fee and they will be fully within their rights to oppose the grant of a British patent. Whether they will do so successfully will depend on the special provisions of the British patent law with regard to such opposition. Their opposition to the patent grant will unquestionably have repercussions in our relations with Krebs and also in our relations with the British Titan Products Company.

Another unpleasant situation may be contemplated in that Krebs, in case they succeed in obtaining the above patent, and assuming that the British Titan Products Company declines its purchase, will then be free to offer it to anyone else in Great Britain.

To sum up, the situation with respect to all these license Agreements could be stated somewhat as follows. While the Titan Company in its Agreements with parties consti-

Exhibit 837

tuting the British Titan Products Company and the Titangesellschaft G.m.b.H., have safeguarded the interests of the Titanium Pigment Company, we have not safeguarded the interests of the Titan Company or our European affiliated companies in executing the present Agreement with Krebs.

The proposed purchase by us of the Titan Company's patents or the assignment of these patents to us, in my opinion, will not remedy the situation, because, under the provisions of Article XIV; our acquisition of these patents would not alter matters one iota. Under the Agreement of 1920, ownership of patents by either party is of no consequence with respect to that party's rights to license or sub-license.

Purchase of the Titan Company's patents might possibly furnish a legal way out of the present difficulty, provided the purchase Agreement specifically stated that the patents involved in the purchase were removed from the structure envisioned by the 1920 Agreement. On this point, competent legal advice might be desirable. Such a course, however, would appear to be, if not actually a legal violation of the 1920 Agreement, directly contrary to the spirit of that agreement.

Furthermore, the purchase of the patents owned by the Titan Company A/S would not remove future possibilities of conflict and misunderstanding. By purchase of these patents, we would still have no right to license Krebs under such subsequent patents, an exclusive license to which we either have obtained or will obtain in the future from the British Titan Products Company and the Titangesellschaft G.m.b.H.

It would appear that the solution of this difficulty should lie in the direction of bringing Krebs more closely within

the structure of the 1920 Agreement, to the extent as would be feasible and compatible with the Krebs obligations to the Du Pont Company. It may be possible to reach some definite understanding in writing, whereby whatever claims the Titan Company may have against Krebs for possible infringement of patents owned by them, would be relinquished in return for the granting of licenses by Krebs under their present and future European patents to the Titan Company and its European affiliates. In other words, the thought here is to bring Krebs within the scope of Article XIV. Such an arrangement would probably be just as beneficial and advantageous to the Krebs Corporation as to the Titan Company and, at the same time, would remove the present difficult situation and create among all the affiliated companies, including Krebs, greater confidence and more wholehearted cooperation.

In this connection, the considerations stated above with respect to our powers to license and sub-license other companies applies to whatever negotiations may now be in progress with companies who are desirous of entering the titanium pigment field and securing from us a license to operate under patents owned by us or our licensors.

Very truly yours,

J. L. TURNER

Exhibit 838

Letterhead of
TITAN COMPANY, INC.

No. 100
GJ/AK Paris, January 4th 1935.

William C. Beschorman Esq.
Executive Vice President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. Beschorman,

Re Krebs U. S. patent application on coloured pigments - ser. No. 714,685 of March 2, 1934 and license under possible European patents.

Many thanks for your letter of November 15th with enclosed letter from Mr. Rupprecht. My answer is somewhat delayed because of my trip to Norway and the necessity of conferring with our associates.

During our conversations with Mr. Rupprecht I expressed the European Titan companies' view that the application was not of outstanding interest, for the following reasons :

1) Very doubtful if a patent giving a satisfactory protection could be obtained in view of previous publications and patents.

2) The manufacture of coloured pigments as described would be of the nature of a retail business and the possible consumption in the European companies' markets of such products was not large.

Exhibit 838

We (Titan Co. Inc. and our European associates) were, however, interested in licenses in order to establish in practice a cooperation with Krebs as foreseen in the agreement between them and the Titanium Pigment Co. We therefore proposed that we take licenses against payment of the expenses in obtaining and maintaining the patents, and if Krebs wished anything more they would let us know.

When the consent from Titan Co.Inc. and its European associates to the Krebs agreement was requested by the Titanium Pigment Co, you expressed the view based on your negotiations with Mr. Rupprecht, that Krebs would only expect a nominal payment for these licenses except in cases of outstanding development. (I have understood that this was also the practice between Du Pont and I.C.I.)

Mr. Rupprecht, however, requested a royalty of $5.- per ton corresponding to about 2.5% of the sales value of the pigments. He paid us the compliment of suggesting that we take care of the patent applications in the European countries for the Krebs Corporation. He considered the inventions of value for two reasons :

1) They expected a 2 to 3 cents higher price per lb. than for TiO2.

2) An infringement could relatively easily be proved by the product as compared with process patents, where often an infringement could not be detected in the product.

$5.-per ton is not a nominal payment and evidently Mr. Rupprecht has different ideas as to cases of *outstanding development* than we have.

In view of our desire to develop friendly relations and a good understanding, I did not take up any discussion of this, but, as you will remember, suggested a broadening of

Exhibit 838

the co-operation with Krebs to lines similar to those between the companies of our group.

I shall deal with this matter in another letter.

I informed him in a second meeting, that we and our associates might be willing to pay the royalty for pigments manufactured according to specific described manufacturing methods, which Krebs had worked out in detail, but not on any pigments which may be developed by ourselves.

I pointed out that the patent application contains some very broad principal claims, which I doubted very much will be granted, and, even if we succeeded in having them granted, I did not see any justification for paying a royalty on pigments which should come under such claims when these pigments had been developed by us. The idea of making tinted TiO_2 pigments with the aid of colouring oxides was old with us and it was only the practical development of specific pigments of this kind which justified a compensation.

Mr. Rupprecht's answer was that if the claims were granted the patent protection was of value.

It was in my mind but I do not know whether Mr. Rupprecht saw the peculiar position we would come in, if we accepted his suggestion of applying for the patent for Krebs. We would then refrain from opposition and have to use our ability and influence to obtain the widest possible protection for which—once obtained—we should pay a royalty.

Mr. Rupprecht anyhow overlooked the fact that the value of a patent claim is not definitely established before it has been tried in the courts. In England patents are easily obtained and represent chiefly a basis for a trial in the courts; in Germany there is a considerable previous critical

examination and claims granted there are more representative of their possible protective value. When we take a license, however, I assume we have to acknowledge the validity of the patent.

I was not prepared for a discussion in detail of the value of the Krebs application and, as Mr. Rupprecht maintained his demand on a royalty and asked me to put this up to our associates, it was of little use to continue the discussion.

We will now have to substantiate more closely our views. I enclose to this purpose:

1) A note from Mr. Ravnestad of December 27th.

2) Translation of a letter from I.G. Farbenindustrie of December 28th with annexed

   a.—copy of a rejected German application D 53024 Deutsche Gasglühlicht-Auer Gesellschaft;

   b.—extract from opposition case in German application D 53024 re the final decision of the German Court of Appeal.

3) A printed specification of the I.G. Brit.Patent No. 384.473.

I particularly draw your attention to the latter, which is of an earlier date than the Krebs application. It is applied for in U.S.A. and the Titanium Pigment Co. has the right to an exclusive license as far as Titanium is concerned. The U.S. application has been sent Titanium Pigment Co. in these days.

Krebs can be informed that an application has been filed in U.S.A. but this can not be shown to the Krebs people without permission from I.G. Farbenindustrie. How-

ever, the English patent will show them the nature of the invention and should be sufficient.

I presume the above material will alter Mr. Ruppreht's views.

I have discussed the matter with B.T.P.'s board and enclose copy of an informal letter from Mr. Stopford of December 4th, which relates the position we took there.

I have not met Dr. Kühne but assume that T.G.m.b.H. will take the same attitude.

Accordingly I shall appreciate if you will inform Mr. Rupprecht of the enclosed data on the patent side of the question and that, in view of these, we do not feel we should take the position of assisting in the filing of the applications in Europe and this particularly in view of the very broad claims of the U.S. application. We will, though, be glad to consider the question of a license under any patents Krebs may obtain and would suggest this question to be postponed until further.

In the meantime I hope negotiations re the question of a general exchange will develop.

You will note that B.T.P. has in mind to withhold any opposition proceedings against a Krebs application until they see how such negotiations are proceeding. I will suggest to Dr. Kühne that the same attitude be taken by the Titangesellschaft.

I will have to refer again to Mr. Stopford's letter when I write re the question of a general exchange.

With kindest regards,

Yours very truly,

G. JEBSEN

P.S.—I informed Mr. Rupprecht that he could not expect my answer before middle of January. However, as Krebs must have filed their applications in Europe within 2nd March (according to the international convention), I suggest he is informed as early as possible.

P.P.S.—I.G. Farbenindustrie has just informed me that they wish the American application, Ser. Nr.590.724, *not* to be shown Krebs, as it may be unfortunate for the further development of the case. This application should have been sent us earlier, but as the application has been made from their factory in Höchst and deals with Titanium Oxide as only one of the white oxides to be used, this has been overlooked. However, nothing is lost to us, as a patent has been applied for in the important countries and we will have a license if we wish one.

P.P.P.S.—If the I.G. application is granted in U.S.A. Krebs may wish a license under this.

GJ/AK

William C. Beschorman Esq.
Executive Vice President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. Beschorman,

I much appreciate your request in your letter of November 14 asking me to write in full details my ideas as to broadening the agreement with Krebs.

It is of course very difficult in a letter to deal in detail with a matter of such a broad nature and particularly where the position of Krebs is only partly known to me.

What I think we should aim at is to establish a basis on which a full open and confident co-operation can take place.

To this purpose friction caused by competition should as far as possible be avoided.

Competition can be commercial and technical.

The commercial competition is prevented in our agreement by dividing the markets. In order to secure this division our agreements include in the licenses exclusivity also as regards selling and further nominate each company the sales agent for the others (directly or indirectly).

The protection is then threefold:

Exhibit 839

1) Protection through the company's own patents.

2) Protection through the exclusive licenses received,

3) The companies' right to compensation for damages caused by break of the agency agreement.

The technical competition is prevented by each company's right to exclusive licenses under any patents issued to the others, and further by each company's right to have patents applied for in the countries of its territory by any inventor company which is applying for a patent in its own or any other country.

The whole cooperation is of course limited to the "Licensed Field" which I assume in an agreement with Krebs would be that defined in T.P. Co.'s agreement with them.

The agreement should preferably be for a long period of years. It should be kept in mind that exchange of experience incites new technical developments and there will naturally be reluctance in such exchange if any one can break out on relatively short notice when, thanks to some new invention based chiefly on the group's experience, a new and very important patent can be taken out and at the sole disposal of one of the companies.

It should be remembered that sometimes experience is gathered slowly and at great expense and then suddenly by some little discovery this experience becomes of great practical value—a little discovery which often is made within few months on several places. The development can represent a great temptation to leave the cooperation.

You can of course argue that with the market position of the companies here in question anybody will be reluctant to do so, but the point is there and I think most of our associates will consider a long period should be fixed.

I think further it is of importance that the agreement

Exhibit 839

with Krebs is made either as a sublicence from T.P. Co. as foreseen in art. XIV of the 1920 agreement, or perhaps better between Titan Co., Inc. and Krebs with T.P. Co.'s consent. Direct agreements between Krebs and our European associates should be avoided, if possible, because it will leave it open to Krebs to treat them differently in practice and the handling gets out of our control, which may lead to a disintegration of our whole construction.

By such agreement tedious negotiations for each license will be avoided, everybody will know that technical developments benefiting one will also benefit the other.

The present arrangement with Krebs has already created divided interests. For instance: if B.T.P. makes an invention patented in U.S.A., re which Krebs wants a license, the profit of this license goes to B.T.P. Consequently B.T.P. is not quite so disinterested in imparting knowledge to Titenigesellschaft as they were, and vice versa.

I have thought that this situation would only appear in cases of outstanding development (that is very important cases.) but Rupprecht's view on the coloured pigment patent tends to discussion and putting value on even rather small developments.

At present we have a better opportunity than at any other time to bring Krebs to our views, because of their infringement of Titan Co.'s patents, later it will be more difficult because on the one side Titan Co.'s opportunities of making new inventions are lessened and our German and English associates with larger staffs in close contact with actual production are increasing.

Our aim should be to get the relations with Krebs as far as possible in line with the ideas and conditions laid down in article XIV of the license agreement of 1920 be-

Exhibit 839

tween the Titanium Pigment Co. and Titan Co A/S (resp. Titan Co.Inc.) Some of these are of little or no importance in connection with Krebs, others seem unnecessarily detailed and could presumably be changed.

I shall take each point and comment upon it.

Ad 1.—This is not necessary, as Krebs pay no royalty, but it would of course be of interest to exchange data in this respect.

Ad 2.—This is one of the main points. It means that we, Titan Co.Inc. and associates, should have the same rights under the Krebs patents for our territories as we have under the Titanium Pigment Co. Which modifications have to be made here in view of Krebs' policy I do not know. The following objections have been raised by Rupprecht:

The American laws (the antitrust law) do not permit such arrangement.

I doubt this to be right, because, if so, both your and our lawyers would then have been wrong in 1920, in forming Art XIV and at that time the antitrust law conditions were particularly considered in connection with this agreement.

Further, if no such agreement can be made between two American companies, the Titan Co.Inc. can not replace Titan Co A/S in that agreement which has been made with your lawyers' advice.

If, however, the agreement between Titanium Pigment Co. and Titan Co., Inc. is lawful, then an agreement direct between Titan Co. Inc. and Krebs should be possible.

Exhibit 839

We have, however, still the alternative of letting Titan Co A/S replace Titan Co.Inc. and as a last possibility to let Krebs make the agreements direct with each of our European companies. This is, though, the very last we should consider as it can lead to a loosening of the mutual relationship between our companies, leaving Krebs dealing separately with each of our companies.

The basis for the exchange would be that Titan Co.Inc. should have the right to work under Krebs' patents in its territories, with right to sublicense its associated companies, and Krebs should have the right to work under all patents controlled by Titan Co.Inc. for the U.S.A., which includes the patent rights of its associated companies, this last right to be given with the consent of Titanium Pigment Co.

When I say: the right to work under all patents—these rights must be nearer specified.

You will note that art. II and III specify exclusive licenses for the territories mentioned there, and art. IV non exclusive licenses for South-America, and that art. V foresees a system of changing the exclusive licenses into an ownership or a non exclusive license if circumstances develop making this advisable.

In the case of Krebs, Mr. Rupprecht mentioned that a "Dupont rule" stipulates that no Dupont Co. shall give up its right to manufacture in any country, and therefore only non exclusive licenses could be given.

Exhibit 839

I doubt that this rule is always applied and it may be worth while to find this out. It may only be Mr. Rupprecht who hesitates to bring the question before Dupont's financial committee.

Mr. Rupprecht in his letter to you of June 28th 1933 says: "It may well be that such negotiations will result in exclusive licenses to your foreign associates".

You will note from Mr. Stopford's report on our discussion in B. T.P., that our English associates are not afraid of Dupont reserving this right. This is to be understood in view of Dupont's relation in England with I.C.I. I.G. Farbenindustrie may have a different view. I will take it up with Dr. Kühne at the next opportunity.

Personally I am inclined, as far as Europe is concerned, to agree with Mr. Rupprecht that there is no possibility of the reservation becoming of practical importance, but why then make it? It seems high-handed.

As regards China and Japan, some remarks from Mr. Rupprecht made me anxious as to whether he really was aware of what he wrote you in his letter of June 28, 1933.

Mr. Rupprecht further reserved a non exclusive license to I.C.I. for the British Empire (may be Canada excluded). This will not be an obstacle. Our cooperation with I.C.I. will provide for this being of no harm.

Exhibit 839

Ad 3.—This deals only with the matter of procedure for the exchange of the patents. It has certain practical and certain legal aspect but is a detail for consideration when the principal matters have been agreed upon.

Ad 4.—Needs no comment.

Ad 5.—This condition has been made with the idea of exclusive licenses and the purpose I suppose needs no explanation. If something in that line can be agreed upon it will serve as an extra safeguard for a good cooperation.

Ad 6.—The question of technical cooperation beyond an exchange of licenses must be developed with a view to the cooperation existing between Krebs and T.P. Co.

If the agreement provides satisfactorily for no competition between the parties, I think our companies will be inclined to a cooperation as full and open as possible in the same lines as we have between our companies.

Ad 7.—Needs no comment.

Ad 8.—Needs no comment.

I have given you above my thoughts, but must make the reservation that a letter like this can not completely cover the subject. This is so involved that it is only as negotiations proceed that it can be fully developed. Such negotiations need a considerable amount of careful thought and familiarity with the various conditions.

If you find Mr. Rupprecht receptive to the ideas in general and you should wish my presence, I shall be glad to

come over in the spring, as the matter is of a considerable importance for the good cooperation of all taking a long view.

With kindest regards,

Yours very truly,

G. JEBSEN

P.S.—I leave to-morrow night for a much needed rest—going to the mountains for one week skiing.

P.P.S.—I suppose it is unnecessary to go into details as to the advantages to Krebs of obtaining a wholehearted co operation with our group, particularly in view of the obligation of I.G. Farbenindustrie, Imperial Smelting Co. and Goodlass Wall and Lead Ind. to turn over any patent in the Licensed Field to us (Licensed Field as defined in the 1920 agreement), and Imperial Chemical Industries' obligation to turn over any patent to us in a field practically corresponding to the one you have in the Krebs agreement.

A demonstration of this advantage has already arisen with the I.G. patent for coloured pigments, which, considering Mr. Rupprecht's view on this matter, should be of some importance to him.

Letterhead of

TITAN COMPANY, INC.

GJ/AK Paris, January 22nd 1935.

William C. Beschorman Esq.
Executive Vice President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. Beschorman,

Re general exchange of licenses with Krebs.

Referring to my other letter of to-day and my letter of January 4th, I beg to inform you of my conference with Dr. Kühne, Mr. Weber-Andreae, Dr. Raspe and Mr. Borgwardt, last Thursday in Berlin.

T.G.m.b.H. will welcome an arrangement by which Krebs "enter into the family by wholehearted cooperation." —We did not discuss the matter in detail, as Dr. Kühne and Mr. Weber-Andreae are familiar with the principles and aim of our agreements.

Re the question mentioned in paragraph 7 page 4 in my letter of January 4th, Dr. Kühne and Mr. Weber-Andreae felt that Dupont's reservation is not satisfactory.

Dr. Kühne mentioned amongst others: As a consequence of such cooperation, T.G. would, generally speaking, refrain from opposition against Krebs' application and Krebs' patent position could therefore become much

Exhibit 840

stronger than otherwise, giving Dupont advantages which do not seem justified.

Mr. Weber-Andreae, who knows well Mr. Crane of the Dupont board, offered to write him personally and explain the I.G.'s view. I thanked him for his offer and suggested that I return to it later, if developments made such a step desirable, saying that, in case we should avail ourselves of this, it must be done in the right moment.

Please let me know what you think of this.

I am looking forward with much interest to news from you in this matter and also the result of the investigation concerning the Baltimore plant's infringement of Titan Co. Inc.'s patents. Has a description of the process used in Baltimore been sent Mr. Cole of Dorsey and Cole and has he reported on the question?

With kindest regards,

Yours very truly,

G. JEBSEN

Exhibit 841

Letterhead of

KREBS PIGMENT & COLOR CORPORATION

January 7, 1935.

CONFIDENTIAL

W. C. Beschorman, Exec. Vice Pres.,
National Lead Company,
111 Broadway,
New York City, New York.

Dear Mr. Beschorman:—

This will confirm conversation in your office on December 21, 1934, concerning negotiations with your German and British associates relative to licenses on any patents we may obtain in those countries corresponding to our United States Patent Office Application Serial No. 714,685, covering "Colored Titanium Oxide Pigments in Paints".

During the last conversation with Dr. Jebsen in your office, I mentioned that du Pont paint or lacquer affiliates in Europe might automatically be required to have licenses under the coating composition claims in the application. Meanwhile, as explained to you, I am informed by our parent company in Wilmington that agreements with du Pont foreign associates, listed below, entitled them to exclusive rights for their respective countries on any developments in the Duco or paid field relating to such products, or compositions competitive therewith:

Duco A. G.—Germany
Nobel Chemical Finishes, Ltd.—British Empire, excluding Canada and Newfoundland

Exhibit 841

Societe Francaise Duco—France and Colonies
Societa Italiana Duco—Italy and Colonies

In this class would fall developments as covered by Claims 26 to 36 inclusive of our U. S. Application Serial No. 714,685, all of which claims cover coating compositions comprising pigment and vehicle.

Inasmuch as the patent application is principally one covering a pigment process and product, we have in mind approaching the du Pont associates abroad to obtain their consent to non-exclusive licenses under the coating composition claims above enumerated.

In Germany and England, where the filing of patent application corresponding with our United States Patent Application Serial No. 714,685 is definitely under consideration, it would be our idea that your German and British associates have exclusive rights, except for Krebs, I.C.I., du Pont, and any company in which du Pont holds 51% of the voting stock; and that non-exclusive licenses be granted to the du Pont Duco associates, as named above, in Germany, and in England for the British Empire, exclusive of Canada and Newfoundland, to operate under the coating composition claims.

In France and Italy you will recall it is not our intention to file similar applications. However, in order to protect our Duco associates in those countries, and to permit your foreign associates to sell in those countries, it is suggested that du Pont take out patents in France and Italy covering only coating composition claims, which will entitle their associates in such countries to operate thereunder, and to grant your foreign associates rights under the patents, which will enable them to sell to other consumers of tinted titanium dioxide.

Exhibit 841

I believe the above sets forth our position as clearly and briefly as possible, but if anything is not entirely understood, please call upon me. I regret that I was not familiar with the du Pont arrangements with their paint and lacquer manufacturing associates on the other side, so I could have presented it all very clearly to Dr. Jebsen while he was here. It does not in any way alter the pigment process claims in this application, and is merely a matter of protecting our associates who manufacture finishes.

I hope your foreign associates will understand this situation, and we feel confident we will be successful in getting our associates to accept non-exclusive rights on the use claims.

Very truly yours,

C. H. RUPPRECHT
PRESIDENT.

CHR:s

Exhibit 842

GJ/AK

William C. Beschorman Esq.
Executive Vice President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. Beschorman,

Re General Exchange of Licenses with Krebs,

Referring to Mr. Rupprecht's letter of January 7th and the claims covering coating compositions, I will only mention that in the case of *a general agreement* I think it will be satisfactory, re patents or claims concerning the application of pigments (or other articles in the Licensed Field), if Titan Co. Inc. and its associated companies obtain an exclusive license with the exceptions mentioned by Mr. Rupprecht and with the right to give sublicenses.

You may remember that I mentioned to Mr. Rupprecht that it is not in our general policy to deny our *customers* to work under our patents. I take it to be unnecessary to explain our reasons for this.

With kindest regards,

Yours very truly,

G. JEBSEN

Exhibit 843

March 11, 1935.

Dr. G. Jebsen, Vice President
Titan Company, Inc.
26, Rue de la Pepiniere
Paris, France.

Dear Dr. Jebsen:

I have delayed answering your letters No. 105, 106 and 107 which all treated on both the Krebs application on colored pigments and the possibility of a general exchange of licenses or agreement with the Krebs Company as discussed when you were here.

There is nothing new to say for the application on the colored pigments except that Krebs is revamping their claims and as soon as we receive copies of the new application will forward you copy.

Regarding the question of general exchange of license with the Krebs Company, Mr. Rupprecht was in the office on Friday and advised me that he had been discussing this matter with their other people, which requires him to go through the Grasselli Chemical Company as well as the duPont organization, and they are all in general agreement that it is very desirable to make such a contract but they do not feel it advisable to do so at the present time or until they are completely shut of Blumenfeld.

Blumenfeld is still attempting (although they have not heard from him for about a year) to claim that in buying out the old Commercial Pigments Company they also assumed the agreement which Commercial Pigments had with him for exchange of information. The entire basis of his

claim is that for approximately six montns after the purchase of the Commercial Pigments by the Krebs Company, (when Messrs. Ticknor and Chase were still in the saddle) that they did exchange information—mainly the information came from Blumenfeld and was largely in sending a man over here to show them how to work to the best advantage the patents which they already owned.

You can appreciate from the above why the general license agreement between ourselves may have to be delayed some little time.

With kindest regards,

Very truly yours,

Executive Vice President.

Mr. C. H. Rupprecht, July 27, 1932.
Krebs Pigment & Color Corporation
256 Vanderpool Street
Newark, New Jersey

New York

Dear Mr. Rupprecht,

Your letter of May 23rd was received on time. My great delay in replying is due to the fact that since my return from the far East I have had to go from one place to another almost constantly.

I shall not deny that your letter surprised me greatly. When I had the pleasure of meeting you in New York, we attempted to see how we could most effectively bring about technical collaboration between the European group working in the field of titanium pigments and your company.

Unfortunately, my too short stay in New York did not allow us to lay a definite plan; however, we did decide that, in order to safeguard our respective interests, we would limit the exchange of all technical information to 3 European plants, namely, Fabriques de Produits Chimiques de Thann & de Mulhouse, Verein fur Chemische und Metallurgische Produktion at Aussig (Czecho-Slovakia) and the Societe Titanium at Milan.

Exhibit 843b

Returning from my trip, I ordered the department concerned in our organization to send you an outline which would serve as a basis for discussing rational means for effecting this collaboration, and in reply to this outline, I received your letter.

In the meantime, as you know, we have sent you a complete series of laboratory experiments which have been used to establish certain patents.

We also continued to send you all information as in the past, not only because of the conversations which I had the pleasure of having with you in New York, but also because of the formal agreement with the Commercial Pigments Corporation.

Krebs Pigment and Color Corporation having succeeded the latter company, it is rather difficult for me to understand how such an important part of the contract could be purely and simply cancelled (or, literally, "suppressed"—Translator) as you seem to do in your letter, and this, as I have just said, after a conference which was to be considered a beginning, not of a suppression of the principle of exchange, but on the contrary, of a search for the most efficient means (of effecting said exchange).

I shall be extremely grateful to you for a reconsideration of the entire question.

In awaiting your early reply, my dear Mr. Rupprecht, kindly accept my most sincere wishes.

(Signed) J. BLUMENFELD.

May 23, 1932

Societe de Produits Chimiques des Terres Rares
67 Rye de Prony, Paris XVII^e, France

Gentlemen: Attention: Dr. Joseph Blumenfeld
and
Dr. Charles de Rohden

Your letter of February 24th, signed by Dr. de Rohden, and addressed to Dr. J. E. Booge, has been referred to me for attention, but due to the pressure of many matters I have been unable to reply before this time.

We received the suggestions for exchange of information which accompanied your letter, however, this is a matter which we have not as yet been able to give final consideration.

At the time we had the pleasure of a visit from Dr. Blumenfeld in September of last year, this matter was discussed in a tentative way, and it was understood that it would have further discussion upon his return to this country enroute to France, around the first of this year. At the time of Dr. de Rohden's departure we were still expecting that we would have the pleasure of another visit from Dr. Blumenfeld. However, this has not occurred and we would merely like to state that this question of exchange of information will have to be held in abeyance pending further consideration and possible discussion, and that until such time, it will not be possible for this company to enter into any agreement with your company.

Exhibit 843a

Relative to the information which you and your associates are forwarding, it is entirely in your hands whether or not to continue this procedure, with the definite understanding, however, that it does not obligate the Krebs Pigment & Color Corporation in any way. We would ask that you kindly inform your associates accordingly.

We will endeavor to arrange for final disposition of this suggested exchange of information at as early a date as possible.

Dr. Booge's activities have kept him so busy that any plans for a trip to Europe are still quite vague. However, he joins me in sending kindest regards.

Yours very truly,

C. H. RUPPRECHT

President

Exhibit 844

Letterhead of
TITAN COMPANY, INC.

GJ/AK

William C. Beschorman Esq.
Executive Vice President
National Lead Company
111 Broadway
New York City, U.S.A.

Paris, May 21st 1935.

Dear Mr. Beschorman,

Many thanks for your letter of March 11th, which I have read with much interest. Please excuse my late answer due to overcrowded work and the matter not being urgent.

I am glad to note that Dupont and Graselli are in agreement that it is desirable to make such a contract but I regret that they find a postponement necessary in view of their relations to Blumenfeld. This is of course a question for them to judge. Their standpoint raises, however, the following question:

Does Rupprecht expect during the period he requires for clearing up his relations with Blumenfeld, to receive compensations for any licences under patents or possible patent rights of Krebs in Titan Co. Inc. and associated companies' territories, or not?

If he does—what about the U.S.A. patent rights of Titan Co. Inc. and associated companies?

During my last stay in New York, you asked Mr. Kaegebehn to write you a report on Krebs' infringements of our patents, and I understood you agreed to my suggestion to ask Mr. Frank Cole of Dorsey & Cole to make a report.

Exhibit 844

I should much appreciate to hear what the results are.

Mr. Carter and you told me that Duponts are very patent-conscious. When so, Mr. Rupprecht should rather feel that he can not have it both ways in his favour.

If the question of a compensation for a U.S.A. license under Titan Company Inc.'s patents is postponed until the patents have run out, our position is much weaker with regard to this question, if it can be taken up at all.

There is also another point to consider:

The arrangement with Krebs, which you proposed to our associates for their approval, provides for a first call on the Krebs patents in the respective territories. Each has to pay for the licences from Krebs and from the attitude of Rupprecht last year, the payment they expect is not a nominal one.

In recompense, Titan Co. Inc. and our associates should have a compensation from Krebs for any of their U.S.A. patents which Krebs should make use of.

It was expressly pointed out that the National Lead Company would look after our interests in this respect.

Up to now, as far as I know, there is only the question of an infringement of Titan Co. Inc.'s patents—a company controlled by the National Lead Co. We will therefore at present have little difficulty or no difficulty in obtaining our associates' agreement to an arrangement with Krebs as I suggested "to waive payments from both sides". Both B.T.P. and T.G.in.b.H.'s boards have verbally expressed their agreement in principle.

However, if any of our associates should make a patentable development of outstanding interest, their attitude may change. This particular "inventor" company will then have the sole right to the compensation from Krebs for a license under the U.S.A. patent and as they are not interested in

Exhibit 844

Titan Co. Inc. and our other associates' territories, there may be less inclination or a direct objection to any agreement with Krebs for the exchange of patent rights without compensation, as it may be considered giving a present to Titan Co. Inc. and our other associates.

The working out of an agreement with Dupont-Krebs will certainly take time and the earlier it starts the better.

Is Rupprecht willing to do this now, so that it is ready for signature the day he is prepared to sign it?

Doing this, we will all better know where we have Krebs and it will be easier also to have our associates' approval.

I acknowledge receipt of your letter of May 10th regarding Mr. Rupprecht's information that only the "use of the pigment claims" will be filed in England, Germany, France and Italy.

It will be of interest to know what the intentions are with regard to such patents if granted. Will we have a first call on a license under these, with the right to give sublicenses to our customers?

I ask the question of two reasons:

a) with regard to our attitude as to opposing the Krebs applications;

b) to know better how Mr. Rupprecht's mind is running in these matters.

Personally I doubt very much that a satisfactory patent can be obtained and still more that such a patent can be enforced.

I therefore do not see the purpose.

With kindest regards,

Yours very truly,

G. JEBSEN

Dr. G. Jebsen, Vice President
Titan Company, Incorporated
26, Rue de la Pepiniere
Paris 8e, France

Dear Dr. Jebsen:

I had a very extended interview with Rupprecht of the Krebs Company yesterday, and they are very seriously considering the question of full license agreement between us on the lines of the 1920 agreement. In the meantime they have decided to take out no European patents whatever on the colored titanium pigments and their information is at your disposal to take out patents if you desire for the countries in which you are interested.

They are also working to get a change on their licenses with the Duco subsidiaries in Europe with the intention of changing the feature which gives them exclusive use of DuPont patent developments. It is to get around this feature that they have decided to take out no patents in Europe on the tinted titanium pigments.

I sincerely hope by the time you get over next spring, we may be able to work out something on this line.

With kindest regards,

Yours very truly,

Executive Vice President

Dear Mr. Beschorman,

I am very glad to receive the news in your letter of October 29th, regarding your conversation with Mr. Rupprecht, and look forward with interest to your news regarding further developments.

I will inform the Titangesellschaft and British Titan Products Co. of the Krebs Co's offer to put at our disposal their information as regards their colored titanium pigments, to enable us to take out patents if desired, which gesture certainly will be much appreciated.

You will remember that our people were much in doubt if any valid patent could be obtained. A further study of the matter has naturally been postponed on this side. I have asked Mr. Raynestad to go into the matter once more to see what feature, if any, may be considered of interest, but I understand that the application, if any, is likely to be of a very limited scope.

With kindest regards,

Yours very truly,

G. JEBSEN

STRICTLY CONFIDENTIAL

Dear Sirs,

Referring to my conservation with Dr. Raspe last week, I beg to confirm that I received information from Mr. Beschorman to the effect that the Krebs Company has decided to take out no European patents whatever on the colored titanium pigments dealt with in the U.S. Application Ser. No. 714,685, and that their information is at our disposal to take out patents if we so desire for the countries in which we are interested.

Please let me know if you wish to avail yourselves of the Krebs Company's offer the spirit of which you certainly will appreciate.

Mr. Ravnestad informs me that he considers a decision in this matter desirable earliest possible in view of possible publications.

I am glad to be able to add that the Krebs Company is trying to remove obstacles to the purpose of broadening their agreement with the Titanium Pigment Co. with a view to a closer technical cooperation with the associated European companies.

Yours very truly,

Exhibit 847

Take up with Mr. Beschorman ask him to see Mr. R. and ascertain whether Krebs will permit Titan to file in Titan's name or in Krebs?

P.O. Box 58
SOUTH AMBOY
N.J.

Att. Mr. C. F. Kagebehn

Dear Sirs,

U.S.Pat. Appl. Ser. No. 714.685—McKinnay Assignment to Krebs Pigment & Color Corporation "Colored titanium oxide pigments & paints"

As you will be aware our European associates and ourselves are studying the question whether patent applications in the above case should be filed in our territory.

In this connection, it would be of interest to have some information regarding the prosecution of the above U.S. application and we should be much obliged to you if you would ask the Krebs Pigment & Color Corporation (if you think this could be done) whether they would be willing to place at our disposal copies of the Office Actions and responses hereto which have appeared up to now. If so, we should be glad if you would see to it that copies of these papers are sent to us.

Thanking you in advance,

We are.

Yours very truly,

Per TITAN COMPANY INC.

ANDREAS RAVNESTAD

Exhibit 849

January 23, 1936.

Dr. G. Jebsen,
For Mr. Andreas Ravnestad,
c/o Titan Company, Inc.
26, rue de la Pepiniere,
Paris—8e, France.

U. S. Serial No. 714,685
McKinney Application.

Gentlemen:

Your letter of December 9, 1935 was received and we have endeavored to obtain copies of Patent Office action and response thereto which have been entered in this case up to now.

Although we have been unable to secure the copies you ask for, we have gone into the matter with the Krebs Corp. We were informed that up to the present time, all claims have been rejected. The case now contains only process claims directed to the manufacture of the colored pigments and product claims covering the resulting products. The broadest of these process claims and product claims have also been rejected. The Krebs Corp. also informs us that they have filed another application in the name of Messrs. McKinney and Smith. This second application is similar to U. S. Ser. No. 714,685 to McKinney. They expect to abandon the McKinney application and prosecure the McKinney and Smith application because of confusion as to whether the invention was a sole invention or a joint one. We expect to receive a copy of this new application.

We have been informed of Mr. Beschorman's letter to Dr. Jebsen dated October 29, 1935 advising you that you

Exhibit 849

were free to file corresponding applications in your territory. Accordingly, we will have copies made of the McKinney and Smith application and send them to you so that you may determine whether the applications you expect to file should correspond to the McKinney application or to the application of McKinney and Smith.

We trust this information will be useful to you.

Yours very truly,

TITANIUM PIGMENT COMPANY, INC.,

C. F. Kaegebehn
Secretary,
Patent Committee.

CFK:PS

Exhibit 850

Destroy after reading—do not file

1.

Dr. Booge is not coming to see you on Friday unless you hear from him to the contrary.

2.

You asked Dr. Booge to mail you Office Actions and amendments on Ti-Tint applications to facilitate filing applications on these pigments abroad by Dr. Jebsen:

In conversation between Messrs. Rupprecht and Beschorman it was tentatively agreed that in view of the fact that Krebs do not intend to file any foreign applications, Dr. Jebsen is free to file abroad in any countries he may desire.

There is, however, a point which has not been decided as yet; No claims for paints made from Ti-Tints have been included in the United States applications; there is the possibility that Dr. Jebsen may want to include such claims in his applications, and this possibility is worrying Mr. Rupprecht. He fears that such claims, if granted, would exclude the Dupont foreign associates from manufacturing paints containing Ti-Tints, which would create a very undesirable situation. Therefore Mr. Rupprecht very strongly stipulates that if Dr. Jebsen does file, his applications should not include any paint claims.

Nevertheless, you are not free as yet to notify Dr. Jebsen that he is at liberty to proceed with such applications; Mr. Rupprecht desires to discuss the question still further with Mr. Beschorman.

Mr. Rupprecht is away on a trip and will not return for a week or so. Whether or not he will take up this question

Exhibit 850

with Mr. Beschorman soon after his return is not clear to me from conversation with Dr. Booge. You will have therefore to get in touch with Mr. Beschorman and ask him to arrange for an early conference with Mr. Rupprecht so as to clear up the matter and enable you in turn to write to Dr. Jebsen.

It will be only after this clarification that copies of Office Actions and amendments will be mailed to you.

Subject: Patent situation—Ti-Tints

Dear Mr. Beschorman:

I beg to report herewith on the patent situation regarding the so-called Ti-Tint pigments.

A copy of the McKinney application was sent to Dr. Jebsen with Mr. Rupprecht's permission. My understanding is that in subsequent conversations between Dr. Jebsen and Mr. Rupprecht when the former was in this country during the fall of 1934, no agreement was reached as to royalties.

On October 29, 1935 you wrote to Dr. Jebsen informing him that the Krebs Company did not intend to file any European applications and that therefore the Titan Company was free to go ahead and file applications on their own behalf.

Evidently the Titan Company inferred that they were free to apply for applications corresponding to the U. S. application of McKinney because they wrote me on December 9, 1935 asking me to obtain if possible copies of patent office actions and responses thereto in the McKinney application.

Exhibit 852

After taking this matter up with you and the Krebs people I replied on January 23 giving them the status of the case at the present time in the United States Patent Office, and informing them of the existence of a second application, the McKinney and Smith applications relating to the same subjects. I later received instructions from you to advise the Titan Company that they were not to make claims to the use of Ti-Tints in surface coating compositions in view of the license arrangements between duPont and their foreign associates on Duco Lacquers.

My surmise that the Titan Company were going ahead on the presumption that they could file applications corresponding to the McKinney U. S. application was further confirmed in the letter I received from Titan Company dated September 11, in which they refer to the Ti-Tint application as Case T. 143. Titan Co. always sets up a T Case number for all inventions where they have right to apply for patents in their territory correspondent to applications filed in this country. A situation has thus arisen which is somewhat embarrassing.

Titan Company will send us certain documents which will require the Signature of the inventors or Krebs' officials. These documents are necessary to permit them to file European applications corresponding to the U. S. Ti-Tint applications of McKinney and McKinney and Smith. The Krebs Company are not permitted by the duPont executive committee to dispose of any patent rights (which are regarded as capital assets) without proper consideration. The Krebs Company is somewhat at a loss to understand why Titan Company desires to file these applications after Dr. Jebsen rejected the original proposal.

In an endeavor to reach some understanding on this matter Mr. Turner had a conversation with Dr. Booge. Dr.

Exhibit 852

Booge lacked the authority to reach any definite agreement but stated that he would take the matter up with Mr. Rupprecht.

I would like respectfully suggest that an attempt be made to clarify this situation on the following basis:

Since Krebs decided not to apply for patents in foreign countries they have in effect relinquished or renounced their rights abroad. Consequently there should not be any great obstacle in the way of Titan Company applying in Krebs' name and obtaining a non-exclusive license in any patents that might issue abroad in consideration of having undertaken the expense incurred in filing and prosecuting the foreign applications. It will be understood of course that the foreign applications will not contain claims directed to surface coating compositions containing Ti-Tints.

Yours very truly,

CHARLES F. KAEGEBEHN

CFK.BR

Exhibit 853

111 BROADWAY

NEW YORK

May 25, 1937.

Mr. W. C. Berschorman, Executive Vice President
National Lead Company
111 Broadway, New York, N. Y.

Dear Mr. Beschorman:

I learned from Mr. Kaegebehn that the DuPont deNemours Company have a series of patent applications pending in the United States Patent Office, of which Titan Company, Inc. and its European associates have not been informed. According to the Agreement between National Lead Company and DuPont de Nemours of January 1st, 1933, Titan Company, Inc. and its European associates have first call on licenses under any European patents in the "Licensed Field", owned by DuPont de Nemours. They have though no contractual right to information of DuPont de Nemours' inventions before European patents have been granted, and also have no claim to request of DuPont to endeavor to obtain European patents under the inventions.

You will appreciate that in case of an outstanding development regarding which DuPont has neglected to obtain a patent protection in the European countries, the invention may fall into public property in the European countries; a situation which may be undesirable. As regards patent protection in the United States on inventions of Titan Company, Inc. and its European associates re which patents are applied for in Europe, the National Lead

Company has the right and opportunity to see this provided for to the extent that it is possible, and if DuPont de Nemours wish a license, they have an opportunity to benefit by the same protection.

I am certain you will appreciate that this situation is not an equitable one. As possible unfortunate instances I might point out two cases: 1) the DuPont de Nemours Company make an outstanding development *based upon their own experience* regarding which protection would have been desired; 2) DuPont de Nemours make an outstanding development *on the basis of experience first acquired in Europe* and conveyed to DuPont through National Lead Company. Particularly in the latter case resentment may arise if the European companies find themselves left in the open.

I raise the question whether it should not be provided for that Titan Company, Inc. and its European associates are furnished with the same information regarding patent applications of DuPont as received by the National Lead Company, and will appreciate if you will give this consideration.

With kindest regards,

Very truly yours,

G. JEBSEN

Re: Blended Pigments
Titan Agreement

Attached find copy of proposed license agreement with Titan, Inc., involving the foreign patents and applications on Booge Blended Pigment case 575-K.

The agreement embodies all of the terms suggested by you in our discussion Tuesday afternoon. A sub-licensing clause to a third party is included, limiting the right to sub-license by and with the consent of du Pont. I believe some restriction should at least be placed on the sub-licensing feature in order to avoid the possibility of granting royalty-free sub-licenses, if this is desired.

After you have considered the proposed agreement, please call me so that we may incorporate desired changes prior to sumitting the same to Mr. Biesterfeld for approval.

FOREIGN RELATIONS DEPARTMENT
MISS H. M. KIMBLE
LEGAL DEPARTMENT

We are in receipt of your letter of June 21st, attaching a memorandum on proposed agreement between du Pont and Itan, Inc., a subsidiary of National Lead, which agreement is in line with the agreement between du Pont and Titanium Pigments Company (a subsidiary of National Lead Company), dated January, 1933. You are correct in your understanding that titanium pigments are outside the I.C.I./du Pont Agreement. I think your suggestion that I.C.I. be informed of the proposed agreement as a matter of courtesy and because of their minority interest in British Titan Products Company is a good one.

We see nothing in the agreement that is in any way objectionable from the Foreign Relations viewpoint.

FOREIGN RELATIONS DEPARTMENT

Exhibit 856

(COPY)

Dr. G. Jebsen—Vice-President
Titan Company, Incorporated
26, Rue de la Pepiniere
Paris—8e—France

July 8, 1937

Dear Dr. Jebsen:—

Mr. Rupprecht has submitted to Mr. Beschorman a draft of a proposed license agreement between E. I. DuPont and Titan Co., Inc., respecting DuPont's European patents and applications relating to blended titanium dioxide pigments. A copy of this proposed agreement is enclosed herewith.

The intention of this proposed agreement is to grant to Titan Company, Inc., an exclusive, royalty-free license under all Euorpean patents and applications owned by DuPont covering blended titanium dioxide pigments; such license carrying with it the privilege of granting sub-licenses to the European associates of Titan Co., Inc.

Concerning the agreement itself, we have the following comments to offer:

Page 1, paragraph 1: We presume the principal place of business of Titan Co., Inc. should be set forth as "the City of Paris, in the Republic of France."

Page 1, paragraph 2: The patents and applications listed correspond to the information given you in the writer's memorandum to you of June 4th.

Pages 2 & 3, Article 1: The word "Germany has been omitted below the word "France." (Typographical omission).

Exhibit 856

As to the license granted to Titan Company, you will note that this article reads:

> "to practice throughout the United Kingdom of Great Britain, Ireland and the Isle of Man, France, Italy, Germany and Czechoslovakia only, any process disclosed or claimed in said letters patent or applications therefor, and to make, use and/or sell throughout each of the aforementioned countries any products described and/or claimed in said letters patents and/or applications."

This language could be interpreted to mean that Titan Company is restricted from selling outside the countries enumerated.

Mr. Beschorman called Mr. Rupprecht's attention to the fact that the associates of Titan Company sell their products in many countries outside those mentioned in Article 1, and, consequently, they ought not to be restricted by this Article to sell blended titanium pigments only in the countries enumerated. Mr. Rupprecht stated that this was not intended, but that this Article was drafted in its present form in view of the following consideration:

DuPont has been advised by its legal department that it has no right to grant any rights or licenses for any country in which they do not have a patent or an application. Thus, the territorial scope of the license granted in Article 1 can only include those countries wherein the patents and applications have a legal force and effect. Consequently, Mr. Rupprecht advised Mr. Beschorman that DuPont does not consider this Article as restricting the field of sale of Titan Company and its associates, but only as fixing the limits of what DuPont is able to give. Therefore, since

Exhibit 856

DuPont has no foreign patents in countries other than those enumerated which might interfere with Titan Company's right to manufacture and sell, Titan Company and its associates are free both to manufacture and to sell in any countries not protected by patents or applications.

Page 3, Article 2: As to the associates to whom Titan Company may grant sub-licenses, only those associates of Titan Company which reside in countries where DuPont has a patent or application have been mentioned. (cf. comments to Article 1).

Article 3: No comments.

Article 4: We questioned whether this Article imposed on Titan Company the obligation to maintain the patents even though it may not regard them as of sufficient value to justify the expense. We were assured that this Article is to be interpreted as granting Titan Company discretionary powers as to maintaining the patents and only obliges Titan Company to advise DuPont when it intends to abandon a patent.

Article 5: No comments.

Article 6: No comments.

Article 7: No comments.

Article 8: No comments.

Article 9: No comments.

Article 10: No comments.

In connection with this agreement, you will note that the license granted Titan Company is an exclusive one and no exception has been made as to DuPont's reserving a non-

Exhibit 856

"Wrong License retains rights in DuPont. J. P. H."

exclusive license for itself and its allied companies. Mr. Rupprecht further stated that if Titan Company could obtain valid patents in countries other than those now covered by DuPont's patents, he would be glad to co-operate with Titan Company in obtaining such patents. Although the writer is not familiar with the requirements for obtaining patents in countries outside of the United States, it would appear that the publication of the United States and French and, possibly, the British patents, preclude the possibility of obtaining valid patents in additional countries.

This proposed license agreement is still to be approved by the Finance Committee of E. I. DuPont, but Mr. Rupprecht feels confident of obtaining the Committee's approval.

This proposed agreement appears adequately to cover the purpose for which it is intended. It is most certainly a step in the right direction toward establishing a direct connection between Titan Company and E. I. DuPont.

We hope this agreement, viewed in the light of the interpretation of Articles 1, 2 and 4, as contained in this letter, will meet with your approval.

Yours very truly,

CFK:lo

c.c. Mr. W. C. Beschorman

Exhibit 857

GJ/KL

July 24, 1937

W. C. Beschorman, Esq.
Vice President
National Lead Company,
New York,

Dear Mr. Beschorman:—

Many thanks for your letter with information as to your visit to Europe, to which I am looking forward; and also my thanks for your cable of July 22nd, as per copy enclosed, which was forwarded to me at Hankö, where I am staying on holidays.

I had a few days before received from Paris Mr. Kaegebehn's letter of July 8th with enclosed draft of the license agreement.

I confirm my cable of yesterday as per enclosed copy. From my knowledge of the British Titan Products Company's attitude, and particularly Major Barley's intimate knowledge of the manner in which Dupont acts, I assume that the British Titan Products Company will be pleased by the arrangement.

As regards Titangesellschaft, the people of the I.G. have less understanding of the Dupont situation, and I know that they find the reservation for the Dupont companies to operate unpleasant. This view I consider partly due to the above-mentioned less knowledge of Dupont and partly due to the German mentality, which has a strong inclination for strictly clear-cut lines. As, however, Dr. Kühne and Dr. Brüggemann, as well as Dr. Raspe are fully in accordance with our aim as regards co-operation with Dupont, I believe they will join my view as expressed in the cable.

Exhibit 857

I telephoned to Leverkusen and found Dr. Raspe, who was leaving on holiday today, and he joined my view.

Dr. Kühne is absent on holidays and will be back August 12th. A definite and formal approval by Titangesellschaft will therefore have to be postponed until his return, and as Dr. Raspe returns August 16th, I am trying to arrange for a meeting in the latter half of August, together with you, at which time we also will have to take up the formal approval of the other agreements dealt with during my stay in New York—Canadian Industries Limited and the arrangement by which the National Lead Co. takes charge of the payments to Dupont and receives payments from Dupont for licenses to be granted between Dupont on the one side and Titan Company Inc. and associated companies on the other side. I have given Dr. Raspe information of this and an exemplar of the Canadian Industries agreement. I took up these two last mentioned matters with the British Titan Products Co. Ltd. during my stay in London and had them approved.

As regards my cable of yesterday, this speaks for itself. I trust my comments to Par. 4 that we shall we-shall "effect all necessary workings to maintain said letters patent etc." will cause no difficulty. The stipulation is, I may say, old fashioned and can give cause for much dispute. The legal requirements in the various countries as regards "necessary workings" are not well defined, and in certain countries, as for instance Italy and Czecho-Slovakia, it may prove impossible from a practical point of view to fulfill such an obligation. I presume though that this matter can be satisfactorily arranged.

I also confirm my cable of today as per copy enclosed.

Exhibit 857

This letter will not reach you in New York, so I am sending a copy to Park Lane Hotel, London, and I presume I will have been able within your arrival to fix definite dates as regards meetings in London and your visit on the Continent.

Hoping you will have a good passage, I am, with kindest regards,

Yours sincerely,

G. JEBSEN

Enclosure.

W.C.Beschorman
Executive Vice President

CONFIDENTIAL

Mr. C. H. Rupprecht, General Manager
Krebs Pigments Department
E. I. duPont de Nemours & Company, Inc.
Wilmington, Delaware.

Dear Mr. Rupprecht:

I am returning herewith both the original and duplicate copies of the proposed license agreement with Titan Co. Inc. covering patents issued and applications pending in the European countries mentioned on your blended titanium dioxide pigments.

You will note that I have signed these for the Titan Co. Inc., and would call your attention to one change that I have made on the first page where I have blotted out on the ninth and tenth lines "and Paris, France" and initialled this change.

Dr. Jebsen called our attention the fact that if the contract was on file in Paris with these words in it, it would add very materially to their taxes.

While we have signed the contract as written, Dr. Jebsen calls our attention to the stipulation in Article 5 of

Exhibit 858

the proposed agreement with Titan Co. Inc. that they will pay all necessary maintenance fees and/or taxes and will "execute all necessary workings to maintain said letters patent". He desires that this be interpreted to mean "will endeavor to execute all necessary workings", explaining that this is necessary in view of the patent laws in the various countries where, for example, Titan Company and its associates sell but do not manufacture—for instance, Czechoslovakia and Italy.

This interpretation should not be objectionable as this clause later on obligates Titan Co. Inc. to inform du Pont if any patent is to be abandoned.

Kindly advise if this interpretation is satisfactory.

Very truly yours,

(s) W. C. BESCHORMAN
Executive Vice President.

Exhibit 859

Letterhead of

E. I. DU PONT DE NEMOURS & COMPANY

Blind copies to:

Messrs. J. P. Hancock—Legal Dept.
C. H. Lyman —Office

July 27, 1937.

Dear Mr. Beschorman:

We have your letter of July 26th, enclosing signed copies of the license agreement with the Titan Co., Inc., covering patents issued and applications pending in specified European countries on our blended titanium dioxide pigments. These have now been formally executed by us, and I am returning signed copy for your files.

Note the elimination of the words: "and Paris, France." on the first page, which you have initialed and I have also done the same.

With respect to the workings in certain of the countries where Titan Co., Inc. and its associates do not manufacture, it will be understood that Titan Co., Inc. will endeavor to execute all necessary workings. As you say, in the event that such workings are not possible, which would therefore indicate the advisability of abandonment of the patents, we would be so notified and could take whatever action was necessary.

You can, therefore, inform Dr. Jebsen that we thoroughly understand the situation and its interpretation, and

Exhibit 859

hope he will be able to successfully maintain workings of these patents, and if not, we can be advised.

Yours very truly,

C. H. RUPPRECHT
GENERAL MANAGER.

TITAN COMPANY, INC.

No. 17.

CJ/AK

Paris, September 16th 1937.

William C. Beschorman Esq.
Vice President
National Lead Company,
111 Broadway
New York City, U.S.A.

Dear Mr. Beschorman,

You handed me in Hamburg, on August 16th, the Licenise Agreement between E.I. Du Pont de Nemours & Co. and Titan Company Inc., of July 27th, together with a letter from Mr. C. H. Rupprecht of Du Pont de Nemours, of the same date.

Previously I had received from Mr. Kaegebehn a letter of July 8th with interpretations of various of the stipulations of the agreement, developed during conversations with Mr. Rupprecht.

I also refer to my letter to you of July 24th, confirming cable communications of July 22nd, 23rd and 24th.

For the sake of formality and for practical reasons, I herewith confirm that the matter has been submitted to:

1) The British Titan Products Co. Ltd. whose Board on August 24th approved the arrangement.

2) The Titangesellschaft m.b.H. whose Board in the meetings of 18th and 19th of August gave their approval, subject to investigations of the Patent Department, and on September 11th finally approved it.

3007

Exhibit 860

We have still to submit it to Sté Industrielle du Titane which, I take it, will approve the arrangement, and I shall inform you in due course.

I am sending copy of this letter to Mr. Kaegebehn and Mr. Cole for their information, so that they can arrange for a resolution in the Board of Titan Company Inc. giving its approval, as soon as they are also informed of the decision of Sté Industrielle du Titane.

With kind regards,

Yours very truly,

G. JEBSEN

P.S.—May I, for the sake of clearness, comment on Mr. Rupprecht's letter of July 27th, third paragraph, regarding workings.

Mr. Rupprecht seems to think that we will know beforehand whether workings are possible or not, and be able to notify him accordingly with a view of the advisability of abandonment of the patents.

However, in many countries the stipulations regarding workings are of such unclear nature that this is not possible.

It is also so that a practice which has been considered as satisfying the conditions regarding workings sometimes later is found by the authorities to be unsatisfactory.

It is clear to me that as long as we do our best in this matter, Du Pont will be satisfied, but I mention it as it may be of interest to Mr. Rupprecht to be informed of the exact situation.

Copy to Mr. Kaegebehn

Dear Mr. Beschorman,

Re License Agreement E.I. Du Pont de Nemours—Titan Company Inc., of July 27th.

Referring to my letter No.17 of September 16th, I beg to inform you that the matter has been formally submitted to the Board of Sté Industrielle du Titane, which has given its approval.

Yours very truly,

sign. G. JEBSEN

Copy to Mr. Cole
" " " Kaegebehn

Exhibit 862

GJ/AK Paris, November 12th 1937.

J.L.Turner Esq.
Titanium Pigment Corporation
P.O. Box 58
South Amboy, N.J.

Dear Mr. Turner,

You have received a kilogram or two of the new pigment produced on semi-industrial scale in Leverkusen.

We attach on this side a very great importance to this development. Mr. Ravnestad has also taken with him a sample of the pigment.

This pigment consists of 100% Rutile, and preliminary experiments have indicated that the material, as regards resistance against fading, is practically equal to the Aluminium Oxide coated pigment. As regards chalking resistance, indications are that it is nearly as good as the Aluminium Oxide coated pigment and considerably better than the other pigments. This, however, has only been indicated by weatherometer tests which are not conclusive.

I should much appreciate to hear from you what you think of this pigment.

We had recently the visit of Dr. Booge and Mr. McBerty of DuPont de Nemours & Co., who seemed to find their visit very profitable, and from several sides comments have been made that we have not had similar exhaustive visits from representatives of the Titanium Division of the National Lead Co.

Nothing was mentioned on this side to the DuPont people of the new Pigment. It appeared from our conversations

with them that they are studying the possibilities of making a pigment from a Titanium Tetrachloride solution. Mr. Booge said, though, that he would not look upon such a development with favour, because of the amount of Chlorine required, and he expected it would take several years before anything would develop in a patent direction as regards this process.

We are, though, here of the opinion that as soon as the new pigment is brought to the knowledge of our competitors they will put every effort into the production of the same.

I believe that with this new pigment the National Lead Company will have an opportunity to regain a considerable part of the position which now has been lost to Du Pont, provided full advantage is taken of these developments.

We are going ahead on this side with as much speed as possible and hope in the course of a few months to be able to produce between 500 kg. and 1 ton a day, in order to collect more experience as to the industrial manufacture.

We have decided in the British Titan Products Company and will probably very soon do the same in Leverkusen (I have asked Dr. Raspe to submit proposals) to sanction the necessary money for such installations which ought to be made in order to save time and enable us to change over to a full production of the new pigment with the shortest possible delay—provided the installations are of such nature that they can come in useful in any case. There are not many as regards Billingham: it is a matter of an extension of the buildings, ordering some steel tanks for the precipitation (lining to be decided upon later) and a rubber covered rotary filter—the latter in order to get rid of the Sulphuric Acid solutions containing some Hydrochloric Acid as soon as possible, because of the corrosive action of the same.

Exhibit 862

We are studying the question of which quantity of Titanium Tetrachloride Nuclei will be necessary. It seems that 5—may be 10% of the TiO_2 content of the solution to be precipitated must be in the form of Titanium Tetrachloride Nuclei, depending upon the concentration of the solutions. Good results have been obtained from both, but there seems to be some difference as to the tinting strength of the pigment obtained, and both Billingham and Leverkusen are working further on the matter. With the Reynold method the tinting strengths are the same in both cases, but with the Leverkusen method the pigment made with 10% Nuclei gives a somewhat better result. The question is then, which of these methods corresponds more closely to the practical results as regards the use of the pigment in various industries and particularly rubber, linoleum and paints.

Looking forward to hear from you, I am, with kind regards,

Yours very truly,

Exhibit 863

Titan license file.

Mr. C. H. Rupprecht.

CONFERENCE WITH DR. JEBSEN—BLENDED PIGMENT PATENTS.

During our Paris conference with Dr. Jebsen he brought up the question concerning the foreign blended pigment patents and applications. He stated that the patents have issued in Great Britain, France and Italy: the applications are still pending in Germany and Czecho-Slovakia.

He then asked whether we wished him to pay the maintenance cost direct or merely reimburse Du Pont for their payment of these costs. He referred to Section No. 5 of the draft of the agreement. His point was that the draft does not state definitely whether Titan Co. Inc. shall pay the cost direct.

Another question concerning the agreement is the statement that Titan will advise Du Pont *in advance* if the patents are being abandoned in any country. He pointed out that the rules for "working" of patents are not well established in certain countries and whether this working can be accomplished successfully by advertising is open to question, consequently he cannot undertake to advise Du Pont in advance under these conditions.

Finally he made the point that in Italy the only Titanium pigment producer is Montecatini and he would not wish to "work the patent" by licensing them. He would endeavour to obtain the working by an advertisement, but doubts if this would be sufficient.

I naturally stated my ignorance of the official interpretation of the agreement along the above points and promised

Exhibit 863

to take it up with you upon my return, and stated that you would probably write Dr. Jebsen.

Obviously the most satisfactory proposal from Dr. Jebsen's viewpoint would be to ask him to pay the maintenance cost direct and then treat the patents in the same way as he would patents owned by Titan Co. Inc., leaving it to his judgment and good faith as to how the working should be accomplished.

Attn: Mr. Chas. F. Kaegebehn

Gentlemen:

Re: Foreign Patents and Applications Based on Booge U. S. Patent 2,046,054—Blended Titanium Pigments.

Pursuant to our recent conference and telephonic communications concerning the above foreign patents and applications, I have consulted with Mr. Rupprecht, and can now formally advise you with respect to the questions you raised, as follows:

(1) With respect to the issued patents in Great Britain, France and Italy, it is agreeable to du Pont that your own patent agents handle these cases and pay all necessary workings and maintenance fees, directly communicating with and charging you for any fees so incurred.

(2) With respect to the Italian patent, and in view of the peculiar situation surrounding working and maintenance of patents in that country, it is agreeable to Mr. Rupprecht and du Pont that you handle the working and maintenance of the patent in the same manner as you handle

working and maintenance of your own patents in that country, that is, every effort will be made to avoid any possible holding of abandonment through failure to work or maintain.

(3) With respect to the pending Czechoslovakian and German applications, as agreed, du Pont will prosecute these applications to allowance through their present patent agents, billing to Titan the cost involved in such prosecution, when and as received during the course of prosecution from such agents. Upon patents being granted in these countries, you will be promptly notified in behalf of Titan.

(4) As I understand it, new powers of attorney must be filed in Great Britain, France and Italy appointing the patent agents designated in the memo accompanying your letter of November 10th, and also revoking the powers heretofore given our own attorneys. You informed you would communicate with British Titan and procure the necessary powers of attorney to effect this change. Upon receipt of such powers, they shall be executed and returned to you. Concurrently therewith we will inform our own agents of the new appointments and revocation of their powers.

(5) Particular data in respect to the issued patents is as follows:

(a) *Great Britain.* Patent 464,836. *Duration* 16 years. Convention date U.S. Oct. 30, 1934. Application date (Great Britain) Oct. 26, 1935. Accepted April 26, 1937. As I understand it, annual renewal fees do not begin until Oct. 30, 1939, i. e., the beginning of the fifth year from the Convention date of filing in the United States. Working of the

patent begins on April 26, 1940, i.e., 3 years from the sealing or granting date of the patent.

(b) *French* Patent 796,587. Delivery date January 27, 1936. Duration 15 years. Annual renewal fees have been paid on this French patent from the date of application, i.e., Oct. 22, 1935, the last and third annuity payment having been made on August 24, 1937, through patent agents, Brandon, Simmonot & Rinuy, of Paris, France. The next annuity payment, as I understand it, will be due Oct. 22, 1938. Working of the patent is required before January 27, 1939.

(c) *Italian* Patent 336,407. Dated Oct. 29, 1935. Duration 15 years. Taxes due Oct. 29 yearly. Date of working commences Feb. 15, 1939. Third annuity fee was paid through patent agents Brandon, Simmonot & Rinuy of Paris, France on August 24, 1937.

Since as yet no workings are due under any of the foreign patents mentioned, du Pont has not attempted to undertake any workings.

The above information as to dates for maintenance, renewals, workings, etc. has been gleaned from information passed to me from our own patent agents. I assume it is correct and can be relied upon. However, it might be well to have your own agents check the information, when appointed, and on the basis of their own and present familiarity with the patent laws of the countries involved.

Very truly yours,

E. I. Du Pont de Nemours & Co.,

By .....

Mr. J. L. Turner

Re: Dr. Jebsen's Proposal for Exchange of Licenses : DuPont and Titan Co., Inc.

May 27th, 1937

Mr. W. C. Beschorman—Executive-Vice-President

Mr. C. F. Kaegebehn—Patent Department

Dear Mr. Beschorman:—

In connection with the proposal of Dr. Jebsen which we have discussed and which is embodied in the proposed letter from you to Dr. Jebsen, I beg leave to present to you the following comments:

The arrangement should go a long way toward relieving the possibility of inter-company friction within our group. It is a step in the direction of settling the discrepancies between our agreement with Krebs and our agreement with Titan Company, Inc. The effect should be, if this proposal is agreed to, that the European companies will not concern themselves over the financial or economic aspects of taking licences under Krebs' European patents or granting licenses to Krebs under their United States patents.

According to the proposal, National Lead Company undertakes to pay the charges which DuPont may agree to accept in granting licenses to our European associates, and will receive whatever royalties DuPont is willing to pay for obtaining licenses under United States patents of Titan Company, Inc. and its European associates. As to whether or not National Lead Company stands to break even finan-

cially in such an agreement, I cannot hazard a guess. This aspect of the proposal is in the nature of a gamble on our foreign associates developing things desired by Krebs to the same extent and value as the things which may be developed by Krebs are desired by our foreign associates. It is possible that if our foreign associates desire many licenses under patents of secondary importance for purposes of protection rather than to protect a manufacturing step adopted by them on the basis of a development by DuPont, the National Lead Company may take on considerable expense. On the other hand, to request many licenses under patents of secondary importance would involve considerable trouble and expense for our European associates, inasmuch as we could claim that they pay the cost of filing and maintenance under the Agreement of 1920, and this fact should militate against our having to pay license fees under patents of only lesser interest.

I should also like to point out that the proposal does not give the National Lead Company the right, per se, to grant licenses to Krebs under the United States patents of Titan Company, Inc. and its European associates, but only to retain the compensation for such licenses which Krebs may be willing or induced to pay. Thus, the European companies retain the right to certain other compensations, not of monetary value, as for example, insisting in return for grant of license to Krebs that Krebs come in completely, or at least further than it now is, within the structure of the 1920 Agreement. This proviso may well be to the advantage of National Lead Company since, if DuPont became aware that we had the right to grant licenses under the United States patents of Titan Company, Inc. and its European associates, they could assume that they would auto-

matically acquire, without payment of any royalty, licenses in these patents under their agreement with us, which provides for the exchange of licenses for inventions as to which the parties are "free to grant such rights."

This proposal also has a bearing on my memo to you of May 27th, which discusses the situation with respect to informing our foreign associates of pending United States applications of DuPont, raised by Dr. Jebsen in his memo to you of May 25th. Possibly, DuPont may be willing to permit our European associates, in cases of secondary importance where they themselves would not or did not expect to file foreign applications and did not expect royalties, to file applications in their own, i.e. our associates', names and at their expense both for filing and maintenance, to, as an alternative, to permit our associates, at their expense for both filing and maintenance, to file such applications of secondary importance in the name of DuPont and grant to our European associates exclusive licenses under any patents issued therefrom.

Yours very truly,

CFK:lo

May 28, 1937

Dr. G. Jebsen, Vice President
Titan Co. Inc.
26 Rue de la Pepiniere
Paris, France.

Dear Dr. Jebsen:

Referring to our conversation regarding the License Agreement between ourselves and the other American manufacturers and the mutual grant of licenses between them and our associated companies, we suggest the following arrangement.

National Lead Company undertakes to carry the charges of all compensation, monetary or in kind, for licenses granted to Titan Co. Inc. and its associated companies outside of the United States and Canada.

We will endeavor, when requested to do so by Titan Co. Inc., and/or its associates, to obtain exclusive licenses in place of non-exclusive licenses within the "Licensed Field" now provided for in certain agreements.

On the other hand, National Lead Company shall retain for itself any compensation, monetary or in kind, for licenses which its licensees are granted under United States patents owned by Titan Co. Inc. and by its licensees or sublicensees other than the National Lead Company. The terms and condition other than compensation, monetary or in kind, for the licenses granted to its United States associates, or given by them, will continue to be subject to approval of the parties interested.

Exhibit -866

We shall appreciate if you will submit the above to our European associates and inform us of their views.

With kind regards,

Very truly yours,

(Signed) W. C. Beschorman
Executive Vice President.

New York City, U.S.A.

Dear Mr. Beschorman,

Referring to your letter of May 28th, regarding th mutual grant of licenses between the American Titanium manufacturers under license from the National Lead Company, and Titan Company Inc. and its associated companies I take pleasure in informing you that the arrangement a suggested in your letter has found the approval of Titan Company Inc.'s associated companies on this side, so that nothing stands in the way of a definite agreement and confirmation by National Lead Company and Titan Company Inc.

I should much appreciate to have information of this being carried out.

I am sending copies of this letter to the Secretaries, Mr. Cole and Mr. Kaegebehn.

With kindest regards.

Yours very truly,

Exhibit 869

MEMORANDUM

This memorandum is prepared for consideration by the members of the Board of Directors of Titan Company, Inc. at their meeting of October 27th, 1937.

Under the Agreement of 1920, National Lead Company is under obligation to obtain for Titan Company, Inc. licenses under foreign patents of American manufacturers to whom National Lead Company may grant a license under its United States patents.

The Agreement between National Lead Company and E. I. Du Pont De Nemours and Company (previously the Agreement between Titanium Pigment Company, Inc. and Krebs Pigments and Color Company), did not provide for any such grant of licenses. Thus, at the present time, Du Pont is not entitled to licenses in the United States patents of Titan Company, Inc. and its foreign associates, including British Titan Products, Ltd. and Titangesellschaft, m. b. H., etc., and, conversely, Titan Company, Inc. and its foreign associates are not entitled to rights in foreign patents of Du Pont.

Pending an ultimate and final solution of this situation, an arrangement has been suggested to provide a basis for the exchange of licenses as between Titan Company, Inc. and E. I. Du Pont. This arrangement is contained in a letter from Mr. Beschorman to Dr. Jebsen, dated May 28th, 1937; copy attached hereto. The features of this agreement are as follows:

1—In the event Du Pont desires a license under the United States patents owned by Titan Company, Inc. or one of its foreign associates and, as a result of mutual negotiations, agrees to pay compensation for such license,

Exhibit 869

National Lead Company will retain all compensations paid by Du Pont.

2—On the other hand, should Titan Company, Inc. and/or its foreign associates desire a license in foreign patents of Du Pont and, as a result of mutual negotiations, agree to pay compensation, then National Lead Company will pay this compensation to Du Pont.

3—National Lead Company will endeavor, when requested to do so by Titan Company, Inc., to obtain for Titan Company, Inc. and its foreign associates, an exclusive license in place of a non-exclusive license in the foreign patents of Du Pont.

4—The arrangement does not provide that National Lead Company has the right, per se, to grant licenses to Du Pont; that is, Titan Company, Inc. and its foreign associates retain the right to make the final decision with respect to whether or not a license shall be granted to Du Pont.

Dr. Jebsen has informed us that the arrangement has met with the approval of the foreign associates of Titan Company, Inc. Copy of Dr. Jebsen's letter is attached.

C. F. Kaegebehn
Ass't. Secretary

Exhibit 868

TITAN COMPANY INC.

Minutes of a monthly meeting of the Board of Directors, held October 27th, 1937.

RESOLVED, that this corporation generally approves the conclusion of an arrangement with National Lead Company (as successor in interest of Titanium Pigment Company, Inc. under the Agreement of July 30th, 1920 between that Company and Titan Co. A/S., predecessor in interest of this corporation), whereby (1) the said National Lead Company shall assume the payment of all compensation, monetary or in kind, for any and all licenses relating to the manufacture and sale of titanium and titanium compounds which may be granted by any of its presently-existing United States licensees to this corporation or to any of its associated companies outside of the United States and Canada under any foreign Letters Patent owned or controlled by any of the said presently-existing United States licensees of the said National Lead Company, and (2) said National Lead Company shall in turn be entitled to receive and retain for its own benefit the compensation, monetary or in kind, which may be payable to this corporation or to any of its said foreign associates for any license granted by it to any of the said presently-existing United States licensees of the said National Lead Company under any United States Letters Patent owned or controlled by this corporation or by any of its said foreign associates; upon the understanding, however, that said National Lead Company shall use its best endeavors to provide so far as possible that any such license granted by any of its said United States licensees to this corporation or to any of its said foreign associates shall be exclusive rather than non-

exclusive, and that the grant of any such license by this corporation or any of its foreign associates as aforesaid and the terms and conditions thereof other than compensation shall always be subject to its or their approval, and upon the further understanding that nothing in this proposed arrangement shall alter or modify, directly or indirectly, the Agreement of July 30th, 1920 between the said National Lead Company and this corporation.

Exhibit 870

CONFIDENTIAL

Dr. G. Jebsen
c/o Titan Company, Inc.
26, Rue de la Pépiniere
Paris — 8e — France

Dear Dr. Jebsen:—

I beg now to refer to my letters of October 19th and October 20th with reference to the various resolutions to be presented to the Board of this company on October 27th.

There is enclosed herewith a copy of draft minutes of that meeting, wherein the Board approved: 1) The agreement between Titan Company, Inc. and E. I. du Pont de Nemours and Company, dated July 27th, 1937; 2) The agreements between National Lead Company and Canadian Industries, Ltd. and National Lead Company and Titanium Pigments, Ltd.; 3) The arrangement as suggested in Mr. Beschorman's letter of May 28th.

With reference to the last-mentioned resolution, you will note that in my letter of October 20th I stated that Mr. Cole had instructed me to draft an agreement to embody the principles of this arrangement. Mr. Cole and I have given consideration to this matter, and it appears to us that it will be very difficult, if not impossible, to express the various points involved in the arrangement in a formal agreement, without bringing into question the names of National Lead Company's American associates, which would be contrary to their wishes. It was our opinion that the resolution contained in the draft minutes is quite suf-

Exhibit 870

ficient to recognize the conclusion of the arrangement. is binding upon National Lead Company in view of Beschorman's letter. The enclosed draft minutes have been entered in the minute book, but will so be entered up the receipt of your approval.

I would appreciate, also, your comments with respect avoiding the conclusion of a formal license agreeme covering the arrangement set forth in Mr. Beschorma letter.

Yours very truly,

CFK:lo

encls.

Exhibit 871

GJ/AK Paris, February 2nd 1938.

Charles F. Kaegebehn Esq.
National Lead Company
Patent Department
111 Broadway
New York City, U.S.A.

Dear Mr. Kaegebehn,

Many thanks for your letter of January 13th with enclosed draft of a resolution to be passed by the Board of Titan Company Inc.

Some changes are called for in my opinion and I enclose two copies of your draft with the suggested alterations. For your convenience I have underlined the parts which differ from yours and will mention that I have left out part of the last four lines of your draft.

I assume the changes will partly speak for themselves and may only add the following :

As to the underlined part on page 2, you may consider that it is anyhow up to the Titan Company Inc. and its European associates to accept or reject the conditions of the licenses to be granted by the National Lead Company's United States licensees, but I think it is appropriate to have the resolution mentioning that the terms and conditions are subject to approval, which, you will note, was provided for in Mr. Beschorman's letter to me of May 28th. This means, in my opinion, that Titan Company Inc. and its European associates have the right to be a party to the negotiations concerning the mentioned terms and conditions.

I have further changed the word "or" to "and" in order to make it clear that it is not a matter of choice, but that it will be necessary to have both Titan Company Inc., as well

as the associated company interested, to approve the agreement.

I am not quite certain whether I understand your considerations in the third and fourth paragraphs of your letter, as well as the last four lines of your draft.

The situation is the following:

The existing agreement between National Lead Company and Du Pont is a deviation from the 1920 agreement and, as you say, inconsistent with the principles laid down in this. Thus, the 1920 agreement has been modified as far as the relations with Du Pont are concerned. The agreement which is to be dealt with in the Board resolution is caused by this Du Pont agreement.

The Du Pont agreement permits Du Pont, as well as Titan Company Inc. and its European associates, to demand and accept conditions for their mutual grant of licenses, which are outside the provisions and principles of the 1920 agreement.

One is the monetary payment, the others it will be too long to deal with in this letter.

This was done on the request of National Lead Company and was only reluctantly accepted by I.G.

(Ref. the following letters, of which copies are enclosed:

Extract of Dr. Jebsen's letter to Mr. Beschorman of 23.6.1933, enclosing I.G.'s letter to Dr. Jebsen of 20.6.1933.

Dr. Jebsen's letters of 21.7.1933 to Mr. Weber-Andreas and to I.G. Farbenindustrie, enclosing Mr. Beschorman's letter to I.G. of 12.7.1933, enclosing Mr. Rupprecht's letter to Mr. Beschorman of 28.6.1933.

Exhibit 871

Extract of Dr. Jebsen's letter to Mr. Beschorman of 9.8.1933, enclosing I.G.'s letter to Dr. Jebsen of 7.8.1933.)

You write: "Thus, I have regarded this arrangement as a temporary expedient designed to promote a larger measure of equity for Titan Company Inc. vis a vis Du Pont . . . . . ".

It goes considerably further than that. By accepting the arrangement of Mr. Beschorman's letter of May 28th 1937, the European companies have refrained from asking monetary payments for licenses to Du Pont under their patents and we have thus eliminated one and probably the most important point, which could cause friction and tend to develop competition as regards patents and be harmful to good cooperation.

It helps to bring about a structure of the cooperation between all the companies of the group as intended by the 1920 agreement, which should be our aim, as you say further down in the same paragraph as above cited.

Whether a new arrangement with Du Pont as mentioned by you will supersede the existing arrangements depends upon what kind this will be.

The last four lines of your draft of the Board resolution seem to me to have a bearing on this situation and to raise questions, which it would be inopportune to bring up. They may be considered as an obligation upon Titan Company (and consequently need the approval of its non American associates) when granting licenses to Du Pont not to demand any conditions outside of the 1920 agreement. You will appreciate that this raises the question also of which conditions (other than monetary) Du Pont will demand in their licenses to Titan Company Inc. and its non American associates, and can therefore not be accepted.

Exhibit 871

When presenting the letter of May 28, 1937 to the Boards of our European associates, I verbally mentioned that I took it for granted that these companies will not ask for conditions beyond the 1920 agreement, and this was agreed to by our friends.

You will, however, from the above appreciate that this can not be carried further as it is based on reciprocity and presume that Du Pont is doing the same.

It seems to me that it would be well to have the agreement laid down in the letter of May 28, 1937, formally confirmed as soon as possible;—it has been accepted by the European companies—and the earlier this can be done the better.

I note that you are in agreement that the Board of Directors of National Lead Company should pass a corresponding resolution and formal letters should be exchanged between the National Lead Company and Titan Company Inc., confirming the arrangement, and I trust that this will be done at the same time as the resolution is passed in Titan Company Inc.'s Board.

With kindest regards,

Yours very truly,

sign. G. JENSEN.

Re: Pending United States Applications of E. I. Du Pont De Nemours & Co.

Gentlemen:—

With further reference to our letter of December 16th, which was a reply to your letter of November 23rd, we have now gone into the question concerning the filing of foreign applications as requested in your letter.

We beg to advise you that U. S. Serial No. 51,247, for which you requested the filing in Great Britain of a corresponding application, has now matured into a U. S. patent —No. 2,098,054.

We have come into an arrangement with Du Pont regarding the three remaining applications, whereby you will be permitted to file applications as requested, at your own expense, in the name of Du Pont, and to obtain a contract from Du Pont similar in every way to the contract of July 27th, 1937, relative to Blended Pigments. In other words, we have followed the precedents established in the Blended Pigments Case, and the terms and conditions for the filing of the new foreign applications will be identical with those respecting the Blended Pigments Patents.

With respect to U. S. Application Serial No. 33,264, the filing of which you requested in Germany, this case is under final rejection in the United States. Furthermore,

there is a possibility that Du Pont may not want the subject-matter of the application published in a foreign patent, if no U. S. patent issues. This situation will be gone into further by Mr. Rupprecht, who will advise us later on. Please, therefore, send us, as soon as possible, documents for the filing of an application corresponding to U. S. Serial No. 33.264 in Germany and those for the filing of an application corresponding to U. S. Serial No. 69.888 in Great Britain, as well as documents for the filing in France, Holland and Belgium of applications corresponding to U. S. Serial No. 134.577. In the event that Du Pont do not wish the German application corresponding to U. S. Serial No. 33.264 to be filed, the papers in this case will not be executed.

We can advise you that Du Pont have no intentions of filing applications in these or any other foreign countries in the above or any other cases.

Yours very truly,

NATIONAL LEAD COMPANY

TITAN COMPANY, INC.

Mar 7—1938

SA/LA

Paris, 21. February 1938

National Lead Company
Patent Department
111 Broadway
New York N.Y.

Att. Mr. C. F. Kaegebehn

Dear Sirs,

Pending U. S. Applications of E.I.Du Pont de Nemours & Co.

We thank you for your letter of 24. January this year in the above and are pleased to note that you have come into an arrangement with Du Pont permitting us to file applications corresponding to U.S. Ser.Nos. 33.264, 69.888 and 134.577, and to obtain a contract from Du Pont similar to the contract of 27. July 1937 relative to the blended pigments patents (Case T.200). We have also noted that Du Pont has made the reservation as to U.S.Ser.33 264 that there is a possibility of their not wishing to publish the subject matter of the application if no U.S. patent issues.

We note that the application should be filed in the name of Du Pont. It is not however quite clear to us whether the application should be prosecuted by us or by Du Pont. We proceed on the assumption that we are to handle the applications from here, and that the documents you are asking for in this connection are the powers and assignments re-

quired for the filing of the applications, and we enclose such papers as follows:

U.S.Ser.No.33.264.

Germany—Power of Attorney
Inventor's declaration

U.S.Ser.No.134.577

France —Power of Attorney
Declaration d'Ayant-droit
Holland —Power of Attorney
Assignment of Priority Rights
Belgium —Power of Attorney
Authorization

As to the application to be filed in Great Britain corresponding to U.S.Ser.No. 69,888, we have asked our British patent agents Boult, Wade & Tennant to send you a completed application form, and we trust that you will receive same in due course. This application must, according to British practice be made jointly in the names of Du Pont and the inventor. If Du Pont wish the patent to issue in their name only, an assignment before issue should be executed. In this event we shall be pleased if you will advise us of the relation of Mr. McKinney to the Company and the circumstances under which the Assignment is made so that we can prepare the Assignment document.

As you are aware, the declaration d'Ayant-droit for France has to be legalized by a French consul. For cases Ser. No. 33,264 and 69,888 the Convention term has expired but as U. S. Ser.No.134,577 was filed on the 2nd April 1937 it will still be possible to claim priority under the International Convention for the applications to be filed

Exhibit 873

in this case. We should therefore appreciate it if you could arrange to have the powers and the authorization for Belgium returned to us so that they reach us some days before the 2nd. April 1948. The declaration d'Ayant-droit for France need not reach us before the filing date, but the Consular legalization should, as you are aware, bear a date previous to the application in France. As such date, can be noted 1st. April 1938.

We presume that an assignment transferring to Du Pont the U. S. Application and possibly also the right to apply for patents in foreign countries has been executed by the inventor. We think however that in any case it is advisable—in order to ensure Du Pont's rights—that the inventor executes the enclosed assignments of priority rights in the case in which applications should be filed under Convention.

We have completed the papers as far as this is possible on the information at hand, and we hope that Du Pont will have no objection to signing them in this form.

In connection with your statement that we will obtain from Du Pont a contract similar to that of the 27th. July 1937, we would refer to our comments on formal working in our letter of the 31st. January 1938 re Case T. 200 and we would appreciate it very much if you would, also for the above cases, try to come to an arrangement with Du Pont freeing us from obligations as to formal working.

Looking forward to your communication,

We are,

Yours very truly,

for TITAN COMPANY INC.

PATENT CONTRACTS DIVISION
LEGAL DEPARTMENT

March 1, 1938.

Du Pont/Titan Company Agreement

We have reviewed memorandum on a proposed agreement between du Pont and Titan Company, attached to your letter of Febrtiary 25th.

In general, we see no objection to entering agreements with Titan granting them exclusive licenses to Titanium Pigments developments for European countries, provided, however, they are free of our obligations in the field of finishes to our foreign associates. It would appear that German application of Patterson case "Pigments for use particularly in outside paints" might be considered as coming within the scope of the Duco A. G. agreement. I have suggested to Mr. Hancock that he discuss this subject directly with Mr. Shiels. If it is decided that the case does come within the scope of the agreement, it would be satisfactory to adopt either of the following alternatives:

(a) The claims could be so amended as to omit reference to oil paint compositions. This is the suggestion made by Mr. Hancock.

(b) The matter could be referred to Duco A. G. with a request that they waive their rights in view of the fact that the development is one that occurred within the Krebs Pigments Department and one which is of no

practical importance to them in any event as they will be able to secure the material from Titangesellschaft m.b.H., a subsidiary of I.G., of which latter company they are already large and satisfied customers.

We note that licenses granted to Titan are subject to a non-exclusive license reserved for du Pont and for I.C.I. This latter reservation is, of course, not necessary under the terms of the I.C.I./du Pont Agreement but in view of the fact that Titan is willing to accept it, it seems desirable to include it.

In accordance with your suggestion we propose to inform I.C.I. of this agreement when and if it is concluded.

Re: Proposed du Pont—Titan Agreement
under K Cases 701, 743 and 867

Dear Mr. Kaegebehn:

This will acknowledge and reply to your letter of April 26th on the above, communicating the comments of Dr. Jebsen with respect to certain provisions of the proposed draft.

The changes which Dr. Jebsen proposes (more particularly set out at Page 2 of your letter of April 26th) are acceptable to du Pont. Accordingly, Pages 2, 3 and 4 of the submitted draft on which these changes appear have been rewritten to incorporate them. The rewritten pages are enclosed and it would be appreciated if you would appropriately substitute them in the duplicate originals and file copy in your possession, prior to Titan's execution.

The comments which Dr. Jebsen makes in regard to my letter to you of March 18th and that portion which has been quoted in your letter of April 26th are also noted. These have been considered with Mr. Rupprecht. In reply, we advise that as to countries in which du Pont applications and/or patents on the involved titanium dioxide inventions "are not now, or may not subsequently be existent", du

Exhibit 875

Pont should it file applications for patents on the involved TiO_2 inventions in such countries, will grant Titan a free right to operate thereunder.

Relative to your inquiry on the proposed general agreement. As yet, nothing definite is available for report to you on this matter, but it is hoped that something of a tangible nature will be available in the near future. Of course, as soon as we do have something definite, we shall promptly communicate with you.

I trust that the foregoing places the instant license agreement in acceptable form for execution by the Titan Company.

Very truly yours,

E. I. Du Pont de Nemours and Company,

By .....

MISS ROSE M. DAVIS
LEGAL DEPARTMENT

DU PONT/TITAN COMPANY AGREEMENT

This will acknowledge and thank you for your letter of May 20th attaching memorandum on the proposed agreement between du Pont and Titan Company, Incorporated.

The agreement grants Titan exclusive rights to various du Pont patents in the titanium pigments field for France, England, Holland, Germany and Japan subject to non-exclusive licenses reserved for du Pont and I.C.I. In return we receive non-exclusive licenses to certain U.S.A. patents owned by Titan Company, Inc.

We understand that the patents cover inventions in the field of titanium pigments and therefore do not come within the scope of the I.C.I./du Pont agreement. We understand that non-exclusive licenses are being reserved for I.C.I. as a matter of courtesy and feel that it will be satisfactory to merely report this to them after the agreement has been executed. Will you kindly forward two copies of the final agreement to this office, one of which we will transmit to our London Office with the request that they notify I.C.I. of the rights that have been reserved for them?

We also understand that the patents in question do not include any claims in the field of finishes, in which field we have obligations to associated companies in France and Germany.

Exhibit 877

July 15, 1938

To: EXECUTIVE COMMITTEE

FROM: KREBS PIGMENTS DEPARTMENT

PROPOSED LICENSE TO TITAN COMPANY, INC. UNDER FOREIGN PATENT APPLICATIONS LISTED BELOW

Herewith is submitted proposed license agreement to Titan Company,Inc. under our foreign patent applications on titanium pigments in countries mentioned hereafter, corresponding to pending United States applications listed:

For Great Britain, corresponding to U.S.Serial 69,888, filed March 20, 1936, covering cooling calciner discharge rapidly to produce blue tint.

For Germany, corresponding to U.S.Serial 38,264, filed July 26, 1935, covering use of flake extenders with titanium dioxide to improve durability.

For France, Holland, and Belgium, corresponding to U.S. Serial 134,577, filed April 2, 1937, covering a treatment of titanium dioxide to decrease consistency in paints.

Titan Company,Inc. is owned 87% by National Lead Company, and handles all patent matters in foreign countries for National Lead Company and its foreign associates, also acting as Sales Agent for the latter. Foreign associates involved in this license are Titangesellschaft m.b.H. of Leverkusen, Germany, owned 50% by National Lead Company and 50% by I.G; British Titan Products Company, Billingham, England, in which National Lead Com-

pany has a 49% interest and I.C.I. 17%; and Societe Industrielle du Titane, Paris, France, in which Titan Company, Inc. has a 57% interest.

Under this agreement Titan Company, Inc. is granted a royalty-free license, in each case restricted to the countries specified, which is exclusive except for du Pont or any Company controlled by du Pont, and for I.C.I. in Great Britain. Titan Company, Inc. is permitted to sub-license its associates, as defined in the agreement, on a royalty-free basis. Other sub-licenses may be granted subject to du Pont approval and the payment of 50% of any royalties obtained. Titan Company, Inc. is to assume all costs incidental to the filing and prosecution of our applications under this license, and to pay all necessary maintenance fees during their life.

This agreement has been approved by the Legal Department.

Since the patents covered by this agreement offer very little possibility of return, the agreement enables the Company to maintain the patents without expense to us, and also retain all rights of manufacture and sale for the Company in the countries mentioned.

It is, therefore, recommended that the Management be authorized to execute license as herewith submitted.

C. H. RUPPRECHT

EXTRACT FROM MINUTES OF EXECUTIVE COMMITTEE MEETING #1441

JULY TWENTIETH, 1938

E. I. DU PONT DE NEMOURS & COMPANY

PROPOSED LICENSE TO TITAN COMPANY, INC. UNDER FOREIGN PATENT APPLICATIONS ON TITANIUM DIOXIDE:

Letter was presented from C. H. Rupprecht, General Manager, Krebs Pigments Department, dated July 15, 1938 (#8937), enclosing copy of proposed license agreement with Titan Company, Inc., as above, said agreement having been approved by the Legal Department, and already executed by the Titan Company.

After discussion, it was moved and unanimously carried that the letter and enclosure be received and ordered filed, and that the following resolution be adopted:—

RESOLVED, that C. H. Rupprecht, General Manager, or Z. Phelps, Assistant General Manager, Krebs Pigments Department, or the President or any Vice-President of this Company together with the Secretary or an Assistant Secretary, be and they are hereby authorized to execute an agreement, in form substantially as per copy attached to letter to this Committee from Mr. Rupprecht, dated July 15, 1938, under which this Company grants to Titan Company, Inc. a royalty-free license under our patent applications on titanium dioxide in certain foreign countries, corresponding to pending United States applications, as follows:—

For Great Britain, corresponding to U. S. Serial #69,888, filed March 20, 1936; covering cooling calciner discharge rapidly to produce blue tint;

Exhibit 878

For Germany, corresponding to U. S. Serial #33,264, filed July 26, 1935, covering use of flake extenders with titanium dioxide to improve durability;

For France, Holland, and Belgium, corresponding to U. S. Serial #134,577, filed April 2, 1937, covering a treatment of titanium dioxide to decrease consistency in paints.

Re: Pending U. S. applications
Titaninc and Associates
Proposed Agreement Titanine-
E. I. Du Pont De Nemours

Gentlemen:—

We refer to your letter of March 9th and our cable to you of April 13th, which read as follows:

> "DuPont inquires concerning pending United States applications Titan and associates stop Disclosed Cases T. 112, 115, 115-B, 115-C, 120, 125-C, 126-B, 136, 142, 155, 157, 165, 170 as in Licensed Field National Lead DuPont Agreement stop Du Pont willing grant Titan royalty-free license as requested your letter March ninth on same principles Titan DuPont Agreement July 27, 1937 in exchange for non-exclusive licenses United States under mentioned T. Case applications if you agree DuPont willing you file applications as per your letter March ninth in name DuPont your expense before execution formal agreement stop Send papers stop Letter follows."

Prior to the receipt of your letter of March 9th, Mr. Rupprecht asked the writer to acquaint DuPont with such pending United States applications filed by Titan Company Inc. and its European associates which could be con-

sidered as coming within the scope of the Licensed Field of the National Lead-DuPont Agreement. The writer informed DuPont concerning U. S. patents and patent applications in those cases listed in the cable of April 13th, 1938, viz., Cases T. 112, 115, 115-B, 115-C, 120, 125-C, 126-B, 136, 142, 155, 157, 165, and 170.

On April 13th the writer had a conference with Mr. Rupprecht and Mr. Hancock, the latter of the Legal Department, Patent Division of E. I. DuPont. Mr. Rupprecht could see no reason why rights could not be granted to Titan Company, Inc. and its European associates in applications in those foreign countries set forth in your letter of March 9th corresponding to the applications therein enumerated. Mr. Rupprecht felt that a reciprocal exchange of licenses, whereby DuPont received a non-exclusive license under now pending United States applications, or—as in the case of T. 112—United States patents issued from the applications disclosed by the writer to DuPont, would facilitate approval by the Executive Committee of DuPont to the arrangement for giving Titan Company, Inc. the rights it desired. In this connection, we have to inform you that there may be a question raised concerning the filing of applications in Japan. We are not able at this time to give you reasons why it may not be possible for DuPont to permit you to file applications in Japan, but it is Mr. Rupprecht's opinion that, in all probability, the filing in Japan will be permitted without serious objection. We merely bring this to your attention in the event DuPont is not able to give you rights for Japan.

If the arrangement for granting DuPont a non-exclusive license in the Titan Company cases enumerated above is acceptable to you and your European associates,

the question of title becomes one of paramount importance. We have looked into this question and have consulted Messrs. Hutz and Joslin. Neither Messrs. Hutz and Joslin nor we believe that we have been fully informed by I. G. and/or Titangesellschaft concerning their wishes with respect to the title in certain cases. Below we give you the best information we have at this time:

Case No.	*Serial No.*	*Inventor*	*Our Knowledge*
T. 120	33.383	Petersen	Stands in name I. G.
T. 125–C	136.502	Raspe	" " " T. G.
T. 126–B	107.021	Drucker	" " " I. G.
T. 142	85.439	Raspe	" " " I. G.
T. 155	119.625	Petersen	" " " T. G.
T. 157	137.494	Lederle	" " " T. G.
T. 170	137.044	Meder	" " " I. G.

In order that the proposed arrangement with DuPont be reciprocal as between the parties, i.e. DuPont and Titaninc, it will be necessary that the mentioned patent and patent applications stand in the name of Titaninc or, alternatively, that Titaninc is in possession of documents, e.g. exclusive license documents, clearly establishing Titaninc's right to grant to DuPont non-exclusive license. As regards Cases T. 112, T. 115, T. 115-B, and T. 115-C, no difficulty persents itself; we shall assign these cases to Titan Company, Inc. and record the assignments in the United States Patent Office. However, with respect to the remaining cases, you will appreciate that it now becomes important for you definitely to settle with the I. G. the question of what rights they wish to retain in these cases.

It could be considered practically inevitable that some day DuPont would request United States rights from Titan

Company, Inc. in return for granting to Titan Company, Inc. foreign rights in their cases. This matter has been touched upon in conversations with Dr. Jebsen and Mr. Ravenstad. The writer believes that the reluctance on the part of T. G. and I. G. promptly to inform Titan Company, Inc. as to their decision with respect to United States cases and to execute proper assignment documents where these companies have no interest in maintaining the cases in their own behalf has placed Titan Company, Inc. somewhat at a disadvantage with respect to negotiating with DuPont. The situation, as the writer sees it, is this:

Titan Company is asking DuPont for rights under certain foreign patent applications to be filed corresponding to certain United States cases and DuPont has requested as one of the terms for granting such rights to Titan Company that Titan Company grant them a non-exclusive license under certain United States applications for which Titaninc is the exclusive licensee and National Lead the exclusive sublicensee. You will readily appreciate that it will be impossible for you to enter into a license contract wherein you allege the right to grant licenses to DuPont, unless you clearly have title to the cases or you have documentary evidence that Titaninc is the exclusive licensee.

There appear to be two ways to handle the present situation: First and most simple, would be to have I. G. or T. G., respectively, execute assignment documents vesting title in cases T. 120, T. 126-B, T 142, T. 170 (I. G. Cases) and T. 125-C, T. 155, T. 157 (T. G. Cases) in Titan Company, Inc. The second, and somewhat more involved may, would be for these companies to execute formal license agreements between Titan Company A/S. and I. G. and I. G. and Titangesellschaft, granting Titan Company, Inc.

Exhibit 879

exclusive license in the respective cases for the United States, subject to the exclusive license of National Lead Company and permitting Titan Company, Inc. to grant sublicenses, with the consent of National Lead previously obtained. We recommend the first procedure.

There remain only two cases, Case T. 136 and T. 165, title to which must be considered. Case T. 136 has been assigned to National Lead Company and will be reassigned to Titan Company, Inc. In Case T. 165, we are in possession of an assignment vesting title to this case in British Titan Products Company. You will have to take up with British Titan Products Company whether or not the case will be assigned to Titan Company, Inc. or whether Titaninc shall obtain only an exclusive license.

We think you will agree that DuPont has made a reasonable request in this case and their coöperative attitude is shown by the fact that they are agreeable, pending the settlement of the question of title, that you should file the applications requested. Therefore, as stated in my cable, please send the necessary papers to enable you to file the desired applications in the name of DuPont.

Yours very truly,

NATIONAL LEAD COMPANY

NEW YORK N. Y.

Att. Mr. C. F. Kaegebehn

Dear Sirs,

Pending U. S. Applications of E. I. Du Pont de Nemours & Co. Our Ref. Cases DK 15-30

We acknowledge the receipt of your cable of 10. April and your letter of 20. April relating to the Du Pont cases referred to in our letter of 9. March this year.

We are not at present in a position to inform you whether an exchange of licenses as suggested by Du Pont can be arranged or not. Dr. Jebsen will take up this question during his stay in U.S.A.

You will be aware that also other questions relating to the Du Pont cases will have to be settled, particularly the form of the proposed license agreement in connection with the cases dealt with in your letter of 25. March this year and Dr. Jebsen's reply hereto of 12. April.

As you are aware, Du Pont has executed documents enabling us to file applications in the countries in which we are interested in obtaining licenses in these latter cases. (DK 2-13) and these applications have been filed.

Exhibit 880

We are forwarding you herewith as per enclosed list documents required in connection with applications for the cases and in the countries in which we wish licenses, according to our letter of 9. March re cases DK 15-30. If Du Pont are willing to sign these documents now,—without awaiting the result of the negotiations,—this would enable the claiming of priority under the International Convention for most of the applications contemplated, and we would ask you to try to obtain their signature to the documents. We wish to point out that Du Pont's executing the documents in the present situation should not, in any way, be prejudicial to the further negotiations with that company. Please make this clear to Du Pont if you consider it necessary. You will appreciate that, as the applications are filed in the name of Du Pont, no patent rights are given away by them so far.

The applications in France cannot be withdrawn and will automatically result in the publication of a patent specification about 7 months after filing date. In the other countries where we are interested in licenses in cases DK 15-30 (Germany, Great Britain, Holland and Japan), the application may be withdrawn before acceptance and in this event, no publication will take place.

In cases DK 22, 23 and 24, we have had lodged specification and claims at the Patent Offices in Germany and Japan, and also in Holland, in DK 23 before the expiration of the Convention term (23. and 28. April 1938,) and the papers are held there pending receipt of powers of attorney for the agents.

The powers and inventors' assignments in these cases should preferably be dated prior to the 23. April 1938.

In cases DK 25, 26 and 27, it would be well if the documents be dated prior to the 25. May.

In the remaining 3 cases (DK 28, 29 and 30, you will note that the Convention terms expire on 2., 5., and 10. June next, and the documents should be dated before these dates.

We are aware that the time at disposal is not very long, and we hope that we do not cause you too much trouble in having the matter arranged in the manner suggested above.

We should be obliged to you if you also would order and forward us as soon as possible *one certified copy* of each of the basic U. S. applications as follows:

U. S. Pat. Appl. Ser. 138.583 (DK 22)
139.497 (DK 24)
144.759 (DK 25)
145.044 (DK 26)
145.051 (DK 27)
145.930 (DK 28)
147.485 (DK 30)

and *two certified copies* of U. S. Ser. 138.584 (DK 23)

Looking forward to your communication,

We are,

Yours very truly,

For TITAN COMPANY INC.

A. RAVNESTAD

P.S. In addition to the documents enclosed, there is needed application and authorisation forms for the British applications in cases DK 26 and 27. We have asked our British patent agents to forward direct to you the necessary forms with indications as to their signature.

Exhibit 880

As to the documents for Japan, we should be greatly obliged to you, if you would forward these direct to our Japanese patent-agent

Nagashima Law & Patent Office
6 Tsukiji 3-chome, Kiobashi-ku
Tokio (Japan)

and return us the attached copies in completed state.

30056

Exhibit 881

NOTES RE DU PONT SITUATION

May 15, 1938

I. *Licensed Field:*

It has been indicated that it may be possible to broaden the Licensed Field to include titanium compounds which may be developed by the General Chemicals and Organic Chemicals Division of E. I. Du Pont. This means that three divisions will be brought into the structure, viz. Krebs Division, General Chemicals Division and Organic Chemicals Division, leaving other divisions outside the field. Any arrangement for an exchange within a Licensed Field to apply to the whole Du Pont organization can only be dictated by the officials of Du Pont.

II. *License from Du Pont to Titaninc:*

It has been indicated that the Legal Department of Du Pont may hesitate to provide in a written agreement for grant of exclusive licenses by Du Pont to Titaninc. The reason given for this attitude is that the grant of exclusive licenses raises questions which are connected with the Anti-Trust Laws. It has been indicated, however, that if the arrangement provides only for non-exclusive licenses under future patents, these licenses could easily be made exclusive upon the request of Titaninc. The attitude with respect to this point is that Du Pont Legal Department hesitates to approve an arrangement providing for grant of exclusive licenses under patents not yet in being and included within a general agreement, whereas they have no particular objection to grant exclusive licenses under specific patents or patent applications actually in being.

30557

Exhibit 881

III. *Grant of License by Titaninc to Du Pont:*

Du Pont will expect no more than a non-exclusive license under United States patents of Titaninc and its associates.

IV. *Territorial Limitations:*

It has been indicated that Du Pont Legal Department will approve a written agreement only where the license granted or provided to be granted is under patents and only for the countries wherein those patents have force and effect. They will not make commitments with respect to unpatented territories. The reason given being the Anti-Trust Laws.

V. *Royalties:*

The licenses will be royalty-free on both sides.

VI. *Exchange of Experience:*

Du Pont is willing to exchange information within the Licensed Field as agreed upon.

VII. *Term of Agreement:*

It has been indicated that Du Pont will wish the term of the agreement to be similar to that of the Du Pont-National Lead Agreement, viz. terminatable upon three years' notice rather than the termination as provided in the Agreement of 1920.

VIII. *Title to Patents:*

Du Pont will want to keep title to patents under which license is granted to Titaninc and if the license is an exclu-

sive one, will reserve for itself a non-exclusive license. In Great Britain a similar right must be reserved for I. C. I. The latter reservation for I. C. I. is necessary under the Tri-Party Agreement of Du Pont, I. C. I. and C. I. L. It should have little effect on B. T. P. in view of the I. C. I. obligations to B. T. P. The former requirement as to preservation of title is based upon an inflexible Du Pont company policy.

IX. *Finished Articles:*

Du Pont cannot undertake any commitments with respect to exportation of finished articles by its customers as for example is provided in the Agreement of 1920. The reason for this attitude is the Anti-Trust Laws, specifically the Clayton Act. Recently, there have been a number of decisions handed down by the United States Supreme Court, reaffirming the principle of law that a patentee cannot use patents to restrict the use or sale or application of unpatented articles of commerce. For so long as our patent position covers the product itself we may possibly be in a position to sell to customers with the restriction that they cannot export the finished articles, but it is very doubtful today that our patent position is such as to permit us to put this restriction on our customers.

Exhibit 882

OUTLINE OF PROCEDURES FOR GRANTING LICENSES TO DU PONT UNDER PATENTS OWNED BY TITAN COMPANY, INC. OR TITAN COMPANY'S ASSOCIATES

June 1, 1938

I. License by Titan to Du Pont under Patents owned by Titan—Consent of National is the only condition. This consent may be obtained:

a) A simple statement appended to the license agreement wherein National affirms and consents to the granting of the license in the form of:

"Consent is hereby given to the grant of the above license.

NATIONAL LEAD COMPANY

by_____"

(Probably Du Pont will not want this)

b) National Lead Company, by a resolution of its Board, could give Titan Company, Inc. a blanket consent to grant Du Pont licenses as agreed upon, this to be confirmed by a letter to Titan citing the resolution.

c) National Lead Company, by letter to Titan Company, Inc. in each individual case, could consent to grant of license to Du Pont.

II. Sublicense by Titan to Du Pont under Patents of its Associates—Consent of National required—also affirmation by associated patent owner that Titan has right to grant sublicense and that the associate consents thereto. If right is derived from I. G., I. C. I., Goddlass Wall, etc., affirmation and consent of T. G.

or B. T. P. is required, in addition. To obtain same either of the three following alternatives may be followed, making two affirmations and consents for each license document, or if National's consent is obtained in the same way, three consents.

A.—Consent of National

(cf. a), b), and c), Section I)

B.—Affirmation and Consent of Associate

a) Simple statement appended to the license agreement:

"It is hereby affirmed that Titan Company, Inc. possesses the right to grant the license specified in these premises and consent is hereby given to the grant thereof.

(for example) TITANGESELLSCHAFT, m. b. H.

by_____"

b) Resolutions by the Boards of the respective associates owning the patents giving Titan blanket consent to grant Du Pont licenses as agreed upon.

c) Letters from the respective associates owning the patent in each individual case consenting to Titan's giving Du Pont the license.

C. F. Kaegebehn—Manager
Patent Department
National Lead Company
June 2nd, 1938

Exhibit 883

Memorandum of the principles to govern the relations between Du Pont De Nemours and Company and Titan Company, Inc. as regards the operations (manufacture and sale) of the two companies in the titanium industry.

Titan Company, Inc. will operate directly or through associated licensed companies in which it or its owners, directly or indirectly, have substantial shareholding interests (not necessarily a majority interest), in all countries outside North America.

Du Pont will operate in the United States, Central and South America only and will endeavor to prevent that their products in the Licensed Field are exported except as constituents of bona fide manufactured articles.

Licensed Field: To be determined—Krebs-National Lead Agreement or Agreement of 1920).

Licenses: Du Pont will give licenses to manufacture, use and sell under any patentable inventions to Titan Company, Inc. on Titan's request for the territories in which Titan Company, Inc. operates as above mentioned with the right to use and sell in Central and South America and with the further right to Titan Company, Inc. to give sub-licenses of the same scope to its associated licensed companies wherever Du Pont takes out patents in these territories, and will on request of Titan Company, Inc. endeavor to obtain such patents unless Du Pont for definitely stated reasons considers it undesirable to apply for patents, in which case Du Pont will not object to Titan Company, Inc. or its associated licensed companies filing applications for such patents.

The licenses are to be exclusive with the exception of Du Pont itself and its controlled subsidiaries. The licenses will be given without monetary compensation except a reimbursement of the cost of applying for, obtaining and maintaining the patents.

Titan Company will either itself give or will endeavor to procure for Du Pont on Du Pont's request a non-exclusive license to manufacture, use and sell under any United States patent which it owns or in which it has a right to an exclusive license, with the right to use and sell in Central and South America.

If any of the parties do not wish to maintain a patent they shall first give the other party the opportunity to acquire the ownership of the patent. The licenses will be given without monetary compensation except a reimbursement of 50 percent of the cost of applying for, obtaining and maintaining the patents in cases where Du Pont expressly wishes the patents to be applied for, obtained and maintained.

Exchange of Information: Du Pont and Titan Company, Inc. are willing to exchange information within the Licensed Field and will treat such information as confidential.

Term of Agreement: The coöperation, the principles of which are set forth in this memorandum may be terminated on three years' notice but the licenses granted prior to termination are irrevocable.

Exhibit 884

Memorandum of conference between Mr. Rupprecht, Mr. Rockwell and Dr. Jebsen—Friday, June 3, 1938 regarding licenses to and from the du Pont Company

As regards the question of territorial limitations, this was not discussed, having been dealt with previously.

Mr. Rupprecht outlined his company's position and Dr. Jebsen outlined the position of Titan Company Inc. to its various associated companies.

The following specific points were dealt with:

It was agreed that non-exclusive licenses from Titan Company Inc. to duPont in the United States were equitable compensation* for duPont giving exclusive licenses to Titan Company Inc. and associates (with the exception of duPont—I. C. I. as regards the British Empire) for the territories of Titan Company Inc. If Titan Company Inc. wish patents to be applied for, duPont will do so for any country within the territory of Titan Company Inc., with the exception of China and Japan, for which countries it might be done but might also be restricted to special cases.

If Titan Company Inc. do not wish to maintain a patent, but du Pont will maintain it, Titan Company Inc. shall have a non-exclusive license.

Titan Company Inc. has the right to give sub-licenses. These sub-licenses are specified in the license agreements as regards the firms to which they can be given, but on Titan Company Inc.'s request, can be extended to other firms named by Titan Company Inc.

The rights, reserving for duPont to operate under the patents, are to be considered only of a nominal interest to duPont and are made for governmental reasons. On my question if I could state to our friends in Europe that this

*Expenses for obtaining, maintaining, etc. patents not considered.

reservation was made solely to satisfy the government, Rupprecht answered that it has been duPont's policy for their own reasons to make this reservation, but he considered that if an agreement could be made today, he would get approval to omit this reservation for duPont.

It was agreed that we should try to develop standard license agreements to be used in the various cases.

As regards exchange of experience and development work, this was not discussed having also been dealt with earlier.

Rupprecht wanted to make it clearly understood that exchange of licenses was limited to the Licensed Field in the duPont/National Lead Company agreement; that is, manufacture, use and sale of titanium compounds which can be used as pigments, and that it referred only to the Krebs Division of the duPont Company (Pigment Division of the Company). This division is the only one which deals with pigments in the duPont Company.

"Used-patents" in other departments of duPont, for instance, the paint department, were not included.

"Used-patents" developed by the Krebs Division would be licensed to us but with the reservation that benefit under these patents would have to be made for the duPont companies abroad and would have a practical importance.

Dr. Jebsen wished to make it clear that the Licensed Field for the exchange between Titan Company, Inc. and Titangesellschaft—I. G. Farbenindustrie as well as British Titan Products Company Limited and Societe Industrielle du Titane—did not include used patents or application patents, but these firms were under obligation when giving licenses to obligate the licensee to use our pigments, especially the pigments from our various factories in the various territories.

G. JEBSEN

Exhibit 885

License Agreement: Titanine — Du Pont — Reciprocal Exchange
June 6th 1938
Dr. G. Jebsen
Mr. C. F. Kaegebehn — Patent Department

Dear Dr. Jebsen:—

As an alternative to a single cross-licensing agreement providing, on the one hand, for grant of license to Titan under Du Pont's cases and, on the other hand, for grant of license to Du Pont under Titan's, I. G.'s, T. G.'s, and B. T. P.'s cases, the following may be considered:

A. First Alternative—A single cross-license agreement, 3 separate licenses from Titan to Du Pont.

1.) Cross-license—Du Pont grants Titan licenses under all its cases; National Lead will reassign Cases T. 112, T. 115, T. 115-B, T. 115-C and T. 136 to Titan and Titan will give a license to Du Pont under these patents with consent of National.

2.) Titan will give a separate license under I. G.'s patents —Cases T. 120, T. 126-B, T. 142, T. 170 with consent of I. G., T. G. and National.

3.) Titan will give a separate license under I. G.'s patents —Cases T. 125-C, T. 155, T. 157 with consent of National and I. G.

4.) Titan will give a separate license under B. T. P.'s patent Case T. 165 with consent of B. T. P. and National.

B. Second Alternative—A single cross-license agreement; one additional license from Titan to Du Pont.

1.) Cross-license—Du Pont grants Titan licenses under all its cases; National will reassign Case T. 112, T. 115, T. 115-B, T. 115-C and T. 136 to Titan and Titan will give a license under these cases and under I. G.'s Cases T. 125-C, T. 155, T. 157 and under B. T. P.'s Case T. 165 with I. G.'s consent as to T. 125-C, T. 155 and T. 157; B. T. P.'s consent as to T. 165, and Nationals consent as to all.

2.) Titan will give a license under I. G.'s cases T. 120, T. 126-B, T. 142, T. 170 with I. G.'s, T. G.'s and National's consent.

Since both of the above suggestions involve the giving of a license to Du Pont with no showing of reciprocal grant to Titan, the following might be considered:

C. Third Alternative—Two cross-license agreements.

1.) One cross license involving all Du Pont cases except those for Germany and all Titan cases except those originating with I. G. and T. G.—consent of B. T. P. and National required.

2.) A second cross-license involving Du Pont cases for Germany and Titan's cases originating with I. G. and T. G.—consent of I. G., T. G. and National required.

The third alternative (C.) is recommended. It involves only two agreements. The first can be shown to the British, if necessary, since it involves only one of their applications in the United States and two Du Pont appli-

cations in Great Britain. The remaining rights exchanged in this agreement involve Du Pont cases in France, Holland and Japan and Titan cases in the United States. The second agreement can be shown to the Germans, if necessary, since it will involve only Du Pont applications in Germany and T. G.'s and I. G.'s United States applications. (7 U. S. applications—4 I. G. and 3 T. G., as against 7 Du Pont German applications.) Above all, it provides the quid pro quod desired by Du Pont. If desired, the Japanese rights might be included in the second agreement rather than the first.

The consent of National Lead, B. T. P., T. G., and I. G. may be obtained as suggested in my separate memo. on the subject and as desired by Du Pont.

Yours very truly,

CFK:JL

Exhibit 886

Memo Concerning Development of License Agreement between Du Pont De Nemours and Company and Titan Company, Inc.

Margin Note in Handw states: "June 7 Fr Dr. J

These license agreements can either be for: 1) licenses from Titan Company, Inc. to Du Pont (one or more licenses included in each agreement) and, 2) licenses from Du Pont to Titan Company, Inc. with a right to give sublicenses either without restriction or specifically mentioned limitations, if necessary. (These license agreements can also include one or more licenses, partly as under 1) and partly in the form of cross-licensing agreements).

As Titan Company, Inc. will have to procure the consent of the patent owner and any intermediate licensee between Du Pont and Titan Company, Inc., cross-license agreements should, as far as possible, be restricted to the patents belonging to Titan Company, Inc. If, for various reasons, the cross-license agreements have also to be extended to licenses under patents owned by other companies than Titan Company, Inc., as, for example, I. G., T. G., B. T. P., Société Industrielle du Titane, the cross-license agreements should concern only licenses under patents owned or controlled by one of Titan Company Inc.'s associates and as exchange, licenses from Du Pont under patents in these companies' territory. (It should be remembered that Titan Kogyo is a sublicensee of Titangesellschaft and Japan, to this extent, is within the territory of Titangesellschaft, having been given by Titangesellschaft to Titan Kogyo).

If it is found desirable, these cross-license agreements in which other companies than Titan Company, Inc. are affected, as for instance, I. G., B. T. P., T. G., etc., can,

if desirable, also include licenses from Titan Company, Inc. to Du Pont under patents owned by Titan Company, Inc.

It is understood that Du Pont—as regards licenses from Titan Company, Inc. under patents owned by any of the other companies and under which Titan Company, Inc. has exclusive licenses for the United States—will be satisfied with this*

A resolution of the Board of Directors of the National Lead Company, giving their consent to Titan Company, Inc.'s grant of licenses as above is required.

---

*this and trust that Titan Co. Inc. has covered itself. However, in developing these license agreements it should be remember that Titan Co. Inc. for its own protection must have the approval the patent owner and any licensee between Titan Co. Inc. and the Patent owner for the simplification of this it is advisable not to have to ask too many approval for the same document.

Exhibit 887

MEMO RE UNDERSTANDING BETWEEN D.-T. CO., INC. AND N. L. CO.

T. Co.'s operations as regards manufacture and sale will be made directly or through its associated licensed companies in all countries outside North America. T. Co., Inc. and its associated licensed companies outside North America will not export to North America except with the permission of N. L. Co.

D.'s operations as regards manufacture and sale will be in the United States, Central and South America only and they will endeavor to prevent that products within the Licensed Field are exported except as constituents of bona fide manufactured articles.

Licensed Field:

Note: See annexed.

Licenses:

D.'s Pigment Division will give licenses to manufacture, use and sell to T. Co., Inc. at T. Co., Inc.'s request for the territories in which T. Co., Inc. operates with the exception of Central and South America and licenses to use and sell in Central and South America, and with the further right to T. Co., Inc. to give sublicenses to its specifically mentioned associated licensed companies (Titangesellschaft, British Titan Products Company, Société Industrielle du Titane, Titan Kogyo and Titan Company A/S.) wherever D. takes out patents for those territories, and will, on request of T. Co., Inc. endeavor to obtain such patents. The sublicenses will also be permitted to be given on T. Co., Inc.'s request to any company licensed by T. Co., Inc. in the future

and not specifically mentioned yet: Mr. R. declared that D.'s Pigment Division dealt with all pigment matters of D.

It was not specifically mentioned, but it appears from some remarks of Mr. R. that there may from time to time be difficulties as regards taking out patents and giving licenses for Japan and China.

The licenses are to be exclusive with the exception of D. itself and its controlled subsidiaries and I. C. I. as regards the United Kingdom of Great Britain, Ireland and the Isle of Man.

T. Co., Inc. will give D. on D.'s request, a non-exclusive license to manufacture, use and sell under any United States patents which it owns or under which it has the right to an exclusive license, with the right to use and sell in Central and South America.

If any of the parties do not wish to maintain a patent, they shall first give the other party the opportunity to acquire ownership of the patent.

The licenses will be given without monetary compensation except that T. Co., Inc. will pay a remuneration for the cost of applying for, obtaining and maintaining the patents under which T. Co., Inc. has licenses as above mentioned. If T. Co., Inc., wish to refrain from carrying the expenses of maintaining such patents and if D. will continue the maintenance, T. Co., Inc. shall have a non-exclusive license but with no exclusivenesses as above mentioned.

The question of D. sharing expenses of applying for, obtaining and maintaining the patents under which D. obtains a license was not discussed as this is a matter to be dealt with between D. and N. L. Co.

Exhibit 887

Any licenses granted prior to termination of this understanding are irrevocable.

Mr. R. expressed the view that the reservation pertaining to D.'s patent rights in the territories of T. Co., Inc. was of a formal nature and will have no particular importance. If D. felt itself able to make a written general agreement, it could be considered that this reservation would be omitted. He mentioned that D. had a general rule that the company could not part with any property with respect to a patent right without approval of the Financial Committee of D. and this would have to be obtained in case such a written general agreement should be contemplated.

The practical handling of the grant of licenses is dealt with in a separate memo., as attached.

Exchange of Information:

D. and T. Co., Inc. are willing to exchange information within the Licensed Field and permit representatives to visit their plants (provided there are no governmental objections).

Mode of exchange of information was not discussed in detail with Mr. R. and will have to be in coordination with the exchange between D. and N. L. Co. (See attached memo.).

Termination of Agreement:

The cooperation, the principles of which are set forth in this memo., may be terminated upon three years' notice.

The above principles of understanding have been reached between Mr. R. and Dr. Jebsen, with a reservation

Exhibit 887

by Dr. Jebsen that they are subject to approval by our associated licensed companies, British Titan Products Company, Titangesellschaft and Société Industrielle du Titane.

In connection with the above should be considered the agreement between N. L. Co. and Krebs, dated January 1st, 1933 and the following correspondence:

Cablegram—from Dr. Jebsen to Mr. Beschorman, Lead Co. —of June 22, 1933

Letter —from Dr. Jebson to Mr. Beschorman—of June 23, 1933 (1st page and 1st paragraph of 2nd page and P.P.S.)

Letter —from I. G. Farbenindustrie to Dr. Jebsen—of June 20, 1933

Letter —from Mr. Beschorman to I. G. Farbenindustrie—of July 12, 1933

with

Letter —from Mr. C. H. Rupprecht to Mr. Beschorman—of June 28, 1933

Letters —from Dr. Jebsen to I. G. Farbenindustrie and Mr. Weber Andrea—of July 21, 1933

Letter —from I. G. Farbenindustrie to Dr. Jebsen—of August 7, 1933

Letter —from I. G. Farbenindustrie (Juristische Abteilung) to Dr. Jebsen—of August 7, 1933

Letter —from Dr. Jebsen to Mr. Beschorman—of August 9, 1933 (1st page)

[Note: Following starts a new memorandum.]

MEMO RE HANDLING OF LICENSES BETWEEN D. AND T. CO., INC.

The handling of the grant of licenses between D. and T. Co., Inc. will be worked out on the basis of cross-license agreements.

Exhibit 887

When T. Co., Inc. or any of its associated companies file a patent application in the United States, a copy of this application will be sent to D. through Mr. K. Conversely, when D. files a patent application in the United States, Mr. K. will send copy or copies to T. Co., Inc. for itself and its associated companies. Thereafter, T. Co., Inc. will inform Mr. K. of its request concerning the filing of corresponding applications in countries throughout its territory or the respective territories of its associated companies. Mr. K. will then inform D. of the desires of T. Co., Inc. If, when T. Co., Inc. makes known its decision to D. through Mr. K., there is pending in the United States Patent Office one or more patent applications filed by T. Co., Inc. or its associated companies, then a formal cross-license agreement will be executed covering rights to T. Co., Inc. as they desire and a non-exclusive license to D. If D. does not have any patent applications pending in the United States at the time applications of T. Co., Inc. are brought to the attention of D., then D. will not request license agreement executed from T. Co., Inc. until they are in a position to exchange rights with T. Co., Inc., so that the formal license agreement may be of the character of a cross-licensing arrangement. Conversely, a similar procedure will have to be followed, with possible exceptions, in the reverse case.

Mr. K. will undertake all details connected with obtaining the necessary papers to permit T. Co., Inc. to file at the expense of T. Co., Inc. and all details connected with the conclusion of the formal cross-license agreement.

The cross-license agreement will follow the form worked out during Dr. Jebsen's visit and agreed to by D. This form is exemplified in the cross-license agreement involving certain applications of D. and certain United States applica-

tions of T. Co., Inc. and B. T. P. and also in the cross-license agreement involving certain applications of D. for Germany and Japan and certain United States applications of I. G. and T. G., both of which are awaiting final approval by T. Co., Inc.'s associates.

[Note: Following starts a new memorandum.]

ANNEX CONCERNING EXCHANGE OF TECHNICAL INFORMATION

Representatives of the companies can visit the various plants and obtain any and all information they wish as regards plant operations and plant equipment, with the following exceptions:

1.—No exchange of information on new pigments and new grades of present pigments until released for sale. (One week's notice)

2.—Authorization of $5,000.00 or more for equipment to produce a new product.

Patent applications are exchanged after filing without delay (also in cases on new pigments or new grades of present pigments). The information regarding the introduction on the market of a new grade (or a new pigment): the one week's notice is given without request.

Research reports are not exchanged. The exchange of information takes place chiefly by visits to the plants of the representatives, but this may be carried further at the discretion of the representatives of the parties.

The exchange between D. and T. Co., Inc. (and its associated licensed companies) is considered should take place on the same lines as above. In view of the geographical dis-

tance, personal meetings will be less frequent and personal correspondence between representatives of the companies can take place, with copies to Mr. Garesché and Dr. Jebsen.

Samples can be exchanged directly, with samples sent at the same time to N. L. Co. or with copy of accompanying letter to D. sent to N. L. Co. if samples have already been sent (with reference to these samples).

[Note: Following starts a new memorandum.]

ANNEX CONCERNING LICENSED FIELD

The exchange of rights between T. Co., Inc. and D. will be within a field embracing all methods, processes and apparatus in the field of manufacture and use of all titanium compounds containing two percent (2%) or more of the element titanium in a chemically, mechanically or physically combined state, and mixtures thereof which can be used as pigments, whether or not adapted for other uses, as well as all such titanium compounds and mixtures which can be used as pigments, whether or not adapted for other uses. This means that the rights given by D. will include process and product patents as well as all patents relating to the use of titanium pigments developed by D.'s Pigment Division, with this exception: Where the use relates to the preparation of a surface coating composition, such as synthetic resin coatings of the class of "Dulux", rights will have to be given to European licensees of D. who have previous arrangements with D. These previous commitments extend to France, Germany, Italy and England. Consequently, any rights which T. Co., Inc. may desire in such use patents developed by the Pigment Department of D. would have to be negotiated. With respect to patents and patent applications relating to the use of titanium dioxide pigments discovered or developed by other departments of

D., no rights are to be exchanged. Should T. Co., Inc. desire rights in such use patents, these rights will have to be negotiated.

It is to be mentioned that the coöperation between D. and N. L. Co. has gone beyond the Licensed Field as above defined and at the present time includes all the inventions and developments of the Pigment Department of D., regardless of whether or not they fall strictly within the Licensed Field. For example, D. and N. L. Co. exchange patent rights relating to the manufacture of extender pigments themselves, which patents may not directly cover the manufacture of titanium pigments. The same coöperation will extend to the relations between T. Co., Inc. and D. In this connection it is to be noted that among the United States applications of D. which have up to the present been brought to the attention of T. Co., Inc. are several patent applications which relate specifically to the manufacture of calcium sulfate.

[Note: Following starts a new memorandum.]

MEMORANDUM

Re Arrangement with Du Pont.

The following is a résumé of the remarks of Mr. C. H. Rupprecht made at a conference in his office with Dr. G. Jebsen on June 8th, 1938 at which Mr. J. P. Hancock and Mr. C. F. Kaegebehn were present:

According to the understanding regarding the coöperation between Du Pont and Titan Company and Titan Company's foreign associates, there will be included by Du Pont all patents and patent applications relating to the manufacture of titanium dioxide—containing pigments themselves, both process and product patents. There will also be in-

cluded any patents relating to the use of titanium pigments when such patents have been developed by the Krebs Pigment Division of Du Pont, with the exception of such use patents which relate to the preparation of surface coating such as synthetic resin coatings known as "DULUX".

With respect to surface coating compositions, Du Pont has previous commitments to grant exclusive licenses to firms in Germany, France, Italy and England. Therefore, any rights, which Titan Co. and/or its foreign associates might desire in such use patents developed by Krebs, would have to be negotiated. Mr. Rupprecht stated that because of this arrangement the Krebs Pigment Division are avoiding making any patent applications or claims specific to coatings.

With respect to any patents or patent applications relating to the use of titanium dioxide pigments discovered or developed by Du Pont departments other than the Krebs Pigment Division, no rights are to be exchanged. Should Titan Co. or its foreign associates desire rights in such use patents, these rights will have to be negotiated.

With respect to use patents developed by departments of Du Pont other than Krebs and use patents developed by Krebs respecting coating compositions, Mr. Rupprecht assured Dr. Jebsen that he will use his best endeavors to obtain rights, should Titan Co. desire such rights.

Mr. Rupprecht also assured Dr. Jebsen that Du Pont had committed itself to National Lead Co. that all pigment work by Du Pont is to be carried out by the Krebs Pigment Division.

June 13, 1938

Dear Mr. Kaegebehn:

Re: du Pont-Titan, Inc.
Agreements

Enclosed find duplicate originals and extra copy of the above contracts, these having been rewritten in accordance with the understandings reached at Wilmington last week. You will note that the two agreements submitted comprise a split-up of the original single agreement, this also conforming to Dr. Jebsen's suggestion.

In lieu of the warranty that Titan is the owner of the entire right, title and interest of the involved Titan, Inc. patents and applications, the agreements as now submitted merely specify that Titan, Inc. warrants that it has the right to grant the licenses set out in the contract under the specified patents and applications.

Since the agreements embody all of the changes and suggestions made at the recent conference, it is suggested that after their execution by the proper Titan, Inc. official, they be returned here for final approvals and action.

Very truly yours,

E. I. DU PONT DE NEMOURS AND COMPANY,

Mr. M. D. Cole—Ass't to the President
National Lead Company
Building

Dear Mr. Cole:—

This will confirm Dr. Jebsen's approval of the Resolution as modified by you which authorizes Titan Company, Inc. to grant non-exclusive licenses to E. I. Du Pont De Nemours.

It is most desirable that this Resolution be passed by the Board of National Lead Company at its next meeting because Dr. Jebsen has in his possession contracts for which he will endeavor to obtain the approval of Titan Company, Inc.'s foreign associates, which contracts embody the principles of this Resolution.

Yours very truly,

C. F. KAEGEBEHN

COPY

Resolution for National Lead Company
Board action June 28, 1938.

RESOLVED, that as successor in interest to Titanium Pigment Company Inc. under that certain Agreement between that Company and Titan Co. A/S dated July 30, 1920, this Company hereby consents to and authorizes the grant by Titan Company Inc., as successor in interest to Titan Co. A/S under the aforesaid Agreement, directly to E. I. du Pont de Nemours and Company and upon such terms and conditions as may be mutually agreed upon between them, of a non-exclusive license to manufacture, use and sell titanium compounds which can be used as pigments produced under and in accordance with any United States patent or patent application owned or controlled by said Titan Company Inc. or by any of its foreign licensees or sublicensees relating to the manufacture and/or use of such titanium compounds; hereby waiving for that purpose and to that extent only the right to an exclusive license under all of said United States patents and patent applications to which this Company is entitled under the provisions of said Agreement of July 30, 1920

Exhibit 889

COPY

Resolution for National Lead Company Board action June 28, 1938.

RESOLVED, that that certain arrangement between this Company and Titan Company Inc., proposed in letter of W. C. Beschorman as Executive Vice President of this Company to Dr. Gustav Jebsen as Vice President of said Titan Company Inc., dated May 28, 1937, submitted and read at this meeting, relating to the handling of any licenses that may from time to time be granted to any then existing United States licensee of this Company under any patent owned or controlled by said Titan Company Inc. or by any of its licensees or sublicensees other than this Company, and also of any licenses that may from time to time be granted to said Titan Company Inc. or to any of its said licensees or sublicensees other than this Company under any patent owned or controlled by any of said then existing United States licensees of this Company, which said arrangement has been formally approved and accepted by said Titan Company Inc. by resolution of its Board of Directors adopted October 27, 1937, be and it hereby is in all respects approved, ratified and confirmed on behalf of this Company.

C. F. Garesché Esq.,
President,
Titanium Pigment Corp.,
111 Broadway,
New York, N.Y., U.S.A.

Dear Mr. Garesché:

Enclosed I send you copies of letters of even date to Mr. Stopford and Dr. Raspe.

You may remember I told you of my telephone conversation with Dr. Booge after my visit in Wilmington, during which I promised to send Dr. Booge samples of the Rutiox production when available from the pilot plant.

On Turner's request, T.G. and B.T.P.Co. are sending him samples, and you will realize that a delicate situation will arise in case Dupont should happen to know of these samples before having received any from us.

As at the same time you are in the best position to judge when samples should be handed over to Dupont, and we wish to coordinate the cooperation with Dupont with the N.L.Co.'s cooperation, it seems to me best that you hand the samples over to Dupont, when you consider it should be done.

Looking forward to your visit on this side, I am, with kindest regards,

Yours very truly

Mr. Rockwell.

Exhibit 891

Letterhead of

TITAN COMPANY, INC.

Paris, September 20th, 1938.

To:
I. D. Hagar Esq.
Titanium Pigment Corporation
111 Broadway
New York City, U. S. A.

Dear Mr. Hagar:

Many thanks for your letter of September 12th.

I am sorry to hear of the action taken by the Krebs Company and it does not seem well founded.

It has not been stated at which periods the Krebs Company and we should exchange our experience, with the exception of patents and patent applications, and it has not occurred to me that this would be of primary importance, as Krebs and we are not competing in our markets with the exception of South America.

For this reason it seems to me rather far fetched for Krebs to use as an excuse the assumed marketing of a Rutiox type in Europe for them to break their agreement with you as regards mutual information. I say "assumed" because no distribution, neither as sale nor for test purposes, has taken place of a Rutiox type pigment on this or your side. I hope this was sufficiently clear from my letter of September 9th, although I did not know at that time for what purpose you wanted the information. I have, though, in any case, sent you a cable today as per enclosed copy.

Exhibit 891

I expect in the very near future to be able to send Mr. Kaegebehn the cross-licensing agreements with Krebs, as I have got the verbal consent of all parties interested and am awaiting formal acknowledgment from the various parties.

With this done, we can of course take up with Krebs the questions of fixing rules for the exchange of experience on similar lines as yours, or, I hope, better ones. The last remark in view of the information in your letter.

Such rules should be of reciprocal nature.

I do not for the moment see the importance of a mutual announcement of the intention of putting a new quality on the market a short time before this is done, when these qualities are only put on the markets in which the other party is not actively selling, but I have an entirely open mind as regards this matter.

With kind rega ls.

Yours very truly,

(signed) G. JEBSEN

(Note in Dr. Jebsen's handwriting).

P. S. Please show this letter to Mr. Kaegebehn.

" Garesché

Exhibit 892

September 30th, 1938

NOTES

It was my recollection of the conversations between Mr. Rupprecht and Dr. Jebsen at which I was present. (Mr. Rockwell's office, New York City, June 3rd, 1938 and Mr. Rupprecht's office, Wilmington, June 8th, 1938) that an understanding had been reached—details were not worked out—that technical information and experience would be exchanged between Du Pont and Titan Co., Inc.

I further recollect, that on June 9th, 1938, in the course of a review by Dr. Jebsen and myself of the results of our visit to Wilmington on June 8th, and upon being informed by me that a copy of the U. S. Rutox patent application had been forwarded by me to Dr. Booge, Dr. Jebsen called Dr. Booge on the telephone and told him that additional technical information and experience concerning the Rutiox process would be available to Du Pont.

In reviewing the results with Dr. Jebsen, the results of the conversation with Rupprecht, I recollect that we formulated the view that the method of exchange of information had not been considered in detail with Mr. Rupprecht and that it would have to be coordinated with the exchange between Du Pont and National Lead Co. In considering the mode of exchange between National Lead Co. and Du Pont we noted that representatives of the respective companies enjoyed the privilege of visiting the other's plants and obtaining any and all information we wished as regards plant operation and plant equipment with the following exceptions:

1. That no information was to be exchanged on new pigments and new grades of present pigments until these were released for sale, 1 weeks notice being

given to the other party prior to such release for sale;

2. in cases where authorization of $5000.00 or more for equipment to produce a new pigment has been made, no research reports are exchanged, the exchange being confined chiefly to visits by representatives of the respective companies to the plants of the other.

It is my recollection that it was considered that the exchange between Du Pont and Titan Co., Inc. should take place on the same lines. However, in view of geographical distance, personal meetings would be naturally less frequent and personal correspondence between representatives of the companies could take place, with copies being sent to Mr. Garesché and Dr. Jebsen. It is my recollection that it was understood that samples of new products could be exchanged directly between Du Pont and Titan Co., Inc.

Mr. Rupprecht in his telephone conversation to me on September 16th, 1938 stated in unequivocal terms that there had been no understanding reached between himself and Dr. Jebsen with respect to exchange of technical information and experience, particularly as regards new developments. In fact, on the contrary, he said it was the desire of Du Pont not to enter into such an exchange; that he had committed himself only to exchange patent applications with a view to negotiating a mutual exchange of non-exclusive licenses under patents and patent applications and that he could not extend the understanding beyond this. However, he stated that any representatives of Titan Co. Inc. or its European associates who may be in the United States would be most welcome to call upon him and go through the Krebs Division plant and while so doing, to obtain full and complete information concerning plant operations, but that they would not place before such visitors any information concerning research matters.

Paris—VIIIe—France

Dear Dr. Jebsen:—

The attached letter was dictated and written on October 3rd, 1938.

Transmission to you was delayed pending return of Mr. Garesché so that he might consider its contents.

Yours very truly,

NATIONAL LEAD COMPANY

CFK:JL

Exhibit 893

Dr. G. Jebsen
c/o Titan Company, Inc.
26, Rue de la Pépiniere
Paris—VIIIe—France

November 22nd, 1938

Dear Dr. Jebsen:—

You have been advised through letters of Mr. Turner and Mr. Hagar of the situation which has developed here with respect to the exchange of research information with Du Pont, particularly research information concerning the "RUTIOX" process. There are two additional phases of this matter of which I believe you should be informed.

On September 15th, Mr. Turner had a conversation with Dr. Booge at which I was present. Mr. Turner pointed out to Dr. Booge that Du Pont in receiving technical information such as that pertaining to the "RUTIOX" process was being placed in a preferred position over National Lead Co., because Du Pont was not exchanging information of the same nature with us. Mr. Turner particularly referred to the Du Pont development of the so-called "Ti-Pure-O Pigment". Dr. Booge, appreciating the merit of Mr. Turner's contention offered to return unopened any letters he might receive from you or the European associates of Titan Co., Inc. Mr. Turner appreciating that the arrangement with Du Pont was between Titan Co., Inc. and Du Pont directly did not feel in a position to accept this offer from Dr. Booge. I stated that my recollection of the understanding reached between you and Mr. Rupprecht was that technical information would be exchanged, although no details of the manner of the exchange had been worked out. It was my recollection that this exchange would be

coordinated with the exchange between National Lead Co. and Du Pont.

On the 16th of September, the following day, I received a telephone call from Dr. Booge who told me that Mr. Rupprecht had informed him that no exchange of technical information was provided for in the understanding reached between you and Mr. Rupprecht. I asked Dr. Booge to further clarify this with Mr. Rupprecht because I had the distinct recollection that you took back to Europe with you the impression that some exchange of technical information was provided for. Within an hour I received a telephone call from Mr. Rupprecht, who seemed somewhat aroused over the situation. He stated to me in most emphatic and unequivocal terms that there had been no understanding reached between himself and you with respect to the exchange of technical information and experience, particularly as regards new developments. In fact, on the contrary, he said that it was the desire of Du Pont not to enter into such an agreement with any foreign interests; that he had commited himself to you only to exchange patent applications with a view to negotiating a mutual exchange of non-exclusive licenses under patents and patent applications, and that he could not extend the understanding beyond this. However, he stated that any representatives of Titan Co., Inc. or its European associates who may be in the United States would be most welcome to call upon him and go through the Krebs Division plants, and while so doing, to obtain full and complete information concerning plant operations, but that they would not place before such visitors any information concerning research and new development matters.

Exhibit 893

I pointed out to Mr. Rupprecht that the present situation had not arisen through any request for technical information emanating from Titan Co., Inc. or its associates but, on the other hand, it developed out of a request from his technical director, Dr. Booge. Mr. Rupprecht acknowledged this to be so and stated that he had informed Dr. Booge that he should not have made this request and that he was instructing Dr. Booge to turn over to Mr. Turner all letters received from you or the European associates of Titan Co., Inc. unopened. I assured Mr. Rupprecht that as far as any misunderstanding regarding the arrangement reached with him was concerned, I wished him to attribute this to my faulty recollection of the impression you took back with you to Europe. At the conclusion of the conversation I felt that Mr. Rupprecht was considerably reassured. Dr. Booge has already turned over to Mr. Turner one letter received from you which was opened by Mr. Turner and which is enclosed herewith.

I do not believe this situation will have any serious, adverse effect on the cooperation between Du Pont and Titan Co., Inc. to which we are all working. It is fortunate that it arose out of a request from Du Pont rather than from our side. However, I have a feeling that Du Pont will not place at the disposal of Titan Co., Inc. information regarding its new developments or research matters, and I feel that the future direct correspondence between Du Pont and Titan Co., Inc. will be very circumspect from Du Pont's side, leaving for transmission through us of more detailed technical information. I would not recommend writing to Mr. Rupprecht at this time in this matter, since so to do might further arouse him. After speaking with him on the telephone, I have the feeling that he is prepared

to let the matter rest at its present status and to permit the future to work out the relationship between the companies with respect to the exchange of technical information.

The second phase of this situation which I should like to bring to your attention is the following:

It is apparently the practice of Du Pont when they receive patent applications for inventions originating with us or with the European associates of Titan Co., Inc. to scrutinize carefully their old research work and, if it appears that they have performed similar experiments, to file patent applications along the same lines as our applications. Already we have had one such experience, namely in Case T. 174. In so doing, a conflict arises as to which company is the first inventor. It is relatively easy for us to settle this question when the conflict is between ourselves and Du Pont, because our research notes can be compared. On the other hand, when the conflict is between an application of one of Titan Co., Inc.'s associates, it is not so easy because under the United States Law the earliest date which the foreign application can secure is the date of filing in the country in which the first application was filed under the International Convention.

Upon receipt of copies of Titangesellschaft's Rutiox patent application (Case T. 187), we were informed by Dr. Booge that it covered certain phases of their research work and that they contemplated filing a similar patent application. Mr. Turner and I made a special trip to Wilmington to look into this situation. We found that there was no possibility of dissuading Du Pont from filing an application which might conflict with our application in Case T. 187 because, we were informed, all divisions of Du Pont are under specific orders from the Executive Committee to

file patent applications on everything which might possibly contain patentable subject matter. In the course of this conversation, Dr. Booge admitted that they had previously regarded their work as unpatentable. The implication is inescapable that the possibility of patenting was suggested to Du Pont by the knowledge of our application in Case T. 187.

Their experimental procedure, however, differs from the application in case T. 187 in that they first neutralize titanium tetrachloride with alkali and redissolve the precipitated orthotitanic acid in hydrochloric acid. This feature was specifically left out of our application in case T. 187 at my request because it is in my judgment too closely related to the Kubelka procedure. Dr. Booge assured me that before they file the patent application they would consult with me in order to be sure that their case would be as free as possible from interference with Case T. 187, and I told Dr. Booge that at this consultation Mr. Hutz should be present as a representative of Titangesellschaft. I discussed this situation fully with Mr. Hutz and we made a recommendation that a second application should be filed by Titangesellschaft covering specifically the alkali addition treatment of titanium tetrachloride which is disclosed in the second "susats" application in the German case under T. 187. In making this recommendation we had in mind that we might be able to limit any possible interference with Du Pont to this alkali addition step and completely clear our original case T. 187. In making the recommendation to Titangesellschaft Mr. Hutz refrained from advising the I. G. Patent Department that we were aware of a possible interference with Du Pont, because neither he nor I wished to arouse the I. G. Patent Department by informing them

that Du Pont had access to the United States application in case T. 187. The situation respecting cases T. 157, T. 204, T. 205, T. 206, and the Rooge application, Ser. No. 215,220 described to you in Mr. Turner's letter of September 19th, is another instance illustrating Du Pont's practice with respect to patent applications.

You will appreciate that in the exchange of patent applications of Titan Co., Inc.'s associates both Titan Co., Inc. and ourselves are at a disadvantage. First, Titan Co., Inc. is at a disadvantage because they cannot prove a date earlier than the convention date, and Du Pont, having the United States application in their possession has advanced information concerning this date and is in a position to go in back of the convention dates of the applications of Titan Co., Inc.'s associates. We are at a disadvantage insofar as we are the chief beneficiaries under patents of Titan Co., Inc.'s associates and if Du Pont is permitted to obtain patents on the same subject matter after first scrutinizing Titan Co., Inc.'s applications in the United States before filing their own, our patent position is increasingly weakened in the United States.

I do not have any suggestions to offer as to how this situation can be corrected. With respect to Du Pont we again face that attitude which expresses itself by a statement that the Executive Committee of Du Pont has given certain orders which must be carried out. We can, of course, on our part resort to the same procedure of investigating our old research notes upon the receipt of a Du Pont application and then filing a patent application, but we hesitate to do so because we regard this procedure as not strictly the most ethical.

Exhibit 893

In writing this letter it is not my purpose to suggest, and it would be contrary to my intention if you assumed that the cooperation with Du Pont was in jeopardy as a result of this situation. I regard it as an incident in developing the modus operandi of the cooperation which with tact and the passage of time will be smoothly worked out.

With very kind regards,

Yours very truly,

CFK:JL

C. F. Garesché Esq.
National Lead Company
Titanium Division
111 Broadway
New York City. U. S. A.

Dear Mr. Garesché,

I return to your letter of November 21st, regarding the problem of patent interference.

I have no particular suggestion to make, except that it seems to me advisable to postpone sending in the patent applications on inventions originating in Europe as late as possible under the International Conventions, which secures the priority right of the European application date for a period of 12 months.

I trust that the mutual conferences you have agreed upon will lead to satisfactory solutions in the individual cases as there should, generally speaking, be a common interest in these matters and I think the goodwill exists on all sides.

I have only had the opportunity to talk over the matter with Mr. Stopford, who is in agreement with the above, and I will take it up with Dr. Raspe next time I see him.

With kindest regards,

Yours sincerely,

sign. G. JEBSEN

New York City, U. S. A.

Dear Mr. Kaegebehn,

Many thanks for your letter of November 22nd, which I have read with much interest.

You are presumably acquainted with the conversations I had with Mr. Garesché.

I received also a letter from Mr. Garesché of November 21st, to which I have replied on December 6th and 22nd and from which you will know that the questions mentioned by you have been dealt with satisfactorily.

In fact, the standpoint Mr. Rupprecht has taken is quite agreeable to me and simplifies the whole matter quite considerably.

On page 3 you say: "Dr. Booge has already turned over to Mr. Turner one letter received from you, which was opened by Mr. Turner and which is enclosed herewith". This was not enclosed, but I do not think that matters anything.

I enclose copy of my letter of December 6th, of which I note that by inadvertence you have got no copy.

With kindest regards,

Yours very truly,

G. JEBSEN

Re: du Pont—Titan, Inc.
Agreement

Dear Mr. Kaegebehn:

Attached hereto find duplicate originals and extra copy of the consolidated agreement between du Pont and Titan, Inc., effecting license exchanges between certain specific applications and patents of the parties. You will note du Pont Legal Department approvals and endorsements appear on said duplicate originals.

Pursuant to our understanding, in lieu of the two agreements previously proposed, a single form of contract is now presented. Other changes effected in the redraft presented include:

(a) In respect to our applications 466-K, 768-K and Titan, Inc. Cases 112 and 136, the rights of the licensee thereto are restricted to the employment of such inventions in the manufacture of titanium compounds useful as pigments.

(b) Titan, Inc. case T. 142, included in the former agreements, has been eliminated from the present, due to the fact that the same had been inadvertently included under the former proposed exchange.

Exhibit 896

(c) Reciprocal provisions exist in the instant draft, under which purchasers of pigments and other coloring materials from either du Pont or Titan, Inc., manufactured in accordance with the licensed inventions, become free to use such products and in accordance with such licensed inventions.

(d) Paragraph 6, as amended, sets forth that du Pont shall be free of any obligation or expense incidental to Titan, Inc.'s filing and prosecution of licensed U. S. applications.

(e) Paragraph 10, involving infringements and rights to sue, has been modified to restrict the right of du Pont or Titan, Inc. as licensees to bring suit and only when consent in writing has been first obtained from the involved licensor.

If the agreement meets with your approval, will you please have the originals executed by Titan, Inc. and returned here for final action?

Notes—Conference Leverkusen—June 12th, 1939
July 26th, 1939
Mr. F. W. Rockwell—President
Mr. C. F. Kaegebehn—Patent Department

Dear Mr. Rockwell:—

I present herewith minutes of the conference at Leverkusen, relative to patent matters as discussed between Dr. Raspe, Dr. Redies, Dr. Fischer, Mr. Andersen and myself.

The notes were written by Dr. Redies and revised by Mr. Andersen and me. They have not been finally approved by Dr. Redies and Dr. Raspe, so I would appreciate it if you would regard them for the time being as in the nature of tentative minutes.

Yours very truly,

C. F. KAEGEBEHN

Exhibit 897

RE: TITANIUM FIELD

NOTE

RE: CONFERENCE LEVERKUSEN
12th June 1939

Present:

Mr. Kaegebehn, National Lead Co., New York;
Mr. Andersen, Titan Company, Paris;
Dr. Raspe, Director Titan-GmbH, Leverkusen;
Dr. Redies, " I.G. Patent Dept., Leverkusen;
Dr. Fischer, of " " " "

The purpose of the conference is to ascertain whether the correspondence regarding the handling of patent questions may be further simplified or expenses in this connection may be saved. The following is noted:

1.) It is considered advisable to benefit as far as possible from the professional knowledge of the experts of the National Lead Company, when drafting new patent applications in the titanium field for U.S.A. and also during the prosecution of the patent applications. As the patent experts of the National Lead Co. are at the disposition of these applications, the use of other patent attorneys can be avoided. Mr. Kaegebehn refers, however, to his good relationship to Messrs. Hutz and Joslin and it is considered advisable to leave to Mr. Kaegebehn whether and in which cases he wishes collaboration with Messrs. Hutz and Joslin.

For the inventions of the Titangesellschaft for which patent applications are to be filed in U.S.A. the following is agreed:

Exhibit 897

The Patent Dept. in Leverkusen will send a copy of every new patent application of the Titangesellschaft to Titan Co., Paris, as soon as possible after the filing of the application in Germany. At the same time the Titangesellschaft will send the corresponding research report to the Titan Co., Paris. Titan Co., Paris, will forward the patent application together with the research report as soon as possible to the National Lead Company. Furthermore, in so far as the National Lead Company wishes the filing of the application in U.S.A., the draft for the U.S. application will be prepared by Mr. Kaegebehn on the basis of the information sent him. This draft will be returned by Mr. Kaegebehn to the Titan Co., Paris, and from there to the Patent Department in Leverkusen which will consider the draft in collaboration with the inventor and make any alterations which might be necessary. If there is sufficient time at disposal the Patent Dept., Leverkusen, will again ask for the comments of Mr. Kaegebehn in the event that important alterations have been made. If this is not the case, the papers for the filing of the U.S. application will be prepared directly by the Patent Dept., Leverkusen.

Mr. Kaegebehn will when sending the draft communicate whether the U. S. application should be filed by him or by Messrs. Hutz and Joslin.

The U.S. patents should normally issue in the name of the Titan Co. Inc., Wilmington, Delaware, U.S.A.

2.) The above suggestions relate primarily to the inventions of the Titangesellschaft. With respect to inventions which originate with I.G. and which are entirely or partly within the titanium field, the situation is not the same, from an agreement point of view, as with respect to the inventions of the Titangesellschaft. There was an

understanding between those present that I.G. wishes to make its decision from case to case. On the other hand, there is, in the opinion of Dr. Redies, no objection to a recognition in principle of the application of the above considerations to inventions of the I.G., which come within the titanium field. In the case where the National Lead Company gets an exclusive licence for U.S.A. on an invention originating with I.G. and pays the expenses involved in the obtaining of the patent protection it is also, in the case of titanium inventions of the I.G., desirable to obtain the collaboration of the National Lead Company to the extent this is possible.

3.) As the territory of the National Lead Co. includes Canada as well as the United States and the same considerations apply to the situation in Canada as in the U.S.A., Mr. Kaegebehn wishes that the principle described in the foregoing paragraphs should apply also to Canada.

Mr. Kaegebehn communicates that he collaborates in Canada with the Patent attorney firm Fetherstonhaugh & Co. in Montreal.

4.) With respect to the filing and prosecution of patent applications in Germany, the procedure should be analogous with that described under (1) i.e. the professional knowledge of the patent department in Leverkusen should be taken advantage of in this connection in order to obtain the best possible form of patent applications in Germany on inventions originating with the National Lead Company and also in order to avoid the expense of using the assistance of other patent attorneys. Mr. Kaegebehn will send copy of new U.S. patent applications of National Lead Co. to Titan Co. Inc., Paris, as soon as possible after the filing in U.S.A. and Paris will forward copy to the Patent

Dept. in Leverkusen. The patent department in Leverkusen will prepare a draft for the German application in the event of the Titangesellschaft wishing an application in Germany and thereupon file the German application without assistance of patent attorneys outside its organization.

The German patent should—as far as this is in accordance with the situation in the case, from an agreement point of view—issue in the name of the Titangesellschaft.

5.) The situation in the DK. Cases was discussed thoroughly.

The situation is as follows:

There exists no general licence agreement between Inc. and D. but both parties have expressed the willingness to exchange licences on future patent applications and patents in individual agreements. The licences to date have always included the permission to Inc. to give sub-licences to its associated companies outside America and it is confidentially expected that this will also be done in the future.

The general mode of operating is that copies of the D.'s applications in question are sent Inc. through the National Lead Co. and Inc. forwards copies to its associates. When Inc. has considered the cases and has been informed of the wishes of its associated companies for their territory they inform Mr. Kaegebehn who then together with Du Pont prepares a proposal for a cross licence agreement.

Inc. has been permitted by D. to file in D.'s name and prosecute the patent applications in the countries where licences have been asked for.

D. has up to now executed the documents for the filing of the applications and permitted the applications to be filed without awaiting the execution of the licence agree-

ments in question—and it is expected that D. will also do this in the future.

The expenses to the filing and prosecution of the applications and to the maintenance of the patents have been paid by Inc. who is re-imbursed by the associated companies for expenses to applications and patents within their respective territories.

Later remarks by Dr. Redies.

It is doubtful to me whether it is correct from the point of view of German monitary laws that the Titangesellschaft pays expenses incurred on DK. Cases before a licence agreement giving T.G. licences in the cases in question have been executed.

Signed: Dr. Redies.

Whenever possible the question regarding licences under new DK. Cases should be cleared up so early that the Titangesellschaft is in possession of a licence when the German application is filed.

Mr. Kaegebehn explains thoroughly the considerations of the firm Du Pont.—He considers it possible to draft a licence agreement which can be used generally and to submit accordingly drafted agreements to Du Pont in due time and in each particular case. This will only tend to help the situation but it is not believed will completely solve the situation. Mr. Kaegebehn will take up these questions upon his return to U.S.A. if Dr. Jebsen has declared himself in agreement with the above considerations.

6.) The expenses to the filing and prosecution of the German applications in DK. Cases are at present very high for the reason that the cases are prosecuted with the assistance of German patent attorneys. If the average cost of

about RM. 500 per German application is calculated with, the cost of the 35 DK. Cases applications filed in Germany in 1938 would amount to about RM. 17.500 which finally will have to be paid by the Titangesellschaft. In view of this high cost great care should be taken in deciding the filing of the applications in Germany.

Dr. Redies raises the question whether the filing and prosecution of the applications in DK. Cases in Germany could be taken over by T.G. (I.G. patent department)

Mr. Kaegebehn considers that D. would not object to such arrangement.

Mr. Kaegebehn and Mr. Andersen will consider this question and if they find that an arrangement as mentioned can be accepted by Inc. will submit it to Dr. Jebsen, and in case he agrees, Mr. Kaegebehn will take it up with D.

With an arrangement as outlined T.G. would not have to place so much importance on the question of costs of DK. Cases as they do at present when deciding in which cases they should ask for licences. It is, however, agreed that the DK. Cases should be examined very carefully with regard to their value before decision with regard to licence is taken—in order to avoid that we ask for licences in cases of small value—This may give D. a false impression of the opinion on this side regarding such cases.

7.) Some particular cases are discussed.

C. F. K.—COMMENTS DR. REDIES' NOTES—LEVERKUSEN CONVERSATION

The notes prepared by Dr. Redies correctly present with alterations suggested the subject discussed and the conclusions reached in the Leverkusen conversations of June 13th, 1939 The following may be also noted:

Exhibit 897

1) Agreement as to the principles for handling T. G. and I. G. patent applications in U. S. A. and the handling of National Lead Company applications in Germany, (Item 1-3, of Dr. Redies' notes) must include also the consent of Titan Co. Inc. This results from the fact that patent rights exchanged between National Lead Co. and Titangesellschaft do not pass directly from one to the other but flow through Titan Co. Inc. Therefore it may be foreseen, that occasionally Titan Co. Inc. may deem it necessary or desirable, to exercise some control over the preparation and prosecution of the United States applications covering T. G. and I. G. inventions on the one hand, and over the preparation and prosecution of German applications covering National Lead Company's inventions, on the other hand.

National Lead Company, however, accepts with the recognition of the position of Titan Co. Inc. as expressed above, the principles for handling patent applications described in Dr. Redies' notes—Items 1, 2 and 3.

6) Insofar as the territory of National Lead Company includes Canada as well as the United States and the same considerations apply to the situation in Canada as in the United States, it is deemed that the principles described in Dr. Redies' notes—Items 1-3—should apply also to Canada recognizing also the position of the Titan Co. Inc., as above described.

Att. Mr. C. F. Kaegebehn

Dear Sirs

Case DK 32—U.S. Appl. Ser. No. 155.231

In our letter of the 4th. inst. we informed you that we were not interested in obtaining licences in the above case and that we would communicate you the British Titan Products' decision later on.

Our English friends have just informed us that they are not interested in obtaining licences in this case but that they consider it advisable that the subject matter of the application be published.

Such publication could be achieved by filing a patent application in France and we consider it desirable that such application be filed.

We should be obliged if you would submit this matter to Dr. Jebsen asking him whether he approves that the matter be taken up with Du Pont with a view to obtaining a publication patent.

We think Du Pont's attention should be drawn to the fact that we do not wish to maintain this patent and that in the event of their wishing to maintain it we should be

Exhibit 898.

secured a non-exclusive licence with the right to hand on this licence to Société Industrielle du Titane.

Yours very truly,

for TITAN COMPANY INC.

(sgd.) A.J. Ravnestad

P.S. We enclose herewith in duplicate the form for a Power of Attorney in France; this is the only paper which we need in connection with the application to be filed. In view of the fact that only a publication patent is aimed at, it is not of any importance to file under Convention and an Assignment need not be executed.

Copy to Dr. Jebsen

Mr. Andreas Ravnestad
c/o Titan Company, Inc.
26, Rue de la Pépiniere
Paris - 8e - France

Re: Case DK 32 - U. S. Serial No. 155,231

Dear Mr. Ravnestad:—

Upon the receipt of your letter of June 7th, 1938, we took up the question of filing the corresponding application in France with Du Pont.

Du Pont suggests that your case be included in a cross-licensing agreement, wherein Du Pont will receive an exclusive license in certain U. S. applications of Titan Co., Inc., and British Titan Products, Ltd., while in return giving rights for France, Holland and Great Britain, if desired by Titan Co., Inc., Du Pont further suggests that when the French patent has been obtained, you proceed as provided for under the agreements to inform Du Pont of your intention to abandon the French application.

For reasons which have been explained to Dr. Jebsen, we recommend that in the future when it is desired to file an application in France corresponding to a Du Pont U. S. application, but only for purposes of publication, you inform us that you desire to apply in France "only for purposes of record". We will understand the meaning of this expression and will proceed in accordance with your wishes to consider the matter with Du Pont.

Yours very truly,

NATIONAL LEAD COMPANY

Re: Pending Applications of DK Cases 15-30

Gentlemen:

Please refer to your letter of May 10th, 1938. We enclose herewith the following documents:

POUVOIR,
(For France) Cases DK 15, 26, 27, 29, and 32.

VOLLMACHT
(For Germany) Cases DK 16, 22, 23, 24, 25, 28, and 30.

ERFINDERNENNUNG
(For Germany) Cases DK 16, 22, 23, 24, 25, 28, and 30. Assignment of priority rights (for Holland) and Vollmacht DK Case 23.

These documents were sent by you in duplicate and we forwarded both copies to Du Pont. They have, however, failed to return the duplicate copy, and since they have already been put to considerable trouble, we have hesitated to bother them further. Can you not have these documents photostated and will not the photostatic copy serve your purposes? They have been dated according to your wishes. We regret this inconvenience, but as yet Du Pont is not sufficiently familiar with the procedure required, so that an instance of this kind will not occur.

Exhibit 901

As requested in your letter, we have forwarded to your Japanese agent, Nagashima Law and Patent Office, powers of attorney and assignment documents in cases DK 16, 22; 23, 24, 25, 28, and 30. Since no duplicates were returned to us, we had the originals photostated and enclose herewith photostatic copies of these documents.

With respect to the documents for Germany and France, which must be legalized, Du Pont have had considerable difficulty with the German consular service, and in their behalf we have had to appeal to New York to straighten out the difficulty. We have found that it is necessary to have the German documents, which were signed in Wilmington, legalized by the German consul in Baltimore, and the French documents legalized by the French consul in Philadelphia. This has resulted in a delay of several days, but we expect to be able to mail these to you within a day or two.

Perhaps it would be a good idea, in order to insure against failure of Du Pont to return duplicate copies, for you to send three copies of each document. Thereby Du Pont could retain one copy and return two to us.

The certified copies requested in your letter have been ordered from the U. S. Patent Office, and when these arrive, they will be handled in accordance with the wishes expressed in your letter of May 10th, 1938.

Yours very truly,

NATIONAL LEAD COMPANY

CFK:JL
Encs.

P. S.—While typing the above, we received the French and German Patent Declarations, duly legalized, and we are enclosing the same herewith.

Exhibit 902

July 22, 1938

Dr. G. Jebsen
c/o Titan Company, Inc.
26 rue de la Pepiniere
Paris — 8e — France

Dear Dr. Jebsen:—

This will advise you that assignment documents as listed below have been prepared and executed and are ready for recording in the United States Patent Office:

Case T. 112 : U. S. Patent No. 2,111,460, Assignment National Lead Company to Titan Company, Inc.

Case T. 115 : Serial No. 11,164, Assignment National Lead Company to Titan Company, Inc.

Case T. 115B: Serial No. 142,918, Assignment National Lead Company to Titan Company, Inc.

Case T. 115C: Serial No. 142,928, Assignment National Lead Company to Titan Company, Inc.

Case T. 136 : Serial No. 88,851, Assignment National Lead Company to Titan Company, Inc.

Case T. 165 : Serial No. 155,040, Assignment by Inventors—R. W. Ancrum and A. G. Stopegaard to British Titan Products Company, Ltd.

As soon as I have word from you that the arrangement with Du Pont has been approved by British Titan Products Co., Ltd., and the Titangeselleschaft, and more particularly approval of B. T. P. to the cross-license agreement under which Du Pont is given rights in the above listed cases, the assignment documents will be recorded in the U. S. Patent Office. In this connection, I may point out that the final fee in case T. 136, Serial 88,851, is due by August 26th next. If it would be possible to record the assignment for this application before that date or shortly thereafter—say about a week—the patent can issue showing on its face that Titan Company is the assignor.

Yours very truly,

CFK/rd

Exhibit 903

COPY

CONFIDENTIAL August 3, 1938

Dr. G. Jebsen
c/o Titan Company, Inc.
26 ru de la Pepiniere
Paris — 8e — France

Dear Dr. Jebsen:

This morning I received a telephone call from Mr. J. P. Hancock, Mr. Rupprecht's patent attorney. Mr. Hancock told me he had been in conference with Mr. Rupprecht concerning the grant of rights to Titan Co., Inc. and its European associates under foreign applications corresponding to U. S. applications serials No. 166.564 (Case DK 33), No. 166.943 (Case DK 34) and No. 172.378 (Case DK 35). Upon conclusion of this conversation, I cabled you as follows:

"RE YOUR LETTER JULY FIFTH DK CASES 33 — 34 — 35 DUPONT SUGGESTS CROSS LICENSE AGREEMENT INCLUDING OUR CASES T 187 AND 169 BUT PREFER TO DELAY EXECUTION FOREIGN APPLICATION PAPERS PENDING RECEIPT OF WORD OF APPROVAL BY TITAN INC'S ASSOCIATES OF CROSS LICENSE AGREEMENTS NOW IN POSSESSION DR. JEBSEN LETTER TO DR. JEBSEN FOLLOWS"

In Mr. Anderson's letter to me of July 5, 1938, Titan Company, Inc. requested rights for Japan in Case DK 33 in Great Britain and Japan under DK 34 and in Great Britain, France, Germany, Holland and Japan in DK 35. Mr. Anderson sent me papers for execution by Du Pont

to facilitate the filing of these applications. I transmitted these papers to Du Pont on July 19th, 1938.

Mr. Hancok informed me that Mr. Rupprecht's attitude was the following: Mr. Rupprecht is quite willing that Titan Company, Inc. should have rights according to their request and is willing to have the applications filed in the respective countries. He desires that these rights be made part of a cross-license arrangement in which Du Pont will receive rights under the pending U. S. applications in Cases T. 169 and T. 187. (Case T. 169 is an I. G. case; T. 187 is the "RUTIOX" process patent—a Titangesellchaft case). Before going ahead with this proposed cross-licensing arrangement Mr. Rupprecht desires to await word from you concerning the attitude of Titan Company, Inc.'s associates with respect to the two cross-licensing agreements you took back to Europe with you. If these are approved by Titan Company, Inc.'s European associates, then Mr. Rupprecht feels he will be in a position to go ahead with the cross-licensing arrangement covering cases DK 33, 34, and 35 and cases T.169 and T. 187.

Mr. Hancock informed me that the Krebs people regard these cases as important patent applications.

The convention year for DK 33 expires September 30th, 1938; for case DK 34, October 2nd, 1938 and for case DK 35, November 2nd, 1938. In order that the papers in case DK 33 reach Japan before the convention term expires they should be mailed from my office on September 2nd. This letter should reach Paris by August 12th and I am confident that if a reply is received by August 29th, assuming that no reply has been received to my cable, I shall be able to start the papers on their way to Japan on September 2nd.

Yours very truly,

CFK:JL

Exhibit 904

Letterhead of

TITAN COMPANY, INC.

SA/LA

Paris, 24. August 1938

Mr. C. F. Kaegebehn
National Lead Company
Patent Department
111 Broadway
NEW YORK, N. Y.

Dear Mr. Kaegebehn,

Pending U. S. Applications of E. I. Du Pont de Nemours & Co.

I thank you for your letters of 22nd July and 3rd and 5th August addressed to Dr. Jebsen.

From your letter of 22nd July I note that if the assignment to Titan Company Inc. in case T. 136 U. S. Ser. 88.851 is recorded by the 26th inst, or about a week later, the patent can issue showing on its face that Titan Company Inc. is the assignee. I think this assignment might well be recorded without delay, and would ask you kindly to do so, if you are in agreement. I cabled you today as follows:

"YOUR LETTERS 22 JULY 3 AND 5 AUGUST SUGGEST YOU RECORD ASSIGNMENT T 136 ENABLING TITANINC APPEAR AS ASSIGNEE ON PATENTSPECIFICATION"

With regard to the other "T" cases referred to in your letter of 22nd July, I understand that there is no urgency in recording the assignments.

Exhibit 904

As particularly regards case T. 165 U. S. Ser. 155.040, Titan Company Inc. is, as mentioned in our letter of 8. July 1937, the owner of this application, and we can have it formally transferred from British Titan Produets Co. Ltd. to Titan Company Inc., whenever we so wish. It seems to me that it would be an advantage to have such formal transfer effected so that Titan Company Inc. appear as the owner on the patent specification which may issue—particularly in view of the case forming part of a cross-licensing agreement between Titan Company Inc. and Du Pont.

Please let me have your opinion on this question. If you agree that it is advisable to record an assignment to Titan Company Inc., I should be greatly obliged to you if you would send me form for such document.

Your above mentioned letters arrived after Dr. Jebsen's departure, and they will be brought to his attention when he returns here in the beginning of September.

Yours truly,

SIGURD ANDERSEN

Dr. G. Jebsen
For Mr. Andreas Ravnestad
c/o Titan Company, Inc.
26 rue de la Pépiniere
Paris—VIIIe—France

Gentlemen:

Further to our letter of July 22nd, we wish to inform you that the assignment documents as listed below have been duly recorded in the United States Patent Office:

Case	*U. S. Patent No.*	*U. S. Patent Assignment*
T. 112	No. 2.111.460	National Lead Co. to Titan Co., Inc.
T. 115	No. 11,164	National Lead Co. to Titan Co., Inc.
T. 115-B	No. 142,918	National Lead Co. to Titan Co., Inc.
T. 115-C	No. 142,928	National Lead Co. to Titan Co., Inc.
T. 136	No. 88.851	National Lead Co. to Titan Co., Inc.
T. 168	No. 155,040	R. W. Ancrum et al to British Titan Prod. Co., Ltd.

We are enclosing herewith for your files conformed copies of these assignments. We also wish to acknowledge receipt of your cable of August 24th, reading as follows:

Exhibit 905

"YOUR LETTERS 22 JULY 3 AND 5 AUGUST SUGGEST YOU RECORD ASSIGNMENT T 136 ENABLING TITANINC APPEAR AS ASSIGNEE ON PATENTSPECIFICATION"

In accordance with the instructions of this cable we wish to inform you that the assignment in case T. 136 has been recorded in time to enable the patent to issue with Titan Company, Inc. as the assignee.

Yours very truly,

NATIONAL LEAD COMPANY

September 7, 1938

Attention: Mr. S. Andersen

Re: Pending U.S. Applications of
E. I. Du Pont de Nemours & Co.

Gentlemen:—

Your letter of August 24th in the above matter has been received.

As you were advised in our letter of August 29th, cases T. 112, T. 115, T. 115-B, T. 115-C and T. 136 have already been assigned to Titan Company, and the respective assignments have been recorded in the United States Patent office.

With respect to the transfer of case T. 165 to Titan Company we may comment as follows: In the cross-licensing agreement under which Du Pont receives from Titan Company a non-exclusive license in this case Titan Company represents itself as possessing the right to grant such licenses. Du Pont accepts the word of Titan Company that Titan Company, in fact, has this right. Therefore, from point of view of Du Pont's position there is no necessity for transferring the case to Titan Company. From the point of view of the legality of the instrument itself, we believe that its provisions would be regarded by the United States courts as perfectly legal and sustainable. There is, as far as we can see, only one reason which militates in favor of transferring the case to Titan Company: Should, as a result of a Government investigation, or for some other rea-

son, this license agreement come to scrutiny, the question may arise as to how Titan Company derived its right from Titan Inc. to grant Du Pont a non-exclusive license? The answer to this question would of necessity have to be a revelation of the arrangement between British Titan Products and Titan Company Inc. If the case was assigined to Titan Company this question may be avoided. However, the record of the United States Patent Office would show the transfer of title from the inventors to British Titan Products and from that company to Titan Company Inc. We, therefore, doubt the advisability of transferring this particular case to Titan Company.

We have recommended that a continuation case under P. 165 be filed in the United States, and it may be advisable, if this recommendation be followed, to assign the new case directly from the inventors to Titan Company, Inc. As a matter of general policy it probably would be advisable to assign cases originating both with Titangesellschaft and British Titan Products directly to Titan Company, Inc. if this could be arranged.

Yours very truly,

NATIONAL LEAD COMPANY

CFK/rd

Exhibit 907

CONFERENCE OF MAY 9th, 1939 WITH MR. RUPPRECHT AND MR. HANCOCK (E. I. Du Pont De Nemours and Co.)

Mr. Rupprecht is pleased with the development of the present coöperation, and only hopes that the execution of license agreements can be expedited.

Regarding the attached lists, Mr. Rupprecht suggests license agreements including Group I of Du Pont and Group I of Titan Co., Inc., and to hold Group II—Titan Co., Inc. for future exchange—inquire whether I. G. Farbenindustrie will grant licenses to Du Pont under these issued patents.

Mr. Rupprecht desires me to describe interference practices in the United States and to point out that the possibility for interference between Du Pont applications and those of our group exist and are normal occurrences.

Re: Future Du Pont Licence Agreement.

Gentlemen:

This will confirm that during the course of our conversations concerning future Licence Agreements with Du Pont, I handed you a list setting forth Du Pont cases which licences have been requested and applications are being filed through Titan Company and which are not covered by any licence. The list further set forth U. S. applications now pending for which, as yet no formal licences have been given Du Pont. In addition, three Titan case patents under which Du Pont has received no formal licence, are enumerated together with a list of some I. G. Patents under which Du Pont is not licensed.

It is Mr. Rupprecht's suggestion that the next Licence Agreement embody an exchange of rights in Du Pont applications set forth in the list with those Titan applications and patents.

He further suggests that the eight I. G. patents be held in reserve for the Licence Agreement which will come after the next one.

Yours very truly,

Exhibit 909

September 6, 1939

Mr. John P. Hancock—

Re: *Proposed Titan Agreement*

I am noting below a few points for your consideration. Several of these points were previously noted in my letter of May 25, 1938, but so much time has elapsed, it seems advisable to repeat them here.

Article 1, page 8, second paragraph. Is it the intention that purchasers from Titan may export to the United States?

Article 2. Is it intended that purchasers from du Pont may export for use in countries where Titan is exclusively licensed?

In connection with the above two points, it may be noted that Article 8 does not clearly give the answer, since it applies to all applications and patents identified in the agreement.

Article 3, line 4. I suggest that the word "controlled" be eliminated as implying an intention to distinguish from the subsidiaries referred to in the preceding paragraph.

Article 5. Would it not be an improvement to state positively that Titan may not grant royalty-free licenses except as prescribed in Article 4? Would it not be to our advantage to specify a minimum royalty rate, since otherwise they will be in a position to grant licenses at a nominal

Exhibit 909

royalty and thus defeat the apparent intent of Article 4? Are not reports to be required?

Article 6. Is not the provision that Titan will not permit abandonment, if read literally, contrary to the intention of the parties as expressed in subsequent provisions?

Should we not provide for release from past infringement since we agree not to contest the issued patents of Titan?

Who is to determine what du Pont applications will be filed and where? Who is to file and prosecute? Are we impliedly obligated to file and prosecute all the foreign applications referred to?

LEE R. GRABILL, JR.

New York, N. Y.

Att.: Mr. C. F. Kaegebehn

Dear Sirs,

Future Du Pont Cross License Agreement

We beg to refer to your letter of the 7th of June with enclosed proposal for our next cross license agreement with Du Pont.

As to the cases included on our side, we would call your attention to the fact that U. S. application Ser. No. 136,806 (Case T 169) according to our records has been abandoned. If we are correct in this, and you find that it should be replaced by another case, please inform us of which case you propose to include of T 169 before preparing the draft agreement. We believe, however, that the simplest would be not to replace T 169 by an further T case if this is acceptable to Du Pont.—

With regard to case T 227, we do not as yet know whether the Titangesellschaft wishes to retain ownership to the case and give us an exclusive license or whether they are willing to assign the case to us, but we expect to receive information regarding their decision in the nearest future. This would not, as far as we can see, effect the form of cross license agreement, but we think that the agreement

Exhibit 910

should not be executed before we have a confirmation from Titangesellschaft re our rights to the case.

As to the other cases included, we have no remarks to make and are in agreement with the proposal.

As to the form of the cross license agreement, we take it that the alterations agreed upon with Du Pont, according to Mr. Kaegebehn's letter to Mr. Andersen of 9th August 1939, will be embodied in it.

We should be obliged if you would let us have 2 copies of the draft cross license agreement—in addition to the copies intended for execution.

Looking forward to your communication, we are,

Yours very truly,

SIGURD ANDERSEN

Exhibit 911

August 9th, 1939

Mr. S. Andersen
c/o Titan Co., Inc.
26, Rue de la Pépiniere
Paris—VIIIe—France

Dear Mr. Andersen:—

On August 4th I had a discussion with the Du Pont people concerning the various points which we considered in Paris. The following information will be of interest to you:

1.) Du Pont has no interest in controlling the filing or prosecution of the foreign applications originating from their inventions. They are perfectly willing that Titan Co., Inc. should file and prosecute the foreign applications in any way Titan Co., Inc. sees fit. Therefore, should you desire, you are at liberty to permit Titangesellschaft to file and to prosecute the Du Pont applications through Dr. Redies' department.

2.) Du Pont will be glad to furnish any technical information, as well as their evaluation as to the importance of the case upon a specific request relative to a specific case. Therefore, in the future when any questions arise in your mind, or in the minds of Titan Co., Inc.'s associates with respect to any Du Pont case, if you will communicate these questions to me, I shall be able to obtain answers to these questions for you.

3.) In the future, the charges incurred by Du Pont for legalizations, notarial acknowledgments, etc. will be billed

you in such manner that the cost per case will be shown for each country.

4.) Du Pont agrees to the insertion, Article 6, third line from the bottom, after "such" of the expression: *applications for Letters Patent or.*

5.) The meaning of "controlled subsidiaries", as I explained to you, is to denote companies in which Du Pont controls over 50 percent of the voting shares. There is a standard phrase which Du Pont uses in its contracts and which defines "controlled subsidiaries", and this phrase will be embodied in the next draft of contract to be sent you.

6.) Du Pont has no objection to Titan Co., Inc.'s revising the specifications in order to better meet the requirements for filing in individual foreign countries. Thus, they have no objections to cutting out unnecessary descriptive matter which serves only to teach the skill of the art to your competitors. However, they do not feel it possible to alter their manner of drafting United States specifications, since this manner is based upon what their attorney advises is the best method of presenting the case to the United States Patent Office.

7.) Without officially requesting Du Pont to do so, I canvassed the opinion of their legal people concerning whether or not it would be possible to revise Article 10 to give Titan Co., Inc., per se, the right to sue infringers while limiting Du Pont's right to sue upon obtaining Titan Co., Inc.'s consent. The opinion is that Du Pont could not consent to this. It was explained that Du Pont has many subsidiaries, associates and friends in foreign countries,

and they should not like to give Titan Co., Inc. a right to sue which could be exercised by Titan Co., Inc. perhaps against one of their friends without being in a position to act as mediators. By making Titan Co., Inc.'s right to sue dependent upon obtaining Du Pont's consent, Du Pont feels itself protecting its associates, subsidiaries and friends. It was explained to me that a similar situation exists in the United States where, for instance, one department of Du Pont will have friendly relations with a certain American company, whereas another department will not. Consequently, no department is permitted to enter contracts or bring about suits, etc. without the consent of all departments.

8.) I told Du Pont that Titan Co., Inc. did not fore-see any objection to Mr. Rupprecht's suggestion as to cross-licensing in accordance with the list I handed you with my letter of June 7th, although as yet official confirmation of this has not been received by me. Accordingly, in order to save time, I am consulting with Mr. Hancock to prepare a draft of a cross-licensing agreement which, when completed, will be forwarded to you for consideration.

Yours very truly,

CFK:JL

Exhibit 912

Copy to: Mr. C. H. Rupprecht
Krebs—Nemours Building

October 25, 1939.

Charles F. Kaegebehn, Esq.,
Titan Company, Inc.,
111 Broadway,
New York City.

Dear Mr. Kaegebehn:

Re Proposed DuPont-Titan
Agreement

I am forwarding herewith duplicate originals together with extra copy of the above license agreement. Please note that although the proposed agreement has been approved as to form by our Legal Department, we have yet to procure the approval of the Company's Executive Committee before due execution on our part can be had. We have deferred obtaining this latter approval, pending formal approval or execution of the agreement by Titan.

As I already informed you, certain changes have been made in the present agreement which effect a slight variance from the former contract. However, all of these changes appear to be minor in character, are completely reciprocal, and I believe, in strict accordance with the intent of the parties. These changes, in particular, are:

1) The granting clauses (Articles 1 and 2) have been modified to specify that the rights of use granted purchasers from either DuPont or Titan shall be restricted to "within the licensed territory" involved in such grant.

2) Certain of the involved DuPont applications, i.e. those set out at the top of page 8 of the agreement, make disclosure that their titanium oxide pigments and/or extenders may be used in the manufacture of particular coating compositions or are useful in ceramic production. Since any grant on the part of Krebs outside the field of titanium compounds useful as pigments presents possible conflict with contractual obligations of other departments of the Company, it has been necessary to restrict the rights which are granted Titan under these applications to the use of the involved inventions in the manufacture and sale of titanium compounds which can be used as pigments. This change appears to be in complete accord with the prior agreement in so far as said agreement affected extender inventions. You indicated that this, as well as the preceding change, was acceptable to you.

3) In Article 3, the word "controlled" preceding "subsidiaries" has been deleted. Its elimination in nowise affects the agreement, since Article 12 (added at your own request) sets forth that a subsidiary of either party, as that term is used in the agreement, is defined as a company which owns more than 50% of the subsidiary's stock entitled to vote for directors.

4) To avoid possible confusion between the language of Articles 4 and 5, Article 5 has been modified to provide that Titan shall have the right "provided DuPont consents" to grant sub-licenses for a stated royalty, etc.

5) Article 6 of the accompanying agreement (corresponding to Article 6 of the preceding April 21, 1939 agreement) has been modified to provide that in the event Titan shall desire to abandon *any applications* or letters patent, it will first notify DuPont. This at your request.

Exhibit 912

6) Article 7 of the instant agreement corresponds to Article 7 of the prior agreement, except that in lieu of Titan and DuPont acknowledging validity of issued letters patent as well as those subsequently arising pursuant to pending applications, the companies merely acknowledge the validity of patents which have already issued. In view of the fact that an implied acknowledgment of validity arises by reason of the license, this change appears to be of minor character. In addition, the Article differs from the like article of the previous agreement in that a provision is now present that each party releases the other from liability for past infringements of such letters patent. You indicated that this latter change was acceptable to you.

In all other respects the proposed agreement conforms to the former instrument. I trust that the agreement is in a form acceptable to Titan Inc.

Very truly yours;

E. I. Du Pont de Nemours & Co.

Exhibit 913

Blind cc: C. H. Rupprecht, Esq.
Krebs—Nemours Bldg.

January 24, 1940

Charles F. Kaegebehn, Esq.
c/o Titan Company, Inc.
111 Broadway
New York City

PATENT DEPT.

Dear Mr. Kaegebehn:

Re: Proposed du Pont-Titan Agreement

Attached hereto find duplicate originals, with one extra copy, of license agreement, involving seven du Pont applications for letters patent, three Titan, Inc. applications, and one patent. Although the agreement has been approved as to form by our Legal Department, procurance of Executive Committee approval is yet to be had by us before we can execute. We have deferred obtaining final approval pending submission for approval or execution by Titan.

The provisions of the instant agreement are the same as those of the pending non-executed agreement submitted you with my letter of October 25, 1939. Two relatively minor changes have been effected, both of which are more or less informal in character. These are as follows:

(1) The granting clause, page 3, now sets out that the exclusive right granted Titan is "in the following countries and under the following foreign applications for letters patent."

Exhibit 913

(2) Clause 6, deemed somewhat indefinite by our Legal Department, has been modified, whereby it now provides that Titan will not permit abandonment of an application or patent without first promptly notifying du Pont of its intention to so abandon, and within ample time to permit us to take over prosecution or maintenance, should we so desire.

Your attention is also directed to the proviso of Clause 2 that in respect to the applications of Heckert 689-K, Booge 888-K, Geddes 912-K and Schaumann 915-K, the rights granted to Titan are restricted to the use of the inventions involved in such applications, in the manufacture and sale of titanium compounds which can be used as pigments. The disclosures of these cases were broad enough to include various uses of the titanium oxide pigment or were directed to an extender per se. In order to avoid any possible conflict with prior commitments, it has been necessary to introduce the proviso mentioned. Since this procedure has been adopted in prior instances where cases of this character have arisen, we assume that the proviso is entirely acceptable to you.

Trusting that the agreement is acceptable to your people, I am

Very truly yours,

E. I. du Pont de Nemours & Co.

Attention: *Mr. C. R. Kaegebehn*

Dear Sirs,

Re: PROPOSED DU PONT TITAN COMPANY INC. CROSS LICENCE AGREEMENT

With our letter of the 12th inst. we have sent you cross licence agreement, signed by Dr. Jebsen, and have called your attention to the points on which this agreement differs from the draft sent us with your letter of the 31st October 1939. In the following are some comiments replying to the comments by Mr. Hancock and yourselves in your letter of the 31st October 1939—as far as they have not been handled in our letter of the 12th inst.

/1/ See comments last part of our letter of February 12th.

/2/ See comments page 2 under "article 1" in our letter of the 12th inst.

/3/ We agree that the alteration /cancellation of the word "controlled" before "subsidiaries"/ appears to be

acceptable in view of the inclusion of the new section 12 in the agreement.

The reservation regarding I.C.I.'s rights in section 3 refers to "The United Kingdom of Great Britain, Ireland and The Isle of Man"

We are wondering whether this is meant to cover Eire /the Irish Free State/ or not. If not, the commonly used definition of the United Kingdom is "The United Kingdom of Great Britain, Northern Ireland and the Isle of Man". In this connection you are certainly aware that a British patent covers The United Kingdom as above defined, i.e. it does not cover Eire, which has its own Patent Office.

We have not made any alteration regarding this in the present agreement, but we think that the point should be cleared up and necessary correction made in future agreements.

4/ We are in agreement with this alteration.

5/ The desirability of an inclusion of a reference to applications in this section was discussed with Mr. Kaegebehn this summer and we are pleased to note that Du Pont has accepted such inclusion.

6/ Section 7., as it now reads, frees the parties from obligation put on them in previous cross license agreements not to contest the validity of the patents which may be granted upon the applications involved. It will thus be open to the parties to contest the validity of patents resulting from the applications at any time during their lives /excepting the implication involved by the license in force—as mentioned in your letter/.

p.t.o.

There might be a posibility of this alteration in section 7 becoming of practical interest in connection with patents resulting from applications included in the agreement and under which licenses have been given for only a part of their scope according to the penultimate paragraphs in article I and II. It seems to us that the acknowledgement of validity implied by the license, as mentioned by you, cannot exist for such subject matter of a patent under which no license is given, and that accordingly it should be free to the licensee to contest the validity of the patent as far as such subject matter is concerned. It may be that the possibility of this point becoming of importance is rather remote, and we can foresee complications for inst. in the event of an attack on the not licensed subject matter of the patent involving the probability of the entire patent being revoked. This alteration in Section 7. might also be of interest if an interference, provoked by one of the parties against patents resulting from applications included in the agreement, is considered as a contest of validity. We understand, however, from a recent incident /interference between U.S. Patent No.2.161.755—Case T-165 and Du Pont's Application Ser.No. 262.695/ that Du Pont is not of the opinion that an interference is a "contest of validity" and that the question is not clear.—

We will not propose any amendment to the present agreement on account of the above, but would not have omitted to call these possibilities to your attention in view of your remark.

As to the reciprocal release from liability for past infringement, we have no objection to inserting this clause,

Exhibit 914

in the present agreement. For the sake of order we would—in view of the 3rd line on page 3 of your letter—mention that the clause relates only to patents and does not include applications, as mentioned by you. It seems to us that the clause will consequently not cover patents resulting from applications specified in the agreement.

We would be glad to receive any comments you might with to make to the above.

Yours very truly,

Sign.: Sigurd Andersen

COPY

Letterhead of

TITAN COMPANY, INC.

Address for Correspondence:
111 Broadway, New York

December 12, 1940

Mr. C. J. Stopford
British Titan Products Company Limited
Burlington House, Yarm Road
Eaglescliffe
Stockton-on-Tees
England

Dear Mr. Stopford:

Re: DK 42—British Patent 525,472

Many thanks for your letter of November 15, 1940.

The proposal for an arrangement with N.T.P. as suggested in their internal memo. of November 11th, seems a good solution. (We assume that the expression "Exchange Patent" does mean a mutual cross-licensing under the two patents in question.) We will take up the matter with duPont and do not expect any difficulty from them.

As to the carrying out of this solution, you will note that the license to N.T.P. will have to be given by Titan Company, Inc. according to the agreements with duPont and Titan Company, Inc. will need the formal permission from B.T.P., since B.T.P. now has the exclusive license with certain specified limitations.

There is, however, one point which has to be considered and may stand in the way of carrying out the suggestion.

Exhibit 915

namely, the conditions of Article 14 of our license agreement, which are conditions of a reciprocal nature embodied in all the agreements with our associated companies, with the exception of the Japanese who can not grant a sublicense except with the permission of their licensors. One of the main reasons for these conditions is as you know to prevent aid in the skill of the art to competitors.

The DK case must not only be looked upon from the point of view of dispersion and coagulation but also with regard to the production of pigments containing aluminum oxide which, as you know, are of special importance. The suggestion to develop pigments of this type was, as you remember, brought forward by one of the associated companies, which has always shown a special interest in this type of pigment.

Under normal circumstances we would seek and, I think, obtain the approval of all the associated companies to the above proposal. We have hesitated to bring the matter before our associates and do not under the present conditions consider ourselves entitled to do so without your approval. In this connection we may mention that we have in view of another license question regarding which we cabled you, discussed here in principle the question of whether, under the present circumstances, we should in principle take actions which in form are contrary to the agreements,—provided we consider that they in reality serve the interests of all,—without asking the approval of our associates even where they can be reached by correspondence. We have come to the conclusion not to do so and not act only on our own judgment for several reasons:

1) Consideration for our associates,

2) Reluctance to deviate from principles laid down,

3) Creation of a precedence of this kind may lead to our associates considering themselves entitled to act in the same way and you will easily realize that we then may have started to slide downhill as regards cooperation.

Please note that we are here considering situations where the associates *can be contacted.* If situations should arise where associates can not be contacted and it is a question of arrangements in the interest of all and in the spirit, although contrary to the letter of the agreements, our considerations may have taken a different course.

We should much regret if the complications as mentioned above should prevent an understanding to be reached in this matter, and this particularly in view of the very interesting information contained in your letter of November 16th regarding the development of the relations between N.T.P. (Laporte) and B.T.P.

Considering the above we suggest one of the following alternatives:

1) Granting of a license under the patent Case DK 42 provided Laporte will undertake an obligation not to export beyond B.T.P.'s territory any product manufactured under the license

2) Reach an understanding on the basis that you and we will not object to N.T.P. working according to Case DK 42 during the war period, and if after the war we could not get our associates' approval to so license N.T.P. (Laporte), we would undertake to let the patent drop. We assume then that duPont when the time comes would not maintain it for their

Exhibit 915

own account, which in view of their practice hitherto is not likely.

The last alternative may look "extraordinary" at the face of it from a direct practical point of view but there is a considerable reality in it.

Hoping you will be able to follow one of these lines, I am, with kindest regards,

Yours sincerely,

(Signed) G. JEBSEN

Exhibit 916

Letterhead of

TITAN COMPANY, INC.

SA/LA

Paris, 9 November 1938

National Lead Company
Patent Department
111 Broadway
NEW YORK N.Y. *Att.Mr.C.F.Kaegebehn*

Dear Sirs,

Pending U.S.Applications of E.I. Du Pont de Nemours & Co. Cases DK 36 to DK 41

We beg to refer to your letters of the 15th December 1937 and the 15th February 1938 by which you sent us copies of the following pending U.S.applications of E.I. Du Pont de Nemours & Co.:

U.S.Ser.No.	*Inventor*	*Our Ref.*
177.739	Roy W. Sullivan	DK 36
181.990	Hagar	DK 37
183.127	McCleary	DK 38
183.311	Schwartz	DK 39
183.322	Sullivan	DK 40
187.431	Schauman	DK 41

We have considered these patent applications and have also obtained the opinion of our associates companies over here, and find that it would be of interest to have licenses in cases and countries as follows:

Exhibit 916

		England
DK 36	U.S.Ser.177.739	France
		Holland
		Belgium
		Italy
		Japan
DK 37	U.S.Ser.181.990	Germany
		France
DK 38	" "	183.127—France
DK 39	" "	183.311—Germany
		France
DK 40	" "	183.322—Germany
		France

I should be obliged to you if you would take up this matter with Du Pont.

For your information we would mention that the licenses in France in cases DK 37, 38, 39 and 40 are found desirable in order to obtain the filing of patent applications for purposes of record.

We would appreciate it greatly if Du Pont, as in the former cases, would execute the necessary documents for filing applications in cases and countries listed above, without awaiting the execution of corresponding License Agreement (s), as this would enable us to file the applications under the Provisions of the International Convention.

We enclose herewith blank forms as follows:

Exhibit 916

Germany for Cases DK 37—39—40

3 Powers of attorney
3 Inventors' declaration
3 Assignments

France for Cases DK 36—37—38—39—40

5 Powers of attorney
5 Assignments

Holland for Case DK 36

1 Power of attorney
1 Assignment

Belgium for Case DK 36

1 Power of attorney
1 Assignment

Italy for case DK 36

1 Power of attorney
1 Assignment

Japan for case DK 36

1 Power of attorney with declaration of nationality
1 Assignment

We also enclose 2 copies of each of the forms.

You will be aware that the assignments for Germany, France and Italy have to be legalised by the consuls of the respective countries and further that the declaration of nationality in the power of attorney for Japan should be executed before a notary public.

The papers required for the application in England in DK 36 will be sent to you direct by our English agents,

Exhibit 916

Messrs. Boult, Wade & Tennant, 112 Hatton Garden, LONDON E.C.I. with indication as to their execution.

Kindly also order 4 certified copies of U.S.Ser.177.739 DK 36. We should appreciate it very much if you would forward the papers for Japan, including one of the certified copies in case DK 36, direct to our Japanese agents, under the following address: Nagashima Law & Patent Office, 6 Tsukiji 3 chome, Kiobashi-ku TOKIO. Please forward the remaining papers and certified copies to us.

Thanking you in anticipation,

We are,

Yours very truly,

Dear Mr. Henrich:

Re: Foreign Applications—
Our Cases K-834-C and 892-K—
DK Cases 47-49

In accordance with the request contained in your letter of March 6th, there are enclosed various formal papers which you have submitted, all duly executed.

A County Clerk's certificate has been obtained in Case DK-49. Previously, a County Clerk's certificate was obtained in your case DK-36 (our case 873-K). The latter was forwarded to you a few days ago. In procuring these certificates, I personally advanced $1.00.

Also enclosed are the Powers to Inspect in Cases K-834-C and 892-K.

In the instance of your case DK-47, it was necessary to rewrite the assignment document for execution, because one inventor is presently located in Philadelphia. The papers originally submitted for execution, as well as the rewritten and executed assignment document, are enclosed.

Very truly yours,

E. I. Du Pont de Nemours & Co.

PATENT DEPT.

Dear Mr. Kaegebehn:

This will reply to your letter of May 14th, advising of the receipt of a cable from Fredrikstad, Norway, informing that Titan, Inc. desires to relinquish certain licenses and obtain consent to abandon certain foreign cases covered by agreements between Titan, Inc. and du Pont.

Immediately upon receipt of your letter, I communicated its contents to the Krebs Department and am now advised that du Pont will have no objection to the proposed action by Titan, Inc. on the cases involved. Specifically, du Pont has no objection to the relinquishment of Titan, Inc.'s licenses in Germany and Czechoslovakia under the Booge Blended Pigments 575-K application (your Case T-200) covered by the agreement dated July 27, 1937. Du Pont also consents to your proposed abandonment in Germany of Cases DK-16, 23, 24, 28, 30, 35, 37, 39, 40, 42 and 49, included, respectively, in the du Pont-Titan agreements dated April 21, 1939 and May 10, 1940. As we understand it, these DK cases correspond to Krebs Cases 754-K, 632, K-834-B, 868½, 634, 884, 893, K-885-A, 885, 898 and 892-K.

Exhibit 933

In addition to the above cases, you may recall that on December 20, 1939 you also advised du Pont that Titan, Inc. had decided on non-maintenance of certain recently issued French patents and requested that we advise you of our approval thereof. In particular these patents and their involved reference numbers are as follows:

Pat. No.	*Your Reference*	*Our Reference*
847,987	DK-37	893-K
848,405	DK-38	738-K
848,406	DK-39	K-885-A
848,407	DK-40	885-K
850,882	DK-43	894-K

These latter cases are included in the concluded du Pont-Titan, Inc. agreement, dated May 10, 1940.

I have taken up with Krebs the question of non-maintenance of these cases and am advised that they have no objection to your proposed action and do not desire to maintain the cases in du Pont's behalf.

Very truly yours,

E. I. du Pont de Nemours & Co.

TITAN COMPANY, INC.

ADDRESS FOR CORRESPONDENCE:
Sigurd Andersen
Stora Nygatan 31
Stockholm.

Stockholm, the 9th August 1940

Dr. G. Jebsen Esq.
c/o National Lead Company,
111 Broadway,
NEW YORK U.S.A.

Dear Dr. Jebsen,

Proposed Du Pont Titanine Cross License Agreement
DK-Cases 51, 52, 56, 57, 60 and 61
T-Cases 43, 207, 240 and 242

I enclose herewith my comments to the draft for the above cross license agreement which was sent us with N.L. Co's letter of January 31, 1940.

I would mention that we wish to abandon three of the Du Pont applications included in this draft, namely, Cases DK 51 and DK 61 Germany and Case DK 61 Japan, the reason being that Titangesellschaft and Titan Kogyo respectively, who asked for these licenses, later on have come to the conclusion that the cases are not of sufficient value to them to uphold their request.

Du Pont have given their consent to the abandonment of DK 61 Japan. As to DK 51 and DK 61 Germany, I enclose copy of my letter to Mr. Kaegebehn of yesterday notifying him of our wish to abandon the cases.

Exhibit 935

The question whether Du Pont applications re. which we have notified Du Pont regarding our desire to abandon, previous to the execution of the cross license agreement in which they should be included, could be left out of the cross license agreement has been raised previously but, as far as I remember, Du Pont have been reluctant to leave them out, their attitude being that they could not consent to an abandonment before the agreement containing the stipulations re, such abandonment had been executed. They have now made an exception from this in consenting to the abandonment of DK 61 Japan, which is included in the draft cross license agreement now under consideration.

I am mentioning this point for the event that you may wish to take it up with Mr. Kaegebehn and Du Pont. I don't think that it is very important but it would of course be an advantage if effective licenses only be listed in the cross license agreements.

I am enclosing the comments in duplicate so that you, if you so wish, may hand one copy to Mr. Kaegebehn.

As I presume that the draft contract and the correspondance of interest is available to you in Mr. Kaegebehn's office, I am not sending you these papers in view of the considerable airmail postage involved.

For the sake of order I have to-day written Mr. Kaegebehn as per enclosed copy.

Yours sincerely,

SIGURD ANDERSEN
Sigurd Andersen

ADDRESS FOR CORRESPONDENCE:
Sigurd Andersen
Stora Nygatan 31
Stockholm.

Enclosure to letter to Dr. G. Jebsen
From Mr. Sigurd Andersen
Dated 9th August, 1940.

COMMENTS TO
DRAFT CROSS LICENSE AGREEMENT INC.—D.

sent us with N.L.Co's letter January 31, 1940

DK-Cases 51, 52, 56, 57, 60 and 61
T-Cases 43, 207, 240 and 242

CLAUSE 1

The first paragraph differs from that of foregoing agreements in that Du Pont has inserted "in the following countries and" after "license".

I see no objection to this alteration.

"/2/ Throughout the United Kingdom of Great Britain, Ireland and the Isle of Man": I propose to insert "Northern" before "Ireland" in order to bring the territory covered by the license in accordance with the territory covered by a British patent.

In addition to the licenses listed under clause 1 of the draft we asked for licenses under Case DK 61 /Du Pont's reference 912-K/ in Great Britain and Holland. I presume that these have been left out by an oversight.

(Applications in DK 61 in these countries as well as the other applications listed under clause 1 have been filed) These should accordingly be inserted as follows: under "/2/ Throughout the United Kingdom of Great Britain, Northern Ireland and the Isle of Man":

"c/ British Application corresponding to US application /912-K/ of John A. Geddes for Improved Titanium Oxide Pigments and Process of Making Same. Serial No. 228,926, filed September 8, 1939."

and under "/5/ Throughout Holland":

"b/ Dutch Application corresponding to US application /912-K/ of John A. Geddes for Improved Titanium Oxide Pigments and Process of Making Same, Serial No. 228,926, filed September 8, 1939".

In line 2 from the bottom of the penultimate paragraph of clause 1, I suggest to alter "manufacture and sale" to "manufacture, use and/or sale" so as to bring the draft in accordance with the previous cross license agreement. According to Mr. Kaegebehn's letter of the 14th of May this year Du Pont has accepted such wording of this passage.

The last paragraph of clause 1 states that purchasers from Titan and/or its sublicensees shall be free to use the products of the licensed inventions "within the licensed territory of this section" i.e. within the countries in which Titan is given licenses in each particular case.

The passage "within the licensed territory of this section" was inserted by Du Pont in the previous cross license agreement and we accepted this alteration with

the following reservation /our letter to N.L.Co of the 12th of February 1940/:

"We interpret this paragraph as it now reads as meaning that the purchasers are free to use and sell in the countries of Titan Company Inc's territory where we get licenses in each particular case, and in countries where no patents are taken out.

This being so, we are willing to accept the insertion of this passage on the understanding that—in the event of Dupont taking out patents in other countries of our territory than those specified in the agreement in each particular case, we will get licenses under such patents in countries outside Central and South America, and that we will get licenses for use and sale of the products in any countries in Central and South America in which Dupont might take out patents in any of the cases included in the agreement."

I am not as yet informed of Du Pont's comments to this reservation.

CLAUSE 2

I suggest to insert our reference numbers /T-numbers/ under the particular applications and patents, as has been done in the previous agreement.

1. US Serial No. 277.870 = Case T. 217
2. US Serial No. 283.986 = Case T. 240
3. US Serial No. 300.004 = Case T. 242
4. Patent No. 1,852.510 = Case T. 43

Of the patents and applications under which Titan grants Du Pont licenses according to clause 2, there are

p.t.o.

Exhibit 935

two cases which in addition to titanium compounds, which can be used as pigments, cover other matters, namely, P e and Ancrum, US application Serial No. 283.986 /T.240/ covering titanium pigments and printing inks and US patent No. 1.852.510 /T. 43/ Peder Farup covering a process of treating titaniferous materials with acid i.e. a process which may be used in the manufacture of titanium pigments as well as in the manufacture of other titanium compounds.

Following the usual practice, these licenses should be restricted by inserting the following passage at the end of the penultimate paragraph of clause 2:

"Provided, however, that in respect of aforesaid applications of Raspe and Ancrum, CaseT240, and aforesaid patent of Farup, Case T.43, the rights granted Du Pont hereunder shall be restricted to the use of the inventions involved in said application T.240 and said patent T.43 in the manufacture, use and/or sale of titanium compounds which can be used as pigments."

CLAUSE 3

From the photostate copy of the previous license agreement (of the 10th of May. 1940) I understand that the reservation as to Imperial Chemical Industries Ltd. covers the United Kingdom only and not Eire /the Irish Freestate/. "Northern" should accordingly be inserted before "Ireland" in the last line of clause 3.

CLAUSE 4

Kobe should be altered to Tokio in the address of Titan Kogyo, as this is the address of the Company according to the last information I have received.

Exhibit 935

CLAUSE 6

Du Pont has proposed an alteration of the wording of the paragraph relating to conditions for Titan's abandonment of Du Pont's patents and applications. I consider the alteration proposed to be an improvement.

Clauses 7 to 13 inclusive are identical* with the corresponding clauses of the previous cross license agreement.

At the time being I have no further remarks to make in connection with these clauses but it may be of interest to have Mr. Kaegebein's comments to the questions raised in our letter of February 13th, 1940, in connection with clause 7. Copy of this letter is attached.

---

* excepting the alteration of "herein-involved" to "herein-licensed" in Clause 7, line 2,—which seems in order.

Re; Your Case 899-K—Our Case DK 44
Japan

Dear Mr. Hancock:—

Our foreign associates have just advised us that they do not wish to maintain further the above identified Japanese case.

The license covering this case was included in the Agreement of May 10th, 1940. Will you please advise whether Du Pont wishes to maintain the case on its own behalf, or whether it should be allowed to lapse.

Yours very truly,

Dear Sirs:—

Abandonment DK-cases Germany.

On June 20th we informed you that we are abandoning various DK-cases filed in Germany.

Amongst the patents mentioned was also case DK-35. For the sake of order we would draw your attention to the fact that this German Patent has not been abandoned, as in the meantime Titangesellschaft informed us that, upon reconsideration of this case, they would be interested in a further prosecution of this application and they reported that they would take up again the question of maintenance if and when the patent is granted on the application.

We would suggest that you inform du Pont correspondingly in order that they may be kept informed of the situation as regards this case.

The remaining patent cases mentioned in our letter of June 20th, have been abandoned.

Yours very truly,

H. B. ECKHOFF

MINUTES: MEETING December 3rd, 1940

TITAN COMPANY, INC.

Present:
Dr. G. Jebsen
Mr. C. F. Kaegebehn

MATTER CONSIDERED: Transmission of Licenses under DK Case Patents to B. T. P., S. I. T. and Titan Kogyo.

Mr. Andersen's letter of September 11th and 16th, 1940 with which he sent documents to be signed by Dr. Jebsen were read. These were as follows:

1.) Letter from Titan Co., Inc. to S. I. T. granting them sub-licenses under Cases DK 37, DK 38, DK 39, DK 40 and DK 43, to which was attached excerpts from the Du Pont-Titan Co., Inc. Agreement of May 10th, 1940.

2.) Letter from Titan Co., Inc. to Titan Kogyo, granting them sub-licenses under Cases DK 15-32, to which was attached excerpts from the License Agreement of Du Pont-Titan Co., Inc. of April 21st, 1939.

3.) Letter from Titan Co., Inc. to Titan Kogyo granting them sub-licenses under Cases DK 33-49, to which was attached excerpt of License Agreement of May 10th, 1940 between Titan Co., Inc. and Du Pont.

Exhibit 942

4.) Letter from Titan Co., Inc. to B. T. P. granting them sub-licenses under cases DK 33-49 to which was attached excerpts from the License Agreement of Du Pont-Titan Co., Inc. of May 10th, 1940.

Dr. Jebsen signed the four above listed documents and dated them December 10th, 1940.

Mr. Kaegebehn was instructed to send the letters addressed to B. T. P. and Titan Kogyo and to place in his vault for safe-keeping, pending further instructions, the letter to S. I. T. A cable was drafted to Mr. Andersen, informing him that Dr. Jebsen had signed and dated the documents and that the three mentioned letters had been forwarded to the respective addressees, and the fourth, addressed to S. I. T., was being held.

Attention: Mr. C. J. Stopford

Dear Sirs:

British Patents and Patent Applications
of E. I. Du Pont de Nemours & Co.
Cases DK-33 to DK-49

According to a cross licence agreement dated the 10th of May 1940 between E. I. Du Pont de Nemours & Co. and our Company we have—on certain terms and conditions as specified in the enclosed extract—been granted licences under the following British patent applications:

British application corresponding to US application /876-K/ of Robert K. Whitten for Process for Production of Improved Titanium Pigments, Serial No. 166,943, filed October 2, 1937 /Our Reference DK-34/;

British application corresponding to US application /884-K/ of Robert M. McKinney for Process for Making Titanium Pigments, Serial No. 172,378, filed November 2, 1937 /Our Reference DK-35/;

Exhibit 943

British application corresponding to US application /873-K/ of Roy W. Sullivan for Process for Making Anhydrite, Serial No. 177,739, filed December 2, 1937 /Our Reference DK-36/;

British application corresponding to US application /898-K/ of Robert M. McKinney for Pigment Treating Process and Agents Therefor, Serial No. 191,967, filed February 23, 1938 /Our Reference DK-42/;

We hereby grant you a sublicence under the above mentioned British patent applications, this sublicence being restricted and subject to reservations as specified in the enclosed extract of the above mentioned cross licence agreement of 10. May 1940—and its grant being conditional upon your true and faithful performance of all undertakings and covenants on which our fulfillment of the stipulations of this cross licence agreement is dependent upon you as a sublicencee—these stipulations being likewise stated in the enclosed extract—and on the following particular conditions:

a/ You undertake to reimburse the part of our expenses according to art. 6 of the cross licence agreement which have been and will be involved in the prosecution of the herein sublicenced British patent applications and in the maintenance of any patents which have been or will be granted on them.

b/ You assume the same obligations as we have assumed according to art. 7 and 8.

c/ You accept the stipulations of art. 9, as if the words "Du Pont" were replaced by "Dupont and/or Titan"

Exhibit 943

and the word "Titan" by "British Titan Products Co. Ltd."

d/ You accept the stipulation of art. 10 and will notify us of infringements of herein-sublicenced patents and patent applications whenever such infringement comes to your attention.

We will, on your request in each particular case, endeavour to obtain Du Pont's agreement to give you the right to bring suit against specified infringer or infringers of herein sublicenced patents and patent applications or to join in such suit by Du Pont and/or ourselves on the understanding that your bringing or joining in such suit be subject to the principles stipulated in art. 10.

e/ You accept the stipulation of art. 11 regarding recoveries in litigation as if the words "Dupont and Titan" were replaced by "Dupont and/or Titan and British Titan Products Co. Ltd.".

f/ You will, in case you are called upon, fulfill towards Du Pont and/or ourselves the obligation we have taken on towards Du Pont according to the last period of art. 11, reading: "Where either party hereto brings suit against an infringer upon a patent licenced hereunder, the other party agrees to assist in the prosecution of said suit to the extent of making available any pertinent evidence in its possession."

g/ You accept the definition in art. 12.

Exhibit 943

We will inform you in a separate letter of filing dates and British numbers of the applications as well as of data regarding the patents which have up to now been granted on them.

Please acknowledge the receipt of this letter with your approval.

Yours very truly,

(signed) SIGURD ANDERSEN

Exhibit 944

MEMO. OF CONFERENCE—DR. JEBSEN AND MR. KAEGEBEHN—*Jan. 31, 1941*

Discussing the cross-license agreement between Du Pont and Titan Co., Inc., Mr. Kaegebehn drew attention to the possibility that Du Pont's interests may develop in such a manner that the possibility of Titan Co., Inc. and its non-American associates obtaining licenses to use and sell products within the Licensed Field in Central and South America may be excluded. It was noted that the National Lead Company agreement with Du Pont gives National Lead Co. the right to use and sell in Central and South America.

If such a situation arises, conditions will have developed which are against the understanding forming the basis for Titan Co., Inc.'s approval of the agreement between Du Pont and National Lead Co. (particularly I. G. Farbenindustrie, respectively, Titangesellschaft). This situation could, under certain circumstances, lead to the exclusion of Titan Co., Inc. and its non-American associates from Central and South America, to the advantage of National Lead Co. (and Du Pont), and so create a considerable ill feeling. A way partially to adjust this situation may be for National Lead Co. to permit Titan Co., Inc. and its associates to sell National Lead Co.'s products in Central and South America on the best possible terms, or to share the profits from shares in those countries in proportion corresponding to the two party's positions in these markets before the above situation was created, including consideration of potentiality.

Exhibit 945

DRAFT

June 3, 1941

TO: COMMITTEE ON PATENTS

FROM: KREBS PIGMENTS DEPARTMENT

PROPOSED LICENSE AGREEMENT WITH TITAN COMPANY, INC. COVERING SPECIFIC TITANIUM PIGMENT PATENTS

Herewith is submitted proposed license agreement with Titan Company, Inc. covering exchange of rights under a number of their United States Letters Patent and Applications, for rights under a number of du Pont foreign applications in several countries, as listed hereafter, all rights being restricted to the titanium pigment field.

Titan Company, Inc., a Delaware corporation, is owned 87% by National Lead Company, and handles all patent matters in foreign countries for National Lead Company and its foreign associates, also acting as sales agent for the latter. Foreign associates of National Lead Company involved in this agreement are Titangesellschaft m.b.H. of Leverkusen, Germany, owned 50% by National Lead Company and 50% by I. G.; British Titan Products Company, Billingham, England, in which National Lead Company has a 49% interest, I.C.I. 17%, with the remaining 17% owned by several other British companies; Societe Industrielle du Titane, Paris, France, in which Titan Company, Inc. has a 50% interest; and Titan Kogyo Kabushiki Kaisha, Tokyo, Japan, in which Titangesellschaft of Germany is a minority stockholder.

Negotiations leading to this proposed agreement were begun early in 1939. The du Pont U.S. patent applications

corresponding to their equivalent foreign applications involved, were all filed in the United States Patent Office between June 15 and October 7, 1938, and these foreign applications were filed in the various countries between June 16 and September 19, 1939. Some of the applications have since been issued as patents in the United States and foreign countries.

Except for some minor changes, the terms of the proposed agreement were practically agreed upon in the fall of 1939 and first draft submitted to the Legal Department on November 27, 1939, approval of which was obtained January 23, 1940. Subsequently Titan Company, Inc. submitted the proposed agreement to their foreign associates for approval; but the documents were lost during the German occupation of Paris. The Vice President of Titan Company, Inc., whose headquarters were in Paris, and who has handled all negotiations, has now been in the United States for some months and has advised that the proposed agreement is approved and he is prepared to execute.

The du Pont foreign applications and/or patents involved correspond to the following seven United States applications and patents, the same applications having been filed in more than one country in a number of instances:

In France:

Serial No.215,218, Filed June 22, 1938—"Titanium Pigment Production"

Serial No.213,835, Filed June 15, 1938—"Process of Preparing Alkaline Earth Metal Titanates"

Exhibit 945

Serial No.219,601, Filed July 16, 1938—"Titanium Oxide Suspensions"

Serial No.228,926, Filed September 8, 1938—"Improved Titanium Oxide Pigments and Process of Making Same"

In United Kingdom of Great Britan, Northern Ireland and the Isle of Man:

Serial No.215,218, Filed June 22, 1938—"Titanium Pigment Production"

Serial No.213,835, Filed June 15, 1938—"Process of Preparing Alkaline Earth Metal Titanates"

Serial No.228,926, Filed September 8, 1938—"Improved Titanium Oxide Pigments and Process of Making Same"

In Germany:

Serial No.225,716, Filed August 19, 1938—"Glue Treatment of Calcium Sulphate"

Serial No.215,218, Filed June 22, 1938—"Titanium Pigment Production"

Serial No.219,601, Filed July 16, 1938—"Titanium Oxide Suspensions"

In Italy:

Serial No.215,218, Filed June 22, 1938—"Titanium Pigment Production"

Exhibit 945

In Holland:

Serial No.215,218, Filed June 22, 1938—"Titanium Pigment Production"

Serial No.228,926, Filed September 8, 1938—"Improved Titanium Oxide Pigments and Process of Making Same"

In Belgium:

Serial No.215,218, Filed June 22, 1938—"Titanium Pigment Production"

In Japan:

Serial No.219,601, Filed July 16, 1938—"Titanium Oxide Suspensions"

Serial No.228,403, Filed September 3, 1938—"Oxidation Treatment of Tinted Titanium Oxide"

Serial No.233,749, Filed October 7, 1938—"Process for Production of Titanium Solutions"

Under this agreement, Titan Company, Inc. is granted a non-assignable, royalty-free license, in each case restricted to countries as specified above. License is exclusive except for du Pont or any company controlled by du Pont, and for I.C.I. in Great Britain. Titan Company, Inc. is permitted to sub-license its associates, as specifically defined in the agreement, on a royalty-free basis. Other sub-licenses may be granted subject to du Pont approval and the payment of 50% of any royalties obtained. Titan Company, Inc. as-

sumes all costs incidental to the filing and prosecution of our foreign applications under this license; pays all necessary maintenance fees during their life; and cannot permit abandonment without our approval.

Of the seven applications or patents under which Titan Company, Inc. will be licensed, only one is considered to be important, and one of moderate importance, i.e.:

"Application Serial No. 215,218 (now U.S. Patent No. 2,218,655), covers calcination of titanium with small amount of zinc oxide to produce low-chalking grade suitable for tinted finishes, and sold by du Pont as "Ti-Pure" O. This case was declared in interference with Titan Company, Inc., but du Pont was able to prove priority. It is considered relatively important, representing 1.4% of our total TiO_2 sales in 1940 and 1.2% over the first four months of 1941.

Application Serial No. 233,749, covers process for reuse of sulphide containing muds in dissolving titaniferous ores. Moderately important, as it offers possibility of some savings, but we have not yet been able to justify adoption in our operations.

Du Pont obtains from Titan Company, Inc. a non-exclusive, royalty-free, non-assignable license under the following four United States Letters Patent and/or Applications:

Serial No. 277,870, Filed June 7, 1939—"Manufacture of Titanium Dioxide Pigments"

Serial No. 283,986, Filed July 12, 1939—"Titanium Dioxide Pigment and Printing Inks Containing Same"

Exhibit 945

Serial No.300,004, Filed October 18, 1939—"Methods of Making Improved Titanium Dioxide Pigments"

Patent No.1,852,510, Dated April 5, 1932—"Process of Treating Titaniferous Materials with Acids"

Two of the above inventions under which du Pont will be licensed are of extreme importance, i.e.:

Serial No.283,986 (now U.S.Patent No.2,224,987), covers combination of antimony-aluminum treatment of TiO_2 for low-chalking pigment satisfactory for white finishes. Of our 1940 sales 14.2% came within the scope of this patent, and for the first four months of this year 20.8% of sales.. There is also indication that use of domestic or ore type ilmenite may require this treatment for all production.

Serial No.300,004, covers precipitating aluminum oxide on TiO_2 in atmosphere of ammonia by a specific method which we have adopted over our earlier procedure because of much improved quality resulting. Of our 1940 sales 12.2% came within claims of this application and 14.4% of our sales over the first four months of this year.

Du Pont rights under the patents listed are confined to the United States of America, its territories and dependencies. Du Pont is not obliged to pay any expenses incidental to preparation, filing and prosecution of United States patents covered by this license.

License specifically provides that where patent extends or applies outside titanium, no rights are granted except

Exhibit 945

insofar as they pertain to the manufacture of titanium compounds which can be used as pigments. Each admits validity of the patents involved, during period of license.

This exchange of patent rights is highly desirable and necessary for du Pont, inasmuch as two of the inventions under which we will be licensed are of great importance, since about 35% of our current TiO_2 sales represent grades produced within the claims of these two cases as described in a previous paragraph. The remaining applications under which du Pont will be licensed are of lesser importance, but permit us freedom of action in adopting process refinements which they cover and may prove of real value. Furthermore, the du Pont foreign applications and patents under which Titan Company, Inc. will be licensed are of relatively minor importance, and we retain all rights of manufacture and sale for du Pont under our foreign patents without any filing or maintenance costs.

If any future commitments on our part arise under the agreement its controlled by a clause to the effect that Governmental objection or prohibition shall be a valid plea for either party to decline to disclose or grant rights on any invention, patent or application therein mentioned, which will govern. Additionally, we propose to transmit to Titan Inc. to make certain that Titan Inc. (an American principal) shall comply with governmental order, etc.

This agreement has been prepared and approved by the Legal Department, and the required Operating and Chemical Department approvals have been obtained.

It is, therefore, recommended that the Management be authorized to execute license as herewith presented.

C. H. RUPPRECHT
General Manager

Re: Du Pont—Titan Company, Inc. Agreement

Gentlemen:—

Attached hereto find your copy of duly executed original of the above agreement, dated June 23, 1941.

Since our obligations under this contract are directly with you as a domestic principal, and not as an agent for any other company, domestic or foreign, we do not believe it is necessary that we obtain any United States Government approvals under the agreement. However, disclosure and grant of any license rights by you, as the other principal under the contract, to any of your affiliates or agents outside of the United States, and particularly to any nationals of occupied countries, will involve matter which is subject to Governmental regulation and control. We respectfully direct your attention to the existence of these Governmental regulations, and especially to Executive Order No. 8389, as amended, relating to the blocking of assets of nationals of occupied countries, and suggest that before you grant any rights under the contract to your affiliates or agents outside

Exhibit 946

of the United States, the necessary approvals be obtained from the Division of Controls of the United States State Department, as well as from the Export License Control of the United States Treasury Department.

Very truly yours,

(Signed) C. H. RUPPRECHT
General Manager

SUBJECT Du Pont—Titan Company, Inc. Agreement

DATE June 24th, 1941

TO Dr. G. Jebsen—Mr. C. F. Garesché

FROM Mr. C. F. Kaegebehn—Patent Department

In Reply to

Gentlemen:—

I beg to advise that a license agreement between Titan Co., Inc. and Du Pont, involving the latest exchange of licenses, has been executed on behalf of Du Pont. The contract bears the date of June 23rd, 1941.

In returning to us our executed copy, Mr. Hancock enclosed a letter addressed to Titan Co., Inc. by Mr. C. H. Rupprecht, copy of which is attached hereto. This letter again brings to our attention the Government regulations affecting the control of patent property and patent rights. I have drafted a reply to Mr. Rupprecht's letter, copy of which is also attached hereto, but refrain from sending this pending your approval thereof.

Yours very truly,

C. F. KAEGEBEHN

Dear Sirs,

PENDING U.S. APPLICATIONS OF E. I. DU PONT DE NEMOURS & Co.

With reference to your letter of April 14th, and to the copies of the following U.S. applications belonging to Du Pont de Nemours which were enclosed with that letter:

DK. Case	*Ser. No.*	*Filed*
126	338,381	June 1st, 1940
127	338,384	June 1st, 1940
128	346,370	July 19th, 1940
129	354,801	Aug. 30th, 1940

please note that we are not interested in obtaining licences in any of these patent cases, but we should like to be given an opportunity to reconsider any of these cases in which Du Pont de Nemours might themselves file applications within our territory, with a view to a non-exclusive licence, without any restriction on Du Pont as to licensing other firms.

Yours truly,

For BRITISH TITAN PRODUCTS CO. LTD.

Re: Recently Filed Du Pont Applications

Gentlemen:

Further to our letter of January 25th we are pleased to enclose herewith six copies of each of the following U.S. applications recently filed by Du Pont.

Ser. No.	*Inventor*	*Title*
242,603	Wood	Titanium Oxide Production
242,922	McKinney et al.	Production of Titanium Oxide Pigments
242,923	McKinney et al.	Production of Titanium Oxide Pigments
244,174	Schaumann et al.	Colored Titanium Pigments
244,175	Schaumann et al.	Colored Titanium Pigments
240,518	McKinney et al.	Colored Titanium Pigments (reissue)
242,461	Berry	Method & Apparatus for Effecting Particle Size Reduction
244,571	Hanahan	High Surface Hiding Pigment Materials & Process of Making the Same
244,568	Booge et al	High Surface Hiding Pigment Materials & Process of Making the Same
244,569	Hanahan	High Surface Hiding Pigment Materials & Process of Making the Same
244,572	Hanahan	High Surface Hiding Pigment Materials & Process of Making the Same
244,570	Hanahan	High Surface Hiding Pigment Materials & Process of Making the Same

Exhibit 950

You will note that application Serial No. 240,518 is a reissue application, the specification of which is identical with the original application Serial No. 1284 (DK 1) issued as U.S. Patent No. 2,062,137. Accordingly, there are enclosed herewith copies of only the claims of this reissue application.

Will you please assign DK Case Nos to these applications and in due time advise us as to whether you and your associates would desire to have corresponding applications filed.

For your information we are holding three other recently filed Du Pont applications and shall forward them to you as soon as we are able to have copies made.

Yours very truly,

Attention: Mr. C. F. Kaegebehn

Dear Sirs:—

Re: Pending U.S.Applications of E.I. DU PONT de Nemours & Co. Cases DK. 4 to 13 (Previously T.190 to 199.)

The Titangesellschaft have asked us whether there exists any German Applications in the above cases.

As no licences have been wished by the associated companies on this side in Germany, no applications have been filed in that country through us.

We understand that Du Pont does not ordinarily file any application, outside America in the "D.K. Cases" but for the sake of order, we should be obliged if you would obtain du Pont's confirmation of this and communicate it to us.

We would appreciate it very much if you, at the same time, could obtain similar confirmation for the later D.K. Cases, to the extent this is possible, so that we may complete our records as far as this question is concerned and be in position to give definite information to our associated companies as far as their territories are concerned.

Thanking you in anticipation, we are

Re: Pending U. S. Applications of Du Pont
Cases DK 4 to 13

Gentlemen:—

We have your letter of August 18th, 1939.

We can confirm that Du Pont has filed no applications in foreign countries on their own behalf since the practice of exchanging patent applications was established. Only in two previous cases, viz. (1) Case T. 143 and (2) Case T. 200, Blended Titanium Pigments, were applications filed by Du Pont. They have not since filed any foreign applications.

We trust this is the information you desire.

Yours very truly,

NATIONAL LEAD COMPANY

Patent Applications of E.I.du Pont de Nemours & Co.

Dear Mr. Kaegebehn,

I beg to confirm my to-day's cable reading as follows:

"Have Dupont filed any applications outside North America in cases DK-15 to 75 inclusive Please cable."

I understand that Du Pont does not ordinarily file applications outside U. S. A. in the DK-cases, and we have proceeded upon this presumption when considering the question of obtaining licenses in DK-cases, asking, however, to be given an opportunity to consider the question of obtaining non-exclusive licenses in countries outside North America in which Du Pont might themselves file applications.

I would ask you whether it would be possible for you to get such confirmation from Du Pont so that you can inform us when forwarding the applications or say, within a couple

of months afterwards. I presume that Du Pont could not give a general confirmation, but that they would have to inform you re each particular case.

Please let me have your comments to the above.

With kind regards,

Yours sincerely,

SIGURD ANDERSEN
SIGURD ANDERSEN

Exhibit 955

December 8th, 1939

Dr. G. Jebsen
For Mr. S. Andersen
c/o Titan Co. A/S
Fredrikstad, Norway

Re: Patent Applns. of Du Pont

Gentlemen:—

On November 15th we received your cable, reading as follows:

"HAVE DUPONT FILED ANY APPLICATIONS OUTSIDE NORTH AMERICA IN CASES DK 15 TO 75 INCLUSIVE PLEASE CABLE"

to which, on the following day, we replied as follows:

"NO APPLICATIONS FILED BY DUPONT OUTSIDE NORTH AMERICA IN CASES DK 15-75 INCLUSIVE EXCEPT THOSE FILED ON DUPONTS BEHALF BY TITAN COMPANY"

We have also received your letter dated November 14th with reference to this matter.

I have discussed the question raised in your letter with Du Pont. It may be accepted as a general policy that Du Pont is not interested in filing applications in the titanium field outside the United States. Hence, in the future, you can assume, unless advised to the contrary with respect to any patent cases, that Du Pont has no intention of filing an application outside the United States.

Exhibit 955

Thus, you may regard that Du Pont has given a general confirmation of this policy and that they will inform us only should they intend to depart from this policy and file applications with respect to some particular development. This general understanding, we believe, is simpler than to endeavor to get confirmation in each particular case.

We trust these comments clarify the situation.

Yours very truly,

NATIONAL LEAD COMPANY

Dear Mr. Ravnestad:—

We received recently from the Patent Department of the I. G. Farbenindustrie copy of their communication to you of May 31st, 1940, informing you that Titan Kogyo had no further interest in maintaining the above identified application in Japan.

We took the matter up with Du Pont who also do not desire to maintain the case and we so advised the Patent Department of the I. G. Farbenindustrie as per the enclosed copy. Photostatic copy of Du Pont's letter of July 9th, 1940 is also enclosed.

Yours very truly,

NATIONAL LEAD COMPANY

Dear Sirs:—

DK-24, Jap. Pat. No. 131.757.

We have been informed that the Titan Kogyo are not interested in a further maintenance of the Jap ese patent in case DK-24.

We would therefore ask you to obtain du Pont's consent to the abandonment of this patent. A copy of the printed specification was sent you in our letter of December 6th, 1939.

Yours very truly,

A. RAVNESTAD

Exhibit 970

TITAN COMPANY, INC.

HBE/HH. *No. 107.*

National Lead Company,
Patent Department,
111 Broadway,
New York City.

Fredrikstad, Norway,
October 11th, 1940

Attention: Mr. Kaegebehn.

Dear Sirs:—

DK-24 Japanese Patent Application No. 6.930/1938.

We beg to refer to your letter of July 11th, 1940 with enclosed photostatic copy of du Pont's consent to the abandonment of the above identified Japanese application.

We have, however, not instructed our Patent Agents to abandon this application, the reason herefore being briefly:

As we received I.G.'s communication that Titan Kogyo have no interest in a further prosecution of this application, the position was that the application was ready for publication. In view of this the Titan Kogyo reconsidered the question of maintenance, and informed us through the I.G. Patent Department that they were interested in a further maintenance of 3 years, the annuity fees herefore being already paid.

The I.G. further communicated that Titan Kogyo would take up again the question of maintenance after 3 years.

We would be obliged to you if you would communicate this to du Pont, in order that they may be kept informed of the position.

In this connection we beg to refer to our letter of December 6th, 1939 by which we informed you that the above mentioned application has matured into a patent No. 131.753.

Yours very truly,

H. ECKHOFF

Re: New Patent Applications of Du Pont and American Zirconium

Gentlemen:—

We are enclosing herewith copies of four new Du Pont applications and five new American Zirconium applications, as follows:

No. Copies	U.S.Ser. No.	Company	Du Pont Ref.	DK Case
3	332,979	Du Pont	873-K	114
3	332,989	Du Pont	949-K	115
3	332,990	Du Pont	949-AK	116
3	335,765	Du Pont	987-K	117
2	332,460	Am.Zirconium	—	—
2	350,124	Am.Zirconium	—	—
2	350,125	Am.Zirconium	—	—
2	350,126	Am.Zirconium	—	—
2	350,127	Am.Zirconium	—	—

You will note that we have tentatively assigned DK Case number to the Du Pont applications but refrained from assigning "T" case numbers to the American Zirconium applications. Titan Co., Inc.—Fredrikstad is con-

Exhibit 971

timing to give "T" case designations and when we are advised of these designations, we shall advise you promptly of the proper "T" case numbers of these applications.

We have not had the opportunity to consider the practical value of the several applications sent herewith because of the fact that it was more urgent to forward them to you then to take the time necessary to study them carefully. We suggest that if you have any questions concerning the value of the individual applications, you make such inquiry of us and we will promptly give you our reply.

In due time, please advise us in which countries in your territory you wish to file corresponding applications.

Yours very truly,

TITAN COMPANY, INC.

Dear Sirs,

PENDING U.S. APPLICATIONS OF E. I. DU PONT DE NEMOURS & CO.

With reference to your letter of April 14th, and to the copies of the following U.S. applications belonging to Du Pont de Nemours which were enclosed with that letter:

DK. Case	*Ser. No.*	*Filed*
126	338,381	June 1st, 1940
127	338,384	June 1st, 1940

Dears Sirs,

Re Sublicences on DK-Patents 16-49

Please find enclosed a copy of the Declaration, dated May 17th 1941. The Original of this declaration, bearing the signature of Messrs. Titan Kogyo Kaisha, Ld., Tokyo, we have sent to the address of I. G. Leverkusen.

Messrs. Titan Kogyo Kaisha, Ld., Tokyo, specially asked us to inform you that they expect that the licensed DK-patents will not be abandoned by patent-owners without first having such cases submitted and decided by Titan Kogyo.

In order to be sure that this is done, Titan Kogyo wishes to have a corresponding paragraph inserted in future cases similar to the § 6 of the Cross License Agreement between Du Pont and Titan Comp. Inc.

We are, dear Sirs,

Yours faithfully,

KAGAKU TOKKYO JIMUSHO

Re: Sublicenses on DK Patents DK 16-49

Gentlemen:—

We have your letter of July 11th, 1941 regarding licenses under DK cases.

We do not see how it will be possible for the patent owners to abandon DK cases in Japan. As we understand the situation, you will supervise the paying of the annual taxes and will only pay those taxes when authorized to do so by Titan Kogyo. It is only when Titan Kogyo no longer desires to maintain the patent that the obligation exists to so advise the patent owners in order that they may, if they elect to do so, maintain the patent on their own behalf.

Yours very truly,

TITAN COMPANY, INC.

Dr. G. Jebsen, Managing Director
Titan Company A/S
Fredriksstad, Norway

Dear Dr. Jebsen:

The Titanium Pigment Company has had several inquiries recently for pure titanium oxide such as we sell to the trade in this country. These inquiries are mainly for shipment to Australia.

I see no reason why we should not make these shipments for the account of the Titan Company if it has your approval. We are charging the trade 40¢ per pound for this material, and would charge the same to Australian buyers if it met with your approval allowing some margin or commission to the Titan Company.

The Titanium Pigment Company are sending you copies of the correspondence so that you will have it before you when you get this letter. Will appreciate your advice.

Yours very truly,

Vice President

Paris, May 14th 1930.

Titanium Pigment Company, Inc.
60 John Street
New York

Dear Sirs,

We acknowledge receipt of your favours of May 1st re the inquiry from the Dunlop Rubber Shoe Co, Australia, and of April 21st regarding sales to Manila and beg to refer to the writer's letter of May 16th last year, concerning sales to the Philippine Islands. As no reply to this letter has been received, we have presumed that you intend to keep the Philippine Islands as part of your territory in accordance with the agreement of July 1920. Please let us know whether or not we are right in this presumption.

For the case of future inquiries for titanium products from our territory, we beg to recall that, according to the agreement of July 1920 and subsequent agreements, the whole territory outside of Titanium Pigment Co's is dealt with by the Titan Co.Inc. (which has subrogated Titan Co A/S and which represents these territories. towards Titanium Pigment Co.)

The Titan Co. Inc. has given a license to

Titangesellschaft m.b.H. for the following countries:

Germany, Russia, Austria, Hungaria, Czechoslovakia, Switzerland, Roumania, Servia-Croatia-Slavonia, Bulgaria,

Greece, Turkey, Japan, China, Spain, Poland and Portugal; and to

Société Industrielle du Titane for France, Colonies, Protectorates and Dependencies.

The sales in these respective countries are conducted by these two companies and for all other countries of the territory of Titan Co. Inc. the sales are done through its general agent

Titan Co A/S, respectively this company's representatives in the various countries.

We beg you therefore in case of inquiries to refer to the one of the three above mentioned companies which works the market from which the inquiry has come, and inform the respective company correspondingly. For the sake of order and control, we should appreciate that you at the same time send copies of the correspondence to our office, addressed until further notice to:

Dr. G. Jebsen
26 Rue de la Pépinière
Paris.

We beg at the same time to recall that Titan Co. Inc. acts as your agent under the agreement of 1920, in case of any sale from you to the above mentioned three companies or anybody else outside of your territory, and be you therefore, in a possible event of such nature, to address yourselves to Dr. G. Jebsen, 26 Rue de la Pépinière, Paris. Excluded from this are, of course, deliveries to R.W. Greeff & Co and Titan Co A/S for those materials regarding

Exhibit 997

which arrangements already have been made for direct settlement.

For your information we enclose a list of the agents and representatives which are working in the various markets for the companies which operate that market.

Yours very truly,

G. JEBSEN

Titan Co A/S Frederickstad, Norway

Dear Sirs:

Attention of the Directors:

We have just learned that you have a German patent for the manufacture of titanium pigments and we wish to inform you hereby that we are very much interested in these products.

We may add that we wish to take up such processes in collaboration with a chemical factory associated with our concern.

We look forward, therefore, to details concerning this process, the information required concerning the necessary patents and patent applications, license on the most favorable basis, apparatus, costs of the plant, manufacturing costs, yields, advantages, information where the process is being worked, etc. Is a patent for this process also applied for in the United States or can this still be done?

At the same time we ask that you give us power of attorney so that we can make a contract according to your wishes.

Assuring you of a mutually confidential and profitable business consummation, we are, with best regards

Respectfully yours

CHAS. A. PFEIFFENBERGER, PH.D.

William C. Beschorman Esq.
Executive Vice President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. Beschorman,

I.G. Farbenindustrie, Frankfurt, asks me if the Titanium Pigment Co. or Dupont make deliveries at their inland prices to American wholesale dealers, who, with or without the manufacturers' knowledge, may export the product. In the latter months the I.G. has been informed of export offers from Japan, as well as European countries, for instance Portugal, at prices which are to quite some extent below Titangesellschaft's usual quotations, and indications are that these competitive offers are based on American Titanium Oxide.

I.G. begs also to be informed of the prevailing prices in U.S.A.

I should be much obliged for all information you can send me on this subject.

You will appreciate that competition from U.S.A. will only lead to a lowering of Titangesellschaft's prices with correspondingly less profit for all of us, and that it is desirable to exercise an efficient control in this question.

Exhibit 999

I will tell the I.G. that they can be assured that both Dupont and the Titanium Pigment Co. will look after this matter, but a letter from you to me in this connection will certainly be appreciated.

With kindest regards,

Yours very truly,

G. JEBSEN

March 15, 1934.

Dr. G. Jebsen, Vice President
Titan Company, Inc.
26 Rue de la Pepiniere
Paris, France.

Dear Dr. Jebsen:

Replying to your letter of February 28th, # 59, regarding inquiry from I. G. Farbenindustrie as to whether Titanium Company or DuPont make deliveries at inland prices to wholesale dealers, beg to advise that neither of us sell any of our product through dealers; all of our trade is direct with manufacturers and users. Occasionally we receive inquiries from dealers, but in no case do we make a sale to them unless we know exactly where it is going. As a result of this policy there can be no possibility of anything being exported from here without our knowledge.

I am enclosing you one-half dozen of our U.S.A. price lists on Titanium products.

Yours very truly

Executive Vice President.

Re: "Kronos Titanium White / China.

Dear Dr. Jebsen,

Our Chinese representatives, the firm Siemssen & Co., Shanghai, inform us under date of April 4th, that the cheap American Titanium White offers already mentioned by us in our letter of March 29th have now been made also in Shanghai and Hankow. The product is stated to be sold through the firm Melchers. We are further informed that the National Lacquer & Paint Products Co., Hongkong, gets Titanium White from a dealer in New York at the price of U.S.A.$cents 6 per lb., that is USA $13.20 per 100 Kg. fob shipping port, and that we would lose our business established with much difficulty if we do not adapt our sales quotations to the competitive prices. We were therefore obliged to give our representative the following prices:

For	Kronos Titanium White Standard A and T	FFrs 255.—
"	" " " Extra T	" 480.—
"	" " " Titanium Dioxide	" 700.—

Exhibit 1001

per 100 Kg. incl. original casks cif Shanghai.

For Kronos Titanium White Standard A in paste, we fixed the quotation at

FFrs. 328.0 per 100 Kg. cif Shanghai incl. tin packing of 28 lbs. content.

In order that our Chinese business should not continue to be disturbed by American dealers, we may ask you to please again request the National Lead Co., as well as Dupont, to prevent such offers by imposing corresponding obligations on the American exporters. We already have to compete in China with the cheap Japanese White Paints industry and would be much obliged if you could eliminate these low price-offers from American firms.

Yours very truly,

I. G. FARBENINDUSTRIE AKTIENGES.

Exhibit 1001

Abt. V K/Sch. 25.Mai 34

"KRONOS" Titanweiss / China.

Sehr geehrter Herr Dr. Jebsen.:

Unsere chinesische Vertretung, die Firma Siemssen & Co., Shanghai, berichtet uns unterm 4. vr.Mts., dass nunmehr auch in Shanghai und Hankow die Ihnen bereits mit unseren Schreiben vom 29.März aufgegebenen billigen amerikanischen Titanweiss-Offerten angetroffen wurden und swar soll das Produkt durch die Firma Melchers vertrieben werden. Weiterhin wurde uns mitgeteilt, dass die National Lacquer & Paint Products Co., Hongkong, Titanweiss von einer Händlerfirma in New York zum Preise von USA $cents 6 per lbs, das sind USA $ 13.20 per 100 kg fob Verschiffungshafen erhalte und dass wir unsere seither mit grosser Mühe aufgebautes Geschäft verlieren würden, wenn wir unsere Verkaufemotierungen nicht den Konkurrenzpreisen anpassen würden. Wir haben uns daher gezwungen gesehen, unserer Vertretung folgende Notpreise anhand zu geben:

Für	"KRONOS" Titanweiss Standard A und T	ffrs. 255.—
"	" " Extra T	" 480.—
"	" Titandioxyd	" 700.—

Exhibit 1001

per 100 kg einschliesslich Originalfässer cif Shanghai.

Für "KRONOS" Titanweiss Standard A in Paste setzten wir die Verkaufsnotierung auf

ffrs. 328.—per 100 kg cif Shanghai einschl. Blechpackungen von 88 lbs Inhalt fest.

Abt.V K/Sch. 25.5.34 2

Damit unser chinesisches Geschäft nicht weiterhin von amerikanischer Händlerseite aus beunruhigt wird, möchten wir Sie hiermit nochmals höflichst bitten, die National Lead Comp. sowie Dupont zu veranlassen, derartige Angebote durch entsprechende Verpflichtungen der amerikanischen Exporteurs unmöglich zu machen. Wir haben in China schon sowieso gegen die billigen japanischen Weissfarbenindustrie anzukämpfen und wären Ihnen zu Dank verbunden, wenn Sie uns die Unterbietungen seitens amerikanischer Firmen fernhalten könnten.

Hochachtungsvoll

I. G. Farbenindustrie Aktiengesellschaft

Exhibit 1002

June 8, 1934

Letter No. 83

Dr. G. Jebsen,
Titan & Co.,
26 Rue de la Pepiniere,
Paris, France.

Dear Dr. Jebsen—

I have your letter of May 29th, addressed to Mr. Beschorman, and transmitting copy of letter from I. G. Farbenindustrie, in which they comment upon prices made on titanium white by New York sellers, for shipment to China. The price named, 6¢ per pound, is Titanium Pigments Co. minimum to the trade, carload lots (1% discount for each ten days). If, therefore, a New York seller is offering at that figure for shipment to China or elsewhere, he would be doing it without profit.

Apparently I. G. Farbenindustrie has adjusted their price to meet this 6¢ figure. It should be the absolute bottom, and it is rather difficult to understand why a seller should go that low. *However, it would not be possible for us to impose restrictions upon exporters.* A purchaser from Titanium Pigments Co. can sell to whom he will, and there is no legal method by which we could prevent him. I. G. Farbenindustrie, however, should be able to control the business, if they make a price with which offers at 6¢, f.o.b. U.S. shipping ports would be non-competitive.

Trusting that this will clear up the situation for you,

Yours very truly,

President

Exhibit 1003

Letterhead of

TITAN COMPANY, INC.

GJ/AK Paris, June 26th 1934

F. M. Carter Esq.
President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. Carter,

Re sale to China.

Many thanks for your letter of June 8th.

I.G. Farbenindustrie have, as you point out, adjusted their price. They felt this to be necessary in view of the American offers.

Although recognizing that a too great difference in prices will lead to "bootlegging" in the titanium pigment trade, it is of considerable importance to endeavour to prevent a trespassing of the frontiers of the various territories allotted to the different companies. I have always, towards our friends here, emphasized this policy, which was laid down in the agreement of 1920 as well as the successive agreements. This is of reciprocal interest, and during the years passed, in which export, for instance to Canada from Europe, could have taken place, we have prevented this.

The fault of a legal method to prevent export of goods once delivered exists also in the countries on this side. It is, however, possible to stop deliveries to such customers. All

Exhibit 1003

our invoices contain a stipulation that export of the goods is not allowed, and in contracts for deliveries over a period we reserve the right to cease deliveries in case goods received are exported. We have been able in this way to maintain the lines drawn for each company's territory.

In the case of China the I.G. Farbenindustrie have gone to the trouble and found out the name of the American exporter. Can it not be made clear to him, that such export must not take place, otherwise deliveries to him will be stopped? Is there any objection to this, so serious that it weighs more than the above principle and the obligations once undertaken by the Titanium Pigment Co.?

It would be very regrettable if the Titanium Pigment Co. should not take the same interest in these matters as over here, particularly as in the eyes of our European friends its organisation is identical with the National Lead Co.

With kind regards,

Yours very truly,

G. JEBSEN

P.S.—I enclose copy of Article 3 of the Agreement between the British Titan Products Co. and R.W. Greeff & Co., as an example of the attention we pay to this matter over here.

The condition re export by the customers to the American Continent of Titanium products in a bona fide manufactured form goes beyond the conditions stipulated in the 1920 agreement, in order to be on the safe side. It will of course be impossible to prevent entirely such export neither from your side nor from ours, but the condition has been

Exhibit 1003

put in, in order to have a free hand towards our agents in case of necessity.

P.P.S.—*Quotation from I.G.'s letter of May 25th:*

> "The product is stated to be sold through the firm "Melchers. We are further informed that the "National Lacquer & Paint Products Co., Hong-"kong, gets Titanium White from a dealer in New "York. . . .

Exhibit 1003

EXTRACT OF THE AGREEMENT BETWEEN BRITISH TITAN PRODUCTS COMPANY LTD. AND R.W. GREEFF & COMPANY LTD. MARCH 10TH 1933.

3. The Agents shall not sell Titan products for export outside the Agents' territory, nor shall the Agents enter into any contract providing for the delivery of more than fifty tons of Titan products to any one customer at any one time without imposing the above-mentioned restrictions on any such customer and reserving the right to cancel all future deliveries on the breach of the said restrictions by any such customer and upon being called upon by Manufacturers will exercise such right of cancellation. Nothing contained in this clause shall prevent the export to any part of the world by the customers of Titan products in a bona fide manufactured form except that Titan products in any form shall not be exported by the customer to the American Continent north of the Panama Canal and islands adjacent thereto.

Exhibit 1005

September 4, 1934.

INTER-OFFICE CORRESPONDENCE

TITANIUM PIGMENT COMPANY, INC.

111 BROADWAY, NEW YORK

SUBJECT.

TO Mr. W. C. Beschorman, Vice President,
National Lead Company, Building.

FROM I. D. Hagar, Eastern Sales Manager,
New York Office.

REFERENCE

Dear Mr. Beschorman:

Complying with your instructions, I have checked up on the three broker customers who purchased TITANOX-B from us in the first six months of this year, and have questioned them regarding their offering of Titanium pigment for shipment to China. They report as follows:

H. Kohnstamm & Company. Interviewed both Mr. Kohnstamm and Mr. Castellano. They claim that 10,300 pounds of TITANOX-B was none of it resold in dry form, all of it being incorporated with various oils in paste form, and most of this paste sold in the domestic market. They are very emphatic in their statement that they do not resell any Titanium pigments in dry powdered form.

Smith Chemical & Color Co., 55 John St., Brooklyn. Both Mr. Smith and his associate states that all of the TITANOX-B bought by them was resold to small paint manufacturers, some of whom were accounts to which

Exhibit 1005

we would not extend satisfactory credit. They state that everything sold by them has been disposed of in the local market, and that the price was well above 6¼¢ per lb., which was the figure paid by them to us.

Dooner & Smith Chemical Co., Newark. The 300 lbs. of TITANOX-B which they bought was sold in small quantities to cosmetic concerns, all of them situated in the local territory. None of it has been offered by them for sale abroad.

Yours very truly,

TITANIUM PIGMENT CO., INC.,

I. D. HAGAR
Eastern Sales Manager.

IDH:LE

Exhibit 1006

September 5, 1934.

Dr. G. Jebsen, Vice President
Titan Company, Inc.
26 Rue de la Pepiniere
Paris, France.

Dear Dr. Jebsen:

Referring further to your letter of May 29th to which Mr. Carter replied on June 8th regarding a letter from the I.G. as to reports which they had received from their Shanghai Chinese representatives to the effect that the National Lacquer & Paint Products Company of Hongkong were obtaining Titanium White from a dealer in New York at a price of 6¢ U.S.A. per pound; and further that this product was sold through the firm of Melchers.

I presume that they are referring to the firm of Melchior Armstrong Dessau Co., Inc. to whom we have never sold a single pound, nor have we had an inquiry from them.

I have had the Titanium Pigment Company go over all of their sales to exporters, and further interview these parties, to learn where the material had been resold. Of course, you understand that all exporters are also importers and consequently sell a great deal of stuff locally. Each of these parties has satisfied us that everything they have sold has been sold to the domestic trade. However, our price in less than carload lots, in which all of these parties are buying, is 6¼¢ per pound.

I am very sorry to note that the I.G. people have reduced their prices to meet the 6¢ quotation which I cannot help

Exhibit 1006

but feel was not a legitimate price and that no purchase had been made at that price.

Rest assured that we will use our best endeavors at all times to keep any material from being exported even when we have a surplus stock, which we have not had for over a year. We are today about 2000 tons behind our orders.

With kindest regards,

Very truly yours

Executive Vice President.

TITAN COMPANY, INC.

SJH/AK Paris, February 24th, 1936.

William C. Beschorman Esq.
Executive Vice President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. Beschorman,

Dr. Jebsen being actually in England, I beg to refer to his letter No.182 regarding import of American Titanium Oxide to Holland.

As you will know, our working agreements with Mr. Blumenfeld's group provide for cooperation on a quota basis in the Dutch market and we are now informed that one of Thann's customers in Holland, The Ferro Enameling Co., is drawing its supply from *"The Titanium Alloy Co."* at a price which is Fl.100.- lower per 1000 Kg. than our prices.

Our prices in Holland are Fl.550.- per ton for quantities of 200/250 Kg. and Fl.510.- for 10.000 Kg. lots. Calculating backwards, we find that this should correspond to about 13 c/lbs. cif New York or considerably less than your ordinary sales price.

Further, we have indications to the effect that the firm Oosthoek Jr. in Rotterdam is selling American Titanium.

We are of course very much interested in locating the source of this American Titanium White and will do our

Exhibit 1008

best to secure samples. In the meantime we would appreciate any assistance to the effect of preventing American Titanium from entering the Dutch market, as we, due to our agreements with Thann, suffer as much as they do from such imports.

Very truly yours,

S. J. HENRIKSSEN

Exhibit 1009

Letterhead of.

NATIONAL LEAD COMPANY

March 12, 1936

Mr. W. C. Beschorman,
Scarsdale.

Dear Will —

Mr. Rupprecht called this morning to say he had an order from British Titan Co. for 50 lbs. Rayox. He said he was inclined to send it as a sample, no charge; not wanting to have any question raised about their selling outside of the United States. I approved of the suggestion.

I take it for granted the inquiry was caused by a desire to make some comparisons with Rayox, particularly in connection with questions raised by the delusterizing rayon industry. If I remember rightly, one of the English rayon companies is strongly wedded to Rayox type.

Yours very truly,

F. M. CARTER
President

Exhibit 1009

On Friday, the 24th, the day after you went home ill, Mr. Rupprecht phoned that Krebs had received a remittance from American Zirconium on their Titanium production for the period January 1st to Sept. 30th on 1252.89 tons. The last quarter was not in at that time, but I gave Mr. Warshow that figure which he said he would send to Dr. Jebsen by that night's steamer.

Monday of this week Mr. Phelps telephoned the production for the last quarter of 1935—October 1st to December 31st, inclusive. This amounted to 953.7 tons which he said brought them under their quota for the year of 3000 tons. He said to tell you that inasmuch as their 1936 quota would also be 3000 tons they would not be able to keep up their rate of production for the last quarter. Mr. Warshow also has this figure.

Gentlemen:

Our affiliate in Czechoslovakia, Dr. Rudolf Vanicek, has written us to inquire about the sales rights of your newly published invention re:

#55,187 — Titan Pigments

Our affiliated office in Czechoslovakia is under the very able hands of Dr. Vanicek who is a man of high standing and high repute.

We shall, therefore, be glad to know if you would enter into connection with us for the sale or license of your invention and upon your favorable reply we shall be glad to inform you upon what terms he eventually would be willing to negotiate and consummate deals in his country.

Yours very truly,

ASSOCIATED INVENTORS INC.

Dear Sir:

I have your letter of the 17th addressed to the Titanium Pigment Co. with reference to Patent #55,187, Titanium Pigments, and beg to refer you to Titangesellschaft, m.b.H., Leverkusen, Germany, who holds the license for Czechoslovakia as well as other Central European countries.

Very truly yours

Executive Vice President.

I.D. Hagar Esq.,
Titanium Pigment Corp.
111 Broadway,
New York, N.Y.

Dear Mr. Hagar,

Imports to China

We beg to inform you that we have received to-day a letter from the I.G. Farbenindustrie, Frankfort, reading in translation as follows:

" As you know, we have often been informed by our
" Chinese Representative that Titanium White was
" imported in China from America, without it being
" possible so far to discover the seller.
" We heard to-day that the Export Firm Butcher & Co.,
" Los Angelos, were probably the sellers in question.
" We should be much obliged to you if you will get
" from the Titanium Pigment Corp., New York, the
" information whether the above mentioned Firm is
" one of their customers.
" If this is the case, we would like to ask you to
" take the necessary steps in order to keep this
" Firm away from the Chinese Market."

We should be much obliged if you would kindly investigate this matter so that we may be in a position to reply to the I.G.'s letter.

Thanking you in advance, we are,

Yours very truly,

TITAN COMPANY, INC.,

(Sign. S.J. Henrikssen)

Exhibit 1019

July 12,
1937

Dr. G. Jebsen,
Societe Industrielle du Titane,
26 Rue de la Pepiniere,
Paris, 8e, France.

Dear Doctor Jebsen:

Some time ago, you made complaint to the effect that an American Company was exporting titanium pigments to China.

We have followed this up very carefully and have found that the concern doing such exporting was the L. H. Butcher Company of Los Angeles, California, who were combining titanium pigments of our manufacture with other materials destined for Chinese customers.

We have taken the matter up with them very tactfully and they have kindly agreed not to make any further shipments of this kind. Therefore, we believe that the matter is now settled and trust that you will be satisfied with the action we have taken and the outcome thereof.

Yours very truly,

TITANIUM PIGMENT CORPORATION

I. D. HAGAR
General Sales Manager

Exhibit 1020

SJH/MH Paris, December 4th, 1937.

I.D. Hagar Esq.,
General Sales Manager
Titanium Pigment Corporation
111 Broadway,
New York.

Dear Mr. Hagar,

Export to China—
L.H. Butcher Co., Los Angeles.

Referring to your letter of July 12th, I am sorry to tell you that we are to-day informed by the I.G.Frankfort, that their Agent in Hongkong has had the occasion to see personally an invoice from L.H. Butcher Co. to the National Lacquer & Paint Products Co., of September 13th this year, covering a shipment of 8 casks Titanox C., totalling lbs. 2.000.- at a price of U.S.A. $0.06¼ per lb. cif. Hongkong.

This price corresponds to £3.- per 100 kgs, cif, while I.G.'s lowest quotation is £3.8.6. per 100 kgs, cif.

As you will note, Butcher Co. apparently do not stick to their agreement with you not to make any shipments of this kind to China, and we should be particularly obliged if you could take the matter up with them again, or in some way or other prevent this export.

In this connection, we may mention that the I.G. request that the name of the National Lacquer & Paint Prod. Co. be not mentioned, as they will naturally not welcome the loss of their present source of supply at the above low price, and if they learn that the discontinuance of supply from

America is due to steps taken by the representative of the I.G., the relations between the I.G.'s representative and the National Lacquer & Paint Prod.Co. may of course easily become difficult.

Thanking you in advance for anything you can do in this matter, I remain,

Yours very truly,

Copy to Mr. Beschorman

Exhibit 1021

December 15, 1937

Dr. G. Jebsen,
Societe Industrielle du Titane,
26 Rue de la Pepiniere,
Paris, 8e, France.

Dear Doctor Jebsen:

We have your letter of December 4 in which you advise us that your agent has seen an invoice from the L. H. Butcher Company to the National Lacquer & Paint Products Company, of September 13, 1937, covering a shipment of 8 casks of Titanox-C, totaling 2,000 pounds. The incident is very much to be regretted, particularly, since the sale is consummated at a price so much lower than that regularly charged by the I. G. in Chinese territory.

However, we think there must be an error in this connection. Upon receipt of your communication, we immediately looked up our records and we find that we have not sold any Titanox-C to L. H. Butcher during 1937. Their last purchase of this pigment was in the first quarter of 1936, and it hardly seems probable that they would carry material in stock for a year and a half, and then ship it to China.

This company has agreed not to export any of our Titanox pigments to China in accordance with your request. On the other hand, it is entirely possible that they might purchase material from another source and export to China, and we do not see how we could possibly control such a situation.

Also, it seems strange that the invoice should be made out for Titanox-C. It is hardly customary for a broker when re-selling materials to invoice them under a specific brand's name. It would be more likely to invoice such material as Titanium Calcium Pigment. We can, of course, take this matter up again with L. H. Butcher but, before doing so, we would want to be sure that the material was specifically invoiced as indicated by you and, even so, there would be reasonable doubt that the product was ours because of the infrequency of sales noted above.

Yours very truly,

TITANIUM PIGMENT CORPORATION

General Sales Manager

IDH:ELB

cc. Mr. Beschorman

Exhibit 1022

December 16,
1937

Dr. G. Jebsen,
Societe Industrielle du Titane,
26 Rue de la Pepiniere,
Paris, 8e, France.

Dear Doctor Jebsen:

We acknowledge your letter of December 4. It is quite surprising to us to learn therefrom, that the L. H. Butcher Company have made another shipment to the National Lacquer and Paint Products Company, c.i.f., Hongkong. You realize that this incident is quite disturbing to us, particularly, because of the lower prices at which the material is offered.

On the other hand, we are quite puzzled with regard to this entire situation. You state that the agent of I. G., Frankfort, in Hongkong, personally saw an invoice from the L. H. Butcher Company to the National Lacquer & Paint Products Company, dated September 13, this year, covering 8 casks of Titanox-C.

We feel that there is a reasonable doubt that this pigment was Titanox-C, for the following reasons:

First, the L. H. Butcher Company have bought no Titanox-C from us since the first quarter of 1936. In that quarter, they purchased 3,000 pounds, for which they paid 6¼ cents a pound, f.o.b., our Los Angeles warehouse. It hardly seems probable that they carried this Titanox-C from early 1936 until September 1937, before making a delivery thereof.

Exhibit 1022

You will note also that, at the price quoted by you, there would be no profit, and probably a loss, to the L. H. Butcher Company, since it would be necessary to truck at their own expense from our warehouse to them and thence to the piers, pay the ocean freight, and also repack the material.

Your letter states that the 2,000 pounds were contained in eight casks, which means that the material was packed at the rate of 250 pounds per cask; all of our packing in barrels is done at 300 pounds net. Consequently, original packages could not have been used.

Secondly, there is reasonable doubt that a broker would invoice a material as Titanox-C. We sell considerable material through brokers who, like L. H. Butcher, receive no concessions from us in the way of commission. Such brokers usually sell at a definite advance over card prices and they always ask that the material be supplied in plain packages so that the identity of the manufacturer may be concealed.

It would be very surprising if L. H. Butcher did invoice the material as Titanox-C, and we would like very much to have this point accurately checked. The logical method of procedure would be to invoice the material as titanium calcium pigment.

L. H. Butcher have given us a definite promise that they would not export any more of our pigment to China. We know them sufficiently well to believe that they will keep their promises. On the other hand, it is entirely possible that they might purchase titanium pigments from another source and export such pigments to China. It would be

very difficult for us to control such a situation; perhaps, this is what happened in this case and the pigment supplied may have been Ti-Cal, manufactured and sold by Krebs Pigment & Color Corporation.

We will again ask Mr. Irwin, representative of the National Lead Company in Los Angeles, to take this matter up with L. H. Butcher, but to go into the subject thoroughly, we should like very much to have further confirmation of the facts stated in the first paragraph of your letter and clarification of the thoughts suggested in this communication.

Yours very truly,

TITANIUM PIGMENT CORPORATION

December 22, 1937

Mr. I. D. Hagar, General Sales Manager,
Titanium Pigment Corporation,
111 Broadway
New York

Dear Mr. Hagar:

I think our European connections must have been misinformed in regard to shipments of Titanox to the National Lacquer & Paint Products Company by L. H. Butcher. I have checked with the Butcher people and they state definitely that they have made no shipments of Titanox since they gave me their promise to desist.

I have checked over our sales records and the L. H. Butcher Company have not bought any C Pigment from us this year; but, as your records will show, they have purchased some A and B. However, this was not for export.

I do not know what I can do further in the matter in view of the Butcher Company's statement that they are not exporting our pigment.

Yours very truly,

H. S. Irwin—Div. Manager

Gentlemen:—

I saw your address in the "Annuaire Official Belge des Industries Chimiques" (Translator's note: an annual chemical gazette).

As there is a great demand in the Republic of Mexico for the products which you manufacture, such as oxide and titanium white, I am very much interested to be your representative. If you have not already an agent here, I would appreciate it very much if you would instruct me about the prices of the products, as well as your sales service (condition).

I am willing to place at your disposal references and any information you may desire.

Yours very truly

Mr. C. F. Kaegebehn, Manager
Patent Department
National Lead Company
111 Broadway
New York, N. Y., U. S. A.

Dear Kaegy:

I am attaching some information concerning #2000 pigment which is being distributed in Canada by Chemical and Pigment Company of the United States. As this pigment contains a portion of Titanium Dioxide I am wondering whether the license under which this company is operating allows them to ship Titanated pigments into Canada and, if so, whether there is any limit to the Titanium Dioxide content.

I have been unable to determine the TiO_2 content of #2000 pigment but should imagine that Mr. D. W. Robertson will have the information.

Yours very truly,

CANADIAN TITANIUM PIGMENTS LIMITED

R. G. BECK

Exhibit 1028

Mr. R. G. Beck
Canadian Titanium Pigments, Ltd.
P. O. Box 10
Montreal, Canada

December 20, 1939

Dear Bob:—

I have your recent letter concerning No. 2000 pigment. Mr. Robertson informs me that this is a product of The Glidden Company, or one of its subsidiaries. He believes that it contains between about 11% and about 15% TiO_2. It is to be expected that this titanium dioxide is manufactured by the American Zirconium Corporation in whom Glidden has an interest and who fill Glidden's titanium dioxide requirements.

This pigment since it contains zinc sulfide and barium sulfate in addition to magnesium silicate appears to be in the nature of a titanated lithopone and it may well be that patents held, or controlled by Canadian Industries, Limited, would cover the product and hence furnish a simple and expedient means of stopping its importation into Canada.

National Lead Company, as you know, has licensed the American Zirconium under its United States titanium patents. In the agreement "Finished Articles" are defined as:

> ". . . a cohesive intermixture of titanic material with other material with which such titanic material was not previously intermixed or associated as, for example, in paint, rubber, glass, and titanated lithopone".

With respect to such "Finished Articles" the agreement provides that zirconium shall appoint National Lead Com-

pany, or any licensee specified by National, its sole agent for the sale outside the United States. However, the agreement provides that zirconium may export "Finished Articles" of which titanium products "shall not constitute such an important part that the sale thereof within the territory of such agent" (in this case National or C. T. P.) "will substantially interfere with such agent's sales of its own titanium products in its territory." The Glidden Company in guarantying the performance of the American Zirconium Corporation undertakes insofar as in its power fully to respect the license agreement.

As to your present problem; it would seem to me that, if the importation of No. 2000 pigment into Canada, is bothersome to C. T. P. the simplest way to stop it would be on the basis of titanated lithopone patents held by C. I. L. If this is not possible, and the matter appears of sufficient importance, we might, on the basis of assurance from you that the importation of No. 2000 pigment is interfering with your sales, make representations to Glidden and American Zirconium with a view to stopping the importation or having C. T. P. made the agent for its sale.

Yours very truly,

NATIONAL LEAD COMPANY

Exhibit 1029

Letterhead of

TITAN COMPANY, INC.

Fredrikstad, Norway,
13th October 1939.

GJ/HS.
Fletcher W. Rockwell Esq.,
Executive President,
National Lead Co.,
111 Broadway,
New York, N. Y., U.S.A.

Dear Mr. Rockwell:

I have received some time ago a letter from Mr. Tasker, as per copy enclosed, concerning restrictions re communication of information, and I have answered him as per copy attached.

The line we have taken in these matters is chiefly a policy of "Wait and see". It is to be expected, that when the first confusion is over, certain rules will be developed in these matters as well as questions concerning patents. Whether these will follow the practice during the last war is of course difficult to say to-day; but probably they will be more stringent. Our policy will have to be to observe a strict neutrality.

I have had a cable from Mr. Stopford in which he tells me, that he may have to consider a £40.000 expenditure for an acid-recovery plant, and he will try to have a Board Meeting held, which he though thinks may be difficult in view of the various members being in different places out of London.

Mr. Henrikssen left Norway for Brussels on September 30th, from there he went on to Paris on October 2nd:

he intends to return via England, and Stopford will try to have the Board Meeting at the time Mr. Henrikssen is there.

B.T.P. have suspended extension work, and it looks as if the capacity will be restricted to about 17 tons of TiO_2 a day for a considerable time.

You have already been informed that B.T.P. cannot continue to supply Canada, and presumably they will have to rely on your factory for supply of their other oversea markets.

I should much appreciate to have a word from your side as to your present and future production capacity in relation to the demand from your markets.

I much appreciated your letter of September 19th assuring us of your cooperation in assisting us. It may interest you to hear that I only got the copy of your letter, whereas the original has not arrived yet, but it will probably come in one of these days.

The organisation of the Work of the Titan Company Inc's personnel here in Fredrikstad has now more or less been settled, but there are any number of irregular questions coming up needing my attention, so I am not able yet to get away, and this may still take some time—of course depending upon the developments. I am therefore afraid I will not see you on your side before early next year.

Hoping that you and your family are well, I am, with kindest regards,

Yours sincerely

G. JEBSEN

Dear Mr. Hagar,

I was very pleased to receive your letter of October 20th, letting me know the position in regard to the enquiry by the New York Purchasing Agent of the Celanese Corporation of America, on behalf of the English plant.

I fully appreciate that on the basis of 13¢ per lb. f.a.s. New York, the price must be prohibitive landed duty paid in England, and this of course, suits us, as we do not want Celanese to import American pigment into this country, but on the other hand do not want to give rise to any resentment on their part by taking any action to prevent their importing, and your co-operation in this respect has helped us very considerably.

In regard to the English duty on American titanium pigments, this is 20% of an agreed figure, based on the market selling price, less an allowance for selling expenses. On the last lot of Titanox-A we imported we paid duty at the rate of £12.3.3. per ton.

We much appreciate your offer to deal with further business on our behalf on the same basis and to credit us

for the shipments as referred to in your letter of October 18th, the difference between the cost plus 10% and the selling price. Where you make a sale direct to a customer as distinct from selling to us, according to the established procedure between the associated companies, you are entitled to make a further deduction to reimburse you for the selling expenses incurred. You had possibly overlooked this point. Therefore, on sales to customers made on our behalf, the credit to us should be the selling price to the customer, less 5% of that amount, less any delivery expenses incurred, less cost plus 10%.

This covers the offer made to American Celanese referred to in your letter of October 20th and to the sale being made to the Singapore Rubber Works, referred to in your letter of October 18th. In regard to this last letter, only the profit on the shipment to Singapore should be credited to us, as Batavia comes in the territory of Societe Belge du Titane and therefore, the profit on that sale should go to that company through Dr. Jebsen.

Again referring to your letter of October 18th, we note that you have received several requests to quote from points in our territory such as New Zealand and South Africa within the last few days, but have turned them all down in view of the heavy demands being made against you by your domestic customers. We fully appreciate that with the titanium pigment situation being so acute in the States, your own customers must have first call on the supplies available. I should be interested, however, if you would keep me advised of all enquiries from our territory, whether you are in a position to supply them or not, as we are naturally interested to know which of our customers is trying to obtain supplies outside.

Exhibit 1030

We are very grateful to you for the help you are giving us in these matters and much appreciate the manner in which you have handled the enquiries received.

With kindest personal regards,

Yours very truly,

C. J. STOPFORD,
General Manager.

March 12th 40.

GJ/AK

Fletcher W. Rockwell, Esq.
President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. Rockwell,

I take the opportunity to send you a few words from here.

On my way down, I passed one day in Brussels and saw Mr. de Vleeschouver and Mr. Kersten. It was a Sunday, so Mr. de Vleeschouver had got a leave from his military duties.

Business was good last year. It has been rather slow in January-February, but altogether we cannot complain.

Outstanding risks have been considerably reduced and the stock is small, partly forced by circumstances, with the exception of a quantity of Lead Titanate taken over last autumn. It arrived just as the crisis came last autumn (fear of German invasion) with the consequence that the customers did not take the quantities ordered. It was particularly our friend Pieter Schoen & Soon, Zaandam, who failed us. Société Belge is however very optimistic with regard to the future of Lead Titanate. The Dutch manufacturers are very enthusiastic about it and two of the most important firms have launched themselves on great propaganda on paints, based on Titanated Lead. They use this partly as the only pigment and partly a mixture of Titanated Lead with TiO2 (with 1% antimony), the latter in quantities up to 30 parts mixed with 70 parts of Titanated

Exhibit 1031

Lead. First of all it was used for marine paints, and now also in house paints.

Our profit on this pigment has been very small, due to the policy you have followed in U.S.A. I am inclined to hope that your production cost for this pigment will go considerably down, with the increased consumption, which I understand you also have there. I should, though, much appreciate if Mr. Garesché would write me a few words, what your long view policy will be, with regard to this pigment; whether you intend to continue to use it as a "loss-leader" or you are looking forward to a profitable business in this pigment, with the idea of holding the price where it is or somewhere in that neighbourhood, in view of its remarkable properties in certain directions.

Here in France we have, as you will have understood, a shortness of material.

Mr. Gilbert has during the first 4 months of the war been selling about 40% of the total consumption, which represents about 83% of his quota in the market. This has been done partly with the old stock and partly with material furnished us by Blumenfeld. As we had surplus sales in Belgium and Holland in the first 8 months of last year, amounting to 120 tons TiO_2, we have arranged that he delivers this quantity to Sté Ind. du Titane. 90 tons have been delivered and we are awaiting further 30 tons. Our stocks are now exhausted.

I intend to go to England one of the first days and will see if we cannot get goods from Billingham, in view of the treaty between France and England, which is under development and according to which it seems that an exchange of goods will take place between these two countries as before the war, without restrictions caused by the war.

Exhibit 1031

If they are short of goods in Billingham, I intend to suggest that the quantities they would deliver to France (and somewhat to Belgium and Holland) could be replaced by deliveries from Sayreville and St. Louis to B.T.P.'s overseas markets like Australia and South Africa. I trust that this will be in order as far as the Titanium Pigment Corporation is concerned, as Mr. Garesché informed me that he expected to be in a position to deliver from the middle of February this year. I will write nearer about this matter as soon as I have been in England.

I have had a conversation with Blumenfeld, who at the present also is looking forward to getting some material from Laporte, as his factory is not ready for production and he is short of goods.

I intend to remain in England nearly a week and will then return to Paris and discuss an arrangement for future cooperation with Blumenfeld, in which he has expressed also his interest. I hope that the basic principles can be agreed upon fairly quickly, so that I can leave the matter for development in detail to Mr. Gilbert and Mr. Henriksen, and go to Norway, as I will then have already been away 5 weeks, which is a long time under the present circumstances.

I have received letters from Mr. Tasker and Mr. Stopford, telling me that last year was a very good year, but of course the increase in profit will chiefly be taken by the Government in taxes.

They intend to propose definitely at the next Board Meeting an extension of the capacity with 3000 tons TiO2 at a cost of £40.000, and a plant for recuperation of acid, at a cost of also £40.000.—

They have further had a request from the Government to widen their export field, but this, as Mr. Stopford re-

marks, is connected with difficulties in view of their agreement with Titan Company Inc. He wants to talk it over. As Titan Company Inc. has no market which they can leave to B.T.P., this question can only be considered from the point of view, to which extent Titan Company Inc. buys from B.T.P.

I am writing you the above to inform you of the situation and how my thoughts are running, and I should much appreciate your comments and any advice you will send me.

March 13th

News have just arrived that the Finnish Delegation in Moscou has agreed on terms which will be placed before the Finnish Government and finally the parliament, for decision.

I hope that the conditions are such, that the Finnish strategical position in the future will be fully satisfactory, otherwise it does not speak well for the future.

You will realise that during the last week I have had to ask myself the question whether I will be able to get back to Norway in a reasonable way or not, as a continuance of the war would more than likely have brought Norway and Sweden also in. With a peace between Finland and Russia, there will be a pause, but the question may turn up again from time to time, if new incidents similar to "Altmark" occur, which is not unlikely. Regarding the Altmark affair, the Norwegian Government and all the people I have spoken to, with knowledge of international law, consider that the Norwegian Government has acted correctly and it is my impression that this is being more and more realised also in France and England. This is apart from sentiment which is of course an entirely different

matter, that is the question of entering the war or not and whether Norway in that case will not be more of a liability than an asset, in view of the long coast and thin population, and the country being insufficiently prepared.

It is admirable and a comfort to see the good spirit (you may nearly say gay) among the French. Life is going on very much the same as before the war, with the exception of the black-out and earlier closing hours.

Hoping you and your family are well, I am, with kindest regards,

Yours sincerely,

sign G. JEBSEN

P.S.—I have just received the preliminary result of Sté Industrielle du Titane for 1939, showing a profit of about Frs. 100.000.—after provision for depreciation and taxes.

Copy to Mr. Garesché

Exhibit 1032

March 29, 1940

Dr. G. Jebsen,
Titan Company A/S,
Fredrikstad, Norway

Dear Dr. Jebsen:

In the absence of Mr. C. F. Garesché, who is in Florida recuperating from a recent operation, I have been requested by Mr. Rockwell to reply to your very interesting letter of March 12th.

We are pleased to learn that business was good last year, although somewhat lower in January and February. You have already been advised that our tonnage sales for 1939 increased 33.2% over 1938, while for the first two months of 1940 there was an increase of 18.3% over the corresponding two months of 1939. The increase in dollar sales would be even greater, due to the fact that our principal gain has been in "TITANOX"-A which, of course, commands a much higher price than the composite pigments.

Unfortunately, our costs since the first of the year have been very much higher than for last year, due primarily to the excessive freight rates now charged for the transportation of ilmenite ore. Consequently, our profits have diminished. The shrinkage, however, has not been sufficiently great so that we have found it necessary to increase any of our selling prices. In fact, we have, since the first of the year, reduced the price of "TITANOX"-C one-fourth of a cent per pound, applicable to all of the various types of this pigment, and have reduced the premium on "TITANOX"-A NC by one cent per pound.

Exhibit 1032

With respect to "TITANOX"-L, which we note still offers you little opportunity for profit, we call your attention to the fact that the production cost of this pigment was substantially improved throughout the year 1939, and so enabled us to continue our policy of selling you on the basis of cost plus the regular percentage, rather than an arbitrary sales figure. The report of December 31st, 1939, shows the total manufacturing cost for the year at $146.14 per ton of 2000 pounds, and your transactions with us were adjusted on that basis. However, due to the increased freight rates on ilmenite and other advances, fortunately of a more moderate character, the cost for the first two months of 1940 stands at $150.61. We hope and expect that this will be improved during the year. You are, of course, being billed for 1940 purchases on the basis of 1939 manufacturing cost, subject to adjustment at the end of the year.

The improvement in costs which we were able to accomplish last year definitely removed "TITANOX"-L from the category of a "Lost Leader Pigment". While the profits accruing to us from the sale of this pigment were not as great proportionately as that of other "TITANOX"-Pigments, they were reasonably satisfactory.

As for our future policy, we are not disposed to discontinue a material which showed an increase in tonnage sales of 127% in 1939, as compared with 1938, and which, in the first two months of 1940, has shown an increase of 74% over the corresponding months of 1939. Moreover, we feel that "TITANOX"-L definitely fills an important place in the list of pigments obtainable by the paint manufacturer, and that it has desirable qualities which are available in no other pigments.

With respect to a shortage of goods in Billingham, we have already promised Mr. Stopford that upon receipt of

a request from him we will do our best to accomodate him in connection with requirements originating in Australia and South Africa, and to this end have already made some shipments.

The increased production now available at our Sayreville plant, through the completion of the third unit, and somewhat greater production at St. Louis, both have helped to relieve a situation which had us rather worried in the latter months of 1939. At the moment, we are in a reasonably easy position with respect to supply and demand.

It is true that our stocks on hand of "TITANOX"-A and "TITANOX"-C have not yet attained the maximum which we have set up as a safe limit, but they are pretty close and in the case of "TITANOX"-B we have a little excess. In this connection we can release further shipments of "TITANOX"-B-25 for your requirements in Norway as soon as advice is furnished by you with respect to the quantities desired and the details of shipment.

I will leave the other points touched upon in your letter for such comment as Mr. Garesché may care to make, following his return which we expect will be by April 15th.

Yours very truly,

TITANIUM PIGMENT CORPORATION

Titanium Pigment Corporation,
111 Broadway,
New York, U. S. A.

Dear Sirs,

We have to thank you for your letter of the 21st ultimo and have to state that we are particularly interested in titanium for use in the manufacturing of coloured cements. Perhaps you could advise us on this point and send us a sample or samples of the most satisfactory grade for this purpose. We would appreciate a reasonably large sample of say two pounds to enable us to carry out the necessary work prior to ordering.

We would order only in reasonably large quantities and pay as usual in your country prior to shipment. Could shipment be made from the Pacific Coast and if so what difference if any would it make to prices.

We look forward to receiving the sample asked for and if it is suitable and competitive we could cable an immediate order.

Yours truly,

SILICA DEPOSITS LTD.

Paris,
France

April 12, 1940

Dear Dr. Jebsen:

I have read with much interest your letter of March 12th to Mr. Rockwell. I note that Mr. Hagar has replied to your questions. I note your intention to suggest the possibility of Billingham supplying your French, Belgium and Holland markets, in which event, it may be necessary for us to take care of the requirements of Australia and South Africa. We will be very much interested to hear their reaction to your proposal.

Our latest information regarding Billingham's supply of ilmenite was as of September 1st, 1939, at which time we calculated they had a little more than three months' supply on hand. We have had no further news, except that we were advised that shipments of ore from Sogndol were reasonably heavy. We would be very much interested to know whether Billingham was able to increase their stock pile to give them a reserve for as much as six months. It would seem that the recent developments in Norway put them into a serious predicament, unless the Germans are quickly driven out of the country.

Yours very truly,

Manager

P. S. Have just heard that Billingham is trying to arrange for 2000 tons of Colachel ore from Hopkins & Williams.

Mr. Fletcher W. Rockwell, President
National Lead Company
111 Broadway, New York City

Dear Mr. Rockwell:

Although I think the Germans will be thrown out of Norway within a relatively short period, we must reckon that quite some time will pass before Titan Company Inc.'s work as hitherto done on this side, can be resumed.

It is out of question to attempt to organize such work here in Paris at present. We will therefore, for the time being, have to get along in the simplest way possible and each company carry on its business as far as possible without depending on Titan Co. Inc.'s organization here in Europe.

In this connection I will have to ask more work being done on your side, for Titan Co. Inc.

Hitherto the Company's bookkeeping in New York has been reduced to a minimum and kept, as regards the European business, as well as Inc.'s accounts with the Guaranty Trust Co., on the basis of records made in Fredrikstad.

Some of this work I suggest now to be done in New York, until further, as it will appear in the course of my dealing with various matters below. I hope this can be done without causing too much trouble.

I instructed them Friday to take their supply from you or Billingham.

I assume, though, that they will not receive anything from Billingham for the time being, and on a telegram from Hagar Saturday, I replied, the 13th, as per copy enclosed.

Sté Belge du Titane sold in 1939 a very nice quantity, i.e., a little over 1000 tons calculated as TiO_2, and business is going well at present.

They operate with their own capital and funds (altogether about Belg. Frs. 800,000 of which B. Frs. 500,000 in share capital)—further with a Belgian loan of B. Frs. 1,000,000 and a Dutch loan of Fl. 50,000, these two amounting together to ea $60,000. The loans are guaranteed by National Lead Company.

Sté Belge is instructed to transfer all available cash into dollars, besides covering exchange also for receivables, and they will, in case these loans for some reason should not be renewed, have to call on Titan Co. Inc. for payment.

Sté Belge has today paid in to Titan Company Inc. more than they owe; how much I do not know, but expect to hear from Sté Belge one of these days. (Our records are in Fredrikstad).

Our business in Belgium and Holland has been of a very satisfactory nature, with good profits for Titan Co. Inc., so we are interested in and owe to help them as far as we can.

I suggest, though, that Mr. Hagar watches that we do not send too large shipments on one boat.

Invoices concerning the shipments, I trust, will be sent to Sté Belge on the basis mentioned in my cable of April

Exhibit 1037

13th, and these will serve Sté Belge for their bookkeeping and, in case it should be necessary, as a basis for the purchase of Dollars.

As regards payments, Sté Belge has hitherto paid into Titan Co. Inc.'s account with the Guaranty Trust Company, London or New York, as they have had means available, and independent of invoices. I have now asked them to pay to National Lead Company until they receive other instructions from you or me. National Lead Company will consequently receive money on account, independent of what goods, resp. invoices, have been sent to Sté Belge. This money should be credited Titan Co. Inc., which on the other hand, I take it, will be debited for the goods sent to Sté Belge.

As regards the means to pay Inc.'s expenses on this side, I suggest as most practical that I ask you (National Lead Company) to send us money as it will be required—this to be debited to Titan Co. Inc.'s account.

Consequently I must ask that the bookkeeping for Titan Co. Inc. be extended to record the above mentioned transactions.

Societé Industrielle du Titane

Societé industrielle du Titane has been working with the stock in hand in September, and 130 tons received from Thann et Mulhouse.

Blumenfeld has promised to supply us with 30 to 50 tons per month, but these are coming very slowly and he would like us to import from England.

Import from U. S. A. is subject to licenses, which no doubt will not be given because of more urgent use of foreign currencies.

Billingham has until lately refused deliveries because of shortage, but Stopford has informed us of their interest to export now. This is in connection with the English Government's wish to see their export developed.

With the new English-French Treaty, France can be supplied from England without special licenses.

I have written to Stopford and suggested that B. T. P., in case of shortage of goods, should deliver to Societé Industrielle du Titané against being correspondingly supplied by National Lead Company in their oversea markets, Australia and perhaps South Africa, until the extension of the factory in Billingham has been made. (I assume that the extension of Sayreville is now completed and that you have no difficulties in making deliveries).

Stopford will send us 20 tons Extra T, but says he can not send any more before verbal discussion of the situation. This has not come off yet, as my departure to England has been delayed for various reasons.

As regards the outcome of the German invasion, I am fairly optimistic that the Germans will be thrown out within not too long. However, they may do a lot of damage in their usual way and you will realise my anxiety, particularly as to my family, friends, our staff and our factory and warehouse in Fredrikstad. Fredrikstad has been bombed, but indications are that our place has not been hit yet. I am without any personal news hitherto and do not know whether my wife and the children have been able to evacuate, according to plans made last autumn. If so, they should be in Lillehammer, which is unoccupied.

Henrikssen being of military age, is going to Norway with the first transport taking Norwegians for the army. Personally I have no definite plans. I wish to go back as

Exhibit 1037

soon as possible, to see my wife and family and see to the reorganization of the Titan Co. A/S, and wish also beforehand to have arranged for the supplies of France and the working of Sté Belge. As my return to Norway will presumably have to be via England, I suppose both can be achieved without interfering with each other.

The consolidated results of our activities last year were under preparation by Mr. Iuell and well on the way. From preliminary information it looked as if it would show about the same results as for 1938, after stocks had been put at prices equal to those of January 1, 1939, and also otherwise certain reserves made, but now it will be impossible to establish such a report for quite some time.

I am enclosing a copy for Mr. Garesché and will appreciate if you or he will give the necessary information or instructions to Messrs. Simon, Warshow, Hagar, Cole and Kaegebehn.

Please convey my best regard to all my friends.

Trusting that you and your family are well, I am, with kindest regards to you all

Yours,

(Signed) G. JEBSEN

P. S. I also enclose copy of a cable of April 15th to Mr. Hagar and beg this letter to be considered as answers to the cable he was good enough to send me the twelfth, copy of which also is enclosed.

P. P. S. I have just received a cable from Mr. Andersen, as per copy enclosed. This is the first contact I have since April eighth.

Copy to Mr. Garesché

Gentlemen:

Thank you for your letter of March 27th in further reference to the use of Titanium Pigments for the manufacturing of cements.

For the purpose which you have indicated the standard grade of Titanium Dioxide would probably be as beneficial as any. Of equal stability, but lessor in tinting strength, is Titanium Barium Pigment, and this also should prove satisfactory.

In the matter of samples, we feel it best to refer you to:—

Imperial Chemical Industries,
380 Collins Street,
Melbourne, Australia

from whom you can also obtain quotations.

Yours very truly,

Dear Sir:

We acknowledge your letter of April 19th in further reference to an order recently received from your client in *South Africa*.

First, let us advise you that since your order came to our attention, we have been requested by our English associates to refer all orders originating in the British Empire to them, since it is highly important that they maintain the maximum of Empire trade under existing conditions.

We cannot, therefore, accept further orders from any part of the British Empire, but will in this instance work along with you, since the inquiry came to us prior to the instructions referred to above.

In response to your request for information regarding the various grades which we produce, we believe we can best serve you by furnishing galley proofs of advice soon to be published in one of the Paint Trade Journals. These came to us for correction just recently and two copies are attached, one for your own use and one to be forwarded to your South African clients.

Yours very truly,

TITANIUM PIGMENT CORPORATION

Exhibit 1041

Paris, May 1st, 1940.

GJ/AK

H. S. Tasker Esq.
Stocks Wood
Wareham
Dorset

Dear Mr. Tasker,

I note the Minute No. 932 of the Board Meeting of April 17th 1940, and can not but think that the criticism which apparently is expressed by the Board of the British Titan Products Company has been made without knowledge or sufficient consideration of the circumstances.

I beg therefore to mention the following:

Titan Company Inc., which has licensed the various associated companies, has operated commercially in these territories re which licenses have not been given, and it has also supplied Société Industrielle du Titane, which, of various reasons, has not yet constructed a manufacturing unit.

Some of these markets, and this particularly applies to France, have been developed and maintained for years even at a loss, as a matter of policy which it should be unnecessary to explain here, a policy which also has had the interest of all the associated companies in mind.

It has been the practice between the British Titan Products Co. and Titan Co. Inc., that deliveries to Titan Co. Inc. for territories outside B.T.P.'s have been made at cost plus 10%.

What Titan Co. Inc. has done with the goods so purchased is Titan Co. Inc.'s own matter, and it is difficult to

understand the objection the Board feels, and this to such extent as to make it the subject of a Board resolution.

In parenthesis, I will mention that an exception has been made as regards deliveries, which have been made to territories which are operated by companies with manufacturing units. This has been a matter of understanding in these specific cases.

When Titan Co. Inc. in the case dealt with in Minute No. 932 asked B.T.P. to reserve a profit of 10% for Titan Co. Inc., instead of sending its own invoice to Sté Industrielle du Titane, this was a practical measure due to the specific circumstances arisen from the war, which at present and for some time has prevented Titan Co. Inc's organisation in Europe for a considerable part from functioning.

I suppose that also the following should be mentioned:

From the Minute I am under the impression that the 10% profit mentioned is considered as a payment for which Titan Co. Inc. has not made or is not making any contribution.

Probably most of the members of the Board are not sufficiently familiar with the functions of Titan Co. Inc. This company has maintained at its own expense a clearing office for technical and commercial exchange of experience, which has been considerably more than a pure automatic work and has, I believe I can say, exercised a beneficiary influence on the international cooperation. To this end, a staff has been maintained of more than secretarial qualifications, and also other expenses are involved.

The money for this has to come from somewhere, and therefore the profit to which the Board has taken an objection is not a net profit.

Although the war to a great extent has eliminated this work, the staff is still existing and has a right to be sup-

ported in a similar manner as the staff of the associated companies doing war service. It should be remembered that this staff consisted chiefly of Norwegians living in Paris and not of Americans in New York, and further that the expenses I refer to were incurred in Europe, chiefly in France, until the war broke out.

I should appreciate if you will bring the above to the attention of the other members of the Board, as the Minute leaves with me the feeling that the Board is under a wrong impression, having not been made sufficiently acquainted with real circumstances.

With kind regards,

Yours very truly,

Exhibit 1042

Paris, May 2nd 1940.

C. F. Garesché Esq.
National Lead Company
Titanium Division
111 Broadway
New York City, U. S. A.

Dear Mr. Garesché,

Many thanks for your letter of April 12th in answer to my letter of March 12th to Mr. Rockwell.

I wrote another letter concerning the markets to Mr. Rockwell on April 25th, and am now following this matter up in a letter to you, assuming that he prefers you to deal with this first hand.

Mr. Stopford left here this morning for London, after three days visit, during which we discussed the situation thoroughly.

There is not much to be added in principle to my letter of April 25th, but I may develop the matter somewhat.

First: In addition to the countries mentioned in my letter of April 25th "China and probably Spain and Portugal" should also be mentioned Turkey. Stopford was also in hope of South America, as these currencies are of great interest.

He repeated that B. T. P., according to the government's proposal, could hold the profits in suspense until after the war, with a view to transferring these profits to Titan Co. Inc. when the war is over, with full liberty for Titan Co. Inc. to dispose of the profits then, as Titan Co. Inc. considers right. Whether these profits would be taxed

in England was a matter under investigation, re which he could not express himself at present. I include a memo which Stopford detached on my request.

Stopford pointed out the importance to England and the British Empire of acquiring foreign currencies and reducing the need for such.

For the latter reason, he considered export from U. S. A. to Australia, as I suggested, out of question. Dollars are scarce.

The English government wish export even at the expense of the home market and the size of a firm's export business is of primary importance for the obtainment of facilities as to raw material requirements as sulphuric acid, ilmenite, etc., as well as to the purchase and time of delivery of apparatus and materials for an extension of the factory's capacity.

The English government would not ask them to break their agreement, but if the export was not done, he was wondering if the government would not look out for other ways of acquiring this export business.

A supply of France would be considered as export, but of less interest than export to countries with a currency not connected with the pound. England and France cooperating together are more or less in the same boat in these matters and he assumed that, as long as England restricted home consumption to necessities, export licences to France would be considered with this in mind and be correspondingly limited.

However, I understand that France shall also be enabled to export so that its requirements in this respect will to a certain degree be considered as necessities and an import

Exhibit 1042

to France may be permitted also with the consequence of liberating some material of Blumenfeld's for export.

Blumenfeld is contractually free to operate the markets like South America, China, Turkey, Spain, Portugal, etc.

Another supplier to these markets may be Montecatini at the time being.

Stopford has accepted orders (for shipment soonest), from Société Industrielle du Titane, corresponding to 187 tons calculated as TiO2, and he considers the question of further supplies of ca 50 tons TiO2 per month in various qualities.

B. T. P. may also in part supply Belgium and Holland. His prices cif works begin to be practically the same as yours and I believe it will be wise to give him this opportunity, but how long will Belgium and Holland be left in peace?

Supply from England has the advantage of quicker deliveries with the possibility of keeping lower stocks in these countries.

Billingham's capacity at present is ca 7000 tons TiO2. Extension to 8000 tons will be ready in 6 months, but the extension planned last summer will take ca 11 months from now.

He has Ilmenite in stock for 6 to 7 months, which may just keep him going until supply can come from India at the beginning of next shipping season, but as it is a very narrow margin, he hopes anxiously to get the 2000 tons you mention.

I shall look forward to hear from you in the near future and will then go to England to talk the various matters over with B. T. P.

Exhibit 1042

As regards the countries like China, Turkey, Spain, Portugal, I should appreciate a clear cut answer.

With kindest regards,

Yours very truly,

G. JEBSEN.

P. S.—Yesterday Gilbert received a word from Janda of Thann et Mulhouse (Blumenfeld), that they could not deliver 30 to 50 tons per month (because of shortness of raw materials?), but would send small parcels of 3 to 5 tons, so that a supply from them is as always feared rather doubtful.

P. P. S.—In connection with the above, I refer also to my letter of today to Mr. Hagar.

Copy to Mr. Rockwell

111 Broadway
New York City, U.S.A.

Paris, May 29th 1940.

Dear Mr. Garesché,

I confirm my cable of to-day as follows:

"SUGGEST YOU TAKE OVER SALESWORK
"SUPPLY BELGIAN DUTCH COLONIES FOR
"TITANICS ACCOUNT STOP WILL TRY
"SUPPLY YOU LIST OF CUSTOMERS STOP
"BASE PRICES ON YOUR OWN FOB PRICES
"STOP HAVE NO NEWS FROM VLEESCHOUWER
"AND KERSTEN BUT ACCOUNTANT DHONT
"AMONGST REFUGEES NEAR ROUEN,"

which speaks for itself.

The list of customers I hope to get from Mr. Dhont and will send it as soon as I have received it.

Many thanks for your letter of May 17th.

I suppose you will hold the profits in suspense until after the war and keep track of how much profit has been made on each market in question.

I am very glad to note that these markets now will be taken care of and I trust that you will go after them energetically.

Exhibit 1043

With the new situation which has arisen since the capitulation of the King of Belgium, the question arises how long Billingham will be able go continue export, as I assume that all efforts will be put to war production and sulphuric acid may be difficult to have in sufficient quantities.

I have sent you yesterday copy of my letter of May 29th to Mr. Rockwell, which speaks for itself.

Personally I do not feel that we will have to leave Paris in the very early future, but it is better to be prepared early than too late.

The capitulation of the king of Belgium has rather reinforced the determination here in France, than having a depressing effect.

With kindest regards,

Yours very truly,

G. JEBSEN

GJ/AK

TITAN COMPANY, INC.

C. E. Garesché Esq.
National Lead Company
Titanium Division
111 Broadway
New York City, U. S. A.

Paris, June 5th, 1940.

Dear Mr. Garesché,

Many thanks for your letter of May 17th.

Reading this, I got at first the impression that you had in mind that B. T. P. also should supply China, Spain, Portugal and Turkey besides the Titanium Pigment Corporation.

However, I could not find any information concerning an authorization of the Board of Titaninc for B. T. P. supplying those countries and, as Mr. Rockwell's telegram and letter were quite definite, I have informed Mr. Stopford in conformity with this.

I assume you had in mind the British Titan Products Co.'s deliveries to France and the contemplated deliveries to Societé Belge.

The factors which you put forward in the second paragraph to be considered in connection with B. T. P.'s proposal, are of course fully justified and the decision taken creates a clearer position, so that in fact I was expecting the decision arrived at.

From your letter, however, and considering as information from Mr. Hagar last autumn, I am under the im-

pression that the Titanium Pigment Corporation will only accept such orders as they receive, and not solicitate orders or do any active sales work. It may be that the last would be putting too high a demand on you, compared with the possible results, but you will realize the importance of maintaining those markets.

In view of the last paragraph of your letter of May 17th, I may mention that I have expressly said to Mr. Stopford that deliveries to Titaninc's territories during the war shall not form a basis for any claim from them or obligation for us as regards supplies later, and he was perfectly in agreement with them.

Contractually Sté Ind. du Titane's territory form a part of Titaninc's territory vis a vis the B. T. P. but, for the sake of clearness, it was expressly mentioned that the above applies also to the territory of Sté Ind. du Titane.

With kindest regards,

Yours sincerely,

G. JEBSEN

Dear Dr. Jebsen:

I have yours of the 5th instant from Paris.

We had presumed that you were perhaps arranging for BTP to furnish pigments to China, Spain, Portugal and Turkey during the emergency, but had not in our letters intended to convey the idea that there had been formal authorization to that effect.

As regards our soliciting business in the various colonies, we wish to make our program fit what you feel is desirable. We can see the importance, particularly under present conditions, of our attempting to serve these customers so that they will not be lost when the emergency is ended. Please be assured that we will do this to the best of our ability.

Eaglescliffe,
Stockton-onTees, England

Dear Mr. Stopford:

We cabled you on February 5th as follows:

"HAVE REQUEST 4 TONS OXIDE INDIA FROM LOCAL BROKER. IF REFUSED WILL PURCHASE ELSEWHERE. SHALL WE QUOTE. CABLE RPLY." HAGAR

This morning we were pleased to receive from you the following cable in reply:-

"AGREE YOU QUOTE FOUR TONS OXIDE INDIA" STOPFORD

The Binney & Smith Company represent us in South America but they also do export business all over the world. They recently had an order from one of their clients in India, the identity of which they have not divulged other than to say it was a rubber manufacturing plant, for several different products including 4 tons of Titanium Dioxide.

The Manager of their Export Department, Mr. H. V. Whelan, called us on this matter and asked if we would supply them with the Titanium Dioxide. I was hesitant to consent to this, even after talking with Dr. Jebsen and

Exhibit 1047

despite the fact that Mr. Whelan claimed they would have to go into the market and purchase the pigment from someone else in the event we would not sell them. Accordingly I cabled you and was very glad to have your consent to the transaction.

We are selling the pigment to Binney & Smith at our regular American price of 14-1/4¢ per pound, packed for export, delivered either to their warehouse or to the steamship pier. They will charge this price, plus the cost of handling, delivery, etc., and will waive their usual commission of 5% unless you would be willing to grant that out of your profits. We, of course, will handle the transaction as for your account, invoicing you on the basis of cost, plus 10%, any profits beyond this to accrue to your credit.

Yours very truly,

d

I. D. Hagar Vice President.

New York, N. Y.

Dear Mr. Hagar,

Many thanks for your letter of February 6th, confirming arrangements in regard to the quotation to the Binney & Smith Company for shipment to India. I thank you for the action you have taken in this matter, with which I am in full agreement.

With regard to the correspondence with Mr. Barnes, of Lewis Berger & Sons Ltd., enclosed with your letter, I find the first paragraph of Mr. Barnes' letter to Mr. Corddry, dated February 4th, very interesting. I do not want to appear grasping, but we certainly need every dollar we can get hold of in these days of heavy purchases from America, and as it would appear that we are entitled to the profit over and above cost plus 10% on your material shipped by the Sherwin Williams Company to Australia, if they or Mr. Barnes would tell you how much they have shipped since the outbreak of war, we should be very pleased to receive credit for the profit on the shipments.

Yours very truly,

C. J. STOPFORD
Director and General Manager.

Dear Mr. Barnes:

I very much appreciate your letter of Nov. 21 asking that we quote you on our various grades of "TITANOX" pigments required for your plants located in the British colonies.

In accordance with out telephone conversation of yesterday, we cabled the British Titan Products Company, and have been advised by them that it will be satisfactory for us to quote and supply you thus removing the restrictions mentioned in your letter.

We are, therefore, pleased to quote you domestic prices f. a. s. New York packed for export for deliveries to your plants in the British Empire outside of the United Kingdom. We are attaching our price schedule of domestic prices applying to all pigments.

For your information, "TITANOX"—A is our trade name for commercially pure titanium dioxide (TiO_2). "TITANOX"-B (Titanium Barium Pigment) contains 25% TiO_2 and 75% barium sulphate, while "TITANOX"-B-30 contains 30% TiO_2 and 70% barium sulphate. "TITAN-

ox"-C (Titanium Calcium Pigment) contains 30% TiO_2 and 70% calcium sulphate. "TITANOX"-M (Titanium Magnesium Pigment) contains 30% TiO_2 and 70% magnesium silicate.

If this letter, together with the attached price list and booklet, does not give you all the information you desire, please do not hesitate to communicate with us.

Yours very truly,

Dear Mr. Stopford:-

We refer to your letter of March 31st in reference to shipments to Lewis Berger & Sons.

The first paragraph of your communication states that in January, 4,500 pounds of Titanox A were shipped to Australia on their account by their American associates and that the invoice was at 13-3/4¢ per pound, amounting to $1,618.75.

Our records indicate that this shipment was made in January 1940, and that the value at 13-3/4¢ per lb. was $618.75. We call your attention to the fact that the profit on this transaction was transferred to you by our credit memorandum No. Y-2427 dated January 29, 1940, in the amount of $252.22.

The order for 4,200 pounds, to which you also refer, is in the process of being billed at the present time. It was shipped from our Sayreville plant on April 9, 1941. As soon as the transaction is complete a proper credit memorandum will be issued to you.

Exhibit 1052

So far as we can determine these are the only transactions with Lewis Berger and credit for each is being awarded to you.

Dear Mr. Hagar

I asknowledge receipt of your cable of May 1st, received yesterday, reading:

"H. M. HODGES SHANGHAI REQUESTS REPRESENTATION OUR PIGMENTS BECAUSE DEFAG CLOSED.

"PLEASE ADVISE."

and confirm my today's reply, as follows:

"CABLE RE CHINA RECEIVED. REFER MY LETTER APRIL 25 TO ROCKWELL AND LEAVE DECISION

"TO TITANINCS BOARD STOP LETTER TO GARESCHE WITH FURTHER INFORMATION GOES WITH

"CLIPPER TOMORROW".

My letters to Mr. Rockwell and Mr. Garesché contain all the information I can send and I must leave it to Titaninc's Board to take a decision.

As a Norwegian, being at war with Germany, I neither can, nor do I wish to have anything to do with the Germans.

Exhibit 1055.

Trusting that the right decision will be taken in New York, I am, with kindest regards and best wishes to Mrs. Hagar and yourself,

Yours very truly,

G. JEBSEN.

P.S.—I would, though, in view of the steadily changing conditions in the world, suggest to avoid giving a representation definitely to a firm, but rather let them work and protect them by not selling to others in that territory, until more experience is gathered.

Under the present circumstances where, generally speaking, it is more difficult to get materials than to sell them, this will probably be satisfactory to the applicant.

2 P.S.—I have no knowledge as to where H. M. Hodges is.

Copy to Mr. Gaffesché.

Exhibit 1056

Dr. G. Jebsen,
26 Rue de la Pepiniere,
Paris, France

Dear Dr. Jebsen:

We acknowledge your letter of May 3rd in which you confirm the cable received from us with respect to *Hodges, Shanghai,* and your reply thereto in which you instruct us to leave the decision to the Board of Titan Co., Inc.

As we stated in another letter, at a meeting of Titan Co., Inc.'s Board yesterday, it was agreed that during the emergency we would accept orders from certain countries previously served by I. G. where it was now impossible for them to fill orders, such action on our part to be only for the duration of the emergency.

It is not our thought to make any hard and fast arrangements from which we could not readily withdraw when the time comes for us to do so.

We are looking up H. M. Hodges and may make a proposal to them a little later on if their credit references seem satisfactory.

We will keep you advised of whatever steps we take in this direction.

Yours very truly,

TITANIUM PIGMENT CORPORATION

I. D. HAGAR—General Sales Manager.

Exhibit 1057

COPY

May 17, 1940

Dear Dr. Jebsen:
26 rue de la Pepiniere,
Paris, France

Dear Dr. Jebsen:

Your letter of May 2nd is acknowledged. I note from it that Mr. Stopford spent three days with you in Paris discussing the matter of B.T.P. furnishing pigments to certain territories heretofore served by Titangesellschaft.

One factor to be considered when contemplating B.T.P's proposal to hold profits in suspense until after the war, is that such funds in escrow might well be depreciated even to worthlessness by reason of possible inflation. Of course, the uncertainty as regards possible taxation is another important factor.

We can appreciate the importance of export to England, and can only be sympathetic regarding the necessity of such a program. However, we feel it would be rather doubtful that they would be able, or willing, to supply all of the requirements of Titangesellschaft's foreign territories, and in the event that they failed, it would probably mean that Blumenfeld or Montecatinie, would be in position to capture the market and perhaps hold it after hostilities ceased. It would be our feeling, therefore, that if you are in position to supply these territories from both B.T.P and ourselves, that Titaninc's best interests would be served.

We were very interested to hear that Billingham have on hand a 6-7 months' supply of ore. Having had no

figures since September 1, 1939, we had attempted to estimate how much they might possibly have accumulated and had more or less arrived at a figure of a maximum six months' supply as of May 1st. Apparently they have done a little better.

As Mr. Rockwell has advised you, the Board of Directors of Titaninc have authorized the Titanium Pigment Corporation to accept orders from China, Spain, Portugal, Turkey and other territories which before the war, were served by Leverkusen.

We had gathered the impression that B.T.P were asking Titaninc to agree to take certain foreign supplies from them for a period of years, perhaps longer than the end of the war, but this situation is not touched upon in Mr. Stopford's memorandum attached to your letter.

Yours very truly,

SECOND MAIL

Titanium Pigment Corporation,

New York.
111 Broadway

Dear Sirs, *Titanium Dioxide pure 99%.*

We are the Swiss agents for Messrs. Fabriques de Produits Chimiques de Thann et de Mulhouse S.A., Thann, the French producer of Titanium Dixoide, and have been supplying the Swiss market in competition to the J.G.Farbenindustrie. Since the war deliveries from France have become rather irregular. Matters have grown worse since the invasion of Holland, Belgium and France and these last days supplies from Thann stopped entirely, the French railway system being temporarily monopolised by the Military authorities.

In order not to lose contact with our clients we are on the lookout for a new source of supply and we beg to inquire by the present whether and on what conditions you would be in a position to furnish us

Titanium Dioxide pure 99%

in lots of *10/20 tons at a time,* packed either in bags of 50 kgs each or casks of 200 kgs contents. Shipment would

have to be effected to Genoa and we shall thank you to indicate with your offer the present freight rates in force for this product to that port.

We sincerely hope that you will not hesitate to give this matter your careful attention and pass us a favourable decision by return of mail.

When fixing your prices please keep in mind that we still have to face German competition and that high freight rates from U.S.A., warriskinsurance etc. will make business very difficult.

Minutes

of the Board Meeting in A/S TITANIA

on June 21, 1940.

Present:

Members of the Board: Mr. Vogt and Mr. Borchgrevink

Others: Mr. Knudsen, Mr. Mölbach and Mr. Anker

---

1. Mr. Knudsen informed that space has been booked for shipment of approx. 6000 tons Ilmenite to Titangesellschaft. The shipment will go forward before the end of the present month.

On telegraphic inquiry how it will be with additional shipments, Titangesellschaft have replied that they will require 40,000 tons during the rest of the year, in monthly shipments of about 6000 tons.

There has also come a telegraphic inquiry from Montecatini Italy, if we can offer them Ilemenite. This inquiry has been communicated to Titangesellschaft, as it was desirable to obtain the latter company's consent before offering. However, no reply has as yet been received from Titangesellschaft.

With these prospects of future shipments, it was decided to commence operations on August 1, and Mr. Mölbach was requested to make preparations for the starting.

Signed: C. H. VOGT. Signed: H. S. BORCHGREVINK.

Exhibit 1062

Minutes

of the Board Meeting in A/S TITANIA

on July 31, 1940.

Present:

Members of the Board: Mr. Vogt and Mr. Borchgrevink

Others: Mr. Knudsen and Mr. Anker.

---

3. Mr. Knudsen informed that approximately 12,800 tons have now been shipped to Titangesellschaft and the stock of ilemenite is thereby reduced to about 12,700 tons. Titangesellschaft have consented to that 5,000 tons can be supplied to Montecatini, Italy, but the sale is not closed, as Montecatini is awaiting the Italian authorities' permission to import and to pay for the material with free currency.

In respect to further shipments to Titangesellschaft, space has been booked for shipment of approximately 6,000 tons in August, and Titangesellschaft have informed that they expect being able to receive about 6,000 tons per month during the rest of the year.

Signed: C. H. Vogt. Signed: H. S. Borchgrevink.

Exhibit 1063

September 12, 1940

MEMO *to Dr. Jebsen:*

I am attaching hereto a statement which I had our Accounting Dept. compile showing in detail all sales to countries south of the Panama Canal during the year ending August 31, 1940.

It will be noted that the total sales of all pigments were approximately 192 tons, and that most of it was sold through our New York brokers, Binney & Smith and National Lead Co. of South America.

Of course, South America is open territory, but if it were possible to identify any of these sales as normally going to Titangesellschaft, we would give consideration to adjusting the profits with them after hostilities have ceased.

You will note that we have made no sales to China, or to Spain or Portugal or their colonies.

I will be pleased to discuss this further with you at your convenience.

Please return the statement when it has served your purpose.

Gentlemen:

With further reference to my letter of September 30th, we find that through inadvertence, a quotation was made on October 4th to Agencia Helice,

R. Jardin do Tobaco, 90,
Lisbon, Portugal

on 200 drums of titanium dioxide. We have not, as yet, heard from this quotation, but under date of October 25th, when the error was discovered, we withdrew our quotation.

Also, under date of October 11th, a quotation was made to Marshall Dill, Broker
San Francisco, California,
U. S. A.

on "TITANOX"-B-25 and "TITANOX"-B-30 for shipment to China. This quotation was rescinded on October 25th.

We are very sorry that through an oversight in our office these quotations were made, but trust that our having rescinded them will cause you a minimum of inconvenience. We assure you that definite instructions have been issued so that no more quotations will be made.

Yours very truly,

C. F. GARESCHÉ

Re: "KRONOS" Titanium White

Gentlemen:

We confirm receipt of your letter, addressed to Titangesellschaft m.b.H. at Leverkusen, from which we understand that the firm

Chemical Exchange, Shanghai and
Hodges, Hongkong

have been pressing you for offers of Titanium White, supposedly due to the fact that these firms are unable to fill their requirements in China, and that you, accordingly, would be prepared to make deliveries.

We very much appreciate this proposal, but would ask you to refrain from making any offers to the firm in Shanghai as we have the possibility of delivering there, and also because we have a sufficiently large supply on hand to supply customers located there.

As concerns supplying the firm of Hodges in Hongkong, due to the present circumstances, we are not in a position to deliver (sell) Titanium White there and we, therefore, authorized you by cable to deliver directly from the U. S. A. to Hongkong while the present conditions pre-

Exhibit 1074

vail. In the meantime, we understand from your cable, addressed to Titangesellschaft, that you will also refrain from sending your offers to Hongkong, and we take it that you have reached this decision due to the fact that you are of the opinion that the material would be re-shipped from there to China.

With best regards,

Yours very truly,

I. G. Farbenindustrie A. G.

(Both Signatures Illegible)

February 7, 1941

I. G. Farbenindustrie A.G.
Frankfurt (Main) 20
Germany

Gentlemen:

Thank you very much for your letter of December 17th which has just reached us.

Since September we have refused to make any offers to both Shanghai and Hong Hong. Our position in this respect is based upon the advice in the cablegram sent us by Titangesellschaft on November 20th which reads as follows:-

"YOUR CABLE NOVEMBER 20 PLEASE DO NOT MAKE ANY OFFERS TO CHEMICAL EXCHANGE SHANGHAI BECAUSE OUR MERCHANDISE IN SHANGHAI IS AT THEIR DISPOSAL. STOP DELIVERIES TO HODGES HONGKONG IS NOT POSSIBLE ON OUR SIDE STOP IN CASE DELIVERIES AREMADE FROM THERE* PLEASE EXERCISE CARE THAT MERCHANDISE DOES NOT GO OVER HONGKONG TO CHINA." TITANGESELLSCHAFT

*Apparently means Shanghai

Your communication just received indicates that you are willing, however, for us to supply Hong Kong while present conditions prevail. Therefore, we are modifying our policy to the extent that in the event we have offers from Hong Kong in the future we will accept them until advised to the contrary by yourselves. We will take such steps as are possible to make sure that the pigment sold to Hong

Exhibit 1075

Kong does not get into Shanghai, but naturally our influence over this situation will be limited since the only thing that we can do is to ask for assurance from the purchaser that such a movement will not take place.

We have noted with considerable concern that substantial quantities of titanium pigments are being shipped to China by other producers whose identity we have not been able to establish. Naturally, since there is some business to be had in China we are rather disappointed that we have been unable to benefit thereby.

Yours very truly,

TITANIUM PIGMENT CORPORATION.

"KRONOS" TITANIUM PIGMENT

We take the liberty of informing you of the following:

Titan Kogyo K.K., Tokio, which formerly obtained its ore supply from Norway, now does not have the possibility of ordering its raw material from that source. Therefore, as early as December of last year consideration was given to placing orders for Travancore ore in the event that the war became more intense, so that at least an accumulation of the stocks on hand would be possible. Factory experiments, which have been carried out this year, with this ore have given products of good color. Thereupon, Titan Kogyo decided to place an order for 3,500 tons of Travancore Ore. The export license of British India required for the first shipment of 1,500 tons was granted on the condition that the ore would not be delivered to Germany. Export licenses for additional shipments have been refused on the ground that German capital is invested in Titan Kogyo. Furthermore, in order to prevent discussion our representative heard (hoerte—possibly meaning "was told") that the interested American parties would, in the future, also receive only export licenses to the extent of their former orders.

3423

Exhibit 1082

Since obtaining ore from Norway by the land route is impossible due to the high freight rates, we have discussed with the representative the possibility of using Japanese ores or ores from Manchukuo. However, according to the information of Mr. Fujita, part of the ore deposits of this region are not useable and the other part could only be supplied after possibly two years.

Considering the continued expansion of the plant an increasing consumption of ore is to be expected and, according to information received by us, it is to be concluded that the present ore supplies will be used up in production by the middle of 1941. Since the continuing operation of the plant is dependent upon the ore supply, Titan Kogyo has applied to the Japanese Foreign Office to act through diplomatic representation to the proper corresponding English authorities, with a view to obtaining an export release of Travancore ore. It was suggested by the Japanese that you support the efforts of our friends and negotiate with the English Government for the export release of Travancore ore in connection with which you might like to call attention to the fact that the German held share of Titan Kogyo is only slight.

We join Titan Kogyo in its request and would greatly appreciate it if you would take steps in the light of the suggestions made by Japanese Titanium Pigment Company relative to an unhindered importation of Travancore ore into Japan.

We look forward with interest to your reply in this matter.

c.c. Titangesellschaft, Le.

Yours very truly,

I. G. FARBENINDUSTRIE AKTIENGESELLSCHAFT

TRANSLATION

Fredrikstad, September 4, 1940

Dr. G. Jebsen
c/o National Lead Company
111 Broadway
New York, N. Y., U. S. A.

Dear Dr. Jebsen:

TITAN KOGYO

Please find herewith "Resolutions" and "Niederschrift" (minutes) from the Board Meeting of June 27, in connection with which I. G. Farbenindustrie, Frankfort, write as follows:

"We have already mentioned in our letter of June 13, 1940 that a member of the Japanese executive committee, Mr. Ishizaka, had submitted his resignation. We are sorry to say that all our efforts to keep this gentleman with Titan Kogyo have been unsuccessful, consequently his leaving the company will have to be regarded as final. At the meeting of the executive committee of June 27, 1940, it was suggested by Mr. Fujita that Nakajima, the manager in Ube, be elected director as successor to Mr. Ishizaka. At the same time, the nomination for director of Mr. Tanaka, who has been designated as sales manager in Tokio, was suggested. As this would increase the Japanese representation on the executive committee to three (Messrs. Fujita, Nakajima, Tanaka) the Doitsu has asked for our approval for the election of a director from the European-American group, which, up to this time, was only represented by two gentlemen on the executive committee (Dr. Rockstroh and Mr. van der Laan). To safe-guard the parity Doitsu fur-

ther suggested Mr. Grimm as director. We have, in the meantime, cabled our approval hereto.

"We are enclosing herewith three copies of the minutes, as well as the official record of the above-mentioned meeting of the executive committee of June 27, 1940. Article 4. of the minutes states that the matter of the "retiring allowance". (Abfindungssumme) for Mr. Ishikaza is to be handled by Mr. Fujita. In the meantime, we have been advised that the amount of 20,000. Yen was suggested as "retiring allowance", which amount, according to information received by us from Doitsu, corresponds with the usual custom of Japanese firms. We have, therefore, answered the cabled request for approval in the affirmative."

With kind regards,

Translator: R. DANNENBAUM — *Patent Department* — *National Lead Co.*—Oct. 4, 1940

Tokyo, July 2, 1940

Minutes of the Meeting of the Executive Committee of Titan Kogyo, held in the Nissan Building, 10:30 A.M., June 27, 1940

Present: Messrs. Fujita, Tanaka, Nagasaki, Abe, Pahl, Dr. Rockstroh, van der Laan

Business of the day:

1. Suggestions for a successor to Director Zenso Ishizaka who has resigned.

Exhibit 1083

2. Increasing the number of directors to six.

3. Raising the maximum remuneration for directors and auditors to 50,000 Yen.

4. Retiring Allowance (Gratifikation) for Mr. Z. Ishizaka.

5. Calling a principal meeting (a.o. Hauptversammlung) to vote on the aforementioned points.

6. Transfer of the 30 shares of stock presently standing in the name of Z. Ishizaka to Mr. Kikujiro Nakajima.

7. Suggestion to nominate Messrs. E. Grimm, Otokichi Tanaka, and Kikujiro Nakajima to the position of director.

8. Duties of Messrs. Tanaka and Nakajima.

9. Fixing the position of Dr. Rockstroh.

10. Authorization of funds for the acquisition of apparatus, etc.

As to Nos. 1 and 2: Mr. Fujita stated that an effort to influence Mr. Ishizaka to renounce his resignation was unsuccessful, and that the resignation set for the end of February would have to be accepted now. He further stated that Mr. Murayama has also repeatedly conferred with Mr. Ishizaka, without finding a way for further interesting the latter in the business of Titan Kogyo. Mr. Fujita recommended that Messrs. Tanaka and Nakajima be elected to the Board of Directors, the latter of whom has had the same university training as Mr. Ishizaka, is slated for the business in Ube, while Mr. Tanaka is to be made sales manager in Tokio. To safe-guard the parity within the executive committee, Doitsu recommended an additional director, for

which Mr. Grimm was suggested. Doitsu has now objections to Mr. Grimm's election, and Mr. van der Laan offered to inform the European-American Group by telegram of the above suggestion, so that they may also comment on this matter.

As to No. 3: At the principal meeting on June 22, 1936, founding Titan Kogyo the total amount of the yearly remuneration for directors and auditors was fixed at 30,000 Yen. In view of the enlarged number of directors an increase of this amount to 50,000 Yen is deemed desirable. The usual bonus will not be affected by this ruling.

As to No. 4: Mr. Pahl suggests the payment of a retiring allowance to Mr. Ishizaka be left to be determined by Mr. Fujita in accordance with the usual practice of the Nihon Yushi. Mr. Fujity will try to get this information and will report the amount some time in the near future.

As to No. 5: An "a.o." principal meeting will be called for July 13, 1940 to vote on the above-mentioned points. It is expected that telegraphic comments from Frankfort will have been received in the meantime. Mr. Nagasaki calls attention to the fact that the permission of the Ministry of Finance will have to be obtained on points 3 and 4.

As to No. 6: Of the 30 shares of stock now standing in the name of Mr. Ishizaka, 10 shall be transferred to Mr. Nakajima, and, according to the suggestion of Messrs. Pahl and Tanaka, 20 shares to Mr. Abe. As to Doitsu it will have to be established whether they on their part want to recommend a further stockholder not presently represented on the Board of Directors.

As to Nos. 7-9: In assigning positions among the directors, Dr. Rockstroh and Mr. Ishizaka were, some time ago, nominated as Managing Directors (Jomu Torishimariyaku). As it is desirable that Mr. Nakajima should not become a managing director, and all directors are now on equal basis, Dr. Rockstroh will, therefore, in the future be regarded as a director only, and not as managing director.

Mr. Fujita explains that Nakajima will be factory manager at Ube, but that Dr. Rockstroh as "sōji kantoku" will remain general manager. To Mr. Pahl's question thereto, it is specifically stated that Mr. Nakajima will have to obtain the permission of Dr. Rockstroh before taking any decisive steps.

As to No. 10: The following payments are authorized:

Y 1,130—for a reserve acid pump

Y 1,140—for reserve steering heads for rotary filters

Y 1,900—for tube conduits for recovering waste liquors (without tank, as this is taken care of in the excavation program.)

Y 1,000—Toward the erection of a Chamber of Commerce building in Ube.

Mr. Van der Laan asked as to this (latter) for a statement of the amounts to be paid by the other industrial firms in Ube.

Obtaining Ore:

1. Travancore Ore: Mr. Van der Laan states that Doitsu has cabled Dr. Jebsen through Frankfort asking him to

negotiate with the British government for lifting the embargo on Travancore ore export. No answer has been received so far. Mr. Tanaka acknowledges that Titan Kogyo has, on its own behalf, approached the Japanese Foreign Office to influence the respective British authorities through diplomatic channels in relation to the same matter.

Mr. Fujita states that he has telegraphically contacted Mr. Miho, Mr. Aikawa's former companion on a trip to Germany, who is now in America (U.S.A.) to endeavor to arrange through Titan Co., Inc.—Wilmington that Titan Kogyo will be able to receive a part of the ore from British India.

2. *Ore From Brazil:* Dr. Rockstroh states that according to his information there are deposits of ilmenite at Bahia and it was agreed to approach the I. G. representatives in Brazil to gather information about transportation possibilities as well as a sample and price list.

3. *Ore in Asia:* Mr. Fujita reported the results of his last trip to Manchuria, where the Manshu Kogan K. K. possesses exploitation rights to an ore deposit in the Nekka District from which samples of ilmenite have been submitted. Deliveries from these deposits can be expected at the earliest, two years from now, because the obtaining of ilmenite and iron ore are connected with blast furnace works presently under construction.

The ilmenite deposits examined up to now in Korea (Chosen) are so unfavorably situated that their use, according to the Japanese opinion, cannot be considered because of high transportation costs.

Exhibit 1083

The deposits on Shodoshima (Translator's Note: This seems to be a mountain.) mentioned by Dr. Rockstroh, are not regarded as being suitable by the Japanese because that district has been declared as a National Park (Naturschutzpark) and permission for working will, in all probability, be refused by the government.

Expense Refunds: In view of the affirmation obtained at the last meeting of the Board of Directors, regarding the refund of expenditures, Mr. Van der Laan would like to know what further steps have been taken in the meantime. He was informed that it will again be brought to the attention of the Ministry, so as to speed up the granting of the transfer-petition which is in their hands.

Attention Messrs. Weiss
&
Ernest

Gentlemen:

We beg to acknowledge receipt of your letter of September 2nd with reference to the difficulty which Titan Kogyo K. K., is having in obtaining ore for the operation of their plant.

Under date of August 23rd, we also had a cable from Tokyo asking us to quote them on 2000 - 3000 tons of Travancore ilmenite for shipment this year. We cabled them in reply on September 5th that we were unable to obtain quotations from our London suppliers because of war complications. We, however, offered to sell them some Norwegian ore from our stock at Sayreville, N. J., if they found it impossible to get ores elsewhere. We have since had a reply from them stating that they are trying to negotiate direct with a native producer in India.

It apparently is not possible to arrange for shipments to them from our English suppliers, due to war complications. However, if they are unsuccessful in obtaining sup-

plies elsewhere, we will be glad to keep them going with several thousand tons of Norwegian ilmenite from our stock pile.

Yours very truly,

C. F. Garesché
Manager

New York

Dear Mr. Garesche:

Referring back to your cable dated Sept. 7th regarding import of Travancore Ilmenite to Japan through you, we appreciate very much for your kind inquiry made for us to your London supplier and the good suggestion you have given us for possibility of securing the ore.

We are very glad to inform you that by negotiating with Hopkin & Williams (Travancore) Ltd. through Brunner Mond Co. (Japan) Ltd. we have succeeded at last to obtain quotation for 2,000 tons, and we are now negotiating with steamship company here for the space which is not easy at present on account of the government control of the space of ocean carriers. However we are endeavoring utmost effort to secure it as soon as possible.

Should the present situation change in future, which would make the dealing with the Travancore supplier impossible, we may ask your assistance again in obtaining Norwegian Ilmenite from your side, and we trust that you would help us at anytime if necessary.

Hoping to remain, always,

Yours truly,

Mr. F. J. Shirley—Sayreville
J. Stranad

Dear Mr. Shirley:

Mr. Garesché received a cable today from Tokyo, advising that arrangements were made by Titan Kogyo K. K. for space on the Mitsui Line's vessel "ASOSAN MARU" for 700 tons of Ilmenite in bags.

This vessel according to the cable is to leave New York about March 9th, and the necessary permits from the Japanese Government are expected shortly.

We are passing this information on to you so that you will be prepared to ship this material when the confirmation of the permit and credit arrangements are received.

We are informed that the best way to ship these 700 gross tons in bags would be by a large barge to handle the whole tonnage at the 45¢ per gross ton lighterage rate.

Very truly yours,

J. STRANAD

J. Stranad

Dear Mr. Tipton:

We confirm our several conversations in connection with the movement of 707 gross tons of Norwegian ilmenite, which we have sold to Titan Kogyo K. K. at Tokio, Japan. This material is to be prepared for shipment as arranged by Mr. Garesche some time ago in second-hand cloth cement bags and is to be loaded in barges during the latter part of this week for delivery to the S. S. Asosan Maru of the Mitsui Line, Brooklyn Pier foot of 31st Street on March 3rd or 4th.

The bags as we understand it will be packed to their full capacity and weighed in bulk and are to be marked as follows:

TITAN
KOBE

This lot of ilmenite has been sold to our Japanese affiliate on the basis of cash against on board order bills of lading against an irrevocable letter of credit issued to us by Titan Kogyo K. K. on the Yokohama Specie Bank at New York. Will you kindly arrange for the careful handling of this ilmenite in accordance with the information given above.

Very truly yours

J. Stranad

Gentlemen:

We acknowledge yours of December 23rd with reference to our offer to Titan Kogyo to ship them some of our Norwegian ilmenite. You will be interested to know that they have asked us to ship 700 tons and that it is due to be forwarded about the first week in March on the "Asosan Maru" of the Mitsui Line.

We trust this will keep them going until they can obtain ore from nearby sources.

Yours very truly,

Manager

cc. Mr. Jebsen

Exhibit 1097

February 27, 1941

Mr. M. B. Tipton—Sayreville
J. Stranad

Dear Mr. Tipton:

On February 24th we informed you that you were to arrange for the shipment of 707 gross tons of Norwegian ilmenite to Titan Kogyo K. K. at Kobe, Japan. At that time the Mitsui Line asked us to have their material alongside their dock on March 3rd or 4th. We are now informed that due to a change in plans they do not want delivery of this ilmenite alongside the S. S. Asosan Maru until March 8th to 10th, and Mr. Doyle therefore suggests that we plan to have the barge, which is to carry this material, load it at Sayreville for departure on March 6th.

This shipment is to be made in the name of the Titanium Pigment Corporation on the basis of cash against on board order bills of lading as previously advised against an irrevocable letter of credit issued to us by Titan Kogyo K. K. on the Yokohama Specie Bank of New York.

On the bill of lading the consignee to be notified is Titan Kogyo Kabushiki Kaisha, Tokio, and according to the Mitsui Line the material will be consigned to Kobe, Japan. Just as soon as you can possibly arrange to do so, will you kindly inform us how many bags will be used in making up this consignment of 707 gross tons net together with the gross, tare and net weights. We need this information during the early part of next week in order that the necessary

documentary procedure in connection with export shipments may be started.

Very truly yours

J. Stranad

Exhibit 1098

ILMENITE FOR TITAN KOGYO K. K.

March 6, 1941

Yesterday afternoon during a telephone conversation with the Mitsui Line with Messrs. Caldron and Katsumouri, the latter the Manager of the Mitsui Line at New York, and the former their export manager, we were informed that the Customs Office at New York advised them to the effect that ilmenite shipments to Japan were classified as Ferrous ores and would therefore require a permit. This is contrary to the information, which we received from the Bureau of Foreign and Domestic Commerce as previously noted. They suggested that we immediately prepare the necessary export declaration and to file it with the Customs House. This was done promptly and the export declaration was accepted and signed—#114873.

In order to determine at the suggestion of Mr. Garesché the matter of loading this ilmenite on the Asosan Maru prior to the deadline under the new restrictions going into effect 12:01 AM, March 10th, I called on Mr. Katsomouri with Mr. Howard of the Atlantic Branch Export Department and the whole situation was discussed. Mr. Caldron their export manager was present at this conversation. Mr. Katsomouri advised us that they are anxious to cooperate in every way with their Japanese customer, even to go as far as to put in overtime in Philadelphia to unload sugar from this vessel to prepare for the loading of the ilmenite before the vessel arrives at New York by handing one half of it over the pier and then to have stevedores come in to load the tonnage on Sunday all of which extra expense would probably run over $2,000.00.

He was pleased with the fact that the export declaration was cleared through Customs because they expected con-

siderable difficulty owing to the fact that Mr. Caldron's previous day's conversation with Customs Officials, particularly Mr. Frye, indicated that they would not pass ilmenite.

In view of the possibility of complications arising from the possible refusal or withdrawal of the export declaration permit, I felt it advisable to discuss this situation with the Customs office for the purpose of obtaining the exact position of our company with relation to the export declaration. Hr. Katsomouri reluctantly acceded to the suggestion that we go to the Customs Office and obtain a ruling.

We first talked with a Mr. Diamond, who initially informed us that ilmenite could not be exported after March 10th according to the new regulations which had just gone into effect. When Mr. Caldron reviewed with him his conversation of the previous day with Mr. Frye, during which there was doubt as to whether or not ilmenite required an export permit and they finally decided that since it contained iron its exportation is prohibited under ferrous ores. He informed Mr. Diamond that we had received an approval on our export declaration, but Mr. Diamond evidently misunderstood it and a great deal of discussion took place between the personnel of the Customs Office and we were later informed that the issue became quite confused because of his belief that the declaration was refused.

After a lot of conversation, which finally was turned over to Mr. Fitzgerald, a special agent for th Deputy Collector, it was decided by him that before they would be able to tell us whether or not the material could be shipped to Japan prior to the new regulations come into effect, they would have to take samples, analyze them and then the Appraiser's

Stores would give a ruling as to whether or not the shipment came within the realm of the current restrictions. I tried and tried to find out from him how we could get an interpretation from someone in New York as to whether an ilmenite of the approximate analysis of the Norwegian ore in question was subject to export permit requirements before March 10th. His continual and definite answer was we could not find it out until after the material had been sampled, submitted to the Appraiser's Stores, analyzed and ruled on by them. I tried to get from him some means of getting such a ruling by the Appraiser's Stores prior to the final analysis and he would not concede to any such way or procedure. The final outcome as far as Mr. Fitzgerald was concerned was that we would not in any way verify whether or not we were within the law in exporting this ilmenite to Japan before the new restrictions go into effect on Monday morning.

The conversation was then shifted over to Mr. Frye where the whole thing was reviewed all over again. They looked over their books and decided that ferrous ores were not exportable. Someone had typed into the book the words ilmenite and rutile. When I tried to find out the authority for those items from the clerk who had inserted them, he disappeared and did not come back.

We were informed that after a definite determination of the composition of the material was made a ruling would have to come through Mr. Fitzgerald's office or from Washington and they could not tell us the information we wanted until then. After a great deal of effort in trying to find where in New York such information was available, he finally gave me the name of either Captain Graff or Mr. Hentz in the State Department at 90 Church St., Rector

Exhibit 1098

2-2100. After discussing the situation with Mr. Garesché and later with Mr. Katsouri I telephoned Captain Graff and outlined the whole picture to him and asked whether or not ilmenite could be exported at the present time. He informed me that ilmenite would be effected by the ruling on March 10th but that it was not under any export restrictions at the present time. However, he also stated that the Customs Office had the prerogative of examining the cargo before permitting it to be loaded and intimated that they might be stalling in order to hold the material subject to export permits.

I recited to him about the history of the transaction and the fact that coincidental to its final consummation this ruling was issued, we had gone to a great deal of expense in packing this material and had it aboard a barge to take care of the first vessel designated for the cargo. Captain Graff promised to get in touch with the Customs Office and talk with Mr. Fitzgerald to see what he could do in getting the material cleared for us.

March 7, 1941

Telephoned Captain Graff this morning about 10 AM to learn of the result of his conversation with the Customs Office. He advised that he was in his office until a quarter after 6:00 last night working on our ilmenite export transaction and was sorry to report that the Customs Office definitely stands on its prerogative to examine the sample and analyze the cargo in question before authorizing its loading. He was sorry that they took such a stand but that there was nothing he could do about it. In spite of the attempt he again stated that as far as his office knew ilmenite

does not require an export permit until the new ruling goes into effect.

He suggested as our last point of appeal that we communicate with the State Department, Division of Control at Washington, Mr. Leonard H. Price at Republic 5600 as there was nothing further that he could do about the situation from his office. I extended our sincere appreciation for his very kind efforts and advised him that we would present the whole picture to our management to see what further action they would want to take.

This information was relayed to Mr. Katsomouri and in view of the fact that the situation had not been definitely cleared up he suggested that we hold the barge for a final decision. I also informed Mr. Caldron and asked that he communicate with Mr. Fitzgerald as soon as possible to find out whether or not the necessary permission would be granted to load the cargo. I also advised him that samples were taken this morning by Mr. Haley the Perth Amboy District official, and that they would probably be delivered to New York this afternoon. He will contact Mr. Fitzgerald personally immediately to find out if possible what the situation is at the moment. In talking with Mr. Turner I asked as to the length of time required to make TiO2 and iron determinations on ilmenite and was informed that the plant takes about one day with a complete set-up ready for such work and that one not acquainted with it would probably take two days. If the decision of the Appraiser's Stores is dependent on an actual analysis, we would then not receive their verdict until on Monday at the earliest, which would be too late for the loading of this vessel to bring the ilmenite within the new regulations.

On Friday I again called on Mr. Katsomouri to be sure that he was thoroughly familiar with our efforts in connection with this matter so that he would be in a position to advise his home office in Japan of our activity, and he in turn suggested that we leave no stone unturned and that we follow through Captain Graff's recommendation that we contact the State Department in Washington. I informed him that I would present the matter to the management again and would probably receive their consent to take this step.

After discussing this with Mr. Garesché he authorized me to make the Washington call and I attempted to contact Mr. Leonard H. Price in the State Department, Division of Control. As Mr. Price takes no phone calls my conversation was with Dr. Johnson in his office. The situation was again explained and he regretfully informed us that if any aid at all could be given to us it would be from Captain Graff and whatever he informed us was the best that the State Department could do for us. He wanted it clearly understood that they were not in any way passing the buck, but that Captain Graff was thoroughly familiar with the attitude of the Government and was set up as a spokesman for the government.

I reviewed for him the attitude of our company in connection with this matter. He appreciated the way our company felt but again suggested that we contact Captain Graff and if there is nothing further that he can do that our last appeal would have to be to the head of the Customs Department in Washington.

This information was promptly telephoned to Captain Graff, who of course informed us that he had done every-

thing he could with Mr. Fitzgerald's office. I thereupon decided to try once more to discuss with Mr. Fitzgerald the whole situation and threw all of our cards on the table. This interview was quite pleasant and when I attempted to obtain some indication as to whether or not we were being held up by a Government request or by a routine situation, he thought it would be best for me to present the whole picture to the Collector of Customs for New York, Mr. O'Keefe, and get whatever decision could be obtained directly from him.

I was thereupon ushered into Mr. O'Keefe's office and presented the whole picture as well as the attitude of our company on the matter, offering every cooperation that we could, if the government felt that it would be unwise to ship this ilmenite to Japan in view of current conditions. After a great deal of conversation he indicated that ilmenite was a commodity that has never cleared through the Port of New York as outgoing cargo and it would therefore be held up until they were thoroughly satisfied that the material was ilmenite by a verdict from their laboratory. Until they got this they could not issue the necessary permit. He did promise however that they would exert every possible means to get this permission to us as soon as possible after the material is received by the laboratory and they felt that an answer would be ready for us the first thing in the morning. I outlined to Mr. O'Keefe our concern in the event that it is perfectly all right for us to export this ilmenite and it takes us a full day to analyze ilmenite and pointed out that we felt it would take someone not actively engaged in the work two days which of course would be much too late for our information unless the material were to be examined microscopically and through such an examination identified as ilmenite.

I extended our appreciation for his very kind attitude and after a brief discussion with Mr. Fitzgerald I telephoned Mr. Katsomouri of what had transpired.

March 8, 1941

On Saturday morning at 11:12 Mr. Fitzgerald telephoned that their laboratory report was OK and that we had the green light to load the ilmenite before midnight Sunday, March 9th. I immediately conveyed the information to Mr. Katsomouri and was advised almost simultaneously by Mr. Caldron, who was with Mr. Fitzgerald when he telephoned. At 11:40 Mr. Katsomouri called, saying that he had just been in touch with the Captain of the vessel and plans were made to get the ship here by noon Sunday. However he was fearful that we might be stuck with part of the tonnage in the event it would be impossible for them to load all of the cargo by midnight.

At 11:45 Mr. Duval instructed us to have the Barge Pelham delivered to the North Side of their Pier, foot of 31st St., Brooklyn. This information was relayed at 11:50 to Mr. James Dwyer. At 12:06 Duval telephone again and said that there was some difficulty about the ship at Philadelphia and would we please hold up on our instructions to Dwyer. I immediately telephoned to Dwyer who advised us that he would wait for final instructions. At 12:23 Duval advised that the situation at Philadelphia had cleared up and would we please follow through on his original instructions.

At 12.24 Dwyer informed and said he would have the barge at the Mitsui Pier probably late that night.

Exhibit 1098

March 10, 1941

Mr. Katsomouri informed us that all of the cargo had been loaded onto the vessel before 11:30 PM. Mr. Duval called our attention to the fact that the number of bags which we informed them of was incorrectly stated. I took this matter up with Mr. Tipton and he verified the number of bags which were actually delivered to the liner. This gave some concern to Mitsui but when they were informed that we made no attempts whatsoever to pack in uniform weights, they decided to issue their Bill of Lading and manifests and all of the documents on the basis of net weight content of the material as cleared by us. The bills of lading were delivered to the writer on March 11th late in the afternoon and turned over to Mr. Woods in connection with the collection of the letter of credit.

Mr. M. Fujita, President
Titan Kogyo Kaisha, Ltd.
Tamuracho 1-Chome,
Shiba-Ku
Tokyo, Japan

Dear Mr. Fujita:

Your letter of October 31st has just been received and we are indeed pleased to note that you have been able to arrange through Brunner Mond Co. (Japan) Ltd. for 2,000 tons of Travancore ilmenite. We trust that you will be successful in obtaining space from a steamship company to enable you to move this to Japan.

We also are having great difficulty in obtaining vessels to move supplies of ilmenite from India to the United States. The situation has become so serious that we are now developing a domestic deposit, but mining and milling equipment is very difficult to obtain quickly, and it will probably be more than a year before we can start commercial production. The situation is serious for us in that our supplies of ilmenite are so low that it is questionable if they will last until our mine is in production. Our situation is, therefore, that we cannot spare additional shipments of Norwegian ilmenite to you until such time as either the shipping situation from India is relieved, or we can be reasonably sure that our domestic supply will be available in time.

Even at the time we made shipment to you of 700 tons on March 9th, the situation was so serious that we should have much preferred not to have released even this quantity,

Exhibit 1100

but in view of the fact that we had promised it to you early last Fall, we felt that we should not witdraw our offer. Incidentally, at the time we made this shipment to you in March, the replacement value of that ore was more than double the price at which we invoiced it to you.

We sincerely hope that you are able to obtain a sufficient and continuous supply of ilmenite from India so that your plant will not be curtailed in its operation.

Sincerely yours,

C. F. GARESCHÉ
Manager

Mr. C. F. Garesche, Manager,
Titanium Division,
National Lead Company,
111 Broadway,
New York,
U. S. A.

Dear Mr. Garesche:

We acknowledge the receipt of your information of April 11th through Doitsu Senryo and also your letter of April 3rd regarding ilmenite.

As our stock piles of Norwegian ilmenite has almost been exhausted and there is no more possibility to obtain such ore for sometime to come, we must depend on Travancore ilmenite and other similar kinds for the future operation. We appreciate greatly, therefore, to receive such information you have furnished us which are quite valuable and useful for the solution of difficult questions we have on hand at present.

Negotiation to import Travancore ilmenite through Brunner Mond Co. (Japan) Ltd. last fall was futile on account of war complication. Therefore we also have projected to develop our own Manchurian deposit recently, but situation here is not favorable to obtain necessary equipments for mining quickly, and it will take many months before we can start actual production.

700 tons lot of Norwegian ilmenite you have kindly spared us has recently been arrived Ube except 200 tons

Exhibit 1101

which is sunk in transit from Kobe to Ube on lighters by a storm accident. We are trying everything possible to save the lost cargo as much as possible.

We sincerely hope that in near future we can reciprocate your kind assistance extended to us in the past,

Sincerely yours,

M. FUJITA
M. Fujita,
President, Titan Kogyo K.K.

Exhibit 1102

Tamuracho 1-Chome, Shibu-Ku
(Nissan Kan)
Tokyo, Japan

Dear Mr. Fujita:

Your letter of May 27th is acknowledged and very much appreciated.

We are indeed pleased to hear that the 700 tons of Norwegian ore which we shipped you arrived safely at Kobe, but we regret to hear that some 200 tons were sunk on a barge during a storm.

We sincerely hope that you will be able to develop your own Manchurian deposit in time to keep your plant continuously supplied. We, too, are confronted with the same problem and will be very fortunate if we can bring domestic supplies into production before our stocks are exhausted.

With kind regards, I am

Yours very truly,

C. F. GARESCHÉ
Manager

Exhibit 1103

September 7th, 1939

Dr. G. Jebsen
Titan Co., Inc.
c/o Titan Co. A/S
Fredrikstad, Norway

Dear Dr. Jebsen:—

Now that the much feared European war has broken out, the question arises concerning United States patents which stand in the name of I. G. Farbenindustrie or Titangesellschaft, under which National Lead Company is licensed.

As long as the United States stays neutral, the license which we enjoy and the title of the I. G. Farbenindustrie or Titangesellschaft will, of course, not be affected. However, should the United States enter the war, it is to be expected that both the title and our license may be placed in jeopardy. At the moment there is no question of America coming in in the near future, but from the editorial comment in the American papers, statements of political leaders and the general public sentiment, I personally believe American opinion is somewhere about where it was in 1916. In other words, it took three years during the last conflict to bring American sentiment to the point where America was ready to enter the war. In the present situation it would probably require very much less time. During the last war all German owned patents were confiscated and placed under the supervision of a custodian of alien property, who then turned over these patents to an organization known as The Chemical Foundation. The Chemical Foundation then licensed any American company who desired to operate under the patent. If a similar situation should

arise from the present circumstances, we cannot be sure that our exclusive license would be respected.

A suggestion has been made that for the protection of the I. G. Farbenindustrie, Titangesellschaft and ourselves the patents might be assigned to us on something of a trust basis. We would, thus, have title to these patents, and would undertake to return these to the I. G. Farbenindustrie and Titangesellschaft when things cleared up.

I am writing this to you as a personal letter for your consideration. *It seems to me that if the I. G. Farbenindustrie and Titangesellschaft would be willing to assign to us for the duration of the present affair their United States patents in the Licensed Field, they would insure the preservation of their property and at the same time we would be in a position to protect our license.* Mr. Garesché believes this is a very good suggestion, and if it also strikes you as being worthy of following up, perhaps you could present it to the I. G. Farbenindustrie and Titangesellschaft in such way as you think best.

With very kind regards,

Yours very truly,

CFK:JL

New York, N. Y., U. S. A.

Dear Mr. Kaegebehn:

Many thanks for your letter of September 7th.—Your suggestion strikes me as being a very good one.

I have not answered your letter before, as I was in the hope to have accomplished something in a relatively near future, but this has not come off. The matter is though under consideration, and I hope to have an opportunity for discussing the same in the near future.

It is regretable that matters of this kind can only be developed slowly in view of all the complications existing, but you may be assured that I will do what can be done to get the patent questions arranged on the lines you have suggested.

With very kind regards,

Yours very truly

G. JEBSEN

Exhibit 1105

Exchange of Patent Assignments
December 11th, 1939
Mr. C. F. Garesché
Mr. C. F. Kaegebehn—Patent Department

Dear Mr. Garesché:

Confirming our recent conversations, regarding exchange of title to patents, I beg to review the situation for you.

On September 7th I wrote Dr. Jebsen, pointing out that in view of the war certain questions arose effecting the United States patents which stand in the name of Titangesellschaft and the I. G. Farbenindustrie under which we enjoy an exclusive license. We suggested to Dr. Jebsen that it might be desirable to assign to National Lead Company, in trust, the patents of the I. G. Farbenindustrie and Titangesellschaft against the possibility of the United States entering the war and taking over these patents. The suggestion was primarily designed to protect the patent property of the I. G. Farbenindustrie and Titangesellschaft and at the same time would have protected our exclusive license by insuring that no one else could have petitioned the government to secure licenses under them. On December 7th I received the following cable from Dr. Jebsen:

"YOUR LETTER SEPTEMBER 7 STOP
SUBJECT LEADCOS AND TITANINCS
APPROVAL HAVE AGREED ASSIGNMENT
TG PATENTS AND APPLICATIONS
COUNTRIES OUTSIDE TG TERRITORY TO
TITANINC AND ASSIGNMENT LEADCOS

Exhibit 1105

AND TITANINCS PATENTS AND APPLICATIONS COUNTRIES WITHIN TG TERRITORY TO TG STOP ASSIGNMENT PATENTS BRITISH EMPIRE FRANCE MUST BE POSTPONED DUE WAR SITUATION STOP PATENTS AND APPLICATIONS OF IG CANNOT BE INCLUDED PRESENTLY BUT QUESTION WILL BE STUDIED STOP PLEASE CABLE APPROVAL STOP GERMAN PATENTS 571387 and 588230 and 604311 ARE IN LEADCOS CZECHOSLOVAKIAN PATENT 39354 IN TITANIUM PIGMENT CO INCORPORATEDS NAME ALL OTHER PATENTS TG TERRITORY IN TITANINCS NAME STOP CABLE TITANINC BOARDS AUTHORISATION I ASSIGN TITANINCS PATENTS AND APPLICATIONS TO TG AS ABOVE OUTLINED STOP SUGGEST FORMAL RESOLUTION BE MADE GENERAL REGARDING ASSIGNMENT AND MAILED STOP PLEASE ACKNOWLEDGE CABLE UPON RECEIPT"—JEBSEN.

The suggestion here is that Titangesellschaft will assign their United States patents and applications to National Lead Co. and National Lead Co. and Titan Co., Inc. will assign their applications and patents in Germany and other countries within Titangesellschaft's territory to Titangesellschaft. For purposes of considering this suggestion, National Lead Company's title may be disregarded. Seven years ago National Lead Company formally renounced maintenance of any European patents owned by it, putting upon Titan Co., Inc. the obligation to pay all maintenance

charges and, hence, under the Agreement of 1920, Titan Co., Inc. could have requested formal assignment of these patents. They have not done so in order to save the expense of preparing the assignments and recording them in the various countries. The question is, therefore, whether Titan Co., Inc. should assign its patents and applications to Titangesellschaft.

In discussing this matter with you on December 8th, it appeared to us that to assign these patents in Germany to Titangesellschaft might involve some risks for the future. For instance, if the Germans owned all the patents now held in Germany by Titan Co., Inc., and if, as a result of the war they were forced by their government, or through other circumstances, to abrogate the main agreement, they would be free to export their products and, in general, take themselves outside of the titanium family cooperation. I cabled this thought to Dr. Jebsen, soliciting his views. A reply has just been received which reads as follows:

"PROPOSAL MY CABLE DECEMBER 7 IS NOT TGS BUT MINE STOP CONSIDER THIS BEST PRESENT CIRCUMSTANCES TO SECURE LEGAL POSITION ALL AROUND STOP EXACTLY LEGAL POSTWAR POSITION PATENTS OTHERWISE VERY UNCERTAIN STOP PREVENTION IMPORT PARTLY SECURED IN FUTURE BY PATENTS IN RESPECTIVE COUNTRIES BUT WILL BE CHIEFLY SECURED BY ALL COMPANIES SELFISH INTEREST IN COOPERATION BECAUSE OF ADVANTAGES ALREADY REALIZED BY EXPERIENCE"—JEBSEN.

You will see that Dr. Jebsen believes that in view of the war the best possible legal position for all the members of the family is to hold title to all patents in its territory. He believes that prevention of import or export competition will chiefly be secured in the future through the individual company's recommendation of the advantages to be derived from maintaining the coöperation, having through experienced appreciated the value of this coöperation.

It should be noted in this connection that even if Titan Co., Inc. retained title to the patents in Germany, and should the government force abrogation of the main agreements, particularly with a view to fostering German exports, they will find means to negate Titan Co., Inc.'s patent rights also. Should the situation develop where Titangesellschaft is forced, perhaps against its will, to engage in export competition with other members of the titanium family, then, as pointed out by Dr. Jebsen, that competition can be controlled by patents owned by the other members of the family in their particular territories.

Therefore, I believe we should approve Dr. Jebsen's proposal.

Yours very truly,

CFK:JL

Jebsen"

Exhibit 1406

Your radiogram of December 8th:

"Discussed assignment proposal Mr Garesche Stop suggestion of our letter September 7 primarily directed protecting TG and IG United States patents property by trust assignment to us Stop as to assignment Titanine Leadco patents to TG can foresee possible risks TG future Titanium family cooperation should war bring about abrogation main TG IG agreements particularly export provisions Stop Please cable your views

Kaegebehn"

My radiogram of December 9th:

"Proposal my cable December 7 is not TGs but mine Stop consider this best present circumstances to secure legal position all around Stop Exactly legal postwar position patents otherwise very uncertain Stop Prevention import partly secured in future by patents in respective countries but will be chiefly secured by all companies selfish interest in cooperation because of advantages already realized by experience

Jebsen"

It will be too long to discuss all the various aspects of this matter, as we have to deal with many uncertainties and assumptions.

In short I trust under the present circumstances more the individual private enterprises than the German government, and consider German firms like I. G. and T. G. in a better position to safeguard the Titanium interests towards the German Government than private enterprises of a belligerent country, as it also will be better for us to get into

our hands the patents in the countries outside T. G.'s territories than to have them in I.G.s and T.G.s hands.

The T.G. patents can be transferred, as this is a contemplated possibility in our agreements.

Unfortunately a transfer of the I. G. patents has not been contemplated in the agreement, and such a transfer is under the present war regulations dependant on a government permission. I do not think it advisable to postpone the transaction in expectation of such permission.

Unfortunately we cannot deal with the English and Canadian patents belonging to the Germans, but I believe this will not have any serious consequences, as I believe the custodians in these countries will give much considerations to the exclusive licences of our associated companies, if the question becomes of actual interest.

The patents we, according to the contemplated arrangement, will have ~~to~~ transfer to T. G. against their transfer to us of their patents—are all German patents—except a few Japanese patents, under which the Japanese company is licenced.

Under these circumstances I do not see that we risk much by making the arrangement, but we gain considerable advantages.

I should much appreciate to have your early answer.

With kindest regards,

Yours very truly

G. JEBSEN

Dr. G. Jebsen
c/o Titan Co. A/S
Fredrikstad, Norway

Dear Dr. Jebsen:—

Please accept my apologies for not replying previously to your cable of January 11th and January 20th, as well as your letter of December 15th.

Upon receipt of your radiogram of December 7th, and after the radiogram exchange of December 8th and 9th, we discussed the matter of drafting the necessary resolutions with Mr. M. D. Cole. In these discussions a point, previously not considered here, came up, viz. what would be the effect upon the contractual structure existing between the companies after assignment of the patents. The existing arrangement is one, to a large measure, based upon a mutual exchange of licenses under patents owned by the respective parties. To assign the patents to the respective licensees, would appear to eliminate from the contractual structure one of its principal raison d'etre and what would remain would be in the nature of a commercial arrangement. It was considered desirable to consider the relationship of American law to such a situation, and the matter was presented for opinion to Mr. Locke of Alexander and Greene, our corporation counsel.

Mr. Locke pointed out that under United States law, an assignment of a patent is always subject to any outstanding licenses; i.e. the licensee enjoys his privileges and is bound by his obligations, regardless of whether or not the owner transfers title to the patent, and the new owner cannot disturb the license. In view of this, Mr. Locke felt that even though the assignment might be to the exclusive

licensee, the obligations of that licensee need not necessarily be destroyed by the assignment. This opinion was, of course, more or less superficial and based upon Mr. Locke's experience and general view of the situation, without attempting to analyse in detail the whole contractual structure and the legal effect of the assignment contemplated. His opinion was considered sufficient assurance to proceed with the proposed assignments. This opinion was given towards the end of December, shortly before my radiogram of December 27th. Since that time, due to the pressure of affairs here, it has not been possible to draft the necessary authorizing resolutions until yesterday, January 22nd.

It would be my suggestion that the assignment of our patents to Titangesellschaft proceed according to German law; they are, in effect German property. Consequently, would it be possible to have prepared in the German language the necessary documents for execution by us. On our side, we would undertake to prepare for execution by Titangesellschaft the necessary assignments transferring the United States patents and patent applications to Titan Co., Inc. In this connection, we would appreciate it if Mr. Andersen would check his records of those patents and patent applications of the United States standing in the name of Titangesellschaft, and cable us the "T" case numbers. We will have prepared a similar list, and if these correspond, will proceed to draft the necessary documents.

I regret the delay in consummating this matter, and hope that it has not caused serious inconvenience.

Yours very truly,

CFK:JL

Dear Sir:

At a meeting of the Executive Committee held today the following resolution was adopted:

RESOLVED, that this Company hereby approves and consents to that certain proposed arrangement between its subsidiary Titan Company Inc. and Titangesellschaft m. b. H., of Leverkusen, Germany, with a view to safeguarding the reciprocal patent interests of these two companies under the License Agreement between Titan Co. A/S (predecessor in interest of said Titan Company Inc.) and said Titangesellschaft dated October 3/20, 1927, whereby each shall assign to the other all patents and patent applications of the one party, within the "Licensed Field" as defined in said License Agreement and amendments thereto to date, in countries embraced within the territory of the other party as similarly defined, upon the understanding and condition that such reciprocal assignments shall in no way alter or limit the general intent and operating effect of said License Agreement or any of the sev-

eral other rights and obligations of the respective parties thereunder; and that to the same end and subject to the same general conditions, and in furtherance of the respective interests of both parties to that certain Agreement between said Titan Co. A/S (predecessor in interest of said Titan Company Inc.) and Titanium Pigment Company Inc. (predecessor in interest of this Company) dated July 30, 1920, the officers of this Company be and they hereby are authorized and empowered in its name and behalf to assign to said Titangesellschaft all patents and patent applications of this Company, within the "Licensed Field" as defined in said Agreement of July 30, 1920, in countries embraced within the territory of said Titangesellschaft as defined in said License Agreement of October 3/20, 1927, first above mentioned and amendments thereto to date, against the assignments by said Titangesellschaft to said Titan Company Inc. contemplated by the arrangement first hereinabove referred to.

Yours respectfully

Dr. Gustave Jebsen, Vice President
Titan Company Inc.

Titangesellschaft-Titaninc.
Interchange of Patent Assignments

Dear Dr. Jebsen:

Please forgive, if you can, my delay in sending you the promised confirmation of the formal action of Titan Company Inc. and of National Lead Company in this matter. I have been under unusual pressure of work complicated recently by jury service, and the exact phraseology of the resolutions required unusual care. Hence the delay in answering your cable to me of February 1st and to Mr. Kaegebehn of February 9th.

Pursuant to my cablegram to you of the 20th (confirmation enclosed) in answer to yours to Mr. Rockwell of February 19th, I now enclose.

(1) two certified copies of Titaninc resolution of December 19, 1939, and

(2) two certified copies of the National Lead Company resolution of this date

and hope you will find these sufficient to enable you to carry out all necessary details of this exchange of assignments. Mr. Kaegebehn informs me today by telephone from his home, where he is confined with a cold, of your cablegram of even date in this connection, and both of us feel that the enclosed resolutions are sufficiently broad in terms to permit of the execution of the necessary assignments by Titaninc either in Europe or here as may be most convenient.

Exhibit 1119

In order to bring your and Mr. Henrikssen's files up to date I am also enclosing two copies each of the Titaninc Board meetings of October 3rd, December 19th and December 27th, 1939, which I believe you will find in order.

With apologies again for my delay in this mater and with personal regards as always,

Yours very truly,

Assistant to the President.

MDC-P

(COPY)

RESOLVED, in furtherance of that certain License Agreement between Titan Co. A/S (predecessor in interest of this corporation) and Titangesellschaft m. b. H., of Leverkusen, Germany, dated October 3/20, 1937, and pursuant to the recommendation of Dr. G. Jebsen, Vice President of this corporation, the officers of this corporation be and they hereby are authorized and empowered to execute and deliver in its name and behalf appropriate assignments to said Titangesellschaft of all patents and patent applications of this corporation, within the Licensed Field as defined in said Agreement, in countries now embraced within the territory of said Titangesellschaft as defined in said Agreement and subsequent amendments thereto, in consideration of the execution and delivery by said Titangesellschaft to this corporation of appropriate assignments of all patents and patent applications of said Titangesellschaft, within said Licensed Field, in countries embraced within the territory of this corporation as

defined in said Agreement and subsequent amendments thereto, and upon the express understanding and condition that such reciprocal assignments shall in no way alter or limit the general intent and operating effect of said Agreement or the several other rights and obligations of the respective parties thereto.

I, H. Douglas Cole, Secretary of Titan Company, Inc., a corporation of the State of Delaware, do hereby certify that the foregoing is a true copy of a resolution duly adopted by the Board of Directors of said corporation at a meeting thereof duly held on the 19th day of December, 1939, at which a quorum was present and acting throughout, and that said resolution is now in full force and effect.

IN WITNESS WHEREOF I have hereunto set my hand and the seal of said corporation this 23rd day of February, 1940.

Secretary.

(COPY)

National Lead Company Resolution

RESOLVED, that for the purpose of assisting Titan Company, Inc., subsidiary of this corporation in safeguarding the reciprocal patent interests of said Titan Company Inc., and Titangesellschaft m. b. H., under that certain License Agreement between Titan Co. A/S (predecessor in interest of said Titan Company Inc.) and said Titangesellschaft m. b. H. dated October 3/20, 1927, and for the purpose of safeguarding the patent interests of this corpora-

tion itself, as successor in interest to Titanium Pigment Company Inc., under that certain agreement between said Titan Co. A/S and said Titanium Pigment Company Inc., dated July 30, 1920, the officers of the corporation be and they hereby are authorized and empowered to deliver in its name and behalf appropriate assignments to said Titangesellschaft of all patents and patent obligations of this corporation, within the Licensed Field as defined in said agreement dated July 30, 1920, in countries now embraced within the territory of said Titangesellschaft as defined in said License Agreement dated October 3/20, 1927 first above mentioned and subsequent amendments thereto, in consideration of the execution and delivery by said Titangesellschaft to said Titan Company, Inc. of all patents and patent applications of said Titangesellschaft, within said Licensed Field, in countries embraced within the territory of said Titan Company Inc., as defined in said License Agreement dated October 3/20/1927, and upon the express understanding and condition that such reciprocal assignments shall in no way alter or limit the general intent and operating effect of either of the Agreements hereinabove mentioned or the several other rights and obligations of the respective parties thereto; and that this corporation hereby approves for the same corresponding consideration and upon the same corresponding conditions as aforesaid, the like assignment by said Titan Company Inc. to said Titangesellschaft of all patents and patent applications of said Titan Company Inc., within said Licensed Field in countries embraced within the territory of said Titangesellschaft.

My cable of March 2nd, 1940:

YOUR CABLE TWENTYNINTH FEBRUARY SUGGEST YOU INCLUDE LEADCO GERMAN PATENT 604311 IN ARRANGEMENT SUGGESTED DR JEBSEN CABLE TWENTYFIRST FEBRUARY STOP THIS LEAVES ONE LEADCO PATENT NAMELY CZECHOSLOVAKIAN 39354 FOR WHICH I SEND YOU ASSIGNMENT FORM—

ANDERSEN.

I enclose herewith assignment form for *Czechoslovakian* Patent No. 39.354 (Case T-47).

The signature of the National Lead Company on this document should be legalized by a Notary Public, who should certify that the signatories are entitled to sign for that company. The document should thereupon be legalized by a German Consul.

The patent stands in the name of Titanium Pigment Company Inc in the Czechoslovakian patent register, and

the assignment will be arranged by filing a certified copy of the deed transferring the assets of the Titanium Pigment Company Inc to the National Lead Company in the Czechslovakian Patent Office together with the Assignment Deed executed by National Lead Company. The certified copy of this Deed, asked for by my cable of the 6th of Februtary, is intended for this use. I presume it has now been despatched, and we will then forward it from here. If not, please hand it to Messrs. Hutz and Joslin together with the executed assignment document.

German patents Nos. 571.387 (T-47) and 588.230 (T-78), listed in Dr. Jebsen's cable of the 21st of February, together with German patent No. 604.311 (T-90) and Czechslovakian Patent No. 39.354 (T-47) are all the patents for which execution of assignment by National Lead Company is required. The other patents which are coming in question as well as all patent applications stand in the name of Titan Company, Inc. excepting 2 patents standing in the name of Titan Co. A/S. The assignment for Case T-125 C USA, received here, will be sent you shortly. In Case T-240, U.S.A. we have requested assignments from both inventors, and we will forward you also these when they come to hand.

Yours sincerely,

SIGURD ANDERSEN

Enclosure

Exhibit 1121

Letterhead of

HUTZ AND JOSLIN

March 5, 1940

Re: Assignment of Titan cases
to the Titan Co. Inc. of Delaware
Mr. Charles F. Kaegebehn,
National Lead Company
111 Broadway
New York City.

Dear Mr. Kaegebehn:

Confirming our telephone conversation, I wish to advise that we have received new assignments from the inventors to the Titan Co. Inc. of Delaware in the following three pending U. S. applications:

Serial No.	204,838, Tillmann et al.	Case T. 187	Titan #20
" "	238,358, Tillmann et al.	Case T. 227	Titan #23
" "	304,323, Tillmann et al.	Case T. 187F	Titan #24(*)

In each case I. G. has asked us to substitute the new assignments for the ones we are now holding in our files running from the inventors to Titangesellschaft. As you know, it is our practice to withold the recording of such assignments until allowance of the applications.

I. G. has requested us to return to it the original assignments from the inventors to Titangesellschaft. We plan to do so, but would first like to hear whether you have any objection to the proposed procedure.

The question arises to whom we should make our future charges in connection with the prosecution of these appli-

(*) (see our letter of even date regarding this application)

cations. In the past we have, of course, charged Titangesellschaft. In view of the assignments, however, I wonder whether we should not change our methods of charging in these cases. Please let me have your comments on this point.

Very truly yours,

HUTZ AND JOSLIN

WH:FT

Exhibit 1122

Dr. G. Jebsen
For Mr. S. Andersen
c/o Titan Co. A/S
Fredrikstad, Norway

March 7th, 1940.

Gentlemen:—

Messrs. Hutz and Joslin inform us that they have received assignments to Titan Co., Inc. in the following United States applications:

U. S. Ser. No. 204,838 Tillmann et al. Case T. 187
U. S. Ser. No. 238,358 Tillmann et al. Case T. 227
U. S. Ser. No. 304,323 Tillmann et al. Case T. 187-F

Messrs. Hutz and Joslin have raised the question of expense and have suggested that possibly they should bill us directly. Of course, ultimately National Lead Co. will stand this expense, but we do not feel justified in authorizing the charge directly to us at this time. Since Titan Co., Inc. is now the owner of the cases, question, we think, might be raised as to why we are maintaining outside attorneys to handle the cases. I believe expense might be saved if Power of Attorney in these cases is transferred to us, and we carry on our correspondence directly with the German inventors in the I. G. Farbenindustrie's Patent Department at Leverkusen. However, we have not made this suggestion to Hutz and Joslin. Whether or not we took Power of Attorney, we should undertake to keep Hutz and Joslin informed on the prosecution of the cases and would consult with them in the future prosecution.

Please let us have your views.

Yours very truly,

NATIONAL LEAD COMPANY

CHK:JL
c.c. Mr. C. F. Garesché

New York, New York

Re: Assignments of Titan Cases
to Titan Co., Inc.

Dear Mr. Hutz:—

We acknowledge receipt of your letter of March 5th, 1940, informing us that you have received new assignments to Titan Co., Inc. in the following cases:

Ser. No. 204,838 Tillmann et al. Case T. 187 —Titan No. 20
Ser. No. 238,358 Tillmann et al. Case T. 227 —Titan No. 23
Ser. No. 304,323 Tillmann et al. Case T. 187-F—Titan No. 24

Regarding the question of whom to bill for charges connected with the future prosecution, the situation is a little puzzling to me at this time. In the final analysis it will be National Lead Co. who will pay the expense. At the present time our book-keeping set-up is such that these charges come through Titan Co., Inc. through Titangesellschaft and are paid in the regular manner. For a few months more I should prefer to keep that arrangement. We are taking up the question with Titan Co., Inc. and will advise you later. Personally, we see no reason why we should not be billed directly but would like to have Titan Co., Inc.'s comments first.

Yours very truly,

CFK:JL

Exhibit 1124

Letterhead of

HUTZ AND JOSLIN

March 6, 1940

Re: Assignment of Titan Cases
from Titangesellschaft to the Titan Co., Inc. of Dela.
in Canada

Mr. Charles F. Kaegebehn
National Lead Co.,
111 Broadway
New York City

Dear Mr. Kaegebehn:

Supplementing our letter of March 5th, I wish to advise that we have now received assignments from Titangesellschaft to the Titan Co., Inc., Delaware, in the following two Canadian applications:

Tillman et al. Ser. No.	456,990	Case T. 227	Titan #23
Tillman et al. " "	451,898	Case T. 187	Titan #20

The assignments are informal in that they were not executed in duplicate and because they do not include the usual affidavit of execution. I doubt whether it would be possible to record these assignments even if they were in proper form, because the Canadian Patent Office does not record assignments from enemy aliens, unless it is first shown to the satisfaction of the Custodian of Enemy Alien

Exhibit 1124

Property that such assignment has been made in good faith and will not result in the payment of any moneys to the enemy alien.

We shall hold the two assignments in our files subject to your instructions.

Very truly yours,

W. H. Hutz

Exhibit 1125

Re: Assignment of Titangesellschaft Cases to Titan Company, Inc.

Dear Mr. Hutz:—

Your letter of March 6, 1940 has just been received.

Would it not be desirable for us to prepare proper assignment documents in Canadian cases T. 227 and T. 187, forward them to Titan Company, Inc. for transmission to Titangesellschaft and re-execution? If you think this procedure desirable, we will be glad to undertake the preparation of the instruments, and in fact to forward them to Titan Company, Inc. who, I am sure, will be glad to forward them to Titangesellschaft.

Yours very truly,

CFK/rg

Exhibit 1126

Letterhead of
HUTZ AND JOSLIN

re—Assignment of Titan Gesellschaft
cases to Titan Company, Inc.

Mr. C. F. Kaegebehn
National Lead Company
111 Broadway
New York, N. Y.

Dear Mr. Kaegebehn:

We thank you for your two letters of March 7, 1940, replying to our letters of March 5 and 6, 1940, regarding the above subject. It is our understanding that it will be in order for us to substitute the new assignments of the three U. S. applications from the inventors to Titan Company Inc. for the former assignments from the inventors to the Titan Gesellschaft and to return the old assignments to I. G.

As regards the assignments of the two Canadian applications from the Titan Gesellschaft to Titan Company Inc., we agree with you that it would be desirable for you to prepare proper assignment documents to replace the informal ones which we received from I. G. We believe, however, that it would be simpler for you to send the new documents to us for transmittal to I. G. rather than to have them go by way of Titan Company Inc. and Titan Gesellschaft. This appears to be the more logical procedure since we received the informal documents from I. G.

Very truly yours,

WHH:DK Hutz and Joslin

Exhibit 1127

Letterhead of

TITAN COMPANY, INC.

Fredrikstad, Norway,
March 29, 1940.

National Lead Company,
Patent Department,
111 Broadway,
New York.

Att.: Mr. C. F. Kaegebehn

Dear Sirs,

Assignments of Patents:

T-187, U. S. Ser. No. 204.838
T-227, U. S. Ser. No. 238.358
T-187 F, U. S. Ser. No. 304.323.

We thank you for your letter of the 7th inst. from which we note that Messrs. Hutz & Joslin have received assignments to Titan Company Inc. of the above patents. We presume that they have received instructions to hand these assignments to you, and that you will hand them assignments for those of our patents referred to in Dr. Jebsen's cable of February 21st. and Mr. Andersen's cable of March 2.

We note your remarks in connection with the expenses as involved in assignments of cases T-187, T-227 and T-187 F and suggest that these be charged to the Titan Company Inc. and are looking forward to your bill.

With regard to the question of attorney in U. S. A. for these cases, we quite agree to your suggestion that you

Exhibit 1127

take over their handling. We presume that powers of attorney required in this connection must be signed by the inventors, and if this is so, we suggest that you arrange with Messrs. Hutz & Joslin that the documents be sent direct for execution by the inventors. Should powers executed by the Titan Company Inc. (as assignee) be necessary, we take it, that you can have such documents executed in U. S.

Yours very truly,

Sigurd Andersen.

Exhibit 1128

August 20th, 1940

Mr. Sigurd Andersen
Stora Nygaten 31
Stockholm, Sweden

Re: Case T. 187 —U. S. Ser. No. 204,838
Case T. 227 —U. S. Ser. No. 238,358
Case T. 187F—U. S. Ser. No. 304,323

Dear Mr. Andersen:—

We find that we have not replied to your letter of March 29th, 1940, which was in reply to our letter of March 7th.

Messrs. Hutz and Joslin will hold the assignments received from I. G. until the cases are allowed. The assignments will then be recorded and the recorded documents handed to us with the Letters Patents.

Messrs. Hutz and Joslin have given us associated powers of attorney in the three above identified cases. This enables us to act as may be necessary, for instance, where interviews with the Examiner are required, or filing amendments, etc. In view of the fact that Messrs. Hutz and Joslin have handled these cases from the beginning, are familiar with them and are able to give valuable advice, we do not consider it expedient at this time to completely eliminate them from this case.

With regard to the expense involved, we have asked Hutz and Joslin to bill the I. G. in the regular way and expect that through T. G. you will be informed of these charges.

Exhibit 1128

The question of patent expense connected with United States applications and patents of Titan Co., Inc. is under consideration on this side, and in a short time we hope to be able to advise you on this point.

Yours very truly,

NATIONAL LEAD COMPANY

Re: Mutual Transfer of Patent rights between
T. G. and Titan Co., Inc. (U.S.A.).
Cases T. 125-C and T. 240.

Gentlemen:-

We acknowledge with thanks receipt of your letter of April 4, enclosing assignment document from the T. G. to Titan Co., Inc. of U. S. Pat. No. 2,121,215 (Case T. 125-C) as well as an assignment from the inventor, Dr. Raspe, to Titan Co., Inc. in U. S. Ser. No. 283,986 (Case T. 240).

Yours very truly,

TITAN COMPANY, INC.
C. F. KAEGENBEHN

Re: Mutual transfer of Patent Rights between Titangesellschaft and Titan Co., Inc. (Case T. 125-C)

Gentlemen:-

We beg to advise you that the assignment document sent with your letter of April 4th, 1940 has been recorded in the United States Patent Office under their designation Liber S183, Page 544, dated May 21st, 1940.

Yours very truly,

TITAN COMPANY, INC.

C. F. KAEGEBEHN

Re: Tillmann et al.—Application Ser. No. 204,838—Titan No. 20—Case T. 187
Tillmann et al.—Ser. No. 238,358—Leverkusen 1652/1980—Titan. Case T. 227
Tillmann et al.—Ser. No. 304,323—Filed Nov. 14 1939 — Corresponding German Appln. T. 51309—Lev. 2019—Titan No. 24—Case T. 187-F

Gentlemen:

You will recall that last March the question of how to handle charges in connection with the above cases came up. We wrote to Titan Company at Fredrikstad, Norway, for their instruction and have just received their reply.

Titan Company suggests that you bill them, forwarding the bill to me. They further suggest, since Titangesellschaft is no longer chargeable with any part of the expense having given title to Titan Company Inc., that we take over prosecution of the case as attorney and carry on direct correspondence with the German inventors. In connection with the latter suggestion, we would want to send you copies of Patent Office Actions and consult with you in preparing the amendments as may be necessary, having you bill us, as Titan Company Inc., for such services. Will this arrangement be in accord with your wishes?

Very truly yours,

CFK:JM

Second Mail

SA/EE Fredrikstad, March 4th 1940.

Registered.

National Lead Company,
Patent Department,
Broadway 111,
New York.

Attention: *Mr. C.F. Kaegebehn.*

Dear Sirs,

Re: T.G. and I.G. Canadian Patent Applications.

We have received from the I.G.Farbenindustrie A.-G. authorizations requesting their Canadian agents to give information to and receive instructions from the Titan Company Inc. in connection with the following Canadian patent Applications:

T-115	Canadian	Patent	Application	No. 448.315
T-155 (T-183)	"	"	—"—	" 457.525
T-155	"	"	—"—	" 437.424
T-157	"	"	—"—	" 440.763
T-186	"	"	—"—	" 443.725
T-187	"	"	—"—	" 451.898
T-213	"	"	—"—	" 454.748
T-227	"	"	—"—	" 456.990

We hope that the enclosed authorizations will serve the purpose although they may not be quite satisfactory from a formal point of view.

Exhibit 1132

We hope it will not cause any serious difficulties that there in the authorizations is stated c/o Titan Co.A/S, Fredrikstad, as address of Titan Company Inc., supposing that you can easily show evidence of the Titan Company Inc. being an American company. Should, however, any difficulties raise in connection with these authorizations, please write us and also inform us whether you wish these authorizations to be delegated to the National Lead Company (or Mr. Kaegebehn).

As far as we can see from our files here, yourselves resp. the Canadian Titanium Pigments Ltd. have exclusive licenses in these Canadian cases.

We do not know whether Messrs. Hutz and Joslin have been informed that these authorizations have been sent you. Please, therefore, take up the matter with them.

We take it that you will settle with them and possibly the C.T.P. the questions how the further handling of these applications should be arranged.

We suppose that Messrs. Hutz & Joslin also in the future can collaborate with you re these Canadian Applications—to the extent you may find this desirable.

Yours very truly,

SIGURD ANDERSEN

Gentlemen:

Re: Assignment of Canadian Applications
T-187 and T-227 from Titangesellschaft
to TITAN COMPANY, INC.

In reply to your letter of March sixteenth, we are pleased to enclose herewith in duplicate assignment forms with attached affidavits for transferring Canadian applications Serial Numbers 451,898 and 456,990 (cases T-187 and T-227), from Titangesellschaft to Titan Company, Inc.

Enclosed also are copies of these assignment documents for your files.

Very truly yours,

NATIONAL LEAD COMPANY

Re: T. G. and I. G. Canadian Patent Applications

Dear Mr. Hutz:-

With respect to the following Canadian patent applications

Ser. No.	Your Ref.	Our Ref.	In the Name of
437,424	Titan No. 13 Uord. 1041	T. 155	I. G. Farbenindustrie
440,763	Titan No. 18	T. 157	I. G. Farbenindustrie
443,725		T. 186	I. G. Farbenindustrie
448,315	Titan No. 5	T. 115	I. G. Farbenindustrie
451,898	Lev. 1481 Titan No. 20	T. 187	Titangesellschaft
454,748	Titan No. 22	T. 213	I. G. Farbenindustrie
456,990	Titan No. 23	T. 227	Titangesellschaft
457,525	Titan No. 13/1 cip.	T. 183	I. G. Farbenindustrie

we have received documents authorizing the Canadian agents, Fetherstonhaugh and Company, to furnish to Titan Company, Inc. any information they require and to accept any instructions Titan Co., Inc. may give as to the prosecution of the cases. These documents all follow the safe form as photostatic copy attached hereto.

We really do not know why these were sent. They apparently originated as a result of correspondence between our German associates and Titan Co., Inc. in Europe, growing out of the recently concluded arrangement whereby each of the associated companies will take con-

CLERK'S COPY.

trol over the prosecution of applications in their respective territories.

It does not seem to us that there is any present need to use these documents. The cooperation between us is of such nature that anything we wish accomplished with respect to the Canadian applications can be taken up directly with you. Therefore, these authorizations, at best, serve to confirm the control which the I. G. Farbenindustrie and Titangesellschaft have vested in Titan Company, Inc.

We propose to hold these authorizations against the time when it may be necessary to use them. In the meantime, if you have any questions relative thereto, we should be glad to answer them.

Yours very truly,

CFK:JL

Re: Assignment of Titangesellschaft Canadian cases to TITAN Co., INC.

Mr. Charles F. Kaegebehn
National Lead Co.
111 Broadway
New York City

Dear Mr. Kaegebehn:

Referring to your letter of March 28th, we now enclose the duly executed assignments (including affidavits of execution), in duplicate, of the Canadian applications, Ser. No. 451,898 and Ser. No. 456,990 from Titangesellschaft to Titan Co., Inc. As indicated in our letter of March 6th 1940, we do not believe you will be able to now record these assignments in the Canadian Patent Office. We believe they are in proper form and you should have no difficulty in recording them at the conclusion of the war between Canada and Germany.

Very truly yours,

encls.

Re: Assignment of T. G.'s Canadian
Cases to Titan Company, Inc.—
Cases T. 187 — T. 227

Dear Mr. Kaegebehn:-

With reference to your letter of December 20th, we would advise that you will be able to record these assignments in the Canadian Patent Office provided they were executed prior to September 3rd, 1939. If executed subsequent to that date you will be unable to record them in the Canadian Office and in this event we agree that you should hold them pending the outcome of the war.—

Yours very truly,

E. T. HENRY

Re: Assignment of T. G. 's Canadian
Cases To Titan Co., Inc.—Cases T.187-T.227

Dear Mr. Henry:-

We have just received from Messrs. Hutz and Joslin executed assignments of the above identified Canadian applications, Canadian Ser. No. 451,898 and Ser. No. 456,990, vesting title in Titan Co., Inc.

We are doubtful that you will be able to record these assignments at this time in the Canadian Patent Office and are holding them here pending the outcome of the war.

However, if you think they can be recorded at this time, we shall be glad to forward them to you for that purpose.

Yours very truly,

NATIONAL LEAD COMPANY

Re: Assignment of T. G.'s Canadian
Cases To Titan Co., Inc.
Cases T. 187 and T. 227

Dear Mr. Henry:-

The assignment documents in the above identified cases were dated June 15th, 1940. Therefore, it will not be possible, according to your letter, to register them in the Canadian Patent Office.

We will hold them, pending the outcome of the war.

Yours very truly,

Handling of U.S. and Canadian Patent Applns. Originating with I.G. or T. G. January 5th, 1942

Dr. G. Jebsen

Mr. C. F. Kaegebehn-Patent Department

Dear Dr. Jebsen:-

I beg to confirm my previous conversation with you concerning the handling of United States and Canadian patent applications originating with Titangesellschaft and the I. G. Farbenindustrie.

On December 22nd, I had a conference with Mr. Hutz of Hutz and Joslin. He informed me that the firm is dissolving. We agreed between us that the best procedure in handling the applications now pending in the Canadian and United States Patent Offices would be as follows:

Titan Company, Inc., as assignee of the United States applications in cases T. 187, T. 187-F and T. 227 (Rutiox cases) will revoke the Power of Attorney of Hutz and Joslin and appoint Mr. Henrich and myself as joint attorneys. (I already enjoy associated power of attorney in these cases.)

With respect to three other pending applications title to which stands in the name of German companies, and one where title stands in the name of a German inventor, Hutz and Joslin will simply inform the Patent Office that it is withdrawing from the prosecution of these cases. This notice will be given as soon as an Alien Property Custodian is appointed. In the meantime, I will try to ascertain what will be the attitude of the United States Patent Office and of the Alien Property Custodian with respect

Exhibit 1139

to the preservation of Titan Company, Inc.'s rights in these cases and the possibility of our taking over the prosecution thereof. I will keep you advised as this might develop.

Yours very truly,

CFK:JL

Exhibit 1140

Mr. E. T. Henry
Canadian Titanium Pigments, Ltd.
P. O. Box 10
Montreal, Canada

Dear Mr. Henry:-

The firm of Hutz and Joslin, attorneys who have formerly represented the I. G. Farbenindustrie and Titangesellschaft with respect to United States and Canadian patent applications, is in the process of dissolution. Last week I had a conference with Mr. Hutz and we agreed that as regards United States cases, we would revoke the Power of Attorney of this firm in those cases which are owned by Titan Company, Inc.

With respect to the Canadian cases, I enclose a list drawn up by Messrs. Hutz and Joslin, together with a copy of their letter to me of December 23rd, as well as a copy of their letter to Messrs. Fetherstonhaugh of Ottawa. You will note that it was agreed that the instructions to Messrs. Fetherstonhaugh with respect to the maintenance of the Canadian applications will come from either you or me. These instructions, of course, will come from you.

Please let me know whether you have any suggestions as to what might further be done to facilitate your taking

control of these cases to the extent you desire, or to the extent it is possible under the circumstances. Please also let me know whether you desire any of Mr. Hutz's files.

Yours very truly,

NATIONAL LEAD COMPANY

Canadian Case T. 236—and other cases originating with I. G. or T. G.

January 15th, 1942

Dr. G. Jebsen

Mr. C. F. Kaegebehn—Patent Department

Dear Dr. Jebsen:—

At the present time there are six applications, covering inventions originating with the I. G. or T. G., pending in the Canadian Patent Office. Of these, five were filed before the outbreak of hostilities and our Canadian associate has copies thereof. The sixth was filed after the outbreak of hostilities and no copy of the original case or of the United States application was sent to Canada. Our Canadian associate has no knowledge of its subject matter.

Agreeable to Hutz and Joslin and necessitated by the dissolution of that firm, C. T. P. has indicated its readiness to pay the expense of prosecution of all pending Canadian applications originating with the German associate, and Hutz and Joslin have informed Fetherstonhaugh & Co. of Ottawa, Canada, our Canadian agents, to deal directly with C. T. P. In connection with this arrangement, C. T. P. has been informed of the existence of case T. 236, although its subject matter was not revealed to them. I am now in receipt of a request from C. T. P. for a copy of the specification in case T. 236.

While, technically speaking, to furnish C. T. P. copy of the specification in case T. 236 might be a violation of the understanding not to transmit technical information from

one belligerent to another, it might be justified in view of the following considerations: We could not give the Canadian application as careful consideration as could our Canadian associates. In this sense, they are actually protecting the property rights of the I. G. in this application. Furthermore, they are entitled to an exclusive license under the application and are prepared to assume all the expense of the prosecution, paying the same directly to Fetherstonhaugh & Co. of Ottawa.

Case T. 236 is not an important one. It covers the use of welding rods and coatings for welding rods. The patent protection which may be expected is not to be regarded as particularly broad.

Will you please consider this matter and let me have the benefit of your advice.

Yours very truly,

C. F. Kaegebehn..

Re: Mutual Transfer of Patent Rights between Titangesellschaft and Titan Co. Inc. (Italy)

We are enclosing herewith transfer document for Italien Patents, Nos. 337,218, 318,816, and 345,187 from Titangesellschaft, Leverkusen to Titan Company, Inc., Wilmington. The transfer document has been duly executed by Titangesellschaft Leverkusen. We would like you to sign the document on your behalf, and have the signature acknowledged by a notary public, who will testify that the gentleman or gentlemen who have signed the document are empowered to do so. The signature of the notary public will then have to be legalized by the Italian consul.

We are also enclosing a power of attorney for each of the patents to be transferred, which we would also ask you to have signed. A notarial acknowledgment of the signature on these documents is not needed.

Please return the transfer document and power of attorneys to us after they have been duly executed.

Yours very truly,

between T. G. and Titan Co., Inc. (Italy)

Gentlemen:-

Pursuant to the request contained in your letter of April 4, we return herewith transfer documents for Italian patents Nos. 337,218, 818, 816 and 345,187, transferring title from Titangesellschaft-Leverkusen to Titan Co., Inc. This document has been executed on behalf of Titan Co., Inc., notarized and duly legalized by an Italian consul. We also return the individual Powers of Attorney documents for these 3 cases.

Yours very truly,

TITAN COMPANY, INC.

Re: Patent Expense

Gentlemen:-

In connection with the transfer of title of Italian patents Nos. 337,218, 318,816, 345,187 (Cases T. 108, T. 112, and T. 125), we beg to advise you that we incurred the following expense:

County Clerk Certificate	$ .25
Italian Consul—Legalization	$ 7.19
Incidentals	$ .90
	$ 8.34

This amount has been charged against Titan Co., Inc. on the books of the Treasurer of National Lead Company. Copy of this letter for Mr. Juell as well as two additional copies are enclosed herewith.

Yours very truly

Re: Assignment of Italian Patent Applications to Titan Co., Inc. (i.e. Patents)

Gentlemen:

Enclosed herewith we are sending you an assignment document covering patents in the name of Titangesellschaft. The patents covered by this document are as follows:

No. 360,407
No. 362,555
No. 362,556
No. 362,557
No. 362,558
No. 377,430 and application No. 96,52/39

These patents are to be assigned from Titangesellschaft, Leverkusen to Titan Co., Inc. Wilmington. The document has been duly executed by Titangesellschaft, Leverkusen. We would ask you to please sign the document also on your behalf and have the signature notarized, which notarization will serve to confirm that the persons

signing it have the power to do so. The signature of the notary must then be legalized by the Italian consul.

Further, we are forwarding two Power of Attorney forms for the attorneys which we also ask you to please sign. A legalization of these latter documents is not required.

Please return to us the assignment document as well as the Power of Attorney forms after they have been duly signed.

Yours very truly,

I. G. FARBENINDUSTRIE AKTIENGESELLSCHAFT

Re: Assignment of Italian Patent Applications—and Patents to Titan Co., Inc.

Gentlemen:—

We are in receipt of your letter of June 12, 1940 as well as the assignment document covering the following Italian patents:

No. 360,407	No. 362,557
No. 362,555	No. 362,558
No. 362,556	No. 377,430

and Pat. Appln. No. 9652/39

We have noted that this document is already signed by Titangesellschaft—Leverkusen.

We are sending you herewith the assignment document duly signed by Titan Co., Inc. as well as the signed Power of Attorney forms which were also sent with you letter of June 12, 1940.

Yours very truly,

TITAN COMPANY, INC.

Attention: MR. KAEGEBEHN.

Dear Sirs:—

Assignment from Titangesellschaft to Titan Company, Inc. Belgian Patents T-187 F and T-227.

We received today from Titangesellschaft an assignment document transferring their Belgian Patents T-187 F —Belgian patent No. 437.017 and T-227—Belgian patent No. 436.472 to Titan Company, Inc.

We enclose this assignment document in duplicate, and we would ask you to kindly have them both signed by Titan Company, Inc. The documents are, as you will note, already signed by Titangesellschaft. We would ask you to return the documents to us whereupon we will transmit them to Titangesellschaft's Belgian Patent Agents for registration at the Belgian Patent Office.

One copy of the assignment is enclosed for your file.

Yours very truly,

A. RAVNESTAD

NEW YORK U.S.A.

Dear Mr. Kaegebehn,

Assignment of Titangesellschaft's Patents in Holland to Titan Company Inc.

Case T.187 ABCDE	Dutch	Patent	Application	No.	87.186
" T.187 F.	"	"	"	"	95.925
" T.227	"	"	"	"	95.209

I enclose herewith an assignment executed by Titangesellschaft transferring the above patent applications to our company. This document requires the signature of Titan Company Inc., which I would ask you kindly to obtain.

For the registration of this assignment at the Dutch Patent Office one power of attorney from Titan Company Inc. for each of the three patent cases is necessary. I have asked our Dutch patent agents, Nederlandsch Octrooibureau, Hague, to send you by air-mail forms for such

powers and I would ask you to have them signed by Titan Company Inc.

A legalisation of the signatures of the assignment and the powers is not necessary.

I also enclose for your files a copy of the assignment.

Please send the executed document as well as the three powers of attorney to the Titangesellschaft, z.H. I.G. Farbenindustrie Patentabteilung, Leverkusen, who will take care of the registration of the assignment at the Dutch patent office.

The above assignment completes the transfer to us of Titangesellschaft's patent cases in Holland. For three further cases, namely, patents in T.108, T.118 and T.125 Holland the transfer has been effected.

The completion of the enclosed assignment was delayed on account of the situation and also because of a recent alteration in the Dutch patent practice, according to which the value of the rights should be stated in the assignment document. This necessitated correspondence with the Titangesellschaft and our Dutch patent agents, which resulted in that it was agreed to insert the value of FLR. 500:—and you will note that this has been done in the enclosed document.

Kindly let me have for my records information re the names of the signatures for Titan Company Inc. and the date of execution.

Thanking you in anticipation I am,

Yours sincerely,

SIGURD ANDERSEN
Sigurd Andersen

Dear Mr. Kaegebehn,

Assignment of Titangesellschaft's Patents
to Titan Company Inc. Sweden and Denmark

The assignments transferring T.G.'s patent cases in Sweden and Denmark to our Company have been filed at the respective patent offices together with preliminary powers of attorney signed on this side, in order to save time.

It will probably be advisable to substitute these preliminary powers with powers signed by officers of Titan Company Inc. in order to get the matter in strict formal order.

I therefore enclose 3 forms for powers in Sweden /Cases T. 187, T. 187-F and T. 227/ and 2 forms for powers in Denmark /Cases T. 187 and T. 227/ and should

be obliged to you if you would have these executed by Titan Company Inc. in the usual manner.

Kindly return the executed documents to me.

I also enclose copies of the documents for your files.

Thanking you in anticipation I am,

Yours sincerely,

SIGURD ANDERSEN.

Dear Sirs,

E. L. 93—Case 2989—German Patent 643,995

We thank you for your letter of March 13th from which we are rather surprised to note that the I. G. have applied for an Emergency Licence under this patent.

Under an agreement dated 12th April 1939 between I. C. I. and ourselves, this patent with others was transferred to us. We then transferred those patents lying outside the British Empire to Titan Company Inc., an American Company, although this transfer does not appear to have been formally recorded in an agreement. So far as we know, Titan Company Inc. then transferred the patent in question to Titangesellschaft.

Titangesellschaft is a German Company, owned 50% by the I. G. and 50% by Titan Company Inc., and under the arrangement outlined above, it would appear unneces-

Exhibit 1153

sary for them to apply for a licence under the German Emergency Regulations.

If they do obtain a licence and pay a royalty, can you enlighten us as to what happens to the royalty. So far as any claims we have to it, Titan Company Inc., would have an equal claim on us for it. Are we correct in assuming that any royalty paid will be absorbed by the German equivalent of our Custodian of Enemy Property?

Yours truly,

For BRITISH TITAN PRODUCTS CO. LTD.

Germany

Gentlemen:—

We have the pleasure to enclose herewith the following:

1.) Assignment Document—Titan Co., Inc. to Titangesellschaft, m. b. H., covering German Patents as follows: Nos. 657,599, 666,148, 666,409, 666,530, 671,738 and 684,658.

2.) Assignment Document—National Lead Co. to Titangesellschaft, m. b. H., covering German Patents as follows: Nos. 571,387, 588,230, and 604,311.

3.) Assignment Document—National Lead Co. to Titangesellschaft, m. b. H., covering Czechoslovakian Patent No. 39,354.

These assignments have been executed pursuant to the understanding reached by Titangesellschaft m. b. H. with Titan Co., Inc. in Fredrikstad.

In connection with the transfer of Czechoslovakian Patent No. 39,354, this patent stands in the name of Titanium Pigment Co., Inc. in the Czechoslovakian Patent Register. Upon the request of Titan Co., Inc. in Frederikstad we forwarded to them, on February 16th, 1940, two certified copies of a document transferring the assets of

Titanium Pigment Co., Inc. to National Lead Co. The receipt of these documents was acknowledged from Fredrikstad on March 12th. We understand that this transfer document will be filed in the Czechoslovakian Patent Office to indicate the transfer of title from the Titanium Pigment Co., Inc. to National Lead Co. and thus will enable you to record the assignment document sent therewith.

In preparing these assignments we have been in touch with Messrs. Hutz and Joslin of New York. We may mention that they have advised us of the receipt of new assignments from the inventors to Titan Co., Inc. in U. S. Cases T. 187, T. 187-F and T. 227, as well as assignments from Titangesellschaft m. b. H. to Titan Co., Inc. of Canadian applications in Cases T. 187 and T. 227.

Re: Assignment of Titan Co., Inc.
and Titangesellschaft Patents

Gentlemen:—

We beg to acknowledge receipt of your letter of March 4th, 1940. As per copies of letters enclosed, you will note that Messrs. Hutz and Joslin have received from the I. G. Farbenindustrie-Patent-Abteilung assignments from Titangesellschaft m.b.H. to Titan Co., Inc. for Canadian applications in Cases T. 187 and T. 227., and new assignments from the inventors to Titan Co., Inc. for U. S. applications in cases T. 187, T. 187-F and T. 227.

It is the practice between Messrs. Hutz and Joslin and ourselves for them to keep such assignments until the patents are about to issue and then to record the assignments and turn over the recorded assignment with the Letters Patent deed to us, and this procedure is being followed with respect to these cases. By agreement with Messrs. Hutz and Joslin we forwarded directly to the I. G. Farbenindustrie executed assignments, as follows:

1. Assignment Document—Titan Co., Inc. to Titangesellschaft m.b.H., covering German Patents as follows: Nos. 657,599, 666,148, 666,409, 666,530, 671,738 and 684,658.

2.) Assignment Document—National Lead Co. to Titangesellschaft, m.b.H., covering German

Exhibit 1156

Patents as follows: Nos. 571,387, 588,230, and 604,311.

3.) Assignment Document—National Lead Co. to Titangesellschaft, m.b.H., covering Czechoslovakian Patent No. 39,354.

We enclose copies of our letter of transmittal and assignments for Germany.

We may mention that we have received directly from the I. G. Farbenindustrie assignments of United States Patents in Case T. 125-C from Titangesellschaft to Titan Co., Inc. and assignment from the inventor of United States application in case T. 240 from the inventor to Titan Co., Inc.

Dear Mr. Kaegebehn,

Patents Germany

Further to my letter of the 19th of August I beg to inform you that the Titangesellschaft has taken over the further maintenance of the following German patents:

T-47	D.R.P.	571.387
T-78	"	588.230
T-90	"	604.311
T-102	"	684.658
T-116	"	666.658
T-129	"	657.599
T-137	"	666.530

These patents have accordingly been removed from our records regarding watch for formalities of maintenance of patents.

Exhibit 1159

As you will note, there were two further German patents included amongst those which were assigned to the Titangesellschaft by the assignments dated 6th of April 1940, namely, Case T-45 D. R. P. 666.148 and Case T-101 D. R. P. 671.738. The Titangesellschaft have informed us that they do not wish to maintain these patents and they will accordingly be allowed to lapse by non-payment of the next annuity due.

Stockholm.

Stockholm, the 29th August 1940

C. F. Kaegebehn Esq.,
National Lead Company,
Patent Department,
111 Broadway,
NEW YORK U.S.A.

Dear Mr. Kaegebehn,

Assignment of Titan Co. Inc's Patents in T.G.'s Territory to T.G.

For some of the patents and applications to be assigned to Titangesellschaft the documents have not as yet been executed.

As it is not at present possible to obtain Titan Co. Inc's signature on this side, I should be greatly obliged to you if you would obtain the necessary signatures and am enclosing herewith forms for the documents as follows:

Germany	Assignment of Applications
Japan	Assignment of Patent Case T.165 and Application T.225
Czechoslovakia	Assignment of Patent Application T.171

All these patents and applications are in the name of Titan Co. Inc.

As to the execution of the documents, kindly note that the assignments for Germany and Czechoslovakia should be legalized by a German Consul, which, as you are aware, necessitates notarial certification. A legalisation of patent assignments in Japan is not ordinarily required. I have asked our Japanese patent agent, Dr. Nagashima, whether he advises a legalisation in the present case, requesting him to send his reply direct to you with copy to me. A copy of my letter to him is enclosed.

I might suggest that you submit the matter to Dr. Jebsen before the documents are executed. I presume that the signatures will be effected by him or by Mr. Rockwell and I think that they should be made in the usual manner with your attestation as secretary and under Titan Co. Inc's seal.

The assignments to Titangesellschaft already executed together with those for which forms are enclosed herewith include all patents and applications for which assignment to Titangesellschaft is foreseen at the time being, with the possible exception of a few Japanese Cases which Titangesellschaft possibly do not wish to maintain or may wish to have assigned to Titan Kogyo. We will revert to these when we receive Titangesellschaft's comments.

I would suggest that you send the executed documents for Germany and Czechoslovakia to the Titangesellschaft c/o I. G. Farbenindustrie Patentabteilung.

As to Japan, the Titangesellschaft has requested that these documents be sent direct to Dr. Nagashima and I should be obliged to you if you would do so.

Exhibit 1164

I should be glad to receive copies of the executed documents for my files.

Yours sincerely,

SIGURD ANDERSEN

SIGURD ANDERSEN

Stora Nygatan 31
Stockholm.

By air-mail Stockholm, the 5th October 1940

C. F. Kaegebehn Esq.,
National Lead Company,
Patent Department,
111 Broadway,
NEW YORK U. S. A.

Dear Mr. Kaegebehn,

Assignment of Titan Company Inc's
Patents in T.G.'s Territory to T.G.

I received yesterday your telegram reading as follows:
"re your letter september 23 assignment titan co patents"
"tg neither your letter august 29 nor nagashimas advice"
"received stop suggest forward airmail duplicate the"
"former".

and enclose herewith copy of my letter of the 29th of August—as well as a further set of forms for the documents mentioned therein and copy of my letter to Dr. Nagashima.

I believe that the advice from Dr. Nagashima could hardly be expected to reach you by this date, as you note from the enclosed copy I wrote him at the same time as writing you. I have however sent him copy of my letter for the event of my letter to him has not reached him.

Yours sincerely

SIGURD ANDERSEN

Dear Sirs,

Case T-165 Japan Patent No. 130.169
Case T-225 Japan Patent Application No. 15.180

I beg to refer to prior correspondence regarding contemplated assignment to the Titangesellschaft of the above Japanese patent cases and should like to have your opinion on the question whether it is advisable to have the assignment documents which we execute legalized by an attorney public or by a Japanese Consul or by both.

We are aware that such legalisation is not ordinarily required for assignments in Japan but should like to know whether it presents advantages, in which case we would prefer to have the documents legalized in the present case.

Please send your reply to:

Mr. C. F. Kaegebehn
c/o National Lead Co
Patent Department
111 Broadway
NEW YORK U. S. A.

with copy to the writer under the address:

Re: Assignment Titan Co. Inc.'s Patents to T. G.
(In T. G.'s territory)

Dear Mr. Andersen,

We received your air-mail letter of September 23rd, 1940 on October 3rd and cabled you as follows:

"RE YOUR LETTER SEPTEMBER 23 ASSIGNMENT TITAN CO PATENTS TG NEITHER YOUR LETTER AUGUST 29 NOR NAGASHIMAS ADVICE RECEIVED STOP SUGGEST FORWARD DUPLICATE THE FORMER"

On October 7th, your letter of August 29th was received and we cabled you as follows:

"YOUR LETTER SEPTEMBER 23 ASSIGNMENT TITAN PATENTS TG JUST RECEIVED"

This matter has been considered here and approved.

The documents for Japan, viz., assignments of Cases T. 165, T. 171, T. 182 and T. 225 have been received and already executed. In due time we received from Nagashima instructions concerning the execution of the documents in Cases T. 165 and T. 225 to the effect that a Japanese consular legalization was not necessary but the acknowledgment of a Notary Public was desirable. We executed the documents according to these instructions and have

Exhibit 1167

The documents for Germany and Czechoslovakia, viz., the general assignment for Germany and the assignment of Case T. 171 for Czechoslovakia, have been executed, notarized, legalized by the German Consul, and forwarded to Titangesellschaft, as per your suggestions.

Copies of the executed documents for Japan, Germany and Czechoslovakia are herewith returned for your files.

The cost of legalization by the German consul of the German and Czechoslovakian documents has been rather high, namely $12.00 for each document. We are unable to understand what rules govern the procedure for legalization. In Baltimore, the Consul has charged only $4.00, whereas in New York, we have sometimes paid $8.00 and at other times, $12.00. It appears that unless proof be submitted to the German Consul that the value of the matter submitted, i.e., the patent or patent application, is more than RM 10,000.00, a fee of $12.00 is charged; if proof be submitted that the value is less than RM 10,000.00 a fee of $8.00 is asked. Please, therefore, in the future, give us the approximate evaluation of such cases as are to be assigned the documents for which require legalization of German Consul.

Yours very truly,

NATIONAL LEAD COMPANY

Re: Assignment of Titan Co., Inc.'s Patents in T.G.'s Territory to T.G.

Gentlemen:—

Pursuant to advice received from Titan Co., Inc., Fredrikstad, we have executed certain assignment documents, as follows:

1.) General assignment transferring title to Titangesellschaft in Cases T. 100, T. 107, T. 132, T. 135, T. 153, T. 162, T. 165, T. 171, T. 179, T. 182, T. 184, T. 225 and T. 235.

2.) Assignment of Czechoslovakian patent in Case T. 171 to Titangesellschaft.

These documents, duly notarized and legalized by the local German Consul are enclosed herewith.

Documents transferring title to Japanese Cases T. 165, T. 171, T. 182 and T. 225 to Titangesellschaft will be forwarded directly to Nagashima Law and Patent Office, Tokyo.

In the future, we would like to request that if possible, when transferring title to patents and applications, or in connection with any other document of transfer, requiring the legalization of German Consul, you advise us approxi-

Exhibit 1168

mately of the value of the matter in question. If we cannot supply a value for the document to be legalized, the legalization fee becomes more expensive.

Yours very truly,

TITAN COMPANY, INC.

Re: Case T. 165—Japanese Patent No. 130,169
Case T. 225—Japanese Pat. Appls. 15.180/39

Gentlemen:—

We have received your letter of September 21st, 1940, advising us that assignment documents for cases T. 165 and T. 225 need not be legalized by a Japanese Consul, but should, preferably, be acknowledged by a Notary Public. This has been done, and we are pleased to enclose herewith executed assignment documents for these two above identified cases.

We have also received assignment documents for Cases T. 171 and T. 182, which we also have had executed and send you herewith.

Please acknowledge receipt of these documents.

Yours very truly,

TITAN COMPANY, INC.

Re: Assignment Titan Co., Inc. Patents
to T. G. (T. G. Territory)

Dear Mr. Andersen:—

We acknowledge receipt of your second mail copy of the letter of September 23rd, with which duplicate assignment documents in Cases T. 171 and T. 182 were enclosed.

We believe we forwarded to you, with our letter of October 25th, copies of these assignment documents, showing the signatures and date of execution. However, in the event we did not, we enclose herewith one copy of each of the documents, showing the signatures and date of execution.

In connection with this matter we note from your letter of October 17th that Mr. Nagashima's letter of September 21st was not quite clear. It was not quite clear to us either. We made some inquiries of our foreign patent agents here and the situation seems to be this: The Japanese Patent Office does not require the legalization of assignment documents by their consuls. This being the case, it is not even necessary to obtain a notarization. The notarization which is attached to such documents is simply to confirm that the individuals who executed the document were known to the Notary Public. In turn the County Clerk certifies that the Notary Public is, in fact, a Notary Public and a Consul Confirms that the County Clerk is a representative of the state where the document was executed, for instance, New

York State. If the consular legalization is not necessary, then the notarization by a Notary Public and County Clerk certificate is also not necessary. However, since in Japan they seem to prefer some sort of sealing on the document to make it appear more official (Japanese certificate of nationality, which also does not require legalization, does, however, require notarization by a Notary Public), we attached notarizations by a Notary Public to all documents we send to Japan when executed either on behalf of the company or by an individual.

Yours very truly,

NATIONAL LEAD COMPANY

Dear Sirs:

Re: Case T. 165—Japan. Patent No. 130,169,
Case T. 225—Japan. Patent Application No. 15,180/39.

We have duly received your favour of October 25th with the two assignment-documents and soon today necessary steps for transfer of the above-mentioned two cases to the firm Titangesellschaft m.b.H., Germany.

We have at the same time received two assignment documents for Cases T. 171 and T. 182, but we have not yet heard from any side about the transfer thereof. If we should take necessary steps as the Cases T. 165 and T. 225, so you would kindly send us Powers of Attorney with Certificate of Nationality of the firms Titan Co., Inc., Wilmington, Delaware and Titangesellschaft m.b.H., Leverkusen, Germany.

Yours very truly,

L. NAGASHIMA

By air-mail

C. F. Kaegebehn Esq.,
National Lead Company,
Patent Department,
111 Broadway,
New York, U. S. A.

Dear Mr. Kaegebehn,

Assignment Titan Company Inc. Patents to T. G.

I beg to refer to your letters of October 25th and November 12th with which were enclosed copies of executed assignment transferring to T. G. the following patent cases:

Patent Applications Germany
Patent Application Czechoslovakia Case T. 171
Patent Cases Japan T. 165, T. 171, T. 182 and T. 225.

I notice that you have sent to T. G. the documents for Germany and Czechoslovakia and to Dr. Nagashima the documents for Japan.

I have sent to Fredrikstad copies of the executed documents.

Exhibit 1172

The rules governing the procedure for legalisation of the German Consul are not very clear to me either. Previously, an evaluation of the patent cases in question was not asked for, as the fee was independent on their value. Later, we have, however, also on this side had cases in which we were requested by the Consul to state the value and particularly, whether it was more or less than RM 10,000:— I will in the future endeavour to give you the approximate value of patents for which assignments are to be legalized by a German Consul.

I have noted with interest your remarks in your letter of the 12th of November regarding legalisation of assignment documents in Japan.

I beg to express my best thanks for your kind assistance in the above matter.

Yours sincerely,

SIGURD ANDERSEN

Dear Sirs,

Case T-171 Japan Patent No 134.406
Case T-182 " " No. 137.323 a pl No. 16.798-37

We received to-day a telegram from Mr. Kaegebehn, Titan Company Inc., 111 Broadway, New York according to which you have written him that you are without instructions regarding the transfer of the above patents to the Titangesellschaft m,b,H.

Our letter to you of the 23rd September instructing you regarding this transfer has apparently gone lost and we enclose herewith copy of same. We take it that you have received from Mr. Kaegebehn the assignment documents referred to in that letter.

We have asked the Titangesellschaft to send you direct the two powera of attorney with certificates of nationality signed by a Notary Public, which we understand are required in connection with this transfer, and note from Mr. Kaegebehns telegram that he will send you the necessary powers signed by Titan Company Inc.

Please inform us when the matter has been settled. Your reply should be addressed to the writer using the address in Sweden indicated above sending at the same time

a copy to Titan Company Inc., 111 Broadway, New York, Attention Mr. C. F. Kaegebehn.

Yours very truly,

Sigurd Andersen

P.S. Correpondance re. our other patent and trade mark matters should—as you understand—be continued under our usual adress Titan Co.A/S, Fredrikstad, Norway.

Patent Department,
111 Broadway,
NEW YORK U. S. A.

Dear Mr. Kaegebehn,

Patents in Spain and Japan

I beg to refer to my letter of the 29th of October in the above.

Fredrikstad has inquired regarding the status of cases T.28, T.77, T.78 and T.150 Japan with regard to registered ownership. According to the information received by them, Case T.78 Japanese Patent No. 94.534 was assigned on the 19th of June 1940 and Case T.150 Japanese Patent No. 127.633 was assigned on the 17th of May 1940, both to Titan Kogyo. For cases T.28 and T.77 Japan assignments to Titan Kogyo have not been registered. These cases are, as already mentioned, maintained by Dr. Buchert, presumably on Titan Kogyo's costs.

Exhibit 1181

Case T.28 Japan stands in the name of Titan Co. A/S and case T.77 in the name of Titanium Pigment Company Inc.

Should a formal assignment of the latter case be desired, we will take the liberty to send you the necessary documents for execution.

Yours sincerely,

HBE/HH No. 154.

National Lead Company,
Patent Department,
111 Broadway,
New York City.

Attention: Mr. Kaegebehn.

Dear Sirs:—

T-77 Japanese Patent Nr. 94.271.

The above mentioned Japanese patent stands in the name of Titanium Pigment Company, Inc.

Titan Company, Inc. abandoned their interests in this patent in the year 1938, and since that time the patent has been maintained on behalf of the Titangesellschaft, according to the wish of that company.

The maintenance of this patent was taken over by Titangesellschaft's Japanese representative, Dr. Buchert, Kagaku Tokkyo Jimusho, last year.

We have in accordance with the agreement regarding mutual assignment of patent rights, asked the Titangesellschaft whether they wish this patent to be assigned to them, resp. Titan Kogyo, and we are now advised that they desire to have it transferred to Titan Kogyo.

We enclose herewith the documents required in connection with the transfer, as follows:

Exhibit 1185

Deed of Assignment
2 Powers of Attorney,
Certificate of Juridical Person
Declaration of transfer of Assets.

As we are not informed whether Titan Kogyo wish their own patent attorney to handle this case, or whether they wish to maintain our patent agents, Nagashima Law & Patent Office, as attorney for this case, we have prepared one power document for each attorney, and we leave it to the Titan Kogyo to decide further.

The declaration of transfer of assets from Titanium Pigment Company, Inc. to National Lead Company is, as you are aware, necessary because the patent stands in the name of Titanium Pigment Company, Inc., and we have used the same wording for the declaration as in the similar case T-78, which was assigned previously.

We would ask you to have the assignment, the powers and the declaration signed on behalf of National Lead Company and the certificates by a Notary Public.

Please send the signed documents to Dr. Buchert.

One copy of the papers are enclosed for your file. Thanking you in anticipation, we are

Yours very truly,

Andreas Ravnestad

T-27 Japanese Patent No. 94,271

From the I. G. Farbenindustrie, Patent Dept., we received a copy of your letter of December 3rd 1940, from which we noted that Titan Kogyo has no interest in the further maintenance of Patent T-28, Japanese Patent No. 75,851, and we assume that you will give the Attorneys Nagashima Law & Patent Office instructions for the discontinuance of this patent protection, since we also are not interested in its further maintenance.

Since the I. G. Farbenindustrie, Patent Dept., has asked us to launch a transfer of the Japanese Patent T-77—Patent No. 94,271—to Titan Kogyo, we have sent the necessary documents to Mr. Kaegebehn, New York, with the request to forward the signed documents to you.

Since we do not know whether Titan Kogyo wishes to use our Attorneys, Nagashima Law & Patent Office, for the above maintenance, we have sent two Power of Attor-

ney forms for signature and that is to say one each for the Attorney of Titan Kogyo, Masura Susuki, and Dr. Isawo Nagashima.

Yours very truly,

initialed Rd (Ravnestad)

Re: T. 28—Japanese Patent
No. 75,851

Gentlemen:—

We are in receipt of your letter of January 10th, 1941 and have noted therefrom that Titan Kogyo is no longer interested in maintaining Japanese Patent No. 75,851. We would like to inform you herewith that we also do not have any interest in further maintaining this patent.

Yours very truly,

TITAN COMPANY, INC.

Exhibit 1188

October 1, 1940

Mr. Sigurd Andersen
Stora Nygatan 31
Stockholm, Sweden

Dear Mr. Andersen:

We have endeavored here, in consultation with all parties concerned, to consider Titan Co., Inc.'s patent position in Spain, Portugal and Japan.

In this consideration we have used as a source of information the "List of 'T' Cases" which show the situation as of December 31, 1938. For knowledge of the situation from that date up to the present, we have consulted our own files which, however, will show the situation in these countries only insofar as concerns inventions originating with ourselves or our American licensees. Thus, from the "list of 'T' Cases", showing the situation as of December 31, 1938, it appears that the last case to have been filed in Japan, when that record was completed, was in Case T. 105. For "T" cases of a later date, and up to T. 245, our own records were consulted.

The object of this consideration was to ascertain whether Titan Co., Inc. should continue to maintain patents in these countries, or whether these should be assigned to the associate of Titan Co., Inc. most interested in their maintenance. Two alternatives present themselves, as follows:

Alternative (a): Titan Co., Inc. abandons the case.

Alternative (b): Titan Co., Inc. abandons the case and recommends that its associate also abandon the case.

Exhibit 1188

In applying these alternatives to the individual cases in the respective countries, an attempt was made to evaluate the case both from the point of view of its technical and strategic importance. The records in our possession do not show the existence of any patents or patent applications in Portugal and, hence, only the Spanish and Japanese cases come into question.

The alternatives are applied to the individual cases as follows:

Case T. 28 —Japan—Alternative (b)

Case T. 43 —Japan—Alternative (b)

Case T. 47 —Spain—Alternative (a)

(This apparently is already in force.)

Case T. 77a—Japan—Alternative (a)

(The "T" Case Lists note that this case is owned by T. G. but information from Nagashima indicates that the patent stands in the name of Titanium Pigment Co.)

Case T. 78 —Japan—Alternative (a)

(The list of "T" Cases does not indicate that this patent stands in the name of T. G. It is, however, a companion patent to T. 77a. Information from Nagashima indicates that the patent stands in the name of Titanium Pigment Co.)

Exhibit 1188

Case T. 80 —Spain—Alternative (b)

(This is probably in force. List of "T" Cases for 1938 indicates that this patent is owned by T. G. and that it is in force but we have had no information about it from Elsaburu. Presumably it has been abandoned in the interval.)

Case T. 82 —Spain—Alternative (b)

(Presumably this is already in effect. List of "T" Cases indicates this case to be owned by T. G. but carries the note that it was abandoned on October 16, 1936. However, Elsaburu give us information concerning it.)

Case T. 116—Spain—Alternative (a)

Case T. 117—Spain—Alternative (b)

(This is probably already in effect.)

Case T. 129—Spain—Alternative (b)

(This is probably already in effect.)

Case T. 136—Japan—Alternative (a)

(List of "T" Cases indicates the case to be owned by T. G. but Nagashima give us no information concerning it. Presumably it has been abandoned in the interval.

Exhibit 1188

In Spain—Alternative (b)

(Presumably this is already in effect.)

Case T. 150—Japan—Alternative (a)

In Spain—Alternative (b)

(Presumably this is already in effect.)

Case T. 165—Japan—Alternative (a)

Case T. 171—Japan—Alternative (a)

Case T. 176-178—

(The list of "T" Cases does not indicate whether Japanese patents stand in the name of originating company or which other company.)

Case T. 182—Japan—Alternative (a)

Case T. 184—Japan—Alternative (a)

With respect to cases marked "Alternative (a)" it recommended, provided you concur in the recommendation, to advise the associated company interested in maintaining this patent that Titan Co., Inc. is relinquishing the maintenance thereof and that they should arrange to make payments directly for the maintenance. We should be glad to execute formal assignment papers transferring title to the associated company.

With respect to Cases T. 176, T. 177, T. 178: If these stand in the name of Titan Co., Inc., it is recommended that alternative (a) be applied.

Exhibit 1188

It is noted that the Japanese patents or applications, respectively, in cases T. 154b, T. 203, T. 204, T. 205, T. 209, T. 210, T. 211, T. 212, T. 222, T. 223, T. 224, T. 225, T. 229, T. 230, T. 235, and T. 239 have been filed in the name of Titan Koggyo, whereas Case T. 206 has been filed in the name of T. G.

With respect to those cases where Alternative (b) is applied, it is suggested that, if you concur in this recommendation, you advise the associated company that Titan Co., Inc. is not interested to maintain the patent further and does not regard it of sufficient technical or other value to justify the associate in maintaining it.

Exhibit 1188

We note that there are two other cases, namely, T. 217 and T. 232, which if filed in Japan, might stand in the name of Titan Co., Inc., although our records give no information as to these two cases. If Japanese applications have been filed in Japan or applications have been filed in Spain, it is recommended that Alternative (a) be applied.

The consideration which has been given on this side to the matter of patents in Spain and Japan has led to the general conclusion that such patents and applications as Titan Co., Inc., holds in these countries are not of sufficient importance to justify the further expense of their maintenance.

We shall be pleased to hear from you in this matter.

With kind regards,

Yours very truly,

CFK:JM

ADDRESS FOR CORRESPONDENCE:
Sigurd Andersen
Stora Nygatan 31
Stockholm.

Stockholm, the 29th October 1940

By Air-Mail

C. F. Kaegebehn Esq.,
National Lead Company,
Patent Department,
111 Broadway,
NEW YORK U.S.A.

Dear Mr. Kaegebehn,

Patents in Spain and Japan

I beg to refer to your letter of October 1st.

As to Portugal, I beg to inform you that we have not at the time being any patents or patent applications in this country, which confirms the information shown by your records.

The Titan Company Inc. is not at the time being carrying any expenses for patents or patent applications in Spain and Japan. The costs of the maintenance of the patents in these countries as listed in your letter are,—as far as these patents are still maintained,—carried by the territorially interested companies.

According to our records we have been notified by the interested company of their desire to abandon the following of these patents:

Exhibit 1189

Case T. 43 Japan
" T. 47 Spain
" T. 80 "
" T. 82 "
" T. 117 "
" T. 129 "
" T. 136 Japan
" T. 136 Spain
" T. 150 "

and we have refrained from taking any steps from our side to their maintenance, we had already, prior to their abandonment by the associated company, relinquished our interest in the patents leaving the question of further maintenance as well as costs involved to the territorially interested company.

In cases T.176—T.178 the patents stand in the name of the Imperial Chemical Industries. The costs to the maintenance of these patents are paid by the exclusive licencee. In the case of the Japanese patents they are charged to the Titangesellschaft which we presume again charges them to Titan Kogyo.

Cases T.165, T.171, T.182 and T.184 Japan are being assigned to the Titangesellschaft.

The Japanese patents not included in the above are with Titangesellschaft's consent being maintained by Dr. Buchert/Kagaku Tokkyo Jimusho/ on behalf of the Titan Kogyo and assignments to that company have been executed and sent him in the cases where this was desired by the Titangesellschaft and Titan Kogyo. /As far as I am able to ascertain here, these were cases T.28, T.78 and T.150 Japan, this was effected previous to the understanding regarding

p.t.o.

reciprocal assignment of patent rights of the Titangesellschaft and Titan Company Inc./

As to case T.116 Spain, the maintenance has hitherto been taken care of by us on the understanding that costs should be paid by the Titangesellschaft as the patent was taken out on their request. The question whether they wish to maintain further or not this patent is not as yet clear, we have not therefore submitted a formal assignment for execution pending the settlement of this question.

With regard to cases T.217 and T.232 Japan, these seem to have been filed in the name of Titan Kogyo. I am endeavouring to check this matter and will write you again.

Hoping the above covers satisfactorily the points raised in your letter I am,

With kind regards,

Yours sincerely,

SIGURD ANDERSEN.

By air-mail.

C. F. Kaegebehn Esq.,
National Lead Company,
Patent Department,
111 Broadway,
NEW YORK U.S.A.

Dear Mr. Kaegebehn,

Spanish Patents
T. 116 No. 138.292

I received to-day copy of Messrs Elzaburu's letter to you dated the 5th of December.

As you will have noted from my letter of the 29th of October, we decided to abandon the Spanish Patent in Case T. 82/No. 124.715/. This decision was taken in 1936 and Messrs Elzaburu's records appear consequently to be in accordance with our records as far as this patent is concerned.

As to Patent No. 138.292 T.116, I would likewise refer to my letter of the 29th of October, according to which the question whether the Titangesellschaft wishes to maintain this patent is not as yet clear. I am still awaiting information regarding Titangesellschaft's decision and hope it will come to-hand before the term mentioned in Messrs Elzaburu's letter, namely, the 31st of December, and I will cable you when I receive it. I believe that we should not order any payment on this patent in the meantime.

Yours sincerely,

SIGURD ANDERSEN

Exhibit 1191

Sigurd Andersen
Stora Nygatan 31

Stockholm, the 28th December 1940

Messrs Elzaburu,
Barquillo 26,
MADRID

Dear Sirs,

Case T. 116 Spanish Patent No. 138.292

This case should be assigned to:
Tiganselischaft m. b. H.,
Leverkusen—I. G. Werk,
bei Köln a. Rh.,
Germany

and I would ask you to prepare and send to:
Titan Company Inc.
Attention: Mr. C. F. Kaegebehn,
111 Broadway,
New York

the necessary documents for such assignment with full particulars regarding the manner in which the documents should be executed, such as whether notarial and consular legalisations are necessary or not. Kindly note that in addition to the original documents two copies intended for our files should be forwarded to Mr. Kaegebehn.

Yours very truly,
Sigurd Andersen

Copy to Mr. Kaegebehn

P. S. For clearness sake we mention that correspondence regarding this and our other patent and trade mark matters should be continued with Mr. Kaegebehn in accordance with the existing arrangement.

By air-mail

RECEIVED
NATIONAL LEAD CO.
JAN 27 1941
Patent Dept.

C. F. Kaegebehn Esq.,
National Lead Company,
Patent Department
111 Broadway,
NEW YORK, U. S. A.

Dear Mr. Kaegebehn,

T. 116 Spanish Patent No. 138.292

I was yesterday informed of T. G.'s decision to maintain the above patent and cabled you as follows:

"Elzaburus letter fifth my seventeenth december"
"Tege wishes maintain T116 Spain suggest you"
"cable before thirtyfirst december instructions pay-"
"ment third fourth annuities".

The cost of these annuities /1 tas. 134;—according to Elzaburu's letter of the 5th of December/ as well as other costs involved in the maintenance of this patent should, as you are aware, be charged the Titangesellschaft.

Exhibit 1192

According to Elzaburu's letter to you of the 5th of December the endorsement of the patent for compulsory licenses should be renewed. As I think you are aware, the owner of a Spanish patent law, within certain periods /I believe once a year/ file at the Patent Office a declaration to the effect that he is willing to give licences under the patent. The provisions of the Spanish patent law with regard to working being rather draconic our usual practice has been to file such declarations as there otherwise seems to be a great risk of the patent being declared void.

As you are aware, this patent comes under the understanding with the Titangesellschaft regarding reciprocal assignment of patent rights. As mentioned in my letter of the 29th of October we did not submit a formal assignment for execution because the question, whether the patent should be maintained further, was pending. As the question now has been settled I think that an assignment to the Titangesellschaft should be executed so that they can take necessary steps to have the assignment registered and I should be glad to receive copies of the documents for my files.

Thanking you in anticipation I am,

Yours sincerely,

/s/ SIGURD ANDERSEN

Dear Dr. Jebsen

FEES FOR TRADE MARKS—DIVIDENDS TITAN KOGYO

With further reference to your letter of September 30,* beg to inform you that the patent Department has in the meantime gone further into the matter and now informs me that Mr. Kaegebehn has probably had before him an old list of trade marks belonging to Titan Co. A/S.

These have, however, in the meantime all beeen transferred to Titan Kogyo—who in future pay the expenses themselves—with the exception of No. 256537, which still belongs to Titan Co. A/S. This will have to be renewed only in 1954.

Should, however, any expenses be incurred for patent work, we will have this matter in mind.

With kind regards,

Yours very truly,

sign. RAGNAR IUELL

Re: Trade Mark "TITANOX" China

Gentlemen:—

We have received your letter of February 4th, 1941. You are correct in assuming that the first cable of November 1st, 1940, mentioned in our letter of December 5th, 1940, originated with Titan Co., Inc.—Fredrikstad.

Your letter of November 5th, 1940 has by this time been received by us and we are agreeable that both registrations in China, namely that with Chungking and the newly applied for one with Nanking, should be transferred to Titangesellschaft. In order that this transfer can be effected properly with respect to the Chungking registration, it was necessary for us to transfer it from the former Titanium Pigment Co., now no longer in existence, to National Lead Co. Thereafter it can be transferred to Titangesellschaft. We are not able to send you a photostatic copy of the registration with Chungking because the document has been forwarded to Chungking to record the transfer to National Lead Co. As regards the transfer of the Nanking registration, we recommend that the registration be completed and

Exhibit 1199

then a transfer of both the Chungking and Nanking registrations to T. G. be effected.

29 NOVEMBRE 1932

Monsieur Ch. RUPPRECHT

Krebs Pigments & Color Corporation

256 Vanderpool Street

NEWARKS, New-Jersey

Cher Monsieur Rupprecht,

Vous m'excuserez de revenir aujourd'hui seulement sur votre letter du 26 Septembre dont je vous remercie.

Comme vous, je ne voudrais pas qu'il ait le moindre malentendu entre votre societe et nous-memes.

Je considere donc de mon devois de vous preciser que, contrairement à ce que vous exposes, il see nous a jamais ets explique que les engagements anterieure de la Societe E.I. du Pont de Nemours ètaient de nature à empecher l'execution des accords dans le domaine technique qui existaient entre Commercial Pigments et le groupe de nos amis en Europe, et nous-memes, sauf eventuellement en ce qui concerne l'Angleterre, dent le cas devait faire l'objet d'un examen spécial.

Non-meme J'ai compris lors de ma visite chez vous en Septembre 1931 qu'il s'agissait, non pas de revoir le principle de l'accord, mais uniquement la forme la plus pratique d'assurer une collaboration technique aussi effective que possible, tout en offrant toutes les garanties desirables contre le danger l'informer des tiers.

Exhibit 1205

La situation de ma Societe se Trouve d'autant plus delicate que les accords qui nous lient avec nos amis en Europe sont tous anterieure a nos accords avec Commercial Pigments et que no amis ont mis a la disposition de Commercial Pigments, non seulement toute leur experience technique et tous les bravets qu'ils amaient pr mais egalement qu'ils ont contribue au developpement de I'usine de Baltimore par l'envoi d'un de leurs techniciens.

Vous voyez par cela meme que si on m'avait prevenu, comme vous le croyez, de cette situation, j'aurais immediatement fait toutes les reserves, car j'etais moi-meme lié par des engagements formels. et ??

Je suis persuadé que vous prendrez en consideration la situation que je vous expose et j'ajoute qu'il n'y a rien d'urgent mais que j'espere qu'a la prochaine occasion ou nous aurons le plaisir de nous rencontrer, nous trouverons une voie pratique qui nous permettra de voir la solution du problems en question.

Veuillez agréer, Cher Monsieur Rupprecht, l'expression de mes sentiments distingues.

Dear Dr. Blumenfeld,

I have your letter of November 29th, 1932 for which I thank you.

It is unfortunate that there should be any misunderstanding regarding our relations, as I was informed by Messrs Ticknor and Chase that they had fully explained the situation to you in Paris relative to the prior commitments of the Du Pont Company which required negotiation between the Krebs Corporation and yourself for any exchange of information. Such negotiation, as you know, was never concluded.

I sincerely regret any embarassment this situation may have caused you, and trust that some opportunity will conveniently present itself when we can meet and discuss the matter further.

Meanwhile, with my kindest personal regards and best wishes to you for a successful year in 1933,

I am

Exhibit 1207

PRODUCTION OF EUROPEAN COMPANIES
(and Titan Kogyo Kaisha Ltd.)
Metric Tons as TiO_2 Content

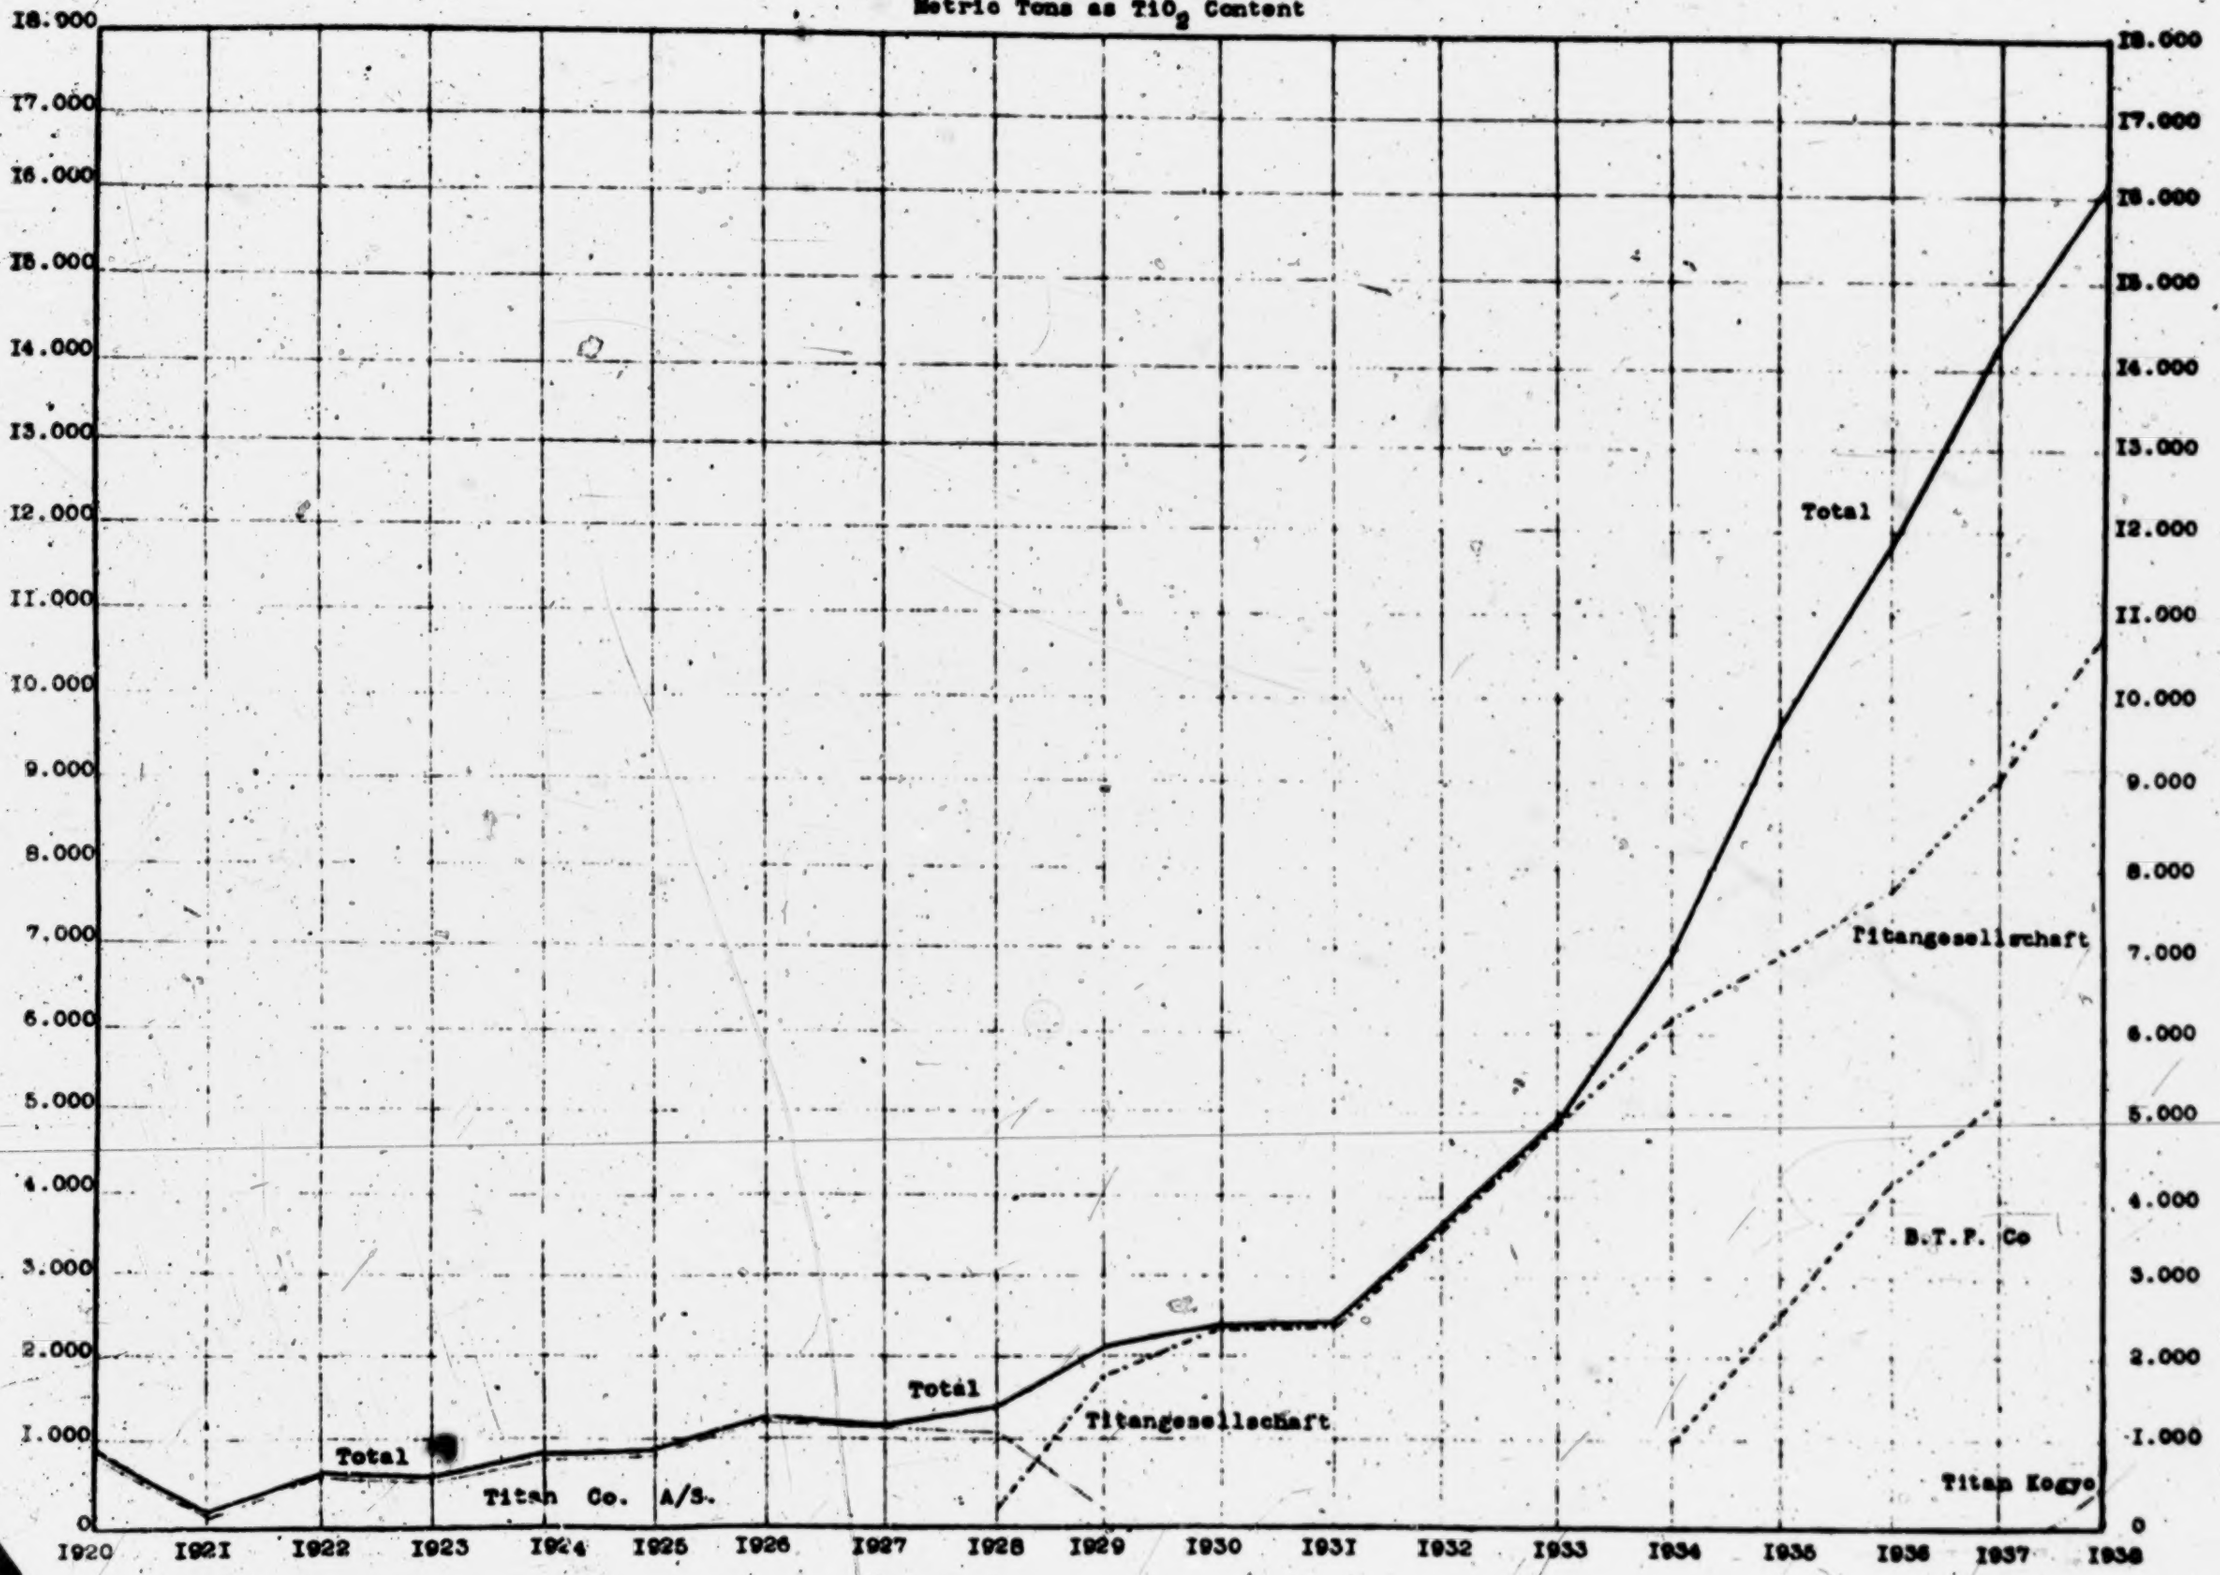

Exhibit 1208

November 4, 1927

Dr. G. Jebsen
Societe Industrielle du Titane
23 Rue Ballu, Paris, France

Dear Dr. Jebsen:

I have your letter of the 19th ultimo regarding the sale of Titanox and pure TiO2 in Europe; also your letter No. 6 of October 24th.

Arrangements will be made to ship five tons of Titanox to the Societe Industrielle du Titane at the first opportunity. As special barrels are used for export this shipment will have to go from St. Louis and cannot be delivered from the New York warehouse.

The question of mixing pure TiO2 with a small percentage of Blanc Fixe so as to avoid customs duty under the English Keys Industries Act has been referred to Mr. Thompson and Mr. Moses, and I will write you later regarding it.

I do not know whether Mr. Meredith will finally conclude to quote you a price of 6¢ per pound on Titanox for shipment to Europe, but think that he would be willing to do so at your request if the quantity required is important. The main problem, however, is involved in the selling price of the material in England.

The price at which Standard Xpigment is sold in England is slightly lower than the price of Titanox in the United States, and it will be difficult for us to explain to our customers here how we are able to supply American Titanox to paint grinders in England at a lower price than we supply it to our customers here. I am enclosing for your information copy of a letter I am writing today to

Mr. Thompson regarding an inquiry from the Nobel Industries, Ltd., which illustrates the point. The price paid is of no great moment when only trial shipments are concerned but becomes an important point when regular supplies are under consideration.

In this connection I might mention that Mr. Washburn stated to me a few days ago that he thought it quite possible for your people in Norway to make a pigment equal to Titanox without making any expensive changes in the factory equipment. I do not know whether he discussed this point with you, but if he did not I will be glad to ask him to give his views in more detail.

We have deferred dealing with this question of American shipments to England until we had Mr. Thompson's report of the trial shipment of five tons which went forward on the steamer American Shipper October 13th. We should have this report at an early date, however, and must therefore be prepared to deal with the problem in the near future.

Yours very truly,

Vice President

1.) A change in the prices for Standard T. Standard A and Paste is not found right at the present state of the market. Rebates can in certain cases be allowed on the list prices, but the net proceeds from the sales should not be under RM. 66.

2.) With regard to sales expenses, another conference is to be held in the next few weeks.

3.) The modified final proposal for the publicity expenses for 1930 will be sent Dr. Jebsen from Frankfurt soonest possible.

4.) Dr. Jebsen mentions that he has discussed with the National Lead Co. the proposal regarding a 10% increase on the deliveries to Titan Co., subject to I.G. dropping the 10% increase on the raw material prices. This question, however, is not to be decided at present. It is desirable to await further developments.

5.) The I.G.'s proposal—which has already been discussed previously—to apply a rate of 15% as general expenses in connection with deliveries to T.G.m.b.H., was accepted by Dr. Jebsen on behalf of Titan Co. Inc. it being understood that this should be considered as a maximum rate. This reservation was accepted by the gentlemen of the I.G.

6.) With regard to South America, Dr. Jebsen mentioned that the question put forward by the gentlemen of the I.G. could not be decided at the present, in view of the option of the Titanium Pigment Co.

The Titan Co. is represented in some South American countries by branches of the I.G. and Dr. Jebsen declares himself ready subject to the approval of his Board of Directors, to transfer to the T.G.m.b.H. the profit realised by sales made through these representatives.

7.) Further, Dr. Jebsen declares that the Titan Co. Inc. is willing to let the T.G.m.b.H. take over Italy, according to the wish the I.G. Dir. Holm wishes to examine once more the sales possibilities in Italy before a decision is taken in this connection.

8.) Dr. Raspe is requested to prepare a detailed annual report regarding the factory operations of the Titan G.m.b.H.

9.) Dr. Jebsen proposes that tests be made with regard to the possibility of using Standard T as a paint for indoor use.

Exhibit. 1209

10.) Dr. Jebsen proposes that numbered minutes be made out, placed in a minute-book and signed each time. Dr. Raspe is requested to take care of this.

11.) Of the M. 100.000, taxes on the capital increase, M. 10.000—is to be written off for the year 1929.

12.) Dr. Jebsen requests that a record of all titanium patents of the Titan G.m.b.H. be prepared for the management. The patents which are being filed for inventions of the T.G.m.b.H.'s organization, are to be filed in the name of this company. It is to be examined under which names such patents are to be filed which are the result of cooperation with the Gentlemen of the I.G. Dr. Kuhne will examine this question specially.

13.) The amount of the royalty is to be fixed according to the exact percentage of contents.

14.) The monthly deliveries to the Titan Co. Inc. will not, as has been the case hitherto, be debited immediately, but debited, value 15th of the month.

(Sign.) Dr. Raspe (sign.) Dr. Jebsen

(Sign.) Dr. Brüggemann (sign.) Dr. Kühne

August 15, 1930

Dr. G. Jebsen
Societe Industrielle du Titane
24 Rue de la Pepiniere
Paris, France

Dear Dr. Jebsen:

Since writing you on the 13th instant I have received from Mr. Washburn a copy of his letter to you of August 12th referring to the installation of an additional evaporator for the concentration of sodium sulphide solutions. This letter will no doubt be in your hands shortly after the arrival of mine.

I have also received from Mr. Washburn a copy of his letter to you of the 11th regarding the Mecklenburg and Blumenfeld patent applications. You will remember that while we were in London I handed to you a copy of a letter from Mr. Washburn to Mr. Moses on this subject.

Mr. Washburn has evidently been cleaning his desk for the same mail brings me a copy of his letter of August 12th to you in which he encloses a memorandum of his reply to a questionnaire prepared by Dr. Raspe which includes eighty-two questions. Certainly Dr. Raspe went at his job with typical German thoroughness, and I hope he got all the information he wanted.

Yours very truly,

Vice President

8th Sept. 1930.

Mr. EvansMcCarty,
Vice President,
The National Lead Company,
111, Broadway,
New York. U. S. A.

Dear Mr. McCarty,

Many thanks for your letters of the 5th, 8th, 13th and 20th as well as your cables of the 29th and 31st August.

Your information as to the future of Titanated Lithopone is most interesting, and I should much appreciate it if you will arrange for more detailed information to be sent to me by Mr. Hagar of his reports. Experience in the United States may or may not be applicable to this market. If, however, your conclusion also refers to Europe, where we have seen no Titanated Lithopone hitherto, it looks to me that a considerable argument in favour of consolidation with the Blumenfeld group has lost its basis. Pisart's interest for the Blumenfeld group may lessen considerably, and anyhow his facilities for creating a quick outlet for the production of a large size factory have diminished considerably.

Blumenfeld has very little chance to find somebody in France outside of Pisart, to finance him and if we go together with the Robinson group there is probably not much chance for Blumenfeld also in England outside of the I. C. I. —which position you know. To make an arrangement on the

lines suggested in July solely to keep Montecatini and Aussig within a certain limit seems to me rather too advantageous for Blumenfeld.

Dr. Kuhne is not very eager to arrange with Aussig now and from our various conversations with Burton it may be concluded that an arrangement as to sales anyhow can be reached with Montecatini, and presumably more easily obtainable after we have started to manufacture TiO2 in Leverkusen.

The 1500 tons suggested in July to be allocated to Montecatini might already be somewhat difficult to digest if it should be in the form of preferential sale.

Dupont's view is very interesting and, being the largest customer of the Commercial Pigment Company, it is comprehensible for Mr. Tickner to come to an arrangement.

As you know Lobstein had the visit of a representative from Dupont early this year who said that his firm intended to take up the manufacture of Titanium and Dr. Raspe told me on my last visit that when he was in the U. S. Dupont had been keen on getting permission to see the Titanium factory in Leverkusen.

Your cable as to MacArthur Irwin's decision is also very interesting.

I have no information re Laporte—it seems, though, that it is still less likely that they will take up the manufacture. They are not very well placed in Luton, neither for sulphuric acid nor ore supplies, and that they should start in another place seems improbable especially when we start in England. The most important matter for us is to enter the market with Pure TiO2.

Our offer to The Greenwich Linoleum Company of Standard "T" at £24. was not attractive as after experiment they found that even at that price the use of TiO2 at

£72 gave better results. Heaton tells me that the experiment undoubtedly was done with impartiality. He sent me a sample showing that the linoleum with TiO2 was of distinctly lighter tone.

Ravnerstad's work is proceeding with good results. I shall be very interested also to know when St. Louis will start again with TiO2 and we may expect lower prices from there.

Our office in Paris has heard nothing from Dr. Gardner up to August 30th. I wrote Mr. Henrikssen on receipt of your letter to arrange the necessary with Leverkusen for his visit.

Many thanks for your information as to Blumenfeld's possible negotiations with Pisart.

Please take this only as an expression of my thoughts as far as they have gone at present.

On Monday 15th I will meet Dr. Kuhne and Dr. Meyer in Zurich, Hotel Baurlac, and will write you an account as soon as possible thereafter.

I was in Norway 2-3 weeks, partly in Oslo—partly in Fredriksstad near Hankoe, with my wife and children. I had no time to go to Sogndal in view of my visit here. Dahl, Vogt and Beer send their best regards. Kiaers were absent.

The erection of the new plant in Sogndal is under way. The power contract is not concluded yet. There have been endless correspondence and conferences on this matter between Mr. Blom the lawyer and Lensehow on the one side and the small power company on the other side, of which we have had copies in Paris to comment on. Blom thought, though, that it now had reached its finish and expected an agreement to be concluded on the terms reached which seem

very satisfactory to us. The agreement is badly arranged and the language not well chosen so I expressed the hope that Mr. Blom should get the power company to agree to an improvement in that respect. Vogt has approved it, but Dahl was away and it will be sent to him later.

There are some difficulties with regard to claims for damages by sludge let into the river during the latest years, but Blom tells me it will not be important.

Lenschow and Moelbach expect to have the new plant ready in the first quarter of next year. With the present low sales and consumption of ilmenite in Leverkusen this year it is to be feared that the run of the new plant with full production will give us more ore next year then desired.

We can now obtain a freight rate from Raegefjord to New Orleans at 16/-per ton for 2-3000 ton steamers, and if some ore of the new production of 46/47% could be taken by St. Louis or Niagara Falls it will help.

Interesting in this connection is that Ravnerstad's experiments for the production of Pure TiO2 has given products without value by no addition of phosphoric acid.

It will be of much interest if I could have figures from St. Louis and Niagara Falls giving the actual recovery of TiO2 from sand ore. I enclose a copy of letter to Mr. Washburn for this purpose. In view of The National Lead Company's interests in Sogndal and the possibility of later supplies from similar deposits in the U. S. A. it seems to me to be of much interest to find the comparative value of these two ores.

I hope to leave here latest on Wednesday and will, if possible, call on Burton before.

Total sales of Titanium this year are at present 10% above last year. R. W. Greeff & Co. are, though, 12% be-

low last year whereas all the other countries show an increase, particularly France, where the increase is 45%. This last progress raises somewhat mixed feelings as we are selling there with a loss because of the duty.

With kindest regards to you and Mrs. McCarty.

Yours very truly,

(Sigd) E. Jebsen

P. S. You will note the information I have had over the telephone from Dr. Raspe as to his experience by copying the St. Louis method.

Exhibit 1212

Letterhead of

NATIONAL LEAD COMPANY

New York, May 17, 1933.

Mr. W. C. Beschorman,
c/o R. W. Greeff & Co., Ltd.
London, England.

Dear Mr. Beschorman—

Enclosed is confirmation of cablegram sent you as a night letter.

Mr. Meredith and Mr. Moses came up yesterday and stated if they could get a supply of TiO_2 from Leverkusen to cover requirements on the eastern seaboard, it would greatly facilitate the operation of the St. Louis Plant, enabling them to increase production of B-product. Their stock of B, which you and I thought was quite adequate when we considered it a couple of months ago, is also rapidly running down and they will be obliged to begin producing very soon.

They have stepped up the production of C, using two calciners, to close to 60 tons per day. This helps, but I was told yesterday that they are 500 tons behind on their orders for C, with the shortage increasing.

Our contract with Leverkusen provides for a price of self cost up to one half of production I believe. We are assuming the contract would now call for self cost and 10% plus. Even though the 10% might not apply under a strict construction, I think it desirable and more equitable to offer that price under the circumstances. I am told by Mr. Moses, that at this figure plus duty, we would have a

landed cost in New York just about equal to the cost of St. Louis product delivered here.

They are intending to repack and sell it under Titanium Pigment Co. labels. This was added to the message, thinking it might possibly enable Leverkusen to use a cheaper package. Mr. Meredith and Mr. Moses are quite anxious to have some shipments started promptly and would like to have the full 500 tons delivered speedily.

I understand Mr. Meredith replied to your cable regarding the purchase of 2500 tons of Ilmenite and made some objections to the price. They tell me the cost of this Norwegian Ilmenite will be about $2.50 per ton in excess of the Indian product. There may be some special reasons not known to them which influenced you to make this purchase but I wish that you had put it up to them first before closing. We should, I think, endeavor to maintain in their minds a sense of responsibility for the conduct of the business, and cause them to feel at all times that they are in control of these details.

Yours very truly,

F. M. CARTER
President

COMPANHIA INDUSTRIAL LIMITADA

São Paulo, 2nd December 1940

To
The Tam Zirconium & Titanium Products.
111 Broadway, New York City
U.S.A.

Gentlemen:—

We have seen your advertisement in the "Chemical & Metallurgical Engineering of September issue and by this motive we come to your presence.

By that advertisement we are sure that your important firm constructs industrial apparatus for the purification of zirconium and titanium ores.

We are in this moment thinking of installing a plant for the manufacture of white pigments, such as: white of titanium and lithopone to the basis of titanium and barium sulphate.

We desire therefore to know your process for the purification and transformation, beginning of the raw ore until the pure finished product.

If it is necessary we can send you a small quantity of natural barytes and titanium ore (Elemenita) with 40-50% of titanium.

We hope that you by the next mail give us all informations and literature if possible about his business, and we are dear gentlemen,

Very truly yours,

COMPANHIA INDUSTRIAL LIMITADA

F. Nargua

Exhibit 1215

December 6, 1940

Companhia Industrial Limitada
Sao Paulo, Brazil

Gentlemen:

Your letter of December 2nd, 1940, addressed to the Tam Zirconium & Titanium Products, has been referred to us for consideration and reply.

We note your interest in the purification of zirconium and titanium ores and the manufacture of titanium and lithopone pigments in your country.

First, let us correct an erroneous impression. We are not manufacturers of industrial apparatus for the purification of titanium and zirconium ores, nor for the manufacture of lithopone and titanium pigments. Our entire interest and operation is centered on the production of titanium pigments.

As regards production in Brazil, we think that this might be a very interesting venture providing you can be assured of a market for 10,000 short tons per annum as Titanium Dioxide. Since the Titanium Dioxide content of a Titanium Barium Pigment is 30%, this would mean about 33,000 short tons of this product per annum to make the venture a paying one. This statement is based upon our own experience and upon some knowledge of the experience of other manufacturers who are operating on a smaller scale than ourselves.

We note further your request for information regarding the process for manufacturing pigment beginning with raw ore and going through to the finished product. Since

the process is a very involved chemical one and since we have devoted many years and much expense to the perfecting of our operations, we naturally do not feel that we can gratuitously distribute such information. However, if you are seriously bent upon the production of titanium pigments in your country we will be very glad to discuss with you operation under a license granted to you by us, the terms of which would make available to you the information which you desire for a fair consideration.

Yours very truly,

TITANIUM PIGMENT CORPORATION

I. D. Hagar—Vice President.

TITAN COMPANY, INC.

June 5, 1941

Mr. C. F. Garesche
Building

COMMENTS TO MR. RUPPRECHT'S LETTER OF MAY 16, 1941

Dear Mr. Garesche:

Referring to the decision we took on the meeting of May 28, present—Mr. Rockwell, Mr. Garesche, Mr. Kaegebehn, and Dr. Jebsen—that we should cease to send patent applications to Titangesellschaft and other associated companies in German-held countries, during the duration of the unlimited national emergency, the proposal by Mr. Rupprecht is all right to us as far as associated companies in Germany and German-held countries are concerned.

However, nearer consideration seems advisable as regards the suggestion to refrain from licenses to Titan Co. Inc. under applications or patents to be had in these countries. It is clear that Titan Co. Inc. only after a most careful consideration will apply for the patents on inventions originating with them or National Lead Company in any of those countries under the present emergency, and the same considerations will be applicable to cases originating with DuPont. It is also most likely that applications for government licenses in such cases will be rejected. On the other hand, to make a blanket renunciation of our rights in this respect seems to go too far at present.

Exhibit 1216

May I suggest that we tell Mr. Rupprecht that we are in agreement with the above first mentioned part of this proposal, but would like to have the question of licenses to Titan Co. Inc. under patents in these countries a matter to be considered from time to time by DuPont and us in common, and that DuPont may rest assured that our wishes in such cases will be governed very much by similar considerations as their own.

Yours very truly,

G. JEBSEN

E. I. DuPont de Nemours & Company,
Wilmington,
Delaware

Attention Mr. C. H. Rupprecht, General Manager
Krebs Pigments Department

Gentlemen:

We refer to your letter of May 16th and subsequent correspondence concerning our titanium pigments agreement (as amended Jan. 1, 1941) and particularly to Article V thereof which provides that you, after the lapse of a definite period of time, shall offer our foreign associates the opportunity to acquire a non-exclusive license under involved applications filed by, or on patents issued to you, in certain foreign countries.

In view of the present international emergency, we agree that until this emergency has passed and to the extent that the above Article may apply to any firm or any party associated with us in Germany, Italy or Japan, or in any country occupied by these nations, you discontinue the grant of further license rights to, as well as the exchange of applications or patents with such firms or parties, provided that you give Titan Company, Inc., during this period, the opportunities previously extended to the above mentioned associated firms or parties. Also, we assume that Titan Company, Inc., when the emergency period is over, will be enabled by you to grant sublicenses to our associates under any licenses Titan Company, Inc., has received during the

period of the emergency, provided, of course, that such sublicensing may be properly done under the government regulations and restrictions in effect after the emergency.

We further agree with your proposal that until the present emergency terminates, we will refrain from sending to such foreign associates copies of any United States patent applications or information thereon which you may file and subsequently submit to us in accordance with our agreement. It is understood that all other obligations of our agreement continue in full force and effect.

Yours very truly,

NATIONAL LEAD COMPANY-TITANIUM DIV.

Manager

Accepted:
E. I. DUPONT DE NEMOURS & COMPANY

Exhibit 1218

Letterhead of

E. I. DU PONT DE NEMOURS & COMPANY

National Lead Company
111 Broadway
New York City, New York

September 17, 1941

Gentlemen:

We desire to refer you to our letter of May 16, 1941, in pursuance of which we mutually agreed to modify our Titanium Pigments Agreement, as amended January 1, 1941, particularly Article V thereof, to discontinue during the present emergency the grant of future license rights to or the exchange of patents or applications therefor with any firm or other party associated with you in Germany, Italy or Japan, or in any country occupied by these nations.

Since May 16th, various Presidential Proclamations have issued and Congressional Acts have been passed which exert a greater control over the transmission of patent applications or information appertaining thereto to countries outside of the United States generally, irrespective of whether the country is in the Axis or the occupied category. Hence, it now appears that our May 16th agreement is too restrictive in that it fails to fully comply with existing Governmental regulations, although, as I understand it, we have, in practice, fully complied with all regulations and restrictions.

Accordingly, and to record our full compliance with existing Governmental regulations, we propose until the present emergency terminates, and except in those instances where first we shall obtain a license to do so from the Gov-

ernment, that you refrain from sending to any of your foreign associates copies of any United States patent application or information concerning the same which we may file and submit to you in pursuance of our agreement.

It is understood that this modification to our aforesaid agreement shall not affect any of its remaining provisions and that all of the other obligations of the agreement continue to remain in full force and effect.

If the foregoing proposal meets with your approval, will you kindly indicate your acceptance thereof by executing and returning to us the enclosed duplicate original of this letter?

Very truly yours,

C. K. Rupprecht
GENERAL MANAGER.

KREBS PIGMENT & COLOR CORPORATION

Newport, Delaware
June 9, 1932

Mr. Z Phelps
Newark—

Replying to your request of yesterday for information for representatives of the National Lead Company, our waste heat boilers each produce about 4300 pounds of steam per hour from gases at a temperature of about 2000°F.

For conveying barium sulphide solution, most economical service has been had from a five-ply water hose furnished by Sibley Hose and Rubber Company. Two and one-half inch hose is used mostly for pressure lines. There is in service now a test section of "Newtype Cord Suction Hose" furnished by Sibley Hose and Rubber Company which is proving very satisfactory for gravity flow lines where ordinary hoses collapse.

IDH

Exhibit 1221

Letterhead of

TITANIUM PIGMENT COMPANY, INC.

ST. LOUIS PLANT

SUBJECT Report on visit to Krebs Pigment & Color Co., Newark, N. J. July 1, 1932.

DATE July 9, 1932.

TO Mr. W. F. Washburn, Supt.

FROM Mr. H. L. Jungmann.

In the absence of Dr. J. E. Booge, the writer was received by Mr. M. L. Hanahan and an inspection made of their pigment physical testing laboratories. Mimeographed copies of their testing methods were obtained, as follows:

Physical Tests:

Color
Tinting Strength
Oil Absorption
Fineness
Texture
Hiding Power (Brush out method)

Chemical Tests:

Reaction
Moisture
Water Soluble Material

Paint Tests:

Paint Grind

(a) Rigidity Readings (Observation of the condition of the mix)

(b) The Mix (Time required for complete wetting)

(c) Consistency of the finished paint —(Determined with modified Stormer viscometer)

Briefly summing up their tests:

Color.

All color tests are made in a pale colored refined linseed oil paste very similar to our own method except for modifications due to the blue tone of lithopone pigments. The colors are compared to four standard samples, one containing no ultramarine blue and the other three varying degrees of blue intensity. These standards have been assigned brightness values and in judging unknown samples, both brightness and degree of bluing are taken into consideration.

Tinting Strength.

This is essentially the old DuPont test using ultramarine blue, a 15# weighted muller, a definite time and manner of mulling and comparing the paste on microscopic slides viewed through the glass and reporting differences from an arbitrarily established standard. Their method does not seem to possess any advantage over our own so far as accuracy is concerned and has the disadvantage of requiring considerably more time.

Oil Absorption.

This test is essentially the same as our own, that is the paste rub out method. They use considerably more pressure

and a longer time in the rub out and take a shorter end-point than we do, all of which of course tend to produce lower values. It was interesting to find that temperature and humidity play as large a part in their determinations as in our own.

Fineness.

This determination is made by the use of a 325 mesh screen and follows our own general procedure except that larger quantities of sample are used and that washing is done by a spray nozzle first instead of a tap water stream, followed by the usual light brushing.

Texture.

This test was very interesting and can well be adopted by ourselves particularly in relation to Pure Titanium Oxide in order to obtain some idea of the state of aggregates of the pigment below 44 microns, which is the average opening in a 325 mesh screen. They claim that aggregates as small as 8 microns can be seen by their method. This consists of working up a sample in a spar varnish (Hyperion, manufactured by DuPont deNemours & Co.) with a definite number of strokes of a stiff spatula, in order to approximate a single pass of a similar paint paste over a roller mill at a moderately tight setting. A wedge-shaped film is spread out over a glass plate and the dried film viewed with a beam of light parallel to the film so that the coarser particles stand out and cast tiny shadows along the film. An arbitrary set of standards which show a wide difference from good to poor are used for judging results.

Exhibit 1221

Hiding Power.

This is a practical brush out test similar to that of Gardner's. They have found that their paper charts having 70% brightness in the white background and 45% brightness in the gray strips are superior to Gardner's black and white linoleum charts. Gardner's charts represent extreme differences and it has been found that the white yellows considerably and the paints have a tendency to peel away, often carrying part of the surface after repeated tests. The Krebs paper charts are economical and can be used for individual tests and held for quite some time as records.

Reaction.

This test is simply one of titrating alkalinity using N/50 H_2SO_4. They do not made pH determinations.

Moisture.

This test is similar to our own except that 5°C. higher temperature (110°C.) is used and 3 hours drying time instead of two.

Water Soluble Material.

This determination is practically like our own.

Paint Grind Test.

The most essential part of this test is the consistency determination and is comparable of course to our present method except in the instruments of measurement and the fact that they use a finished paint for test.

At Mr. Hanahan's suggestion a very hurried inspection was made through the plant covering the making of zinc

Exhibit 1221

sulfate solution, black ash, leaching, precipitation, bluing, drying, calcining and packing. No milling was seen. Of particular interest was the calciner, the discharge end of which was only seen and though not operating, the air-tightness of the front end and the discharge into the slurry box were noted. The black ash roaster could only be seen from below, but the discharge was carried to leaching tanks which were very small and handled as separate batches. Bluing of the pigment was done in the wet way. Filters and driers for the pigment were combination units of the Filtration Engineers. In the packing department bags were filled by an enclosed auger-type screw and bags weighed automatically on a pneumatic weighing machine. Bags were gathered together and tied by wire on a Minneapolis Bag Tieing Machine. Though this department was not operating, it would seem that their packing and weighing could be done by less men than we employ for our packing, provided that the tonnage could be handled. In general the appearance of the entire plant was far inferior to our own.

Very truly yours,

H. L. JUNGMANN

HLJ:HWS

Exhibit 1222

COPY

August 4, 1932.

Mr. M. L. Hanahan,
c/o Krebs Pigment & Chemical Co.,
Newark, N. J.

Dear Mr. Hanahan:

In checking over your method for tinting strength determination, it has been observed under "Notes" that when a pigment of high tinting strength, such as Titanium Oxide, is determined that a special test is used. We would appreciate very much an outline of your method for this test any any comments on it that you care to make.

With kindest personal regards,

Very truly yours,

TITANIUM PIGMENT COMPANY, INC.

(Signed) H. L. JUNGMANN.

HLJ:HWS

Exhibit 1222

1. How much gypsum in C pigment kiln feed?

   5% maximum.

2. Procedure for slaking lime.

   The procedure followed is to run pebble lime and water simultaneously into a tank full of slaked lime slurry. The tank is maintained full with the production overflowing into a supply tank. In this way the slaking takes place in a concentrated lime slurry and conditions are favorable for complete conversion to calcium hydrate. A Richardson "Conveyometer" proportions the lime, and a water meter proportions the water. The two are adjusted so as to produce a slurry containing 17½% calcium oxide. The tank to which the materials are fed is a vigorously agitated (55 r.p.m. sweep) 8 x 8 tank.

3. Temperature of lime slurry to strike.

   This runs between 135 and 150°F.

4. Sizes of our C pigment Olivers.

   We know our washing capacity to be in excess of 60 tons of C pigment per 24 hours. We have three Olivers in our C pigment division—two for filtering and washing the anhydrite, and one for delivering the blend to the kiln. Following are the details of the filters used in this line up:

   (a) 9.5′ x 15′ Oliver for washing diluted strike slurry.

   (b) 11.5′ x 12′ Washing the repulp discharge from (a) above. The delivery from this filter runs 4 or 5 pH.

   (c) 8′ x 14′ This filter delivers the blend to the kiln.

5. Solubility of our uncalcined anhydrite.

The liquid phase in contact with our uncalcined anhydrite is saturated with calcium sulphate. That is, the amount of calcium sulphate in solution is as much as if the liquor were in contact with gypsum.

6. Is our uncalcined anhydrite soluble or insoluble?

Our anhydrite is what is termed insoluble anhydrite. That is, it does not easily change over to gypsum when in contact with water. However, its solubility in water is equal to that of gypsum. This is as expected since the anhydrite contains 3 or 4% gypsum.

7. Details of P. & L. water sensitivity test.

A copy of the specifications for this test is attached.

8. Details of paint grit test.

A copy of this test is also attached.

9. Details of consistency test.

There are three of these, and copies of the specifications for each are attached.

10. Reprints of R. H. Sawyer's Articles and Papers.

Copies of five of these are enclosed.

11. Details of 5 & 10 test on L. W.

This test is made by weighing out ten grams of the pigment in question and stirring up with 5 cc of distilled water. A good water dispersing pigment will make a free flowing slurry under these conditions.

Exhibit 1222

12. Water dispersion test.

This test supplements the 5 & 10 test mentioned above. In this test 50 grams of pigment are stirred for 15 minutes under a milk shake mixer with 500 cc of distilled water. The slurry is then made up to a liter with distilled water, shaken thoroughly and allowed to stand 4 hours. The top 25 cc are pipetted off and the solid content determined. A good water dispersing pigment should carry 85% in suspension by this test.

13. Details on grinding of LO.

Our Williams mill has an 8' separator. The vane settings are wide open for grinding LO. The thimble is set 17.5" below the top of the inner-cone. Grinding rate is approximately two tons an hour.

14. P_2O_5 in old and new M.K. ore.

The following table gives what results we have on P_2O_5 analysis.

	% P_2O_5 in Ore	% P_2O_5 in LW Pigment
Old	.69	.83
New	.22	.62

The above results are not very consistent in that the % P_2O_5 in the pigment does not parallel the % P_2O_5 in the ore. In this connection, it may be pointed out that we never ran 100% new M.K. during the past year. Since we had some of the old M.K. left, this was blended in and this may account for the rather high figure for P_2O_5 in the new M.K. pigment.

15. Samples

The following samples have been shipped direct to Mr Kingsbury:

(1) 1 lb. of FF from old M.K. ore.

(2) 1 lb. of FF representing approximately ⅔ new M.K. and ⅓ old M.K. ore.

(3) 1 lb. of FF with good paint grit.

(4) 1 lb. of FF with poor paint grit.

(5) 1 lb. of LO with medium good paint grit.

(6) 1 lb. of Lo with poor paint grit.

In connection with the samples sent to us from St. Louis for paint grit study, we found that the quantities received were too small. We will, therefore, find it necessary to arrange for another group at some future date. We are, however, sending the above as being representative of good and poor grit, respectively.

Exhibit 1222

WATER SENSITIVITY TEST FOR LO C PIGMENT

PRINCIPAL OF TEST: A measure of the degree of thickening caused by the addition of a water solution to a paint.

APPARATUS & MATERIAL:

Roller Mill
Paint Pots
Torsion Balance and Weights
High Speed Mixer
Modified Stormer Viscometer
Stop Watch
Spatula 6" blade x 1"
Pratt and Lambert #25 Mill White Liquid
Limed Rosin (Gloss Oil)
Cobalt Linoleate (Dryer)

PROCEDURE:

The pigment to be tested and the P. & L. #25 Mill White Liquid are weighed into a 1 quart paint pot in the following proportions:

292.0 g Titanox C
150.00 g P. & L. Liquid #25

The mixture is stirred with a spatula until the pigment is well wetted and a flowing paste produced. The paste transferred to a roller mill, ground with a medium tight setting, and collected in a tared 1 quart paint pot.

Exhibit 1222

398.0 grams of the paste is reduced with:

117.0 grams P. & L. Liquid # 25
9.0 " Limed Rosin Oil
1.8 " Dryer

Mix paint thoroughly with a spatula, and pour into two ½ pint cans. To *one* add 2 ml. of dilute sodium silicate solution.

Mix the sodium silicate into the paint very thoroughly with a speed stirrer and then with a spatula. Continue until thickening appears to be complete.

Determine consistency after fifteen minutes standing by making three consecutive readings (which must check). If there is progressive thickening allow the paint to stand an additional fifteen minute period. Stir with spatula and again determine the consistency.

The difference between the consistency of the ½ pint control paint and that of the sodium silicate treated paint gives a measure of the H_2O sensitivity.

NOTE:

Preparation of dilute sodium silicate solution.

Dilute four grams of Grasselli XX Grade sodium silicate to one hundred grams with distilled water and mix thoroughly. This dilute solution should be prepared fresh daily.

Exhibit 1222

PAINT GRIT

PRINCIPLE OF THE METHOD:

The paint grit of a pigment is determined by grinding the pigment in an enamel vehicle on a roller mill set at a definite roll clearance. The composition of the grinding paste is determined by the approximate consistency of the pigment being tested. The object is to obtain pastes of partically the same consistency in order to equalize the shearing stresses on the pigment aggregates. The ground paste is reduced to the proper pigment-binder ratio and the resulting enamel drawn down on a plain glass plate at a uniform film thickness equal to that of the roll clearance. After drying, the film is compared with arbitrary standards for size and number of gritty particles.

APPARATUS AND MATERIALS REQUIRED:

Roller Mill
Paint Pots, 1-pint size.
4 steel strips, 8" long, ½" wide, 0.0015" thick.
McCloskey 4-hr. white enamel varnish vehicle
Steel drawn-down knife, blade 3½" wide, edge machine planed.
Plate glass slides 6" x 4" and about ⅜" thick, beveled edges.
Drawn-down knife guide, comprising cross- piece 4" long to which are attached two steel strips 8" long ½" wide, 0.0015" thick so that a 3-inch space is left between them.
Standard slides, or standard lithopones from which these may be prepared.

Exhibit 1222

Formulation:

Grind:	*M.O.*	*L.O.*	*Reduction*	*M.O.*	*L.O.*
TiO_2	200 g.	200 g.	Base	220 g.	200 g.
McC Varnish	106 g.	80 g.	McC. Varnish	68 g.	86 g.
Ration P/V	1/.53	1/.4	Ratio P/V	1/1	1/1

Mixing:

Mix 200 g. TiO_2 and 106 g. McCloskey 4 hour White Enamel Liquid in CGM for 5 minutes after breakdown. (Some time after the breakdown the stirrer and can are scraped once with a spatula to mix any dry pigment that may not have gotten well mixed.) Record seconds to mix, seconds to cause breakdown, and the flow of the paste.

Grinding:

Grind on roller mill with rolls set at .0015"—room temperature—with no water circulating through the rolls. Return first part ground paste (one spatula stroke) to grinding rolls. Use all of the grind to make composite base for further reduction. Record seconds to grind paste, appearance of rolls, number and size of lumps in unground paste, flow of ground paste.

After standing 24 hours, drawdowns are made in the following manner:

A quantity of the well mixed paint is placed near one end of a plate glass slide and the drawdown knife guide placed on the slide so that the paint lies between the two parallel steel strips. The drawdown knife is placed vertically on the steel strips and pulled across the paint with a smooth uniform motion while resting on both strips, thus forming a film of a uniform thickness of 0.0015". The finished slide is placed face down in a dust-proof cabinet and allowed to

dry over night. It is then graded by comparison with semi-permanent standard slides prepared from paints containing different amounts of grit. These standards are numbered from 1 to 15, the 1 standard containing an extremely large amount of grit and the 15 standard containing the minimum amount found up to the present time, being practically free of gritty particles.

Exhibit 1222

OIL TYPE FLAT GRINDS — C PIGMENT CONSISTENCY TEST

PRINCIPAL OF TEST:

4/25/35. For determining mixing and consistency qualities of C pigment in a poor wetting vehicle.

APPARATUS AND MATERIAL:

Change Can Mixer
Roller Mill
Mixing Cans (½ gallon capacity)
Torsion Balance and Weights
Modified Stormer Viscometer
Stop watch
Gallon weight cup
Spatula 6" blade x 1"
Paint cans — 1 quart
" " — 1 pint double friction type
Mineral Spirits
Alinoco Oil (Bodied Linseed Oil)
Cobalt Linoleate
Lead Manganese Drier
Standard pigment

PROCEDURE:

Due to the great difference encountered between L.O. and H.O. C pigments in oil absorption, it was neceessary to develop two formulae in this test.

(a) For L.O. C pigment weigh 95 grams of oil, and 112 grams of Mineral Spirits into a ½ gallon mixing can.

Exhibit 1222

(b) For H.O. C pigment weigh 95 grams of oil, and 199 grams of Mineral Spirits into a ½ gallon mixing can.

To either of the above according to the quality being tested add 489 grams of pigment and mix the combination on the change can mixer. Observe the first sign of a slight flow in the forming paste, this being called the *break*. The elapsed time required to obtain this break is recorded in seconds. Continue mixing for 5 minutes after the break.

Following this transfer the paste to a roller mill.

Grind with a medium tight mill setting. Collect in a tared one quart paint can and reduce in the following proportions:

	L.O.	H.O.
Ground Base	650.0 grams	738.0 grams
Mineral Spirits	81.6 "	81.6 "
Manganese Drier	15.0 "	15.0 "
Cobalt Drier	1.4 "	1.4 "
Total	748.0 "	835.0 "

Stir with a spatula until the paint is smooth and uniform and fill a pint paint can (Double Friction Type) within ½" from the top. Determine immediate consistency at 80°F. ± 2°F. with the modified Stormer Viscometer. Then tightly seal the can with a lid to prevent oxidation or skinning. Re-examine paint in two days for consistency, being sure that the paint is well stirred and uniform. At the same time determine the gallon weight. The specified gallon weights are 13.00# for L.O., and 1200# for H.O. No adjustments are made.

Exhibit 1222

For every series of pigments examined, a standard is run along with them for control purposes. This pigment, is made up in the L.O. formula at all times.

RECORD AND TABULATION OF RESULTS:

(a) Break

(b) Immediate Consistency at 80°F.

(c) Two day "

(d) " " gallon weight

Exhibit 1222

CHINA WOOD-LINSED OIL GRINDS — CONSISTENCY TEST

PRINCIPLE OF TEST:

For determining mixing and consistency of C pigment in a good wetting vehicle.

APPARATUS AND MATERIAL:

Same as for Oil Type Flat except for the vehicles, which are:

(1) Acid refined linseed oil — ¾ acid number.

(2) China wood-linseed oil varnish — 50 gallon oil length containing about 20% limed rosin.

PROCEDURE:

The handling of this test is very similar to that for the Oil Type Flat test. Following are the base figures for C pigment:

	L.O.	H.O.
C pigment	313	313
Asbestine	167	167
Linseed Oil	24	24
China wood-Linseed Oil	175	175
Mineral Thinner	—	21
	679	700

This is mixed in the change can mixer by the same procedure as followed for Oil Type Flat mixing.

Following this, transfer the paste to a roller mill.

Grind with a medium tight mill setting. Collect in a tared one quart paint can and reduce in the following proportions:

	L.O.	H.O.
Base	679	700
Mineral Thinner	104	124
	783	824
Gallon Wt.	12.70	12.10

Determine the consistency exactly as in the case of the Oil Type Flat test.

Exhibit 1222

CHINAWOOD-SOYA BEAN OIL PAINT GRIND—C PIGMENT CONSISTENCY TEST

REFERENCE: Modification of lithopone procedure.

STATUS OF THE METHOD:

This test was originally developed for lithopone and has undergone several changes in use which have been chiefly in the nature of slight modification for improved reproducibility. The chief modifications in transfer to C pigment are:

1. Substitution of C pigment for lithopone on a volume basis, i. e., use of lower weight.
2. Modification of the base formula for H. O. C pigment to secure mixing.

APPARATUS AND MATERIALS:

Kent stone mill and mixer
Modified Stormer viscometer
Torsion balance and weights
Gallon weight cup
250 cc graduated cylinder
Stopwatch
Thermometer
Pint cans (friction top)
Spatulas, mixing cans
Refined barytes
Vehicle (see note)
Mineral Thinner

PROCEDURE:

Record temperature and humidity.

	L.O. C Pigment	H.O. C Pigment
Pigment	1652 g.	1652 g.
Barytes	475 g.	475 g.
Vehicle	520 g.	520 g.
(1) Mineral Thinner	—	145 cc
(2) Mineral Thinner	160 cc	200 cc
(3) Mineral Thinner	240 cc	100 cc

(1) Added before mixing

(2) Added after mixing but before grinding

(3) Added after grinding

The vehicle and, in the case of H.O. C pigment, the first unit of Mineral Thinner (145 c.c.) are placed in the mixer and the barytes added. The pigment is then added slowly, timing the operation with a stopwatch, so that all the pigment is added in four minutes. The watch is reset and mixing time taken from that point. After 2 minutes the mix is observed for *rigidity*. If mixing is complete so that the mass is a smooth paste, the rigidity rating is 10. If the mixing is nearly complete, the mass wet and sticky but not quite broken down, the rigidity rating might be 9. Lower rigidity ratings correspond to lesser degrees of completeness of mixing down to 0, which corresponds to dry mass which appears to have no vehicle in it. Mixing continues until the mass breaks down to a flowing paste. This point is fairly

definite. Time in minutes from completion of the pigment addition to this breakdown is called the mix. During this mixing period the operator must stand by and keep the pasty mass in motion and prevent it from climbing out of the mixer by careful and frequent use of the spatula.

After this breakdown the second unit of Mineral Thinner is added slowly and allowed to mix in thoroughly. The sides and bottom of the mixer must be scraped down during this operation to secure a uniform paste. The paste is then ground thru the stone mill (see note) taking care to scrape out all the paste from the mixer and pass it thru the mill.

The third unit of Mineral Thinner is added to the ground paste and the whole is thoroughly mixed. The gallon weight is taken at 79-81°F and, if higher than 15.30 Mineral Thinner is added on the basis of 1.0 c.c. for each .015# heavier than 15.28. This is well mixed in and the paint is poured into a pint can to within ½ inch of the top. The temperature is adjusted to 79-81°F. and immediate consistency is taken.

The can is then tightly closed and the paint is allowed to age two days. Temperature is adjusted to 79-81°F. and consistency is taken. The temperature is then adjusted to 79-81°F. and the gallon weight taken. If heavier than 15.30#, the paint is adjusted on the basis of 1 c.c. Mineral Thinner for each 0.02# heavier than 15.28. The gallon weight should be checked after this adjustment and, if still heavy, readjusted. Final gallon weight should be 15.28 ± 0.02. Consistency is then determined at 79-81°F.

NOTES:

(1) Vehicle. This consists of 76.25% China Wood-Soya bean oil mixture and 23.75% Mineral Thinner.

Exhibit 1222

(2) The clearance between stones in the stone mill grind affects final consistency. Adjust the stone clearance until the point of a 3# tapered spatula can just be inserted between the stones.

(3) Since the grinding base is not completely uniform, it is necessary to grind and collect all of it to avoid error.

Exhibit 1223

Letterhead of

KREBS PIGMENT & COLOR CORPORATION

August 8th, 1932

Mr. W. F. Washburn,
Titanium Pigments Company,
St. Louis, Missouri

Dear Mr. Washburn:

We will appreciate it very much, if you will promptly advise us the temperature of the exit gas from your continuous calciners at your St. Louis plant.

There is some difference of opinion on this particular question between our people who recently visited your St. Louis plant and we would like to now get the benefit of your advice so that we can definitely clear up this item.

I called at your office on Thursday of last week at which time I had intended to ask you about the exit temperature of the calciners, however, I found you were away and not knowing how long you may remain in St. Louis, I am taking the liberty of writing you for this information.

With kindest personal regards, I am

Yours very truly,

KREBS PIGMENT & COLOR CORPORATION

Z. PHELPS

Z. PHELP, VICE PRESIDENT

ZP:KW

Exhibit 1224

August 9th, 1932.

Mr. Z. Phelps, Vice President,
Krebs Pigment & Color Corporation,
256 Vanderpool Street,
Newark, New Jersey.

Dear Mr. Phelps:

Upon receipt of your letter of August 8th, I had temperature measurements taken on each of our three calciners.

These measurements were made by introducing a pyrometer in the feed end of the calciner through the observation port.

The results were as follows:

No. 1 Calciner—225° C.
No. 2 Calciner—425° C.
No. 3 Calciner—325° C.

These readings are accurate within 10-15%.

In this connection I might add that the temperature of the exit gases from our calciners varies over a considerable range depending upon the load in the calciners, the dryness of the filter cake supplied and the physical properties of the pigment pulp.

With kindest personal regards, I remain,

Very truly yours,

TITANIUM PIGMENT COMPANY INC.

WFW-P.

Exhibit 1225

COLOR

REFERENCES: Pamphlet "Improved Method of Testing Lithopones" by Dr. J. E. Booge, and H. E. Eastlack, October 1st, 1924.

STATUS OF THE METHOD: Since the above pamphlet was written several changes in the color test have been made. These have to do mainly with the number and type of standards and with the method of grading and recording results. The present test is in use at the Lithopone Plants at Newark, Philadelphia, and Grasselli. The time required for the test is now dependent on the number of rub-outs necessary to match a standard. When a match is obtained the first time, the time required is about five minutes.

PRINCIPLE OF THE METHOD: The color of a sample of lithopone is determined by comparison with a standard sample. The comparison is made with lithopone glycerin pastes thru a colorless glass slide.

APPARATUS AND MATERIALS REQUIRED:

Ground glass plate, 12" square or larger securely fastened to the table.
Colorless glass slides, 3" x 1½" x 1½" mm. thick.
Steel spatula, 3" x ½" blade of stainless steel.
Glycerin, C.P. water white.
Benzol or alcohol for cleaning plate.
Cotton waste, best grade, or cheesecloth.
Standard Lithopones as follows:

Exhibit 1225

0B, representatives of unblued 18A grade produced at Grasselli, N. J. Contains no ultramarine blue.

3B, contains a moderate quantity of ultramarine blue and represents a type of material produced at Grasselli, N. J.

5B, contains comparatively more ultramarine blue than 3B standard and represents most highly blued pigment produced at Grasselli, N. J.

6B, contains slightly more ultramarine blue than 5B and represents production at Newark and Phila.

The 0B, 3B and 5B standards were made from the same batch of lithopone and therefore had the same inherent brightness. For these, three this is rated as 14. 6B standard is rated as 13 in inherent brightness.

PROCEDURE: Clean the glass plate thoroughly with benzol, alcohol, or soap and water before the tests are started for the day.

A piece of cheesecloth and water may then be used after each test. Place about 5 gms. of the lithopone to be tested on the glass plate and pour about 1 to 2 cc's of the C. P. glycerin on to the plate beside the little heap of lithopone. With the spatula work a sufficient amount of lithopone into the glycerin to yield a smooth, fairly thick paste.

Prepare a similar paste from one of the standard lithopones and with the spatula place the two pastes side by side on a colorless glass slide. Care must be taken

to maintain a sharp line of demarcation between the two pastes,—at the same time, they must be brought into actual contact with each other. To obtain a good comparison, the line of contact between the two pastes should be at least an inch long.

The two pastes are then examined thru the glass and the color of the sample compared with that of the standard. In judging the color, both brightness and degree of bluing are taken into consideration. This is done as follows:

To determine the inherent brightness, the sample is first carefully blued up to match the 6B standard in degree of bluing. The 6B standard has been chosen as a non-selective white. Therefore, when unknown samples are matched with it in degree of bluing, an accurate judgment of inherent brightness can be made.

If the original sample does not match the 6B standard without additional bluing, the degree of bluing is judged by placing it beside one of the other three standards. If a perfect match against one of these standards is obtained, the sample is merely graded accordingly. If the degree of bluing falls between any two of these standards, the degree of bluing is estimated.

RECORDING OF RESULTS: If the sample matches the 6B standard in inherent brightness as well as in bluing, the sample is called 13:6B. If it matches in bluing but is either brighter or not as bright, it is graded accordingly dependent upon the degree of difference. The least perceptible degree in brightness is given one full point. Thus, if a sample were just perceptibly brighter than

the 13 standard, it would be graded 14. Larger differences are estimated accordingly.

If the degree of bluing is very slightly off from the 6B standard, but not sufficient to match one of the other standards, the degree of bluing is estimated against the 6B standard. A slight overbluing is graded 6.2B and a slight underbluing 5.8B, etc. If the degree of bluing matches one of the other standards, grading is made accordingly, or if it falls between two of the standards, the grading is estimated as already mentioned.

Examples:—12:6B would indicate a color matching the 13:6B standard in all respects. 13:6.2B would indicate a match in brightness but with very slight overbluing. 14:3B would indicate a perfect match for the 14:3B standard. 12:0B would indicate a color poorer in brightness than the 13 standard but matching the 0B standard in bluing.

Observers with considerable experience sometimes differ by as much as two points in their gradings of the same sample. Usually, however, agreement is much better. Any such differences may often be decreased on reexamination of the slide.

NOTES:

1. *Cleanliness*—Accurate color testing depends upon scrupulous cleanliness in all steps. The glass plate must be always thoroughly clean and the spatula kept polished, free from rust and preferably used for no other purpose.
2. *Standard Slides*—Slides of the standard samples may be prepared in advance sufficient for one or two

days needs. They should not be kept longer than this, however.

3. *Retention of Slides*—Glycerin paste slides may be kept for some time without changing in color. The hydroscopicity of the glycerin prevents indefinite retention but in a dry atmosphere a reference slide may be preserved for several weeks. A cabinet with shallow drawers is used in most of our laboratories for filing slides. These slides should be kept in a horizontal position to avoid running of the moist glycerin.

4. *Consistency of Pastes*—All pastes should be brought to as nearly the same consistency as possible and should be too thick to show any indication of flowing from a spatula. However, percentage of glycerin does not appreciably affect the color.

5. *Glycerin* vs. *Linseed Oil.*—Careful comparative tests have proven that if a sample matches a standard with glycerin, it will also match the standard with linseed oil. The oil has two disadvantages however. The pastes yellow (and dry) on standing. More serious, the consistency greatly affects the brightness, the thinner the paste the greater the brightness. Hence, for accurate color comparison the unknown and standard pastes should have exactly the same percentage of oil.

6. *Observation thru Glass*—If the slides are inspected on the paste side, an incorrect grading may result. This is due to differences in smoothness of the paste surfaces. A rough surface appears more deeply

tinted than a smooth surface and is given a lower grading. Observation thru the glass eliminates this influence. The slides should show practically no color when held between two pieces of cardboard and viewed edgewise.

7. *Bluing*—A small amount of blue may be mixed with glycerin to a thin paste and placed on the side of the glass plate. This paste may be used throughout the day's work for bluing the samples up to the standards. The bluing is accomplished by placing the standard on a glass slide and matching the sample to it by trial. After each trial test for the sample is scraped from the glass slide and more blue added. Care should be taken in scraping the sample from the glass slide so as not to carry any of the standard with it.

8. *Standards*—At present the four standards are not from the same batch of lithopone. The 6B standard has an inherently lower brightness than the other three. Later, however, standards will be supplied which have all been made from the same Lithopone.

9. *Brightness, Hue and Saturation:* The color of the lithopone is determined by three independent variables:

    1. Brightness or co-efficient of reflection.
    2. Hue or position of the color in the spectrum.
    3. Saturation or depth of tint.

A discussion of these will not be attemtped here. It is obvious, however, that the color or brightness

of a lithopone paste is a composite grading. It is a matter of judgment with the observer whether he is influenced more by brightness, by tint, or by depth of tint. Aside from the degree of blueness or yellowness which is taken care of by the present set of standards, an attempt is made to take into account other off-tint by detracting from the brightness grading. The color test nevertheless, contains considerable of the personal element.

10. *Tintometer Tests:* An effort has been made to put lithopone color grading more on a quantitative basis. Considerable work has been done toward this end with colormetric instruments, particularly by Dr. A. H. Pfund in co-operation with this laboratory. Altho some progress has been made (which has been described elsewhere by Dr. Pfund) and instruments have been developed which have proven of value in research work on improvement of lithopone color, they are not at present adapted to the routine examination of lithopone production. For these purposes careful testing by the method outlined above has proven quite satisfactory.

TINTING STRENGTH

REFERENCES: Pamphlet "Improved Methods of Testing Lithopone" by Dr. J. E. Booge and Dr. H. E. Eastlack, October, 1924.

Letter by Dr. H. H. Morris to Mr. G. D. Robinson, March 16, 1930.

Exhibit 1225

STATUS OF THE METHOD: Several changes have been made in the method since the above pamphlet was written. A new standard has been adopted which is graded 120% based on 100% for the old standard. The scale for addition of ultramarine blue to the new standard has been changed accordingly. Also, a standard mulling area has been prescribed. The present method is in use at the Lithopone Plants at Newark, Philadelphia and Krebs.

PRINCIPLE OF THE METHOD: The tinting strength is determined by comparing the amounts of ultramarine blue required to produce pastes of the same shade with equal weights of the lithopone to be tested and the standard sample. The tinting strength is proportional to the amounts of blue required and is expressed in terms of percentage to the old original standard.

APPARATUS AND MATERIALS REQUIRED:

Ground Glass Plate, 14" square or larger, the surface of which has been ground with a very fine emery powder, turpentine, and a few drops of linseed oil.

A 10" square of black paper is placed beneath the plate to guide the mulling area.

Luer 1 cc. hypodermic syringe or burette.

Weighted muller, weight 15 lbs. Ordinary glass muller 3" face, fitted with lead casting. (See Note 8).

Analytical balance and weights.

Aluminum weighing scoop.

Camel's hair brush.

Steel spatula, 3 x ½" tapered blade.

Microscopic slides, 3" x 1" of colorless glass.

Slide box or filing cabinet for slides.

Exhibit 1225

Acid refined linseed oil. Spencer Kellogg Pale Grinding. Acid number 12.7.

Ultramarine blue, BB Grade supplied by Ultramarine Co.

Standard Lithopone.

PROCEDURE: Weigh out accurately with the aluminum scoop 3.00 grams of the lithopone to be tested and .300 grams of ultramarine blue and transfer both to the ground glass plate. Add exactly 1.0 ccs. of linseed oil at 25° C. from the syringe or burette and work the mixture into a smooth paste with a spatula. Mull the paste for three minutes with the 15 lb. muller. The 10" square area should be adhered to. During the mulling the muller is given a rotary motion by the hand while pushing it across the plate keeping within the 10" square.

After one minute mulling scrape the paste off the muller and plate, mix, spread and mull for one minute. Repeat this after two minutes total mulling and mull again one minute more.

After the three minutes mulling (actual mulling time), collect the paste in the center of the plate with the spatula and mix well. Spread a small portion on a colorless microscope slide adjacent to a similar paste prepared from the standard sample as described below.

The two pastes should touch each other giving a sharp line of demarcation for about one-third of an inch. In putting the paste on the slide, as little pressure as possible should be used to avoid a streaky appearance. The pastes are observed thru the glass and not on the paste side.

Exhibit 1225

The strength of the sample is greater or less than standard according to whether the paste obtained appears brighter or darker respectively than that obtained from the standard (when equal amounts of blue are used). The method for obtaining the quantitative relationship is described below.

EXPRESSION OF RESULTS: Standard pastes are prepared in advance from the standard lithopone exactly as described above except that the amount of blue is varied in order to obtain pastes of different shades. Amounts of blue required to give the various percentage strengths with the present standard lithopone are given in the following table.

% Str. Represented	Grams of Blue used with 3.0 Gr. Standard Litho.
100	.3600
110	.3272
120	.3000
130	.2760
140	.2571
150	.2400
160	.2250
170	.2117
180	.2000
190	.1894
200	.1800
210	.1714

Note:—Unless extreme accuracy is desired, it is not necessary to vary the amount of oil with the different amounts of blue used.

If the test sample which has been made up with .3 grams of blue matches the 130 paste above, the ratio of the amounts of blue in the two pastes is $\frac{.3000}{.2760} = 1.084$

Therefore, the strength of the sample is 1.084 times 120 or 130. The amount of blue required to prepare a paste representing any desired strength can be calculated from the following formula:

$$.3000 \times \frac{120}{\text{strength desired}} = \text{Grams blue to be used with 3 grams standard.}$$

If the sample is found to be darker than the 130 paste but lighter than the 120 paste, its strength is estimated at 122, 124, 126, 128, etc. depending on whether it is judged to more closely match one or the other extreme or to come half-way between.

Duplicate strength tests on the same sample should agree to two points if the procedure is closely followed.

NOTES: 1. *Ultramarine Blue*—A fairly large supply (several pounds) should be obtained and reserved for use in making these strength tests. The BB Grade of the Ultramarine Co. is in use at present and has been satisfactory for this purpose. A small amount should be dried for several hours at 110° to 120° C. and kept in a dessicator over sulphuric acid except when in use.

2. *Ratio of Blue to Lithopone*—The choice of 10% of blue probably gives the maximum delicacy in the test. This is based on tests with the Pfund Colorimeter. With less blue there is a small percentage change in brightness

per unit difference in tinting strength, all pastes being high in brightness. The increase in the blue ratio from 1:10 to 1:5 is not harmful but with much higher percentages all the pastes are too dark. The above remarks apply when the strengths are in normal range for lithopone. When the strengths are much higher, for example, with titanium oxide, the amount of blue should be increased accordingly. We have devised a special test for such high strength pigments.

3. *Amount of Oil Used*—The color of the paste obtained varies with the amount of oil used becoming lighter in shade with more oil. The amount of oil must be actually measured and not judged by merely bringing all pastes to the same consistency. If the latter method were used the amount of oil would vary with the oil absorption. In rare cases with extremely high oil absorption lithopones it may be necessary to increase the amount of oil used. In such cases the paste should then be compared with a standard paste containing the same amount of oil.

4. *Effect of Mulling*—The three minute mulling period has been found to completely insure the uniformity of the paste. However, a slight difference may be obtained if the mulling area varies widely. The standard 10" square mulling area has been prescribed for this reason.

5. *Practical Aspect*—The tinting strength is a measure of (a) the amount of colored pigment required for tinting, and, (b) to some extent, hiding power. From the former consideration, a low tinting strength would be desirable. In the great majority of cases, however, the latter factor is much more important.

Regarding the connection between hiding power and strength no direct quantitative connection has been derived on theoretical grounds, altho both are influenced by such properties as refractive index and average particle size. In general, however, high tinting strength is accompanied by good hiding power and if measurements of the latter are corrected to a standard brightness a quantitative relation usually exists between them.

6. *Standard Lithopone*—Several years ago a change in standards was made. The general improvement in tinting strength of lithopone made it desirable to select a higher standard. The standard selected was rated 120% in comparison with the old standard. However, instead of calling the new standard 100% as was the case with the standard formerly it was allowed to retain its 120 grading and the scale for the amount of blue addition was changed accordingly. In this manner the gradings against the new standards were in effect still referred to the old 100% standard.

7. *Permanent Standards in Paste Form*—Standard pastes may be prepared in larger quantities and may be kept for a considerable time. About 20 g. of pigment is mulled 20 to 30 min. With the proper amount of blue and oil or about 150 g. or more are ground in a roller mill. The paste is kept in collapsible tubes and should be checked frequently against standard mulled paste. If the paste shows the least segregation of oil the tube is emptied, mixed well, and transferred to a fresh tube. Under no circumstances should segregated oil be discarded.

8. *Care of Muller*—Before a new muller is put in operation it should be proved with a slight bevel on the

edge to enable it to ride on top of the paste. If this is not done the muller will push the paste to the sides of the plate preventing efficient grinding. The bevelled edge is produced by tilting the muller very slightly and grinding with a rotating motion on the ground glass plate outside the marked square employing the same grinding mixture as used for the plate itself. The action of the muller is tested by actual mulling of a pigment. If the muller still pushes the paste to the sides of the plate the muller is given some more bevelling until it operates satisfactorily.

Both plate and muller should be kept in good condition by occasional grinding with fine emery.

OIL ABSORPTION

REFERENCES: Pamphlet "Improved Methods of Testing Lithopone" by Dr. J. E. Booge and Dr. H. E. Eastlack, October, 1924.

"Standard Methods of Testing Lithopone", Grasselli Chemical Co.

STATUS OF THE METHODS: During April, 1929 the Dupont Plant changed over from the old Dupont spatula oil absorption test to a slight modification of the standard Grasselli test. The two methods do not differ greatly and the following method is in some respects a combination of the two. The present test is in use at the Lithopone Plants at Newark, Philadelphia and Grasselli.

PRINCIPLE OF THE METHOD: The oil absorption of a Lithopone is defined as the ratio between the amounts of

oil required to produce pastes of the same consistency with equal weights of the sample to be tested and the standard sample.

It is found that when linseed oil (or poppy seed oil) is added slowly to a sample of Lithopone and worked in thoroughly with a spatula, a point is reached where the addition of a single drop of oil changes the mass from a comparatively dry, non-adherent state to a state in which all the particles adhere together and to the blade of the spatula.

This is taken as the endpoint. The amount of oil required to give the same endpoint with the standard lithopone is determined in a similar manner at the same temperature and the oil absorption is calculated as indicated above.

APPARATUS AND MATERIALS REQUIRED:

Smooth glass plate, 12" square or larger, fastened to table.

Analytical balance, weights, scoop, etc.

Two steel spatulas, 4" x ½", stiff blade.

Weighing pipette, Lunge type.

Linseed oil, acid refined, about 4 acid number.

Standard Lithopone.

PROCEDURE: Weigh out 5 grams of the Lithopone to be tested and transfer to the smooth top glass plate. Weigh the pipette filled with the linseed oil. Add 10 to 12 drops of the oil and work in over a period of 2 to 3 minutes. Then add 2 to 3 drops more oil and follow again by the working in process. Repeat this procedure adding one

drop of oil at a time until the pigment shows a tendency to stick to the spatula. The endpoint is reached when all of the pigment collects in a sticky mass and adheres to the spatula. Any sticking to the glass plate, however, indicates the addition of too much oil and the running over of the endpoint.

The oil-lithopone mixture throughout the entire test has a dry appearance until the endpoint is reached. At this time weigh the pipette and calculate the amount of oil used. The standard lithopone is then run in the same manner.

The oil absorption is calculated from the following formula:

$$\frac{W\text{-}1}{W\text{-}2} \times 11.4 = \text{oil absorption}$$

W-1 is the weight of oil used with the standard lithopone.

W-2 is the weight used with the sample to be tested.

The figure 11.4 is an arbitrary factor based on an old standard.

NOTES: The present test differs from the old Dupont test in several respects.

1. In the Dupont test the Lithopone-oil mixture is kept in a wet state throughout the test. This is accomplished by leaving out a part of the Lithopone and working it in gradually. In the present test the mixture is kept in a dry state, the oil being added to the entire sample.

The tests also differ slightly in the endpoint: In the Dupont test a wetter endjoint is used, the criterion being that the paste leave one quarter inch tail on the blade of a spatula when forced off by a jerking motion. Such a paste wets glass decidedly whereas the paste at the Grasselli endpoint does not wet glass.

It is the general opinion that the Grasselli endpoint is slightly sharper than the old Dupont endpoint.

Altho calculated in entirely different manners, the numerical results of the two tests seem to be identical except that a decimal point is used in the Grasselli figures. Thus, 100 oil absorption by the old Dupont test would correspond with 10.0 in the present test. This relationship appears to exist throughout the oil absorption range.

2. *Size of Sample:* The original Grasselli test calls for a 10 gram sample while in the old Dupont test only a 5 gram sample was used. The quantity for the present test was set at 5 grams for greater convenience in testing quenched pigment and other samples which require bolting.

3. *Measurement of Oil:* In the original Grasselli test the oil was measured volumetrically. The Dupont method of weighing the oil in a Lunge pipette was adopted as giving the greater accuracy.

4. *Duration of Test:* The spatula should be grasped with the hand in such a manner that a firm, even pressure may be exerted on the sample throughout the test. A standard rubbing time of 8½ minutes has been adopted. All

tests should be done in as near to this length of time as is possible. It is necessary to have most of the oil incorporated before the last two or three minutes of the test. This gives time for thoroughly incorporating the last bit of oil before the endpoint is reached.

5. *Rubbing Standards:* If a number of tests are to be run consecutively, it is sufficient to run on one standard. However, if the test period covers more than half a day, or includes changes in humidity or temperature, additional standards should be run as necessitated.

6. *Type of Oil:* At present a 4 acid number refined linseed oil furnished by the Spencer Kellogg Co. is used. However, the effect of variation of acid number is not definitely known and it is possible that the 12 acid number oil used in the strength test can also be used for the oil absorption test. An investigation to determine this is under way at the present time.

7. *Effect of Temperature:* At higher temperatures less oil is required to reach the endpoint. Hence it is necessary that the test be conducted in a place which is not subject to rapid fluctuations in temperature. When fluctuations in temperature do occur, the standard should be rerun as already mentioned above.

Exhibit 1225

REACTION

REFERENCES: Pamphlet "Improved Methods of Testing Lithopone", by Drs. J. E. Booge, and H. E. Eastlack, October, 1924. N. J. Zinc Co. U. S. Patent #1,446,637.

PRINCIPLE OF METHOD: The method consists of determination of the alkalinity of Lithopone by titration with N/50 H_2SO_4.

APPARATUS AND MATERIALS:

Soft drink mixer

800 cc beakers

N/50 H_2SO_4 solution

Methyl Orange indicator

Ten cc. burette with glass stop cock, graduated in 1/20 cc. intervals.

Alundum thimble RA #84

Lowy Automatic Pippette 100 cc.

PROCEDURE: 50 grams of Lithopone are mixed for five minutes in 250 cc. of redistilled water using a soft drink mixer. Let settle for one half hour.

a 100 cc. sample is then drawn off thru a clean alundum thimble into a 100 cc. automatic pipette and titrated with N/50 H_2SO_4, using methyl orange indicator.

A blank of pure redistilled water is run at the same time.

Exhibit 1225

RECORDING OF RESULTS: Results are recorded as "Blank" —"sample" in cc of N/50 H_2SO_4 used, e.g. 0.5 — 1.7.

NOTES:

The alkalinity determined by the above test does not represent the total alkaline material present in the Lithopone and presumably available for slow reaction with the vehicle. Some results on Lithopones showing initially slight, moderate and strong alkaline reactions are of interest.

One sample of each was shaken with cold water, another sample boiled with water five minutes. Each was titrated with phenolphthalein as the indicator. The neutralized slurries were allowed to stand 1, 2, 3, and 4 weeks, and the test repeated on the same sample at the end of each week.

The redevelopment of alkalinity is probably due to a reservoir of alkaline compounds very firmly held. Each .1% of alkali calculated as NaOH is equivalent to—and may lead to the formation of approximately .75% of soap.

Exhibit 1225

FINENESS

REFERENCES: Pamphlet "Improved Methods of Testing Lithopone" by Dr. J. E. Booge and Dr. H. E. Eastlack, October, 1924.

PRINCIPLE OF THE METHOD: The percentage of material which can be washed thru a #325 U. S. Standard sieve is determined. The method is similar to that of Gardner as given in Circular #148, Scientific Section, Paint & Varnish Manufacturers' Assn.

APPARATUS AND MATERIALS REQUIRED:

U. S. Standard Sieve #325, 6" diameter.
Analytical balance.
Weights and aluminum scoop.
Camel's Hair Brush (quill, medium).
Camel's Hair Brush (flat, ½" wide).
Electric oven, regulated at 110-115°C.
Spray Nozzle, Oliver Filter Co. (A. R. McO).

PROCEDURE: Weigh out 500 grams of Lithopone. Transfer a portion to screen both sides of which have been previously wet with water. Wash as much of the Lithopone thru the screen with the spray as is possible. Gradually transfer the remainder of the Lithopone to the screen and continue the washing. As the force of the spray is not always great enough to break down all of the lumps, the spray may be aided by brushing the pigment very slightly with a camel's hair brush. The washing is continued for about 2 minutes after the wash water becomes clear.

Exhibit 1225

After all the undersized material has been washed thru the screen, the sides and bottom of the screen are wiped dry with a towel and placed in an oven at 110° to 115°C for one half hour. It is then removed from the oven cooled and the residue brushed into a small tared aluminum scoop using the quill brush. The residue is weighed accurately and calculated in terms of percent material passing thru the screen.

NOTES: 1. *Standard Screen:* The screen used in this test should be made in accordance with the U. S. Bureau of Standards' specifications as follows: Sieve #325, opening .044 mm. or .0017". Wire diameter .036 mm. or .0014". The 6" diameter is recommended altho an 8" may be used if desired. Either size can be obtained from the Newark Wire Cloth Co., Newark, N. J. or W. S. Tyler & Co., Cleveland, O.

2. *Brushing:* Great care should be observed in brushing the pigment about not to damage the screen by contact with the metal parts of the brush nor to force large pigment particles thru the screen.

3. *Water as Wash Liquid:* With treated Lithopones which are not wetted readily by water it has been found necessary to moisten the sample with alcohol before spraying with water. This procedure greatly facilitates the passage of pigment thru the screen. In these cases the size of the sample may be reduced to 100 grams if desired.

The very valuable work of H. A. Gardner's laboratory already referred to indicated that Lithopone may contain particles loosely cemented together, possibly by

water soluble salts. The same indication along this line has also been obtained by our plants. Consequently, if the amount of material cemented together in this manner is to be determined, some organic liquid, such as mineral spirits, turpentine or kerosene should be substituted for the water.

However, for routine control tests, the water method above described answers adequately. Likewise, experience has proved that the loosely cemented aggregates very readily break down in the paint or rubber mill. Only the harder coarse particles not initially broken down in the wet grinding operation during the process of manufacture give trouble. These are much more refractory than the aggregates that are merely cemented together.

It is scarcely necessary to add that the results in this test indicate merely the proportion of very coarse material contained in the sample and throw no light on the fineness or particle size of the bulk of the Lithopone which passes thru the screen. Most of this is of an order of magnitude of less than one michrome, in other words, only less than 1/44, the diameter of the screen opening.

Exhibit 1225

TEXTURE

REFERENCES: Newark Practice. Letter by L. H. Bates to J. E. Booge, August 19, 1926.

STATUS OF THE METHOD: The texture test was developed a number of years ago to indicate the fineness of a pigment beyond that which is indicated by a 325 mesh screen. The aperatures in a 325 mesh screen are in the neighborhood of 44 microms square. The average Lithopone particles size is in the neighborhood of .5 microm. It is obvious that agglomerates containing many thousands of Lithopone particles can make their way thru the aperatures of such a screen. The smallest size of Lithopone aggregates which are visible to the naked eye at 25 cm. is in the neighborhood of 8 microms. It is also obvious, therefore, that aggregates between 8 and 44 microms in size would be visible if left unbroken and in a paint film. The present test, altho not quantitative, gives much more information than is afforded by the screen test. The earlier method consisted merely of comparing the samples to be tested with a single standard. Frequent improvements have been made in the past, however, and a number of types of Lithopones showing a wide variation in texture are on the market at the present time. As a result, the number of standards in the present test has increased to eight. The present test is in use at the Lithopone Plants at Phila., Newport and Newark.

PRINCIPLE OF THE METHOD: The texture of a pigment is determined by comparing a wedge shape paint film containing the pigment to be tested with similar films containing the standard pigments. The films are prepared

on plate glass slides and vary in thickness from .003" on one side to 0" thickness on the other side. In making the texture grading both the number and size of large particles is taken into consideration.

APPARATUS AND MATERIALS REQUIRED:

Smooth glass plate, 14" sq. or larger.

Hyperion Varnish—a spar varnish supplied by E. I. duPont de Nemours & Co., Phila.

Steel drawdown knife, blade 3½" wide, edge machine planed.

Steel tape, 8" long, ½" wide, .003" + or — .0002" in thickness.

Steel spatula, 6" x ½" tapered blade, flexible.

Hypodermic syringe, Luer type, 1½ cc. capacity.

Plate glass slides, 6" x 4" and about ⅜" thick, beveled edge.

Standard slides or standard Lithopones from which these may be prepared.

Microscope lamp, Spencer Lens Co. #394—400 watt bulb.

PROCEDURE: Weigh out 1.5 grams of the Lithopone to be tested and transfer to the smooth glass plate. Add 1.5 ccs. of Hyperion varnish from the hypodermic syringe and work the mixture into a smooth paste with the spatula. Give the paste 50 double strokes with the spatula, each stroke being about 12 inches in length. The strokes must be rapid and administered with firm pressure. Scrape the paste together in the center of the plate after each set of ten double strokes.

Exhibit 1225

Collect the paste and spread in a narrow line across one of the ends of the thoroughly clean texture slides about one inch from the end and leaving about one half inch on each side. Now place the steel tape along one edge of the slide just touching the edge. Draw the paste down by means of the drawdown knife resting one edge of the knife on the steel strip and the other edge of the glass. The resulting film should taper evenly from the thick to the thin side. The blade of the knife should be held vertical while the drawdown is being made and a very slight pressure exerted to keep it in contact with the tape and the glass.

The finished slide is now placed in a cabinet or other dust free place and allowed to dry from 20 to 30 min. When dried it is graded by comparison with the semi-permanent standards prepared for this purpose. The standard slides are given arbitrary gradings from 8 to 15, 8 being the poorest and 15 the best. The 15 texture is practically free from large coarse particles but still contains a very small quantity of "sand" which is just visible in the thin portion of the slide. This is better than any Lithopone on the market at the present time. The 8 standard represents about the poorest texture on the market.

NOTES: 1. *Cleanliness:* Unusual care should be exercised to eliminate dust, lint, etc. from the glass plate, glass slides and other equipment used in this test. Foreign material in the slides makes grinding very difficult. The slides during drying should be protected from atmospheric dust as well as possible.

2. *Retention of Slides:* The standard slides may be preserved for periods of several months if handled carefully. These should be kept in a specially prepared hinged and slotted box when not in use. Frequent handling tends to wear off and reduce the coarse particles in the films. It is, therefore, advisable to replace the standard slides occasionally.

3. *Time Required for Test:* After measuring out the Hyperion Varnish the test should be carried to completion as rapidly as possible. The Hyperion Varnish dries rapidly and if too much time is taken the final paste is too thick to give a satisfactory drawdown. This part of the test requires considerable experience and technique.

4. *Grading:* Observation of the finished slides is best accomplished by means of a powerful lamp. The Spencer Lens Co. #394 lamp has been found very satisfactory for this purpose. The slide is held so that the beam falls almost parallel with the slide. In this manner the coarse particles in the film stand out and cast tiny shadows along the film. In some cases a perfect match for the sample we tested is not found among the standard slides, altho the sample may still be obviously between 8 and 15 in texture. The reason for this is that several variables effect the appearance of the film. These are chiefly the size and number of coarse particles which correspond fairly well with that of a standard but these may be either larger or smaller than those in the standard. In such cases the sample can sometimes be matched in number of particles with one standard and in the size of particles with another and an average grading given.

Exhibit 1225

5. *Practical Aspect of Test:* The 50 double rubs have been found to correspond well with a single pass of a similar paint paste over a roller mill at a moderately tight setting. The test, therefore, probably parallels plant operation especially in the enamel field where roller mills are usually used.

6. *Standard Lithopones:* A set of the standard Lithopones from which the standard slides are made is being held in reserve by the Research Dept. at Newark. Since the slides prepared from these may vary somewhat with the operator, it is advisable that the standard sets of slides be obtained from the Research Lab. The standard Lithopones may be used, however, to cross-check a given operator against the standard set of slides.

Exhibit 1225

KREBS HIDING POWER CHART

Hiding power or opacity is a most important property of pigments from the standpoint of the paint manufacturer. The accurate determination of hiding power has been one of the most difficult tests confronting the purchase of pigments. Several different methods have been advocated but each has suffered in greater or less degree from the fact that they were not practical methods.

The Krebs Pigment & Color Corporation has developed a method for determining hiding power or opacity which practically eliminates the objections to previous methods and offers at the same time an accurate and practical method of determining this important property.

The attached charts serve as a basis. These charts are made from sized paper printed with a design which is approximately 70% brightness in the white and 45% brightness in the gray. This contrast represents the average surface to be painted. The chart is inexpensive and consequently can be used as a permanent record of hiding power. It has the very practical advantage of permitting comparisons to be made on dried films which of course represents the actual conditions of use of a paint.

The Krebs Pigments & Color Corporation will be glad to supply these charts gratis to the paint and pigment industry.

PRINCIPLE OF THE METHOD

The uncontrolled application of paints to any convenient surface is obviously an inaccurate method of determining hiding power. Judging wet paints or paints applied in very thick films to backgrounds of extreme black and white con-

trast does not duplicate actual painting conditions and cannot be regarded as a practical testing procedure.

The first step in an accurate hiding power test is the application of a controlled amount of paint to a definite area. When several paints have been similarly applied comparisons can safely be made.

The background chosen for this application should closely duplicate the average contrast of backgrounds to which paints are practically applied. This contrast is provided by the Krebs Hiding Power Chart. The application of paints to this background should be in films of a thickness which closely duplicates the average application of paint. With very contrastive backgrounds thicker films of paint are required than can be used in actual painting work.

The hiding power of wet films differs in many cases from the hiding power of dry films and consequently a practical test must be made on dry films.

The Krebs Hiding Power Charts being inexpensive can be used for one test only, the paint allowed to dry, the necessary comparisons made, and the Chart retained for reference if desired.

Types of Comparison

Hiding power and opacity comparisons can be made on several different bases. It may be desirable to compare the relative hiding power of several pigments pound for pound or dollar for dollar. It may be desirable to compare the hiding powers of several paints on an equal volume basis, on an equal weight basis, or an equal cost basis.

Any of these types of comparisons can be made by applying the required amount of pigment or paint to the Charts.

The amount of paint applied is best determined on a weight basis. This eliminates an error characteristic of many hiding power tests—namely, the application to the surface of amounts of paint which cannot logically be compared.

A common error in hiding power tests has been that the consistency of the paint had a marked effect on the amount applied. If paints of different consistencies are applied without weight or volume control, more of the thicker paint than of the thin paint is likely to be left on the surface and give the appearance of greater hiding power simply because of the presence of more paint.

Testing Procedure

Hiding Power of Pigments on an Equal Weight Basis

Probably the most interesting use of the Krebs Hiding Power Chart is for the comparison of pigments on an equal weight basis. To make this test the several pigments under consideration are each made up into a paint using exactly the same formulation in each case. The paints are then applied in such a manner that equal weights of each paint are applied to separate charts. After drying the relative hiding power of the several pigments can be determined by inspection of the charts.

In this, as well as in other hiding power tests in which these charts are used, it is necessary to carefully control the application of the paint.

If the following directions are closely observed satisfactory results should be obtained. The paint is well stirred. A brush is dipped into the paint and worked until it does not pick up or lose much paint in brushing out a normal coat. The paint to be used in the test is drawn into a small syringe which should hold about 7 cubic centimeters. The

brush and syringe are then weighed in a small can or beaker to within 0.1 gram. The paint is spread from the syringe over the surface of a Hiding Power Chart. The syringe is returned to the can or beaker and the paint brushed over the entire surface of the Hiding Power Chart, brushing in one direction then rotating the chart ¼ revolution and repeating until the brushing has been completed in four directions. This should give a uniform film on the surface of the chart. The chart is then placed in a protected spot to dry. The brush is returned to the can or beaker with the syringe and reweighed. The difference in weight between the original and final weighings gives the actual weight of paint applied to the chart.

Each paint is tested in a similar manner using a clean brush and syringe. With care it is possible to duplicate the weights of paint applied to each chart, which in turn insures the application of equal weights of pigment to each chart. Comparisons between the several charts will show accurately the relative hiding power of the pigments under test.

The dry paintouts should be compared by placing the charts side by side in uniform light.

Hiding Power of Pigments on an Equal Volume Basis

It is sometimes of interest to compare the hiding power of various pigments on a volume basis instead of a pound for pound basis. The various commonly used pigments vary from one another in specific gravity and consequently occupy various volumes per unit weight. For example, if one desires to compare the hiding power of lithopone with that of titanium dioxide on a volume for volume basis it will at once be noted that the specific gravity of lithopone (4.3) makes one pound occupy 0.02792 gals. whereas titanium

dioxide having a specific gravity of 3.94 occupies 0.03047 gals. per pound.

In order to use the Krebs Hiding Power Charts in comparing these two pigments on an equal volume basis it is first necessary to formulate paints such that equal volumes of pigment will be ground in the same volumes of vehicle. Equal volumes of the resulting paints applied to two of the charts will provide hiding power comparisons of the pigments on an equal volume basis.

The method of preparing the above paints may be described as follows: Let us suppose that the formula chosen requires 10 lbs. of lithopone per gal. of vehicle. This 10 lbs. of lithopone would occupy 0.2792 gals. (10 x 0.02792). In order to calculate the equivalent volume of titanium dioxide it is necessary to divide 0.2792 by the bulking value of TiO_2, i.e., 0.03047. The result of this division, 9.17, is the number of pounds of titanium dioxide which occupies the same volume as 10 lbs. of lithopone. A paint is then prepared containing 9.17 lbs. of titanium dioxide in one gallon of vehicle. These two paints applied to separate charts in equal volumes will give equal volumes of the two pigments on the surface of each chart.

For greater accuracy it is desirable that the amount of paint applied to the charts be determined by weight. Since the two paints under examination have different gallon weights it becomes necessary to calculate the weight of each paint which should be applied to yield equal volumes of pigment. This calculation can be made as follows:

Determine the gallon weight of each paint. The gallon weight of each paint divided by 8.33 (the weight of one

gallon of water) will give the specific gravity or weight of 1 cc. of the paint.

Experience has shown that about 7 ccs. of paint should be applied to each chart. The weight of 7 ccs. of each paint is readily determined by multiplying the weight of each cubic centimeter, as determined above, by 7. The result is the weight of paint which should be applied to each chart.

Comparisons of Paints or Pigments on Other Bases

Should it be required to determine the relative hiding power of paints at equal cost it is only necessary to formulate the desired paints at equal costs per gallon and then compare the hiding power when equal volumes of the paints have been applied to the charts. If it is desired to apply the paints on the weight basis the necessary calculations have been described previously.

A comparison of paints on an equal volume basis as sold in the can is readily made by applying equal volumes of paints to individual charts and comparing in the dry state as usual.

Comparisons of pigments on equal cost basis is carried out in a very similar manner to the comparison of pigments on an equal volume basis except that the paints are made up to carry pigments having an equal cost instead of an equal volume.

The user of these charts will no doubt discover many other interesting types of comparisons but the principles involved remain the same and the necessary calculations are comparatively simple. Should special problems arise where further information is desired inquiries can be addressed to the Krebs Pigment & Color Corporation, 256 Vanderpool St., Newark, N. J.

APPARATUS

The hiding power test using the Krebs charts requires the following apparatus:

Balance with a sensitivity of 0.05 grams with 200 grams load.

Small can or beaker.

Luer type syringe, 10 cc. capacity.

Several clean brushes 1½ in. width.

Exhibit 1225

MOISTURE

REFERENCES: The Newark Practice and "Improved Methods of Testing Lithopone" by Dr. Booge and Dr. H. E. Eastlack, 1924.

PRINCIPLE OF METHOD: The loss in weight at 110°C is determined.

APPARATUS: Analytical balance
Weighing bottles 60 mm in diameter x 30 mm high.
Electric oven — 110-115°C.
Dissicator.

PROCEDURE: Ten grams of Lithopone are weighed into a weighing dish, and placed in an electric oven at 110°C for 3 hours. The sample is then allowed to cool in a dissicator and is then reweighed.

CALCULATION OF RESULTS: The difference in weight x 10 equals percentage of moisture in the sample.

NOTES: 1. A drying time of at least three hours is necessary. If the oven is below 110°C the period should be extended.

Excessive moisture in Lithopone is generally recognized as a source of paint grinding troubles. As the moisture on the surface of the particles protects them from wetting by the vehicle, the mixing is often abnormal, e.g., the mass sets up to a putty like consistency. Likewise the paint after thinning tends to have a false body.

Exhibit 1225

WATER SOLUBLE MATERIAL

REFERENCES: Newark Practice. Pamphlet "Improved Methods of Testing Lithopone" by Dr. J. E. Booge and H. E. Eastlack, Oct. 1924.

PRINCIPLE OF THE METHOD: A weighed sample of Lithopone is agitated with distilled water, the sample filtered and washed and the filtrate evaporated to dryness in a weighed dish. The percentage of water soluble is calculated from the weights of the residue and original sample.

APPARATUS REQUIRED: Pyrex beakers—600 ml. Alundum thimble RA-#84, rubber stopper, 100 cc pipette. Silica evaporating dishes, 100 cc. capacity, malted milk stirrer, electric oven, regulated at 100-115° C.

PROCEDURE: Weigh 100 grams of Lithopone and transfer to a clean 600 cc beaker. Add 400 cc. of redistilled water and stir for five minutes with an electric malted milk stirrer. Pipette off 100 cc with suction, using an alundum thimble, RA-#84 with a Lowy's automatic Pipette.

Examine the liquor coming up into the pipette to make sure that it is perfectly clear. Unless the liquid is clear it should be returned to the original sample and refiltered.

Transfer the clear filtrate to a weighed silica dish and evaporate almost to dryness on a heat plate. Then place the dish in the electric oven overnight to complete evaporation.

Cool the dish in a dessicator to room temperature and reweigh. The increase in weight multiplied by 4 represents the percentage of water soluble material.

NOTES 1. *Time Required:* A considerable saving in time results if determinations are made on two or more samples at the same time.

2. *Overheating:* Too high temperature should be avoided after dryness is reached on account of the danger of decomposing unstable compounds which may be present. 110°C is satisfactory.

3. *Effect of High "Water Soluble":* Water Soluble classes with moisture as a source of paint grinding troubles. The extent of the effect varies with the vehicle used but experience has indicated that over 0.2% water soluble is likely to give trouble. This takes the form of thickening or livering of paint bases and paints.

ZINC OXIDE

REFERENCES: Newark Practice.

PRINCIPLE OF METHOD: The method is based on the fact that zinc oxide is soluble in dilute acetic acid while zinc sulfide is not. The acetic acid solution containing zinc oxide is titrated with a standard potassium ferrocyanide solution.

APPARATUS AND MATERIALS:

250 cc and 400 cc beakers
25 cc. and 50 cc. graduated cylinders
Concentrated HCL

Exhibit 1225

Spot plate
Stirring rods
Standard $K_4Fe(CN)_6$ solution
5% Uronium Acetate solution
Concentrated NH_4OH solution
5% Acetic Acid solution
Litmus Paper
Hot Water bath.
Whatman filter paper.

PROCEDURE: Place a 9 cm filter paper of rather hard quality such as Whatman #5 or #50 in the bottom of a 250 cc. beaker and add 10 g of Lithopone on top of the paper. The object of placing the paper in the beaker is to prevent bumping while boiling. Add 100 cc. of a 5% acetic acid solution and boil 5 min. Filter thru a 9 cm. Buechner funnel provided with a close filter paper. Refilter if necessary to get a clear filtrate. If a tin layer of medium fine asbestos fibre is spread over the paper clear filtration is facilitated. Wash well and transfer filtrate to a 400 cc. beaker. Add 7 g. Ammonium chloride (measured with a small crucible or crys) and 5 cc. conc. hydrochloric acid Heat to 80 or 90° C and titrate the hot solution with standard $K_4Fe(CN)_6$ solution stirring constantly while adding the standard solution. Test for an endpoint on a spot plate using a 5% Uranium Acetate solution. The potassium ferrocyanide should be added slowly and a test made after addition of each one half cc. of the standard solution. The endpoint is reached when a spot test with Uranium acetate shows a very faint brown color. When the endpoint is near a sudden change from greenish

to light yellow or white color can generally be observed. At this point add the standard two drops at the time.

CALCULATION OF RESULTS: (cc. of Ferrocyanide-blank) x (Factor for ZnO) x 10 = Percentage of ZnO. The blank is generally about .15 cc.

NOTES: 1. Standardization of $K_4Fe(CN)_6$ solution. Follow method given in "Scotts Standard Methods of Analysis".

2. The ZnO content usually varies between .05% and .5% depending on the method of manufacture and the purpose for which the Lithopone is intended.

11590 PAINT GRIND

PROCEDURE:

Weigh up on the torsion balance 475 grams of refined barytes (blanc fixe), 520 grams of V-11590 and 2270 grams of pigment. The barytes and the vehicle are put in the mixer and allowed to mix thoroughly. The pigment is then added to the mix slowly with a spatula the rate of addition being so timed that it will all be added in four (4) minutes. At the end of the four minute addition period, the stop-watch is reset and started again.

The pigment and vehicle are allowed to mix for two minutes; the rigidity reading is then made simply by observing the condition of the paste. If the pigment is a difficult one to mix it will sometimes climb out of the mixer which makes it necessary for the operator to stand by with a spatula and push it back into the mixer. With pigments

which mix easily this is an unnecessary precaution as they break down quickly to a smooth paste. This breaking down to a smooth paste has a more or less definite endpoint and is known as the "break". The number of minutes elapsed from the time the pigment is completely added to the break is called the "mix". After the break, 160 cc. of H-287 are added slowly to the paste and when this has been thoroughly incorporated the thinned paste is run thru the stone mills. While grinding paste the setting on the stones is kept as tight as possible. The entire amount of paste in the mixer is ground thru the mills, care being taken to scrape out all that adheres to the sides and bottom. This is done to eliminate an error which might arise from incomplete mixing, i.e.,—the paste beneath the rotating blades of the mixer, especially with thick pigments, is apt to contain more pigment than the paste mixing above it, as the blades do not scrape the bottom or sides. The mixer is therefore carefully scraped out after each mix and the entire amount put thru the mills. The ground paste is mixed thoroughly with a spatula and 1500 grams are weighed into a quart mixing can. 90 cc. of Mineral Thinner and 13 cc. of 2193 drier are then added. This constitutes the finished paint. It is mixed thoroughly and *when well mixed* the gallon weight is determined by means of the gallon weight cup. If the gallon weight is too high Mineral Thinner is added to it in accordance with the following chart:—

Gallon Weight	*CC Mineral Thinner to be added*
18.44	0
18.48	2.5
18.57	5.0
18.67	10.0
18.75	15.0

18.85	20.0
18.94	25.0
19.02	30.0
19.09	35.0
19.20	40.0

When the gallon weight has been adjusted the finished paint is poured into a pint can, filling the can to within ½ inch at the top. The remaining paint may be discarded. The can must be tightly closed so that no air can get to the paint, as this causes skin to form and is liable to thicken the paint abnormally. At the end of two days the can is opened, thoroughly *stirred*, and the gallon weight again adjusted as before except that a different thinning ratio is used.

The chart to be followed on two days thinning to gallon weight is as follows: —

Gallon Weight	*CC Mineral Thinner to be added*
18.44	0
18.48	1.5
18.57	3.0
18.67	6.0
18.75	9.0
18.85	12.0
18.94	15.0
19.02	18.0
19.09	21.0
19.20	24.0

After adding thinner as above to correct the gallon weight the paint should be well stirred and the gallon weight taken again. The allowable range is 18.42-18.46. If the gallon weight falls within the range it may be considered

O.K., however, if outside these limits it must be thinned again, following the chart as before.

When the gallon weight has been correctly adjusted the consistency of the final paint is determined on the viscometer in the usual manner.

All gallon weight determinations are made with the paint at 28°C.

RECORDING OF RESULTS:

There are three gradings taken on 11590 paint grinds, namely—

Rigidity
Mix
Consistency

The *rigidity* grading is made during the mixing operation and depends solely on the operator's judgment. A pigment which breaks down to a smooth paste at the end of the two minute mixing period is said to have *no* rigidity, and therefore graded *10*. If at the end of the mixing period it exhibits rigidness the operator may grade it 9, 8, 7, 4, 3, according to his judgment. And the arbitrary scale runs from 0-10.

The mix grading is the number of minutes it takes to break down to a smooth paste. In the case of a perfect mixing pigment it would be entirely broken down in 2 minutes, therefore, the mix grading would be 2. The grading is taken by means of a stop watch started at the completion of the four minutes allowed for pigment addition.

Consistency is run on the Viscometer, care being taken that the temperature of the paint is at 25°C., and well stirred up.

H-287—Mineral Thinner.

Exhibit 1225

CONSISTENCY TEST

PROCEDURE:

The paint to be tested is thoroughly stirred with the spatula. This has a dual function. It insures a uniform mix and prevents the determination of a false consistency due to improper breaking down of any artificial temporary body that may have been established. Such a practice is of particular importance in the case of flats or reactive formulas. Such mediums tend to develop a structure temporarily approximating the gel state. It is sometimes difficult to break these up except by prolonged agitation. Consistency may be adversely affected by failure to observe this precaution.

It is particularly recommended that this procedure be followed in consistency determinations in the 11590 medium. This vehicle is relatively non-reactive. It has a tendency, however, common to flats, to set up temporarily on storage. This condition yields to agitation.

The temperature is taken by complete immersion of the thermometer for a period of 30 sec. before readings are made. All samples are corrected to 23°C., this being the point selected for consistency determination. In cold weather the paints may be set near a steam coil to bring them up to temperature. In warm weather it is often necessary to use an ice bath to bring them down to temperature. A 1° variation is permissible but should be avoided if possible, especially in thick consistency paints.

Having the paint thoroughly mixed and at the correct temperature, the can is set on the small moveable platform on the viscometer. The set screw is loosened and the platform raised until the paddles are immersed in the paint

exactly to the indented lines on the blades. The platform is held in this position by means of a set screw.

The viscometer is set on the edge of a table so that the cord with the wire hook may run free of obstruction. Sufficient weights are hung on the cord to insure an even rotation of the wheel.

The time required for fifty rotations is noted by means of the small dial indication on the viscometer. This is clocked with a stop watch. This value is multiplied by two giving the time in seconds per hundred revolutions of the paddle.

The weights should be so adjusted that the number of seconds necessary for one hundred revolutions of the paddle fall between 26 and 36. Outside these limits the readings are not accurate. An arbitrary system designed to indicate a consistency range has been set up for use in conjunction with this operation. By referring to this chart the consistency of the paint is determined in units of thinness or thickness.

CARE OF VISCOMETER:

To insure constant efficient functioning of the instrument certain precautions must be taken. It must be kept clean at all times, all paint being removed from paddles and other removable parts. At least once a month the instrument should be completely taken apart, cleaned and oiled. At all times a 5 gram weight attached to the cord should be sufficient to induce motion of the wheel.

Exhibit 1226

Rm. 1823

October 3, 1932

Dr. G. W. Thompson, Chief Chemist
National Lead Company
Research Laboratories
Brooklyn, N. Y.

Dear Dr. Thompson:

Today, Mr. Phelps called me from Newark and asked my opinion as to where the seal ring should be installed on a calciner. He later turned the phone over to Mr. Hupt, as he apparently did not fully understand the engineering details of the calciner.

Mr. Hupt asked me whether the seal ring should be installed on the feed or on the discharge end of the calciner. I informed him that it should be on the discharge end, as a seal ring on the feed end was of doubtful value, and that a seal ring on both ends of the calciner was a little hazardous on account of the tendency of the calciner to move up and down.

Dr. G. W. Thompson, Chief Chemist

October 3, 1932

Mr. Hupt then asked me if I had designed the seal ring, or if Vulcan had. I told him that it was the result of a conference between Mr. Dickie and myself, Mr. Dickie doing practically all the work.

Later, Mr. Phelps called me again and told me that he had received bids on a new calciner 140' long, at a price

equivalent to .0455 cents and .0574 cents per pound. I told him that I considered anything below .05 cents a pound as a remarkably low price. I afterwards called him back and told him that our bid calls for .049 cents per pound, and that I considered it very low.

Yours very truly,

W. F. Washburn
Asst. General Manager

Exhibit 1227

Letterhead of

KREBS PIGMENT AND COLOR CORPORATION

November 3, 1932.

W. F. Washburn, Asst. General Mgr.,
Titanium Pigment Company, Inc.,
111 Broadway,
New York City, New York.

Dear Mr. Washburn:—

This will reply to your letter of October 27th, addressed to Mr. Phelps, who has been away from the office since the latter part of last week, and will express our appreciation of your suggestions.

In view of your possible interest in the Moore Filter, thought you would like to know how Mr. Evans is going ahead at Baltimore.

We have already been experimenting with Everdur bolts and installed them on some of the frames. Furthermore, we are constructing the main castings for our own design from Phosphor Bronze "C", which consists of 91.9% Cu, 7.8% Sn, and 0.3% P., using Everdur bolts and suspending the cast frames by monel strips. We have found that Phosphor Bronze is somewhat better than Everdur and castings of this material are just about as cheap. The bolts, however, are special, and expensive, which leads to the choice of Everdur bolts, with which we have already had some experience. The monel strips are used at the surface

of the water, as tests indicated monel resisted the surface effect best of all. Mr. Evans feels there may be some question as to using three metals, and possibly cause failure due to electrolysis, but this will be carefully watched.

If you will be interested in hearing how we come along, please call upon us and we will be glad to tell you of our experience.

Very truly yours,

H. RUPPRECHT,
PRESIDENT.

Exhibit 1228

Letterhead of

KREBS PIGMENT & COLOR CORPORATION

November 28th, 1932

Mr. W. F. Washburn,
Titanium Pigments Company,
111 Broadway,
New York, N. Y.

Dear Mr. Washburn:

Sometime ago you inquired as to whether we had any information concerning the hydrolysis of cerium compounds. We have taken this up with our technical people and unfortunately the results of tests which have previously been made are not conclusive as to whether Cerium was precipitated along with the TiO2. This is particularly due to the difficulty in analyzing for small amounts of Cerium. Our technical people, however, looked over the literature on this subject and report as follows:

"We have looked into the literature briefly and find that ceric compounds hydrolyze in water to form basic compounds, but information has not as yet been uncovered concerning the influence of free acid on this hydrolysis. There is some indication that in the presence of free acid at concentrations within the range encountered in titanium liquors, the hydrolysis of ceric sulphate, for example, would not occur.

Exhibit 1228

"The behavior of ceric compounds is probably not to the point in the present connection, because it is not likely that the cerium would be present in the ceric form in the titanium liquor. Ceric cerium is reduced to the cerous condition by ferrous iron and therefore it follows that the cerium would be present in these liquors in the cerous form. We do not have any literature on the subject of hydrolysis of cerous compounds, but if it is fair to draw an analogy between the ease of hydrolysis of titanic titanium versus titanous titanium on the one hand, and cerous versus ceric cerium on the other hand, it would seem doubtful whether any appreciable hydrolysis of the cerium would occur in the titanium system, and on the basis of this reasoning one might expect to find that the raw pigment would not carry much cerium in terms of the amount present in the original titanium liquor."

I am sorry that we are unable to give you more definite information, however, this is all of the data which we have available.

Yours very truly,

KREBS PIGMENT & COLOR CORPORATION
Z. PHELPS

Translated from French

September 18, 1933

Mr. Ch. Rupprecht
Krebs Pigment & Color Corporation
256 Vanderpool Street
New York, N. Y.

Dear Mr. Rupprecht:

To my great regret I am obliged to come back to the question of the exchange of technical information and patents because of the very confused situation which resulted due to the attitude taken by your company in denouncing the agreements which bound us with the Commercial Solvents Corporation.

In effect as it appears from our correspondence from the end of 1931 and the beginning of 1932, your department received at that time, all information in our possession relative to certain research and have filed four patent applications corresponding to those already filed by us in certain countries.

I insist upon those facts because at least one of these applications is a basic one opening an entirely new field of titanium rutile pigments. Without pre-judging the validity of the decision which your company has taken, I have to point out this particular situation and I will be very obliged if you will tell me how you intend to settle it.

Please accept the expression of my sentiments.

J. Blumenfeld

Exhibit 1206b

Translated from French

November 10, 1933

Mr. M. F. Chase
230 Park Avenue
New York

Dear Mr. Chase:

I am again forced to raise the question of the exchange of technical information with Krebs.

As you yourself recall, I had a conversation in your presence with Mr. Rupprecht on this subject. Mr. Rupprecht had assured me that he had encountered great difficulties with the du Pont Company, for a close collaboration, according to him, would be contrary to the principles of the du Pont Company. He told me that he was quite prepared to acquire some patents if the patents proved of interest to Krebs.

At that moment I did not have my files before me and I could not then discuss what had happened. Since I returned to Paris I have reviewed the whole files directly or indirectly, touching upon this question and in September I sent a letter to Mr. Rupprecht, of which you will find enclosed a copy. Mr. Rupprecht has answered my letter of which I also enclose a copy.

As you will see, the main argument of Mr. Rupprecht is found in the passage that I underlined in the copy which I enclose for you.

You will certainly agree with me as I answered Mr. Rupprecht, that that was not at all our conversation of August 18, 1931. This conversation covered several points and at that time, yourself, as well as Mr. Ticknor and myself, decided that it was a very important conversation, so

Exhibit 1206b

we decided to make a resume of this conversation of which certainly you have a copy and you will see on this copy that the first two paragraphs deal with the question of the exchange of technical information and patents and what is especially to be noted that the sense of this paragraph is just the opposite of that which Mr. Rupprecht stated in his letter.

On the other hand, it is as a consequence of this conversation that we decided that Mr. Rohden would go as soon as possible to the United States to place himself at the disposition of Krebs and so to insure technical collaboration, of which we spoke in the first paragraph, of the resume of the conversation of August 18.

I find myself now in a very disagreeable situation and before answering Mr. Rupprecht, in order to clear the matter, I thought it advisable to write to you and ask your counsel.

The attitude taken by Mr. Rupprecht has already put me in a very awkward situation with my friends who are working according to my process.

On the other hand I put great value on the patents covering rutile pigments that I consider as a basic patent and really I do not see the reason why I should put them at the disposal of Krebs if we receive nothing in exchange.

The manner in which Mr. Rupprecht has acted is more than objectionable and you will certainly agree with me that one cannot ask me to accept it.

I will then be very much obliged if you will give your attention to my letter and I await your response with the greatest interest.

Believe me, dear Mr. Chase, I send you my best wishes.

J. BLUMENFELD

Exhibit 122a

IMPERIAL CHEMICAL INDUSTRIES LIMITED

8th November, 1932

H. S. Tasker Esq.
Goodlass Wall and Lead Industries Limited
London House
3, New London Street
E.C.3

Dear Mr. Tasker:

I find it difficult to suggest a method by which the Brown & Klein patents can be dealt with before the new Company is formed and its Board is able to take a comprehensive view of the situation. My own influence in this matter will tend to decrease. Mr. Oliver Wilkins, who you may probably know by reputation as a man of very great pigment experience, will be our representative on the Board. I will send a copy of your letter to him immediately and discuss with him as soon as possible any suggestions which he might make. However, as any arrangement with Mr. Klein necessarily would be of a financial nature (e.g. an option payment) it would be necessary to carry the National Lead people with the British Associates. My suggestion is that the whole question should be discussed at the first Board meeting.

Undoubtedly the organization would be stronger for having the benefit of Mr. Klein's experience apart from the merits of his process.

With regard to the second proposal in your letter I am entirely in accord with the suggestion that the whole question of titanium ore supplies should be studied at an early

date, and in this connection Mr. R. S. Brown's knowledge will be invaluable. In this case again, however, I think it is for the Board of the new Company to build up its information and to form its own conclusion regarding the advisability of expanding at an early stage into the control of raw material supplies. My earlier suggestion that this might be considered was not put forward officially in any way, but merely as a suggestion of what might be done if circumstances should dictate.

In this connection you are probably aware that Dr. Jebsen is interested in ilmenite deposits in Norway so that he might not be very enthusiastic to proceed with an Empire scheme in the early stages. There is also another point to be considered. Would the Travancore Companies be more successful tied up to our Group than they would be when making sales to all titanium producers in a competitive manner? It may be that, in view of the DuPont interest in the other Travancore Company, any broad general move to consolidate the raw material position would have to await a more complete understanding between National Lead and DuPont.

I have just put down the above point to show that I personally have no definite ideas in my mind as to what should be done. The main objective is undoubtedly to get the most economical scheme possible for a manufacturing plant and I personally would not be in favour of adding unproductive capital to the Company until the vital necessity of so doing is apparent.

No doubt you have seen the announcement of National Titanium Pigments. I understand that their scheme is larger than we at first contemplated and I imagine that their capital expenses are being kept down to a very low figure.

Exhibit 122a

I hope to come along with Mr. Oliver Wilkins to the first Board meeting and it will be most interesting and satisfactory to discuss these matters with the immediate object of doing something.

Yours sincerely,

(Signed) L. J. BARLEY

P.S. I enclose an additional copy of this letter in case you sent a copy of yours to W.S.R. In that case, perhaps you would be good enough to send him my reply.

1,891,911	Dec. 27, 1932	J. Brode et al.

D. U. S. patent applications exclusively licensed to Titanium Pigment Company, Inc. on or prior to January 1, 1933:

1. PATENT APPLICATIONS OWNED BY TITAN COMPANY A/S

Application Serial No.	*Date of Filing*	*Patent No. if any*	*Date of Issue*	*Applicant-Inventor*
185,657	Apr. 21, 1927	1,919,425	July 25, 1933	P. Farup
185,659	Apr. 21, 1927	Abandoned	June 1932	
580,212	Dec. 10, 1931	Abandoned	Nov. 1932	

2. PATENT APPLICATIONS OWNED BY I. G. FARBINDUSTRIE

Application Serial No.	*Date of Filing*	*Patent No. if any*	*Date of Issue*	*Applicant-Inventor*
176,286	Mar. 17, 1927	Abandoned		
176,288	Mar. 17, 1927	Abandoned		
176,290	Mar. 17, 1927	Abandoned		
240,650	Dec. 16, 1927	Abandoned		
272,563	Apr. 28, 1928	Abandoned		
353,254	Apr. 6, 1929	Abandoned		
431,974	Feb. 27, 1930	Abandoned		
555,141	Aug. 4, 1931	Abandoned		
580,212	Dec. 10, 1931	Abandoned		
590,774	Feb. 3, 1932	2,068,294	Jan. 19, 1937	E. Korinth et al.

Exhibit 470

II. Foreign Patents and Patent Applications

A. Canadian patents owned by Titanium Pigment Company, Inc. as assignee on and prior to January 1, 1933:

Patent No.	*Date of Issue*
172,736	Oct. 24, 1916
178,261	July 17, 1917
178,262	July 17, 1917
178,263	July 17, 1917
179,281	Sept. 11, 1917
179,282	Sept. 11, 1917
179,283	Sept. 11, 1917
179,284	Sept. 11, 1917
182,752	Mar. 5, 1918
182,753	Mar. 5, 1918
191,178	June 24, 1919
191,179	June 24, 1919
191,180	June 24, 1919
191,181	June 24, 1919
231,297	May 22, 1923
242,164	Aug. 12, 1924
274,070	Sept. 20, 1927
280,396	May 22, 1928
285,502	Apr. 2, 1929
287,387	Dec. 19, 1929
288,502	Apr. 2, 1929
293,020	Sept. 10, 1929
294,177	Oct. 22, 1927
297,835	Feb. 25, 1931
299,992	May 6, 1930
314,890	Sept. 1, 1931
317,076	Nov. 10, 1931
317,077	Nov. 10, 1931

Exhibit 470

B. Canadian patents exclusively licensed to Titanium Pigment Company, Inc. on or prior to January 1, 1933:

1. PATENTS OWNED BY TITAN COMPANY A/S

Patent No.	*Date of Issue*
188,808	Feb. 25, 1919
201,703	July 6, 1920
201,704	July 6, 1920
Re. 221,526	July 25, 1922
201,705	July 6, 1920
201,706	July 6, 1920
201,707	July 6, 1920
201,708	July 6, 1920
201,709	July 6, 1920
201,710	July 6, 1920
201,711	July 6, 1920
201,712	July 6, 1920
201,713	July 6, 1920
201,714	July 6, 1920
201,715	July 6, 1920
201,716	July 6, 1920
201,717	July 6, 1920
201,718	July 6, 1920
201,719	July 6, 1920
225,981	Nov. 14, 1922
248,408	Mar. 31, 1925
296,929	Jan. 21, 1930
309,110	Mar. 3, 1931
320,439	Mar. 8. 1932

2. PATENTS OWNED BY TITAN CO. INC.

Patent No.	*Date of Issue*
328,339	Dec. 6, 1932

Exhibit 470

3. PATENTS OWNED BY I. G. FARBENINDUSTRIE

Patent No.	*Date of Issue*
285,355	Dec. 4, 1928
301,199	June 17, 1930
301,200	June 17, 1930
314,219	Aug. 11, 1931

C. Canadian patent applications exclusively licensed to Titanium Pigment Company, Inc. on or prior to January 1, 1933:

1. PATENT APPLICATIONS OWNED BY TITAN COMPANY A/S

Serial No.	*Date of Filing*	*Patent No.*	*Date of Issue*
241,087	May 7, 1920	225,981	Nov. 14, 1922
384,569	Dec. 11, 1931	Abandoned	

2. PATENT APPLICATIONS OWNED BY I. G. FARBENINDUSTRIE

Application Serial No.	*Date of Filing*	*Patent No.*	*Date of Issue*
342,140	Oct. 8, 1928	Abandoned	
349,044	Apr. 8, 1929	Abandoned	
380,664	Aug. 26, 1931	Abandoned	
393,073	Sept. 29, 1932	339,670	Feb. 27, 1934

D. Newfoundland patents exclusively licensed to Titanium Pigment Company, Inc. on or prior to January 1, 1933:

Patent No.	*Date of Issue*
253	Nov. 28, 1917
258	Apr. 4, 1918

Exhibit 470

Patent No.	*Date of Issue*
278	Nov. 11, 1918
283	Dec. 19, 1918
284	Dec. 18, 1918
285	Dec. 19, 1918
326	Feb. 14, 1920

E. Mexican patents exclusively licensed to Titanium Pigment Company, Inc. on or prior to January 1, 1933:

Patent No.	*Date of Issue*
19,396	Aug. 1, 1919

F. Brazilian patents owned by Titanium Pigment Company, Inc. on or prior to January 1, 1933:

Patent No.	*Date of Issue*
18,261	Mar. 11, 1930

G. Brazilian patents non-exclusively licensed to Titanium Pigment Company, Inc. on or prior to January 1, 1933:

1. By Titan Company A/S

Patent No.	*Date of Issue*
10,482	Aug. 31, 1917
10,483	Aug. 20, 1919
10,484	Aug. 20, 1919
12,009	June 20, 1921

H. Argentine patents owned by Titanium Pigment Company, Inc. on or prior to January 1, 1933:

Patent No.	*Date of Issue*
33,282	Apr. 8, 1930

Exhibit 470

J. Argentine patents non-exclusively licensed to Titanium Pigment Company, Inc. on or prior to January 1, 1933:

1. By Titan Company A/S

Patent No.	*Date of Issue*
14,128	Dec. 28, 1917
14,477	Dec. 30, 1921
14,740	July 19, 1918
14,862	Aug. 20, 1918

K. Other foreign patents and patent applications owned by Titanium Pigment Co., Inc. on or prior to January 1, 1933:

1. *Great Britain*

a. Patents owned by Titanium Pigment Company, Inc.

Patent No.	*Date of Issue*
105,645	May 9, 1916
105,646	May 10, 1916
105,853	May 14, 1916
105,962	May 2, 1916
106,428	Nov. 22, 1916
106,584	Nov. 22, 1916
106,585	Nov. 22, 1916
108,693	June 15, 1916
108,805	Jan. 11, 1917
108,875	June 15, 1916
110,324	June 14, 1917
111,257	June 29, 1917
180,089	Feb. 28, 1921

Exhibit 470

Patent No.	*Date of Issue*
206,809	Nov. 8, 1922
281,459	Nov. 9, 1926
288,569	Apr. 12, 1927
289,111	Nov. 17, 1926
308,723	Mar. 27, 1928
329,333	Nov. 12, 1928
364,112	Sept. 24, 1929
364,562	Sept. 24, 1929
370,088	Jan. 29, 1930
374,420	Jan. 14, 1930
387,720	Aug. 14, 1930
395,406	Jan. 16, 1931
399,183	Apr. 9, 1931
405,340	Aug. 6, 1931
408,215	Oct. 16, 1931
409,354	Oct. 31, 1931
410,749	Nov. 19, 1931
413,915	Oct. 29, 1932
415,602	Oct. 29, 1932
416,615	Oct. 28, 1932
417,699	Oct. 28, 1932
426,881	Oct. 28, 1932

b. Patent applications owned by Titanium Pigment Company, Inc. Ser. No. 28,948 of Nov. 16, 1926—Abandoned.

2. *France*

a. Patents owned by Titanium Pigment Company, Inc.

Patent No.	*Date of Issue*
481,721	May 11, 1916
481,722	May 11, 1916

Exhibit 470

Patent No.	*Date of Issue*
482,699	Aug. 29, 1916
483,197	June 24, 1916
483,198	June 24, 1916
483,780	Dec. 12, 1916
483,781	Dec. 12, 1916
483,782	Dec. 12, 1916
485,975	May , 1917
533,866	Apr. 7, 1921
566,890	May 31, 1923
624,944	Nov. 22, 1926
624,945	Nov. 22, 1926
624,946	Nov. 22, 1926
652,357	Apr. 7, 1928
672,002	Mar. 25, 1929
672,003	Mar. 25, 1929
666,109	Dec. 20, 1928
704,044	Sept. 22, 1930
704,585	Sept. 22, 1930
709,953	Jan. 26, 1931
721,188	Aug. 10, 1931
722,035	Jan. 10, 1931
729,798	Jan. 15, 1932
732,219	Feb. 26, 1932
734,601	Apr. 4, 1932
740,890	Aug. 5, 1932
743,851	Oct. 10, 1932
744,617	Oct. 27, 1932
747,370	Dec. 10, 1932
748,714	Nov. 19, 1932

Exhibit 470

3. *Norway*

a. Patents owned by Titanium Pigment Company, Inc.

Patent No.	*Date of Issue*
28,673	
29,191	Mar. 2, 1918
29,194	Mar. 2, 1918
35,887	Mar. 18, 1921

29,174/30	Sept. 24, 1929

22. *New Zealand*

a. Patents owned by Titanium Pigment Company, Inc.

Patent No.	*Date of Issue*
46,364	Aug. 9, 1921
60,291	Apr. 12, 1927
62,626	May 1, 1929
69,759	Oct. 16, 1931

Exhibit 470

23. *South Africa*

a. Patents owned by Titanium Pigment Company, Inc.

Patent No.	*Date of Issue*
671-21	July 8, 1921

CHARLES F. KAEGEBEHN

Sworn to before me this 20th day of October, 1944.

OLGA ISABEL HORVATH
Notary Public, Nassau County
Nassau Co. Clk's No. 652
N. Y. Co. Clk's No. 104
Register's No. 59-H-6
Commission Expires March 30, 1946

(NOTARIAL SEAL)

STATE OF NEW YORK
COUNTY OF NEW YORK } ss.:

JOHAN R. KNOFF, FRANKLIN L. KINGSBURY, and LOUIS E. BARTON, each being duly sworn, depose and say that said JOHAN R. KNOFF and said Franklin L. Kingsbury are research chemists of the Titanium Division of National Lead Company and that said Louis E. Barton is a director of Titanium Pigment Corporation, a subsidiary of National Lead Company, and that they answer Interrogatory No. 2 as follows:

2. The Titanium Pigment Company, Inc. on or prior to January 1, 1933 used the following United States or foreign patents or applications for Letters Patent in the manufacture of TiO_2 or TiO_2 composite pigments or products containing TiO_2:

Exhibit 470

1. United States Patents

A. Patents owned by Titanium Pigment Company, Inc.:

Patent No.
1,106,409
1,106,410
1,171,542
1,196,236
1,206,798
1,348,843

539,332	June 8, 1944	J. M. O'Shaughnessy
539,375	June 8, 1944	W. Y. Agnew
546,903	July 27, 1944	J. Barksdale
555,902	Sept. 26, 1944	S. S. Cole et al.

C. U. S. patents now exclusively licensed to National Lead Company:

1. PATENTS OWNED BY TITAN COMPANY A/S

Patent No.	*Date of Issue*	*Inventor*
1,852,510	Apr. 5, 1932	P. Farup
1,919,425	July 25, 1933	P. Farup

2. PATENTS OWNED BY TITAN CO., INC.

Patent No.	*Date of Issue*	*Inventor*
2,055,221	Sept. 22, 1936	A. J. Ravnestad
2,111,460	Mar. 15, 1938	J. Rockstroh
2,121,215	June 21, 1938	P. Weise et al
2,130,554	Sept. 20, 1938	P. Lusseyran
2,139,686	Dec. 13, 1938	E. Lederle et al.
2,140,235	Dec. 13, 1938	E. Lederle et al.
2,140,236	Dec. 13, 1938	E. Lederle et al.
2,161,755	June 6, 1939	R. W. Ancrum
2,200,373	May 14, 1940	A. G. Oppegaard et al.

Exhibit 470

Patent No.	*Date of Issue*	*Inventor*
2,224,987	Dec. 17, 1940	F. Raspe et al.
2,242,320	May 20, 1941	G. F. New
2,246,030	June 17, 1941	R. W. Ancrum et al.
2,260,177	Oct. 21, 1941	H. Giese
2,303,305	Nov. 24, 1942	P. Tillmann et al.
2,303,306	Nov. 24, 1942	P. Tillmann et al.
2,303,307	Nov. 24, 1942	P. Tillmann et al.
2,339,793	Jan. 25, 1944	O. Moeklebust et al.
2,339,808	Jan. 25, 1944	A. J. Ravnestad et al.

3. PATENTS OWNED BY I. G. FARBENINDUSTRIE

Patent No.	*Date of Issue*	*Inventor*
1,813,649	July 7, 1931	P. Weise
1,816,388	July 28, 1931	A. Mittasch et al.
1,850,286	Mar. 22, 1932	A. Mittasch et al.
1,878,013	Sept. 20, 1932	K. Staib
1,891,210	Dec. 13, 1932	H. Wolff
1,891,911	Dec. 27, 1932	J. Brode et al.
1,995,580	Mar. 26, 1935	J. Rockstroh
2,068,294	Jan. 19, 1937	E. Korinth et al
2,118,916	May 31, 1938	J. Drucker
2,121,408	June 21, 1938	F. Raspe et al.
2,122,180	June 28, 1938	E. Lederle et al.
2,138,384	Nov. 29, 1938	G. Meder
2,144,577	Jan. 17, 1939	K. W. Petersen
2,158,520	May 16, 1939	O. Meyer
2,161,975	June 13, 1939	K. W. Petersen
2,187,821	Jan. 23, 1940	J. Nelles
2,280,223	Apr. 21, 1942	R. Dümpelmann et al.

4. PATENTS OWNED BY TITANGESELLSCHAFT

Patent No.	*Date of Issue*	*Inventor*
2,275,856	Mar. 10, 1942	E. Lederle

Exhibit 470

D. U. S. Patent Applications now exclusively licensed to National Lead Company:

1. PATENT APPLICATIONS OWNED BY TITAN CO., INC.

Serial No.	*Filing Date*	*Applicant*
439,077	Apr. 15, 1942	R. W. Ancrum
495,946	July 23, 1943	R. W. Ancrum
522,833	Feb. 17, 1943	R. W. Ancrum
522,845	Feb. 17, 1943	S. G. Tinsley

2. PATENT APPLICATIONS OWNED BY I. G. FARBENINDUSTRIE

Serial No.	*Filing Date*	*Applicant*
404,503	July 29, 1941	J. Heinen

E. U. S. patents now non-exclusively licensed by National Lead Company:

1. PATENTS OWNED BY E. I. DU PONT DE NEMOURS

Patent No.	*Date of Issue*	*Inventor*
1,649,496	Nov. 15, 1927	N. Sprecht
1,655,940	Jan. 10, 1928	J. D'Ans et al.
1,707,248	Apr. 2, 1929	J. Blumenfeld
1,707,257	Apr. 2, 1929	C. de Rohden
1,750,287	Mar. 11, 1930	N. Sprecht
1,758,528	May 13, 1930	A. Mecklenberg
Re. 18,790		
1,766,592	June 24, 1930	J. Blumenfeld

Exhibit 470

Patent No.	*Date of Issue*	*Inventor*
1,795,467	Mar. 10, 1931	J. Blumenfeld
Re. 18,854		
1,797,760	Mar. 24, 1931	C. de Rohden
1,827,691	Oct. 13, 1931	N. Sprecht
1,832,666	Nov. 17, 1931	N. Sprecht
1,845,633	Feb. 16, 1932	N. Sprecht
1,846,188	Feb. 23, 1932	C. de Rohden
1,851,487	Mar. 29, 1932	J. Blumenfeld
1,853,626	Apr. 12, 1932	K. Leuchs

2,358,167	Sept. 12, 1944	J. L. Keats

Exhibit 470

2. PATENTS OWNED BY INTERNATIONAL PULVERIZER CORP.

Patent No.	*Date of Issue*	*Inventor*
2,032,827	Mar. 3, 1936	N. H. Andrews
2,191,095	Feb. 20, 1940	A. C. Hobbie

3. PATENTS OWNED BY REDUCTION ENGINEERING CORP.

Patent No.	*Date of Issue*	*Inventor*
2,214,905	Sept. 17, 1940	C. H. Kidwell
2,219,011	Oct. 22, 1940	C. H. Kidwell
2,284,746	June 2, 1942	C. H. Kidwell

4. PATENTS OWNED BY LOUISVILLE DRYING MACHINERY CO.

Patent No.	*Date of Issue*	*Inventor*
2,090,177	Aug. 17, 1937	C. E. Bill

5. PATENTS OWNED BY OLIVER UNITED FILTERS, INC.

Patent No.	*Date of Issue*	*Inventor*
2,083,887	June 15, 1937	H. A. Weineke

6. PATENTS OWNED BY ABNER J. BARRETT

Patent No.	*Date of Issue*	*Inventor*
2,057,814	Oct. 20, 1936	A. J. Barrett

7. PATENTS OWNED BY I. G. FARBENINDUSTRIE

Patent No.	*Date of Issue*	*Inventor*
2,337,103	Dec. 21, 1943	W. Heimsoeth et al.

Exhibit 470

8. PATENTS OWNED BY HENRY A. GARDNER

Patent No.	*Date of Issue*	*Inventor*
2,037,322	Apr. 14, 1936	H. A. Gardner
2,037,323	Apr. 14, 1936	H. A. Gardner
2,155,539	Apr. 25, 1939	H. A. Gardner
2,172,505	Sept. 12, 1939	H. A. Gardner

F. U. S. Patent Applications now non-exclusively licensed to National Lead Company:

1. PATENT APPLICATIONS OWNED BY E. I. DU PONT DE NEMOURS

Serial No.	*Filing Date*	*Applicant*
302,850	Nov. 4, 1939	H. M. Stark
364,038	Nov. 2, 1940	J. E. Booge et al.
381,381	Mar. 1, 1941	R. M. McKinney
391,309	Apr. 30, 1941	H. Schaumann
391,313	Apr. 30, 1941	J. E. Booge
392,941	May 10, 1941	G. R. Seidel
408,071	Aug. 23, 1941	R. H. Sawyer
426,247	Jan. 9, 1942	C. M. Olson
426,248	Jan. 9, 1942	C. M. Olson et al.
426,249	Jan. 9, 1942	J. H. Peterson
426,250	Jan. 9, 1942	J. L. Keats et al.
426,251	Jan. 9, 1942	J. L. Keats
435,726	Mar. 21, 1942	J. H. Peterson
449,665	July 3, 1942	C. M. Olson
449,666	July 3, 1942	C. M. Olson
449,667	July 3, 1942	C. M. Olson
455,427	Aug. 20, 1942	F. H. McBerty
472,876	Jan. 19, 1943	C. M. Olson et al.
483,058	Apr. 14, 1943	L. F. Nerlinger
483,357	Apr. 16, 1943	I. J. Krchma
500,148	Aug. 26, 1943	J. L. Keats et al.
502,019	Sept. 11, 1943	R. M. McKinney
521,132	Feb. 4, 1944	J. E. Booge et al.

Exhibit 470

Serial No.	*Filing Date*	*Applicant*
521,685	Feb. 9, 1944	J. H. Peterson
521,686	Feb. 9, 1944	J. H. Peterson
537,408	May 26, 1944	R. M. McAdam
537,409	May 26, 1944	R. M. McAdam
538,339	June 1, 1944	C. M. Olson
541,844	June 23, 1944	R. W. Sullivan
555,381	Oct. 5, 1944	R. L. McCleary

II. Foreign Patents and Patent Applications

A. Canadian patents now owned by National Lead Company as assignee:

Patent No.	*Date of Issue*
374,234	June 7, 1938

Exhibit 470

STATE OF NEW YORK }
COUNTY OF NEW YORK } ss.:

CLAUDE F. GARESCHE, being duly sworn, deposes and says that he is Manager of the Titanium Division of National Lead Company and that he answers Interrogatory No. 7 as follows:

7. (a) The annual total production tonnage calculated as TiO_2 of Titanium Pigment Company from January 1, 1920 to June 30, 1944 was as follows:

1920	100*
1921	500*
1922	900*
1923	1001
1924	1142
1925	2386
1926	2304
1927	2342
1928	3485
1929	5510
1930	6284
1931	9767
1932	9729
1933	8445
1934	13264
1935	18483
1936	21215**

* Actual production figures not available. Above represent best estimate.
** Ten months to October 31, 1936.

(b) The annual total production tonnage calculated as TiO_2 of National Lead Company from January 1, 1920 to June 30, 1944 was as follows:

Exhibit 470

1936	.....	4205***
1937	.....	28468
1938	.....	22789
1939	.....	38340
1940	.....	49984
1941	.....	64035
1942	.....	61621
1943	.....	61502
1944	Six Months to 6/30/44	37080

*** Months of November and December.

(c) The annual total production tonnage calculated as TiO_2 of Titan Company A/S from January 1, 1920 to June 30, 1944 cannot be supplied because, if any such figures are in existence, they are in Fredrikstad, Norway, and, therefore, not available.

Exhibit 471

IN THE DISTRICT COURT OF THE UNITED STATES

FOR THE SOUTHERN DISTRICT OF NEW YORK

UNITED STATES OF AMERICA, Plaintiff, v. NATIONAL LEAD COMPANY, TITAN COMPANY, INC., and E. I. DU PONT DE NEMOURS and COMPANY, INC., Defendants.	Civil No. 26-258

INTERROGATORIES TO THE DEFENDANT E. I. DU PONT DE NEMOURS & COMPANY

The United States of America submits the following interrogatories to the defendant E. I. du Pont de Nemours & Company in accordance with Rule 33 of the Federal Rules of Civil Procedure and requests the defendant named to answer said interrogatories as provided for in said Rule 33:

1. What United States or foreign patents or applications for letters patent, which relate in any way to the manufacture or use of TiO_2 or TiO_2 composite pigments, or products containing TiO_2, did your subsidiary, the Krebs Pigment & Color Corporation, own as assignee, or did it have a right to use as licensee, either exclusive or non-exclusive, on or at any time prior to January 1, 1933?

2. If your answer to Question No. 1 indicates that your subsidiary, the Krebs Pigment & Color Corporation, owned

or was licensed to use any United States or foreign patents or applications for letters patent, which of the patents or applications for letters patent were being used by your subsidiary, the Krebs Pigment & Color Corporation, on or prior to January 1, 1933, in the manufacture of TiO_2 or TiO_2 composite pigments or products containing TiO_2?

3. What United States or foreign patents or applications for letters patent which relate in any way to the manufacture or use of TiO_2 or TiO_2 composite pigments or products containing TiO_2 do you *now* own as assignee, or do you have a right to use as licensee, either exclusive or non-exclusive.

4. If your answer to Question No. 3 indicates that you own or have an interest in or are licensed to use any United States or foreign patents or applications for letters patent which relate in any way to the manufacture or use of TiO_2 or TiO_2 composite pigments or products containing TiO_2, have you ever used said patents or applications for letters patent in any phase of the conduct of your titanium business?

5. If your answer to Question No. 4 indicates that you are using or ever did use said patents or applications for letters patent in your titanium business, what are the numbers of said letters patent or applications for letters patent, and are you now using said patents or applications for letters patent?

6. If your answer to Questions Nos. 4 and 5 indicates that you used some of the patents or applications for letters patent which you owned or under which you enjoyed either

an exclusive or non-exclusive license but are not now using said patents or applications for letters patent, at what approximate time did such use terminate?

7. What was the annual total production tonnage calculated as TiO_2 of Commercial Pigments Corporation, Krebs Pigment & Color Corporation, and E. I. du Pont de Nemours & Company computed separately from January 1, 1928 to June 30, 1944?

.....

Attorney for Plaintiff.

PROOF OF SERVICE

A copy of the within interrogatory was served on the defendant by mailing a copy of the same to his attorneys, Cravath, Swaine & Moore, 15 Broad Street, New York, New York, on this .... day of September, 1944.

.....

Attorney for Plaintiff

Exhibit 472

IN THE

DISTRICT COURT OF THE UNITED STATES

FOR THE SOUTHERN DISTRICT OF NEW YORK

UNITED STATES OF AMERICA, Plaintiff, v. NATIONAL LEAD COMPANY, TITAN COMPANY, INC., E. I. DU PONT DE NEMOURS AND COMPANY, Defendants.	Civil No. 26-258

ANSWER TO INTERROGATORIES

Comes now E. I. du Pont de Nemours and Company, by James E. Booge, its Research Director, Pigments Division, and makes the following answers to interrogatories propounded to it in the above entitled case:

ANSWER TO INTERROGATORY No. 1:

688,655	Sept. 8, 1933	Kubelka, et al.

(c) *Foreign Patents and Applications:*

None.

Travancore Minerals Company, Ltd. of England owned a group of patents and applications known as the "Auer" patents and Krebs Pigment & Color Corporation was neither assignee of title thereto nor a licensee thereunder but, for a consideration of $3,500 paid in or about November 1932 to Travancore, such patents and patent application were held by Travancore

for the account of Krebs and were to be assigned or otherwise disposed of as Krebs might direct at any time in the future.

ANSWER TO INTERROGATORY No. 2:

(a) *U. S. Patents*

No.	Date

*The patents and applications indicated were owned by E. I. du Pont de Nemours and Company at the outbreak of war. The present status of such patents and patent applications cannot be determined. Presumably in most instances they have been expropriated by the enemy under retaliatory legislation or otherwise and it is very doubtful whether they can any longer be said to be owned by the company.

Exhibit 472

ANSWER TO INTERROGATORY No. 4:

Du Pont has used in the conduct of its titanium business some of the U. S. or foreign patents or applications listed in answer to interrogatory No. 3.

Exhibit 472

ANSWER TO INTERROGATORY No. 7:

The annual total production tonnage, calculated as TiO_2, of Krebs and du Pont, computed separately from January 1, 1928 to June 30, 1944, is as follows for the periods indicated:

(a) *Krebs Pigment & Color Corporation*

Period	Net Tons
5 Mos. 1931	825.4
1932	3,873.2
1933	5,511.0
1934	10,699.4
1935	20,027.8

(b) *E. I. du Pont de Nemours and Company*

Period	Net Tons
1936	25,185.9
1937	30,530.5
1938	27,633.6
1939	35,305.0
1940	42,354.9
1941	50,674.4
1942	44,383.1
1943	42,843.4
6 Mos. 1944	23,551.0

The information concerning production of Commercial Pigments cannot be found in available records or from other sources.

E. I. du PONT de NEMOURS AND COMPANY

I, James E. Booge, being duly sworn, upon oath depose and say:

I am a Research Director, Pigments Division, of defendant, E. I. du Pont de Nemours and Company, and the person named in and who executed the foregoing. I have read over the foregoing answers to said interrogatories and am familiar therewith. Such answers are true, except that, where answers are made upon information and belief, the same are true to the best of my knowledge, information and belief.

JAMES E. BOOGE

SUBSCRIBED and sworn to before me this *20th* day of October, 1944.

ROBERT M. MCKINNEY
Notary Public

[NOTARIAL SEAL]

N. L. Exhibit 1

October 30, 1944

U.S. v. National Lead Company et al. (*Civil No. 26-258*)

The annexed statement concerning certain contracts was read today at the first confe ence of counsel (arranged by counsel for the Government as an informal pre-trial conference) with District Judge Rifkind, to whom the case has recently been assigned by Senior District Judge Knox for trial December 4. Counsel for the Government did not comment on the statement. The ribbon copy of the statement was left with Judge Rifkind and carbon copies were served on counsel for the Government and du Pont. Without commenting on the matter contained in the statement, Judge Rifkind directed that the statement be brought to his attention at the opening of the trial so that it might then be made part of the record.

B. M. Webster

N. L. Exhibit 1

IN THE

DISTRICT COURT OF THE UNITED STATES

FOR THE SOUTHERN DISTRICT OF NEW YORK

UNITED STATES OF AMERICA, *Plaintiff*, *v.* NATIONAL LEAD COMPANY, TITAN COMPANY, INC., E. I. DU PONT DE NEMOURS & COMPANY, INC., *Defendants.*	Civil No. 26-258

STATEMENT ON BEHALF OF NATIONAL LEAD COMPANY CONCERNING CERTAIN CONTRACTS REFERRED TO IN THE COMPLAINT

This conference, arranged by the Antitrust Division, offers the first opportunity we have had to inform the Court of certain actions taken and intended respecting contracts referred to in the complaint.

We initiated, and in February, March, and April 1943, had conversations with the Antitrust Division relating to a proposed consent decree. These were suggested by the Antitrust Division's investigation of the titanium pigments industry and antedated the indictment returned June 28, 1943. It was impossible to find a basis of agreement with the Antitrust Division and the conversations were terminated.

Thereafter the indictment (No. 114-455 in this District) was returned.

From before June 1943 to August 1944 we were in touch with representatives of the War and Navy Departments and had reason to believe that, owing to the war production of the company, the Services would not permit the case to be tried during the war. That this belief was well founded is attested by the fact that in about August 1944 the Secretary of War and the Secretary of the Navy did request the Attorney General to postpone the trial of the case because of probable serious interference with war production. This request was appealed to the President after his return from the Pacific war theatre, with the result that the Attorney General was sustained and authorized to proceed with the prosecution. Meanwhile, in the latter part of June 1944, the Antitrust Division had filed its civil complaint No. 26-258, alleging the same facts and causes of action as the indictment. Within a few days of the President's decision authorizing prosecution there was a conference with Judge Knox, by whom the civil case was set for trial before Judge Rifkind December 4. Trial of the indictment was put off indefinitely.

Following the consent decree discussions with the Antitrust Division in the spring of 1943, and believing that no case against the company would be tried during the war, there were conferences between us and the president of the company (Fletcher W. Rockwell) at which the Antitrust Division's objections to certain contracts were discussed and consideration was given to the position of the company in respect of performance of and compliance with the contracts pending trial. It was the position of the president that in view of the probable delay it would not be prudent,

and he did not desire, so far as it was practicable to avoid it, to permit the company to continue to operate in accordance with provisions which had been criticized by the Government; and we were instructed to protect the company against the possible charge that it had persisted in a course of action after the government's objections had been made known and, if possible, to take steps to revise the contracts in such a way as to meet the objections and at the same time avoid unnecessary sacrifice of the company's investments and other interests.

The basis of the Antitrust Division's criticism of the company, both in the indictment and in the complaint, is a contract made in 1920 between Titanium Pigment Company, Inc., and Titan Co. A/S, a Norwegian Company. This contract is referred to in Paragraph 40 of the complaint.

After the 1920 contract was made the Lead Company acquired all of Titanium Pigment Company and became the owner of 87% of the Norwegian company. This contract, containing certain restrictions objected to by the Antitrust Division, might have been terminated or relinquished in some way but for the fact that its terms had been carried over in part into contracts between the Lead Company and certain British companies and that in such British contracts certain provisions had been conditioned on the 1920 contract.

Because of the foregoing we concluded that we could best serve the Lead Company by formulating, and endeavoring to have the parties approve, a further agreement between the Lead Company and the British companies which would remove features of the British contracts criticized by the Antitrust Division and, in particular, provisions

based upon the existence and terms of the Norwegian contract of 1920. We are glad to report that substantial progress in this direction has been made and that we are prepared to submit now or at the opening of the trial in December a form of contract agreed to by our client and the British companies. We should add that, having achieved substantial agreement upon revision with the British, we have initiated similar discussions with the Canadians, to the end that we may avoid conduct and contractual arrangements heretofore criticized by the Antitrust Division.

The British contracts are mentioned in Paragraph 50 of the complaint. The Canadian contracts are referred to in Paragraph 72.

There are other contracts which contain terms based on the 1920 Norwegian contract but they are with German, French, and Japanese companies with whom we have no relations and which were terminated for all purposes by the war.

Consistent with the foregoing, we have thought that we should seek to terminate our clients' present contractual relations with the du Pont Company and substitute a simple form of contract under which the Lead Company and the du Pont Company would exchange merely non-exclusive licenses under existing titanium pigments patents. This has been discussed with the attorneys for du Pont, with the result that we hope soon to have ready for execution the new form of agreement.

We should add that on several occasions we have brought these matters to the attention of the Antitrust Division, describing in detail our intentions and steps taken The Antitrust Division has accepted our statements and

explanations without comment, except to say that the absence of comment should not be taken as approval.

October 30, 1944.

N. L. Exhibit 2

APPENDIX

STATEMENT OF LOUIS E. BARTON

Abstracts of Patents

N. L. Exhibit 2

No. 1,106,406—dated August 11, 1914—Rossi and Barton

This was the first of the patents and covered a method for producing titanic oxide and the resulting titanic oxide product. The method consisted essentially in melting titaniferous ore together with an alkali and coke, treating the resultant melt with water to remove some of the soda salts, treating the remaining residue with acid so as to dissolve the titanium compounds and also the metallic iron constituent. The reaction between titanium, iron and acid is such as to produce a solution containing a titanous salt. Thereafter the bath is treated with suitable oxidizing agents and treated to precipitate a titanic compound. The titanic compound is then calcined to produce titanic oxide.

No. 1,106,407—dated August 11, 1914—Rossi and Barton

This is in some respects similar to the first patent except that the melt is so conducted as to temperature that the iron is concentrated and withdrawn largely in a metallic state. That portion of the melt remaining after withdrawing the iron is then treated with water to extract alkali salts. The residue then is treated with acid so diluted as to dissolve the remaining impurities, such as iron, without dissolving the titanic acid. The titanic acid is finally washed with water, dried and calcined to produce titanic oxide.

No. 1,106,408—dated August 11, 1914—Rossi and Barton

The process covered by this patent consists essentially in fusing titaniferous ore with alkali, causing the ores to decompose and their constituents to become more readily separable. The resulting melt is then treated with hot water to remove the alkali salts, and the residue is then

treated with acid to dissolve the iron and other impurities. The strength of the acid is so adjusted that it will not dissolve the appreciable amounts of titanic acid. The residue of titanic acid is washed with water, dried and calcined to produce titanic oxide.

No. 1,106,409—dated August 11, 1914—Rossi and Barton

This method comprises fusing titaniferous ores with alkali sulphide and the iron contained in such ores is converted into a more readily soluble form, namely, a ferro-sodium sulphide. The resulting melt is then treated with water to dissolve the alkali and iron compounds. The residue then remaining is treated with dilute acid to dissolve as far as possible the remaining impurities and leave a residue of titanic acid, which is then calcined to yield a substantially pure titanic oxide.

No. 1,106,410—dated August 11, 1914—Rossi and Barton

This consists of a process of fusing titaniferous ore with alkali sulphate and a reducing agent such as coke. The iron is converted into a more readily soluble form, such as ferro-sodium sulphide. The resulting melt is first treated with water to remove sodium and iron compounds and then the remaining residue is treated with acid to dissolve as far as possible the remaining impurities, leaving a residue of titanic acid which is calcined to yield titanic oxide.

No. 1,155,462—dated October 5, 1915 (reissued April 24, 1917, No. 14,289)—Barton

This patent covers a composite titanic oxide pigment and the method of producing same. The method consists essentially in treating a titanic sulphate solution by adding

a soluble salt such as calcium chloride capable of forming, by reaction, an insoluble sulphate and then digesting or heating the solution to precipitate titanic acid. The resulting precipitate is separated from the solution, dried and calcined to form a composite titanium pigment product.

No. 1,166,547—dated January 4, 1916—Rossi and Barton

This process consists essentially in melting a titaniferous ore with an alkaline compound and treating the resulting melt with hydrochloric acid so proportioned as to dissolve the alkali and iron compounds, then adding more water and finally separating the remaining residue of titanic acid from the dissolved impurities. The titanic acid thus separated is calcined to produce titanic oxide.

No. 1,171,542—dated February 15, 1916—Rossi and Barton

(Covering a process of concentrating titanic oxide and the resulting titanic oxide product.) The method consists essentially in melting titaniferous ores in the presence of an alkali sulphide or with a mixture of ore, sodium sulphate and carbon and treating the resulting melt with acid so diluted as to dissolve the iron and other impurities rather than the titanium compounds. The remaining undissolved residue is washed and dried and in that form is found to be particularly useful as a starting point in the manufacture of more highly refined titanium products.

No. 1,179,394—dated February 15, 1916—Barton

Covers a process of making titanium tetrachloride. A titanium material such as rutile or a titanium oxide concentrate produced by such methods as before described is mixed

with a carbonaceous material such as soft coal and then heated to form a cake or cinder containing highly dispersed particles of titanic oxide. The cinder is then treated with chlorine in an externally heated closed container to form and distill off titanium tetrachloride.

No. 1,189,229—dated July 4, 1916—Barton

This patent covers a titanic oxide product and method for its production. The method consists essentially in adding to a titanic sulphate solution a compound which by reaction will precipitate sulphate particles such as calcium chloride. The resulting sulphate precipitate is separated from the solution and the solution is then heated to precipitate titanic acid. The precipitated titanic acid is then separated, washed to free it from impurities, dried and calcined to produce the titanic oxide product.

No. 1,196,029—dated August 29, 1916—Rossi and Barton

Covering a process for heating titaniferous ore with a reducing agent, such as coke, until the titanic oxide has been reduced to titanous oxide, then dissolving the resulting titanous oxide in sulphuric acid and heating the solution after suitable dilution to precipitate the titanic compound, the precipitation being accelerated if necessary by addition of an oxidizing agent such as nitric acid. Under these conditions the titanic acid is associated with sulphuric anhydride and combined water in the form of a basic titanic sulphate.

No. 1,196,030—dated August 29, 1916—Rossi and Barton

Covering a process of preparing a titanium basic sulphate. A titaniferous material such as ilmenite or a titanic

oxide concentrate obtainable, for instance, according to the methods of patents 1,106,409 and 1,106,410 is heated with concentrated sulphuric acid. After reaction the resulting digestion mass is dissolved in water and separated from any undissolved residue. Ferric iron in solution is reduced to the ferrous state the reduction conveniently accomplished in an electrolytic cell, continued until a little of the titanium is in the titanous condition. The solution is then boiled to precipitate the titanium basic sulphate.

No. 1,196,031—dated August 29, 1916—Rossi and Barton

Referring to a basic titanic sulphate product such as is obtainable by the process last above described and also by means of other processes recorded in the specification. The basic titanic sulphate product is characterized as containing a preponderance of titanic oxide, less combined water than titanic oxide, and less sulphuric anhydride than combined water.

No. 1,201,541—dated October 17, 1916—Barton

The process covered by this patent consists essentially of melting the titaniferous ore in the presence of an alkali sulphide and treating the resulting melt with chlorine in the presence of water. The action of the chlorine is to oxidize and dissolve iron sulphide and this process has the advantage of oxidizing and dissolving the iron compound and the alkali sulphide constituents without the evolution of hydrogen sulphide gas.

No. 1,205,144—dated November 21, 1916—Barton

This covers the method of producing a composite titanic oxide precipitate consisting essentially of sulphate particles

coalesced with basic titanic sulphate. This patent also covers the product of this description. The method consists essentially of adding to a titanic sulphate solution a base which will form, by reaction with the solution, an insoluble sulphate and then heating the solution to precipitate basic titanic sulphate. The resulting precipitated product is filtered out, washed and dried, and then the dried product may be calcined to produce a composite titanic oxide pigment.

No. 1,206,796—dated December 5, 1916—Barton

This patent is an improvement upon the process developed by Dr. Rossi and Mr. Barton which dealt with the production of titanic acid products by melting titaniferous ore in alkali sulphide. The improvement consists of changing the temperature of furnace operation so that the essential chemical reactions take place without fusion.

No. 1,206,797—dated December 5, 1916—Barton

This is also an improvement patent which consists of treating the sulphide melt described in several of the former patents in a bath containing sulphurous acid whereby iron and other impurities are dissolved and the sulphide decomposed without formation of hydrogen sulphide gas.

No. 1,206,798—dated December 5, 1916—Barton

This is an improvement patent and is based upon the discovery that if sulphide melts are properly proportioned, and the furnace properly controlled, the melt can be separated into two layers, one containing the greater part of the titanic acid constituents and the other containing the greater part of the iron constituents. Thus by separating these two

layers a large part of the impurity which the titanic oxide in the original ore contained is mechanically separated.

No. 1,218,161—March 6, 1917—Barton

This patent covers a composite pigment comprising a composite titanium dioxide pigment, for example, titanium dioxide-barium sulphate composite pigment mixed with white lead, and paints containing this pigmentary mixture.

No. 1,223,356—dated April 24, 1917—Barton

This covers a titanic oxide product and the method for producing it. The method consists essentially in dissolving titanium tetrachloride in water, adding sulphuric acid and distilling the remaining hydrochloric acid formed by the resulting reaction, then calcining the final residual product to obtain the titanic oxide product.

No. 1,223,357—dated April 24, 1917—Barton

This covers composite titanic oxide pigments and the method of producing them. The method consists essentially in suspending particles of so-called "extender pigments" in a titanic sulphate solution, then electrolyzing the solution and heating the solution to precipitate upon and into coalescence with the suspended particles a basic titanic sulphate. The resulting composite precipitate is calcined to produce a composite titanic oxide pigment product.

No. 1,223,358—dated April 24, 1917—Barton

This covers the method of treating a titanic solution by electrolyzing it and meanwhile heating it to precipitate a titanium compound. The basic titanic sulphate may be calcined to produce a titanic oxide product.

N. L. Exhibit 2

No. 1,234,260—dated July 24, 1917—Barton

The patent discloses a method of making composite pigment which consists in adding an extender pigment as such to a titanium salt solution, either titanium chloride or titanium sulphate, or forming the extender, in situ, in the titanium sulphate solution. There is added an alkaline reacting agent, for instance, lime, to neutralize the titanium solution thereby precipitating orthotitanic acid upon the extender. The composite precipitate of extender particles and orthotitanic acid is then calcined to obtain the composite pigment.

No. 1,235,638—dated August 7, 1917—Barton

The patent discloses a method for making relatively pure titanic oxide. A titanium solution, for instance, a titanium sulphate or chloride solution, is placed in the cathode (negative) compartment of an electrolytic cell provided with a diaphragm which separates the cell into a cathode (negative) compartment and an anode (positive) compartment. A sulphuric acid solution is placed in the anode compartment. The titanium solution in the cathode compartment was maintained at a temperature of 95°C. whereupon basic titanic sulphate is precipitated in the cathode compartment. The basic titanic sulphate separated from the cathode compartment is calcined at temperatures of about 750°C.

No. 1,236,367—dated August 7, 1917—Barton and Gardner

This is a "use" patent and covers linoleum containing titanium pigments.

N. L. Exhibit 2

No. 1,236,655—dated August 14, 1917—Barton

The patent is directed specifically to the preparation of composite titanium dioxide-barium sulphate pigment. A titanium sulphate solution is treated with barium chloride whereby barium sulphate is formed, in situ. The mixture is then hasted to precipitate on the barium sulphate so formed, basic titanic sulphate which is precipitated along with the barium sulphate. The composite precipitated is washed, dried and calcined to obtain the titanium dioxide-barium sulphate composite pigment.

No. 1,240,405—dated September 18, 1917—Barton

This patent is a division of Patent No. 1,234,260 above summarized. Both of these patents stem from one application, Serial No. 40,639 filed July 19, 1915. This patent describes the same method of producing composite pigments as set forth in the companion patent, No. 1,234,260, but its claims cover specifically the method as applied to addition of previously formed extender pigment to a titanium solution followed by the addition of an alkaline agent to precipitate orthotitanic acid on the extender pigment. The resulting composite precipitate is washed, dried and calcined.

No. 1,251,170—dated December 25, 1917—Barton

The patent describes the preparation of pigments and paints containing titanium dioxide. Specifically it discloses the intimate, mechanical admixture of an extender pigment, for instance, barytes (barium sulphate) silica, gypsum, etc., with a titanic oxide pigment, either the relatively pure titanic oxide or a composite titanic oxide pigment. The patent further describes the incorporation of such mechanically mixed pigment with the vehicle to form a paint.

N. L. Exhibit 2

No. 1,283,455—dated November 5, 1918—Barton and Gardner

A "use" patent covering inks, particularly printing inks containing a titanic oxide pigment.

No. 1,286,916—dated December 10, 1918—Barton and Gardner

The patent discloses a method for making lake pigment by precipitating an organic coloring matter (Dye-stuff) on titanic oxide. The titanic oxide pigment, either the pure oxide or composite pigment is suspended in a solution of the organic dye which is stirred and maintained at a slightly elevated temperature to precipitate the organic coloring matter on the white titanic oxide pigment.

No. 1,288,473—dated December 24, 1918—Barton

The patent discloses a method for preparing a ternary composite titanic oxide pigment by adding an extender pigment such as barytes, silica, china clay, etc. to a titanium sulphate solution, and thereafter adding an agent such as calcium chloride, which will precipitate to a metal sulphate. The mixture is then boiled to precipitate titanic oxide upon the extender pigment and sulphate particles. This composite pigment was washed, dried and calcined.

No. 1,313,874—dated August 26, 1919—Barton

This patent covers a composite pigment consisting of zinc oxide admixed with titanic oxide-alkaline earth sulphate composite pigment.

N. L. Exhibit 2

No. 1,317,854—dated October 7, 1919—Barton and Gardner

This is a "use" patent covering pliable filled fabric goods such as shade cloth and table oil cloth filled with or coated with a composition containing a titanium pigment.

No. 1,322,518—dated February 27, 1917—Barton

This is a "use" patent and covers any kind of rubber goods having incorporated therewith a titanium compound, specifically titanic oxide.

No. 1,326,319—dated December 30, 1919—Barton and Gardner

This is a "use" patent covering rubber goods having incorporated therewith a composite titanic oxide-alkaline earth sulphate pigment. The patent also covers rubber goods having incorporated therewith titanic oxide together with other pigment fillers such as zinc oxide, lead oxide and carbon black. In either case vulcanization agents such as sulphur can also be incorporated.

No. 1,348,843—dated August 10, 1920—Barton

This patent follows the usual Rossi-Barton procedure for attacking an iron containing titaniferous material with an alkali sulphide to obtain a melt in which the titanium is in the form of sodium titanate and the iron in the form of sulphide compounds. The crushed melt is moistened with water and is oxidized, for example, by introducing air in order to convert the iron sulphide compounds into oxygen compounds of sulphur and iron. Thereafter the compounds so treated will leach with an acid solvent to dissolve the

iron and sulphur compounds but not the titanium compounds. The patent has seven method claims all drawn to the above described method of obtaining a titanic oxide concentrate.

No. 1,362,917—dated December 21, 1920—Barton and Gardner

This "use" patent covers glass containing titanic oxide and method of making same.

No. 1,365,882—January 18, 1921—Barton and Gardner

This is a "use" patent covering cellulose-derived plastics having incorporated therewith a titanic oxide containing pigment.

No. 1,409,648—dated March 14, 1922—Barton

This patent covers specifically the method of making titanium dioxide-barium sulphate composite pigment by adding to a titanium sulphate solution artificially prepared barium sulphate (blanc fixe), heating the solution to precipitate basic titanic sulphate on the blanc fixe, recovering the composite precipitate washing, drying and calcining it. Blanc fixe is previously prepared by reaction of solutions of sodium sulphate and barium sulphide.

No. 1,680,316—August 14, 1928—Barton and Ryan

This patent covers a composite titanic oxide-calcium sulphate pigment and process of making same. The calcium sulphate is prepared as a separate step or operation and is characterized by its structure, consisting of very fine crystals having ascicular or needle-like form. The calcium sul-

phate so prepared is added to a titanium sulphate solution which is then heated to precipitate the titanium. The composite precipitate is then separated, as by filtration, washed and calcined to form the composite pigment.

No. 1,695,270—December 18, 1928—Barton and Kinzie

This patent covers a method of preparing titanic sulphate solutions from any titaniferous ore, rutile or mixtures of titaniferous ores and rutile or other refractory titanium minerals. The process consists in heating the titanium ore with a mixture of concentrated sulphuric acid and an alkali sulphate, such as nitre cake. The mixture of reagents permits the heating or digestion to be conducted at a higher temperature than permissible in the case of sulphuric acid alone as the reagent and results in a higher recovery of soluble titanium sulphate when the mass resulting from digestion is dissolved in water. The solution is separated from any undissolved residue and is then ready for use in the preparation of titanium pigments.

N. L. Exhibit 3

DIGEST SUMMARY

U. S. Patents of Titanium Pigment Co. to inventors other than L. E. Barton listed in Schedule "A" of the Agreement of 1920.

1,080,718 December 9, 1913 A. J. Rossi

This patent describes a method of bleaching articles such as fabrics, fibers and the like by exposing the material to be bleached to the action of a solution containing titanous chloride and ferrous chloride. The bleaching solution is prepared by dissolving an alloy of iron and titanium in hydrochloric acid. The patent has six claims all drawn to the above described method of bleaching materials.

1,080,721 December 9, 1913 C. M. E. Schroeder

This patent may be considered an extension of patent No. 1,080,718 and also describes a method of bleaching material such as fabrics, fibers and the like. According to to the method of this patent, the material to be bleached is immersed in a bath containing metallic titanium and possibly also metallic iron, for instance as an alloy of titanium and iron together with an acid solvent, e.g. hydrochloric acid, for the titanium and iron, whereby the dissolution of titanium and iron, if present, as titanous and ferrous chlorides, proceeds simultaneously with the bleaching of the material. The ultimate solution obtained according to this method is, of course, the same solution described in patent No. 1,080,718. The difference in the two methods lies in that according to the patent No. 1,080,718, the bleaching

bath is previously, separately prepared before immersion of the article to be bleached. The patent has twelve claims all drawn to the above described method of bleaching materials.

1,105,308 July 28, 1914 A. J. Rossi

This patent is related to the two above described patents. It covers specifically a method of producing a bleaching solution. This method includes first dissolving an alloy of iron and titanium in which the titanium is less than 50% in hydrochloric acid, evaporating the solution under vacuum to throw out crystals of iron chloride and removing these crystals so that the solution will contain more titanous chloride than ferrous chloride, then filtering the solution to render it suitable for use as a bleaching agent. The patent has five claims all drawn to the above described method of producing bleaching solutions.

1,184,131 May 23, 1916 A. J. Rossi

This patent describes a method of making titanium oxide from ilmenite by smelting the ore with sodium bisulphate ($NaHSO_4$), boiling the resulting melt in water and continuously adding thereto sulphuric acid until the titanic oxide in the melt is dissolved. The solution is separated from insoluble residues and boiling continued with addition of water to maintain constant concentration until hydrated titanium oxide has been precipitated, which may be calcined if desired. The patent has two claims covering the above description for the method of producing titanic oxide.

N. L. Exhibit 3

1,205,267 November 21, 1916 A. J. Rossi and C. M. E. Schroeder

This patent covers paints containing titanic oxide (TiO_2) characterized, in some of the more specific claims, as white amorphous titanic oxide. The patent has nine product claims covering paint containing titanium dioxide. This patent was a basic "use" patent and as such protected the use of titanium dioxide in paints.

1,205,268 November 21, 1916 A. J. Rossi and C. M. E. Schroeder

This patent covers paints containing titanic oxide (TiO_2) and in addition white lead. The patent has six product claims covering broadly any paint in which both titanic oxide and white lead are constituents of the pigment portion thereof.

1,205,269 November 21, 1916 A. J. Rossi and C. M. E. Schroeder

This patent covers paint containing zinc oxide and titanic oxide. The patent has six claims all of which are product claims covering paints in which both zinc oxide and titanic oxide are constituents of the pigment portion thereof.

1,272,855 July 16, 1918 A. J. Rossi

This patent discloses the preparation of titanic oxide products by a method which includes adding to a titanium sulfate solution an organic material derived from vegetable or animal origin. The patentee claims that this addition accelerates the precipitation of titanium compounds on

boiling the solution and at the same time prevents precipitation of undesirable impurities such as iron. The method is said to be applicable for the preparation of either relatively pure titanic oxide or composite titanium pigment.

The patent has seven claims six of which are drawn to the method of precipitating titanium compounds in the titanium solution containing organic matter, and one covering titanic oxide, characterized as being a white, extremely soft, smooth powder containing constituents of organic origin.

N. L. Exhibit 4

DIGEST SUMMARY

U. S. Patents of Titan Co. A/S
listed in Schedule "B" of the
Agreement of 1920.

966,815 August 9, 1910 P. Farup

The patent covers a method for producing a reddish colored pigment by subjecting iron containing titaniferous mineral to a roasting (about 500°C.) under oxidizing conditions, e.g. in the presence of air, and thereafter suspending the roasted material in water whereby the fine particles go into suspension. The fine particles may be recovered from the suspension by adding a soluble salt to the suspension which causes rapid precipitation of the extremely fine reddish brown powder. The patent has four claims all drawn to the above described process.

1,087,575 February 17, 1914 P. Farup

A method for producing yellow pigment by mixing a titaniferous ore with relatively large amounts of sulphuric acid, heating the mixture to about 900°C. whereby sulphates of the ore are formed and decomposed. The resulting yellow mass is pulverized and may be used as a yellow pigment. The patent has three process claims all drawn to the above described method.

1,156,220 October 11, 1915 P. Farup

A method for preparing titanium - oxygen compounds from ilmenite by heating the ilmenite with concentrated sulphuric acid. It is interesting to note that the proportions suggested by Farup are from one - two parts concentrated

sulphuric acid to one part ore. This might be less acid than theoretically required to combine all of the titanium dioxide in the ore. The solid digestion mass is then heated to about 600° whereby the titanic sulphate is said to decompose but not the iron sulphate. By leaching the heated mass with water, the iron sulphate is said to be removed and remains a concentrate of titanic acid. The patent contains seven process claims all drawn to the above described method of producing titanium - oxygen compounds.

T. 34
1,276,644 August 20, 1918 V. M. Goldschmidt

The patent discloses a method for clarifying liquids containing suspended solid particles. Titanium solutions obtained by treating ilmenite - sulphuric acid digestion masses with aqueous solvents containing suspended solid particles of unreacted ore and gangue. According to the process of this patent, colloidal sulphur is formed in situ in the solution. This colloidal sulphur is formed by introducing hydrogen sulphide into the solution which reacts with the ferric sulphate present to form colloidal sulphur which precipitates out, carrying with it the suspended solid matter. The patent has ten claims, which are process claims, all drawn to the above described method of freeing liquids from suspended particles.

T. 17
1,288,863 December 24, 1918 N. Fladmark

The patent covers a process for precipitating hydrated titanium oxide from concentrated titanium solutions by heating such solutions. While the process of this patent as just stated appears to be a relatively simple procedure, the

value of this teaching may be appreciated from the fact that prior thereto it was understood that high yields of said titanium hydrates could be precipitated only when working with dilute solutions. Rossi and Barton recommended the use of solutions having as little as 0.5-3.0% TiO_2. Fladmark showed that high yields of said products could be obtained when using solutions having as much as 80-300 grams TiO_2 per liter, which, assuming the solution to have a specific gravity of 1.4 would come roughly to from 6% to about 25% TiO_2. Obviously, the use of concentrated solutions brought about important economic advantages, particularly in the saving affected by eliminating the necessity of handling huge quantities of liquid. The patent has seven claims, which are process claims, all drawn to the above described method of precipitating a titanium hydrate.

T. 9.

1,317,164. September 30, 1919 A. P. Jaeger

This patent covers a pigment which consists of a mixture of uncalcined hydrated titanium oxide containing phosphoric acid compound and zinc white (zinc oxide). The pigment is prepared by mixing an uncalcined titanium hydrate containing phosphate with a zinc compound. The patent has six claims, one of which is drawn to the process covering the preparation of the pigment by mixing the titanium oxygen compound containing phosphorous with zinc white. Four product claims cover the resulting pigment, and one product claim covers a paint containing such pigment.

T. 10

1,317,165 September 30, 1919 A. P. Jaeger

The patent discloses a method for making a titanium pigment by an involved procedure, which includes mixing

a titanium oxygen compound, presumably previously prepared, with the salt of a metal the hydroxide of which is white, e.g. zinc or aluminum sulphate, with sulphuric acid. Heating this mixture until a reaction has taken place and a comparatively solid mass is formed. This mass is then ground with sodium chloride and again heated at temperatures between 200 and 700° C. whereby a sintering or smelting is effected. The sintered mass is then lixiviated with water to remove soluble salts and the residue dried and calcined as desired after which it is ready for use as a pigment. The patent has 16 claims of which ten cover the above described process and six cover the resulting pigment compositions.

T. 11
1,325,561 December 23, 1919 P. Farup

The patent covers a method of producing titanium oxygen compounds by treating an iron containing titaniferous material, e.g. ilmenite, with hydrochloric acid to dissolve out the iron compounds and obtain a residue containing titanium compounds. This residue is then dissolved with sulphuric acid from which titanium hydrates may be obtained by any "well known and convenient manner". This patent has eight claims all covering the above described method.

T. 1
1,333,819 March 16, 1920 G. Jebsen

This patent discloses the direct attack of iron containing titaniferous ores with sulphuric acid, using less acid than would be required to form normal salts with base forming materials present in the ores. For instance, it is recom-

mended to use as little as one part (92%) H_2SO_4, to one part of ore. The resulting mass is lixiviated with water according to the counter-current principle to obtain what is called "basic" solutions in which there is less acid material (sulphuric acid) than would be theoretically necessary to combine with the titanium present, calculated as TiO_2. The patent has 22 claims, 19 of which cover the method as above described including the steps of obtaining a hydrate from such basic solutions by boiling. Three claims cover the digestion mass obtained by the ore sulphuric acid reaction.

T. 15

1,333,849 March 16, 1920 H. Olsen and T. R. Förland

This patent covers a method for preparing solutions of titanium and iron salts in which all of the iron is in the reduced (ferrous) state and a small amount of titanium is in the reduced (titanous) state to insure against oxidation of the iron compounds during boiling, which produces the precipitate of titanium hydrates. Such reduced solution is prepared according to the patent from a solution in which some of the iron may be in oxidized (ferric) condition by reducing the solution. The reduction treatment, according to the patent, may be carried out by electrolysis. The patent has five claims, three of which are drawn to the above described method and two are product claims covering titanium solution in which all of the iron is in reduced condition and a small amount of titanium is also in a reduced condition.

N. L. Exhibit 4

T. 2
1,341,307 May 25, 1920 P. Farup

This patent covers a method for preparing titanium oxygen compounds by heating a titanium hydrate containing iron with sulphuric acid at temperatures between about 300 and 500°C. in the presence of sodium chloride to obtain a sintered product from which the free soluble constituents are removed by leaching leaving a residue of purified titanium oxygen compound. The patent has 13 claims nine of which are drawn to the above described method and four to the purified titanium oxygen compound obtained according to this method.

T. 32
1,343,441 June 13, 1920 P. Farup

This patent discloses a method for the manufacture of titanium dioxide which is based upon the use of a new type of titanium starting material, namely, a compound of titanium, carbon and nitrogen (titanium cyanonitride). This titanium nitrogen compound is formed by heating a titaniferous material at high temperatures in admixture with carbon and in the presence of nitrogen gas. If the titaniferous material contains iron, the iron compounds are reduced to metallic iron which is leached out with dilute acid, preferably hydrochloric acid, leaving a residue of the titanium-nitrogen compound. The patent discloses alternative methods for deriving titanium dioxide from this titanium nitrogen compound: (1) treating it with steam; (2) taking it up in sulphuric acid; precipitating a titanium hydrate from a sulphuric acid solution by heating. The patent then discloses the neutralization of the acid adhering to the precipitated titanium hydrate by treating it with a compound which

will form an insoluble sulphate, e.g. calcium hydroxide (lime) or barium hydroxide. The patent has 14 claims covering the method and variations thereof as described.

T. 22
1,343,446 June 15, 1920 V. M. Goldschmidt

This patent covers a colored pigment containing titanium and a method of preparing it. The titanium compound, hydrated titanium oxide, is admixed as desired with an extender pigment, calcium sulphate, which may be present as a result of neutralization. The sulphuric acid containing a titanium hydrate precipitated from sulphuric acid solutions is suspended in a solution of dye stuff where the dye is absorbed by the suspended pigment. The resulting product may be characterized as a lake pigment. This patent is directed to the use of uncalcined titanium hydrate as such or admixed with calcium sulphate. The patent has 14 claims, six of which are drawn to the method above described and eight of which are drawn to colored pigment product obtained therefrom.

T. 29
1,343,447 June 15, 1920 V. M. Goldschmidt

This patent is a companion patent to patent No. 1,343,-446 just above described. It covers, specifically, the process for making a composite pigment consisting of amorphous silicon dioxide and titanium dioxide by mixing amorphous silica with hydrated titanium oxide containing water and sulphuric acid and heating the mixture to expel water and sulphuric and to convert the titanium dioxide to crystalline form. The patent has eight claims, six of which are drawn to the process as above described and two to the products resulting therefrom.

N. L. Exhibit 4

T. 30

1,343,468	June 15, 1920	R. Nielsen and V. M. Goldschmidt

The patent discloses a method for preparing a composite pigment which contains titanium dioxide, iron oxides and insoluble sulphate, for instance calcium sulphate. A solution of iron and titanium sulphates is evaporated to dryness and to expel some sulphuric acid. Thereupon, a compound which forms an insoluble sulphate, the patent discloses the use of calcium compounds, is added to the mixture which is then heated to combine the remaining sulphate with the added calcium compound. The patent has 14 claims, nine of which are drawn to the above described process and five to the new pigmentary mixture.

T. 33

1,346,469	June 15, 1920	R. Neilsen and V. M. Goldschmidt

This patent is a companion patent to patent No. 1,346,-648. It discloses a method for making a composite pigment by adding a calcium compound which will form insoluble calcium sulphate, to hydrous titanium oxide containing adhering sulphuric acid and heating the mixture to combine the sulphuric acid with the calcium compound. The patent has eight claims, seven of which are drawn to the above described method and one to the resulting product.

T. 18

1,348,129	July 27, 1920	V. M. Goldschmidt

This patent covers the heating of hydrated titanium oxide at elevated temperatures until the material is converted

to crystalline condition. Goldschmidt characterized the condition as being crypto-crystalline, presumably meaning that the particles, as a result of the high temperature treatment, exhibit a crystalline interior structure and a smooth exterior surface. He suggests temperatures between 900°C. and 1000°C. The patent also describes adding to the hydrated titanium oxide, which will contain adhering sulphuric acid prior to heating, an alkaline earth compound to form an insoluble alkaline earth sulphate, e.g. calcium sulphate or barium sulphate, during the heating. This is the patent relied upon by Titan Co. A/S to cover the production of crystalline titanium dioxide pigments having optimum pigment properties. As has been previously noted, the Rossi-Barton process included a final heating treatment both in the preparation of the relatively pure oxide as well as the composite pigments, but those inventors characterized their titanium dioxide as being amorphous and recommended temperatures up to about 800°. It is, therefore, to be concluded that the products of Barton and Rossi did not possess the crystallinity and hence optimum pigment properties developed to the same degree as those obtained in the practice of the Goldschmidt patent. Inasmuch as this patent has claimed to cover composite pigments as well as the relatively pure titanium dioxide, some conflict might have arisen with the Barton-Rossi patents. It, however, could be said to be distinguished from the claims of those patents in that they contain titanium dioxide which had been converted to the crypto-crystalline condition. The resolution of such conflict would depend upon the exhaustive examination of the products resulting from the Goldschmidt patent as com-

pared with those by Barton and Rossi. Whether such comparison was ever made is not known to this writer.

The patent has 27 claims, 15 of which are drawn to the process as above described, including the preparation of products containing alkaline earth sulphate and 12 cover the resulting products.

T. 4

1,360,737 November 30, 1920 P. Farup

The patent covers a method for preparing a white titanium dioxide pigment of improved whiteness by mixing an impure titanium oxygen compound with sulphuric acid and some phosphate, for instance, phosphoric acid. After thorough mixing, sodium chloride is added and the whole heated to a high temperature whereby the mass is either sintered or melted. It is then allowed to cool and is crushed and leached with water. The residue is then described as titanium dioxide useful as a pigment. The patent has thirteen claims, eight of which cover the above described process and five the product resulting therefrom.

T. 8

1,368,392 February 15, 1921 P. Farup

This patent covers a method for improving weather resistant properties (chalk resistance) of titanium dioxide pigments by coating such pigments with a coating of a white metal oxide, for instance, an oxide of aluminum. The coating may be effected by suspending particles of the titanium pigment in a solution of a salt of a metal, the oxide of which is white and the hydrated oxide of the metal precipitated on the pigment particles by adding to the suspension an

alkaline precipitating agent. The resulting coated pigment particles are dried and are then ready for use. The patent has twelve claims nine of which are drawn to the above described process and three to products resulting therefrom.

T. 13A

1,361,866 December 14, 1920 G. Jebsen

The patent covers a method for eliminating the sulphuric acid which adheres to titanium hydrates precipitated from titanium sulphate solutions by treating such hydrates with a compound of a metal the sulphate of which is insoluble, e.g. compounds of calcium and barium, whereby a neutralized titanium hydrate containing calcium or barium sulphate is obtained, which in turn may be calcined to form a pigmentary material. The patent has eight claims, seven of which are drawn to the above described process and one to the product resulting therefrom.

T. 13B

1,361,867 December 14, 1920 G. Jebsen

This patent is a companion patent to patent No. 1,361,866 just above summarized. It covers a method for eliminating undesired sulphuric acid adhering to the titanium hydrates by treating with a compound which forms a water soluble sulphate, for example, an ammonium compound and then washing the resulting water soluble sulphate out of the titanium hydrate after the latter may be calcined to a pigment. The patent has six claims, five of which are drawn to the above described process and one to the resulting product.

N. L. Exhibit 4

T. 21B

1,436,164 November 21, 1922 V. M. Goldschmidt

The patent covers a method for the preparation of titanium pigments consisting of, or containing titanates. Such pigmentary compositions are formed by heating titanium oxygen compounds with oxides of metals, for instance, calcium oxide, lead oxide and the like, whereby these oxides react chemically with the titanium oxygen compounds to form titanates. There was no commercial exploitation of compositions consisting of titanates as described in this patent until National Lead Company developed an improved lead titanate pigment. A patent was obtained on the improved lead titanate product. This Goldschmidt patent has seven claims, three of which cover the above described process and four the compositions resulting therefrom.

T. 21A

1,389,191 August 30, 1931 V. M. Goldschmidt

This patent covers the production of blue or violet colored titanium dioxide pigments by heating titanium oxygen compounds at high temperatures (800-1000°C.) in admixture with a reducing agent, for instance, powdered carbon, whereby some of the tetravalent titanium in the titanium dioxide (TiO_2) is reduced to trivalent titanium in the form of an oxide (Ti_2O_3). The reduced titanium imparts the blue or violet color. The patent has fourteen claims, six of which are drawn to the above described process and eight to the products resulting therefrom.

T. 36

1,412,027 April 4, 1922 W. S. Washburn

This patent covers a method for improving color and texture of titanium dioxide pigments by calcining such

pigments in admixture with a small amount of a phosphate, for example, phosphoric acid or calcium phosphate. The process applied not only to the preparation of relatively pure titanium dioxide but to composite pigments as well. The patent has 22 claims, 14 of which cover the above described process and eight, products resulting therefrom.

N. L. Exhibit 5

DIGEST SUMMARY

U. S. Patents Covering Inventions of National Lead Company made after 1920.

T. 28

1,680,316 August 14, 1928 L. E. Barton et al.

Method for the preparation of composite titanium dioxide pigments by adding calcium sulfate having acicular crystalline form to titanium sulfate solution and hydrolyzing the mixture.

T. 26

1,695,270 December 18, 1928 L. E. Barton et al.

The patent covers a method for treating titaniferous ores which includes heating said ores together with sulfuric acid and an alkaline metal sulfate below the fusion temperature, dissolving the reaction mass in water and obtaining titanic oxide by hydrolysis.

T. 27

1,697,929 January 8, 1929 L. W. Ryan

Method of forming potassium metatitanate by adding potassium hydroxide to titanium hydrate containing sulfuric acid and heating the mixture.

T. 54

1,738,765 December 10, 1929 F. Doerinchel et al

The process was invented by a chemist of the I. G. Farbenindustrie, who filed the original U. S. application, which was subsequently assigned to Titanium Pigment Co.

N. L. Exhibit 5

The patent covers the hydrolysis of a titanium solution containing a sulfur-oxygen reducing agent in an amount corresponding to the ferric iron and other oxidizing agents present in the solution.

T. 63

1,758,472 May 13, 1930 M. Schnetka

The invention was made by a chemist of the I. G. Farbenindustrie. The Titanium Pigment Co. requested filing of a corresponding U. S. application, which was originally filed by Titangesellschaft and subsequently transferred to National Lead Company.

The patent covers a process of carrying out the hydrolysis of a titanium sulfate solution containing hydroflouric acid or water soluble flouride.

T. 41

1,773,727 August 26, 1930 P. Farup

Method of hydrolyzing a titanium sulfate solution which consists of continuously adding to a titanium sulfate solution undergoing hydrolysis a titanium sulfate solution to restore the solution with respect to titanium.

T. 67

1,820,987 September 1, 1931 L. W. Ryan

This patent covers specifically the formation of titanium hydrate by pouring the titanium sulfate solution into a hot solution of organic acid.

T. 68

1,820,988 September 1, 1931 L. W. Ryan

This patent covers the preparation of titanium hydrate by pouring a titanium sulfate solution into hot water containing phosphoric acid and an organic acid.

N. L. Exhibit 5

T. 44

1,831,852 November 17, 1931 P. Farup

The patent covers an invention of Professor Farup employed by Titan Co. A/S, who decided that it would not file a corresponding application in the U. S. on its own behalf. The application was filed at the request of Titanium Pigment Co. and an assignment given thereto.

The patent covers a method for treating a titaniferous ore by heating it with a reducing agent to reduce the iron content to metallic state, and then treating the reducing material with strong sulfuric acid to dissolve the titanium compounds but not the iron compounds.

T. 69

1,847,539 March 1, 1932 A. H. Sabin

Mr. A. H. Sabin was a paint technologist employed by National Lead Company principally to attend conventions, and in other words, to further the sale of National Lead Company products through his very considerable contacts in the paint industry. His patent No. 1,847,539 covers a paint composition containing titanium pigment, dry oil and nitrocellulose.

T. 151

1,856,565 May 3, 1932 C. A. Klein et al.

This patent was acquired by National Lead Company by assignment of British Titan Products Co. British Titan Products Co. was interested to obtain rights under the corresponding British patent and under their agreements were obligated to endeavor to secure similar rights throughout the world for their associates. In this manner, the offer to

sell the U. S. Klein and Brown patent was made and accepted by National Lead Company.

The process covers the treatment of a titaniferous ore with a reducing agent and a barium compound, dissolution of the titanium values carrying along the barium. Thereafter heating the solution to obtain a composite TiO_2-$BaSO_4$ pigment.

T. 47

1,889,027 November 29, 1932 W. R. Washburn

This is the so-called "Tank" method, covering specifically the reaction between titaniferous ore and concentrated sulfuric acid, carried out by introducing water and/or steam and air in order to initiate the reaction and maintain it in aerated condition to obtain a porous, readily soluble digestion cake.

T. 77A

1,906,729 May 2, 1933 W. F. Washburn et al.

A method for forming either titanium dioxide or TiO_2-$CaSO_4$-$BaSO_4$ pigments by first forming calcium sulfate anhydrite by reaction of a lime slurry with concentrated sulfuric acid, admixing this with a titanium sulfate solution (if the ternary composite pigment is desired, barium sulfate is added to the solution) hydrolyzing the mixture and calcining the resultant product. If relatively pure TiO_2 is desired, the calcium sulfate is washed out prior to calcination.

T. 78

1,906,730 May 2, 1933 W. F. Washburn et al.

Method for the preparation of composite titanium dioxide-calcium sulfate pigment by first making calcium sul-

fate anhydrite from lime slurry and concentrated sulfuric acid, admixing this with a titanium sulfate solution and hydrolyzing the mixture.

T. 67

1,916,236 July 4, 1933 L. W. Ryan

This patent covers specifically the preparation of titanium hydrates by dissolving an organic acid in said solution, or phosphoric acid, or both, and then pouring the titanium sulfate solution into hot water.

T. 92

1,929,521 October 10, 1933 L. W. Ryan et al.

This patent covers a method for manufacturing an acid soluble alkali-metal titanate containing a minimum of alkali and corresponding to the formula M_2TiO_{11}, where M is an alkali metal.

This patent may be regarded as a culmination of the series of patents directed to the attack of ilmenite with an alkali salt prior to dissolution. In this patent it is suggested that the process is particularly applicable to attack of rutile as a source of raw material.

T. 104

1,957,528 May 8, 1934 W. J. Cauwenberg

The patent covers a method for nucleating a titanium sulfate solution by slowly adding thereto an alkaline reacting organic compound, i.e. an organic base capable of liberating ammonia.

N. L. Exhibit 5

T. 102

1,969,061 August 7, 1934 W. J. Cauwenberg

The patent covers a method for producing a yellow-green titanium pigment consisting essentially of cobalt titanate by heating together titanium oxide and a cobalt compound.

T. 114

2,034,923 March 24, 1936 C. L. Schmidt.

This patent covers the preparation of nuclei of the same character as described in the Dahlstrom patent No. 2,098,-278, but represents an improvement thereover in that the titanium sulfate solutions from which the nuclei are prepared are freed of iron.

T. 119

2,039,432 May 5, 1936 J. McCallum

This patent covers a process for making finely-divided calcium and barium sulfate. Barytes is fused with sodium chloride under reducing conditions to form a heavy slag which settles out of the melt. There are 24 process claims.

T. 84B

2,055,222 September 22, 1936 W. F. Washburn et al.

Method for the preparation of titanium pigments by adding calcium sulfate to a titanium sulfate solution and a small amount of an acid neutralizing agent, after which the solution is hydrolyzed. In order to prepare relatively pure TiO_2 the $CaSO_4$ may be washed out.

N. L. Exhibit 5

T. 101B

2,084,826 June 22, 1937 L. W. Ryan et al.

The patent covers a method for making a colored pigment containing titanium as lead titanate and iron oxide, by heating ilmenite with lead oxide.

The patent represents an attempt to prepare a pigment composition primarily designed for protecting metallic surfaces using materials produced by National Lead Company on the one hand, and the raw material useful for making titanium pigments.

T. 116

2,084,917 June 22, 1937 W. K. Nelson

This patent covers a method for dispersing titanium dioxide pigment by using as dispersing agents certain chlorides, for instance, aluminum chloride. The dispersing is effected by wet-milling of pigment in water in the presence of a dispersing agent.

This patent results from an investigation undertaken by Dr. Nelson to develop a wet-milling method which would not infringe the patents of the Krebs Company, particularly the U. S. patent 1,937,037 of Hanahan. It is my understanding that prior to the conclusion of the Agreement of January 1, 1933 between Krebs and Titanium Pigment Co., the relatively pure titanium dioxide being produced by Titanium Pigment Co. was inferior in quality to that being offered by Krebs. An important reason for its deficiency in pigment properties was the fact that the Krebs product was wet-milled, whereas, that of the Titanium Pigment Co. was not. This was understood to be due to that fact that the Krebs product had an alkaline

pH, whereas, the product made by Titanium Pigment Co. had an acid pH and it was considered impossible to wet-mill an acid pigment using the dispersing agents known at that time. Mr. Turner directed Dr. Nelson to investigate the possibilities of wet-milling the Titanium Pigment Co. product. Dr. Nelson found that certain chlorides, for example, aluminum chloride, would effectively permit the wet-milling of acid-type pigments then being produced by Titanium Pigment Company. The products experimentally produced by Dr. Nelson were tested by Mr. Robinson and pronounced in good quality.

T. 173
2,084,918 June 22, 1937 W. K. Nelson

The patent covers a method for preparing alcoholic dispersions of titanium pigments using certain chlorides, e.g. aluminum chloride, as dispersing agents.

T. 108
2,091,799 August 31, 1937 P. Weise

The patent originates with Titangesellschaft, being an invention of their chemist Dr. Weise. The prosecution of the application was originally handled by Messrs. Hutz & Joslin in collaboration with the Patent Department. However, during the course of the prosecution, upon the request of National Lead Company, the application was assigned to National Lead.

The process covers the hydrolysis of titanium solutions to which have been added small amounts of relatively insoluble colloidal titanium compound, e.g. titanium phosphate. The products obtained are said to have partly the crystalline structure of rutile.

N. L. Exhibit 5

T. 113
2,098,278 November 9, 1937 R. Dahlstrom et al.

The patent covers a method for preparing nuclei useful in the hydrolysis of a titanium sulfate solution, and the use of such nuclei in hydrolysis. Ortho-titanic acid is dissolved in sulfuric acid, the pH value adjusted to from about pH=1.0 to pH less than 2, after which the solution is heated to develop the nuclei in finite, macroscopic particles.

T. 162
2,113,945 April 12, 1938 W. W. Plechner et al.

T. 179B
2,113,946 April 12, 1938 W. W. Plechner et al.
Re.21,693

These patents cover a single inventive concept and should be considered together. They result from work done by Dr. Plechner at Columbia University in fulfillment of the requirements for the degree of Ph.D in Chemistry, work undertaken and carried out while in the employ of National Lead Company. Dr. Plechner and his professor Dr. A. W. Hixson, originally applied, at their own expense, for patents covering the patentable features of their work. During the pendency of the applications, these inventors offered to assign their invention and the applications covering them to the National Lead Company in consideration of reimbursement for expenses incurred up to that time. This offer was accepted and subsequent to the assignment, the Patent Department prosecuted the applications. In this connection, it must be pointed out that only one of the above-identified patents was in the form of an application at the time the assignment took place. That was the application from which

eventually patent No. 2,113,945, which had been filed in November, 1934, subsequent to the assignment of the application from which originated patent No. 2,113,946, was filed in November, 1936.

Patent No. 2,113,945 covers a method for hydrolyzing titanium chloride solutions by adding thereto certain compounds which yield in solution negative divalent ions which have the effect of coagulating the hydrous titanium oxide coming out of solution. This represented a discovery of considerable importance with respect to the hydrolysis of titanium chloride solutions. If such coagulating ions are not present, the hydrated titanium oxide coming out of solution is so extremely fine that subsequent filtration is virtually impossible, and in addition, the resulting pigments do not possess satisfactory pigment properties. The use of these coagulated ions produces an aggregated, easily filtrable precipitate, which on calcination, has improved pigment properties.

When the application upon which patent No. 2,113,945 was brought to the attention of the Patent Department, Dr. Plechner and Mr. Kaegebehn appreciated that this application was limited in scope. In other words, it did not appear to be the result of a complete investigation of the invention. This concept required the use of coagulating ions broadly in the hydrolysis of any titanium halide solution but was limited to the use of negative divalent coagulating ions of titanium chloride solutions. Dr. Plechner then developed the invention further to its true scope, namely, the use of negative polyvalent coagulating ions (covering both di- and tri- valent ions) in the hydrolysis of any titanium halide solution (including chloride, flouride, bromide, and iodide solutions). Both patents issued simultaneously and covered

a complete development with respect to the hydrolysis of a titanium halide solution. Shortly after the issue of patent No. 2,113,946, Sherwin-Williams filed a patent application in which were copied certain claims contained in patent No. 2,113,946 specific to the use of polyvalent coagulating ions in the hydrolysis of titanium flouride solutions. An interference was thereupon set up in the U. S. Patent Office between the Plechner patent and the Sherwin-Williams application. National Lead Company initiated negotiations for the purpose of effecting settlement for avoiding the expense and trouble of proceeding according to the Patent Office regulations. The basis for this settlement was that the parties would agree to exchange in the presence of council and technical experts, evidence as to their dates of conception and reduction to practice of the disputed features of the invention. The party having the earlier date was to take the patent. This was done. Sherwin-Williams was able to prove an earlier date; thereupon National Lead gave Sherwin-Williams a concession of priority for the disputed claims and an exclusive license under patent No. 2,113,946 to use the teachings of that patent in the hydrolysis of flouride solutions. The patent was subsequently reissued, deleting from it all claims specific to the hydrolysis of flouride solutions.

T. 164

2,130,560 September 20, 1938. W. W. Plechner et al.

This patent covers a method for dispersing TiO_2 in wax using certain dispersing agents called "polar—non-polar compounds", e.g. aluminum stearate, then adding a compound havir a higher degree of polarity, e.g. a polyhydric alcohol to retard settling of the titanium pigment. This

patent is strictly a "use" patent in that it covers a method for making dispersions of TiO_2—waxes, which may be useful in coating paper to obtain, for example, opaque wax paper.

T. 150

2,130,565 September 20, 1938 C. L. Schmidt

This patent covers a method for obtaining a porous crystalline readily soluble digestion cake by carrying out the reaction between titaniferous ore and sulfuric acid in the presence of a crystalline titanium sulfate, e.g. titanyl sulfate.

T. 175

2,132,491 October 11, 1938 H. D. Mudford

This patent covers artificial cellulosic bodies delustered with titanium dioxide pigments previously treated with a chromium compound.

National Lead Company derives its title to this patent by mesne assignment through Imperial Chemical Industries by virtue of their obligations under our so-called British Agreements. It is essentially a "use" patent covering the use of separately treated titanium dioxide in the manufacture of artificial silk. As such, it is of greater interest to the producers of artificial silk than to the manufacturers of titanium dioxide pigments. It is a companion patent to patent No. 2,202,594 which covers specifically the treatment of titanium dioxide pigments with chromium compounds to render them suitable for use in artificial silk. National Lead Company uses the process of that latter patent.

The problem solved by this patent is this: it was found that when titanium dioxide was used to deluster dyed artificial silk, the organic dye had a tendency to fade the color. Later an investigation revealed that this was the result of a chemical reaction between the dye-stuff and the titanium dioxide. It was found by Mudford that if the titanium dioxide was treated using a chromium compound, e.g. chromium hydrate, the tendency to accelerate fading of the dye-stuff was retarded.

T. 154B

2,133,251 October 11, 1938 A. T. McCord

This patent covers a method for clarifying acid liquor, e.g. ilmenite solutions by first adding thereto an organic colloid, e.g. glue, to remove particles of the suspended impurities, then adding a coagulating agent, e.g. tannic acid compound, to remove the suspended impurities together with residual organic matter and decomposed colloid.

T. 184

2,140,222 December 13, 1938 H. Espenschied

Preparation of pigment by mixing pigment forming materials containing reactive lead compound, heating said mixture to form lead titanate, to obtain a product of uniform particle size free from more than a trace of particles in excess of 5 microns.

T. 158

2,148,283 February 21, 1939 W. F. Washburn

A method for bleaching hydrous titanium oxide which consists in treating hydrous titanium oxide throughout the

washing and filtering operation with a reducing agent without adding any additional mineral acid.

T. 203

2,154,130 April 11, 1939 F. L. Kingsbury

This invention covers the method of attacking titaniferous ore in the presence of phosphoric acid as a wetting agent.

T. 171

2,166,082 July 11, 1939 W. F. Washburn et al.

A method of controlling the light-reflectance properties of TiO_2 having a blue-gray tone by calcining hydrous titanium oxide in the presence of one or more of eleven selected elements, particularly tungsten and molybdem.

T. 209

2,167,626 August 1, 1939 H. V. Alessandroni

T. 210

2,167,627 August 1, 1939 H. V. Alessandroni

T. 211

2,167,628 August 1, 1939 H. V. Alessandroni

These three patents result from an investigation made by Mr. Alessandroni with the possibility of using sphene as a source of raw material in the manufacture of titanium dioxide pigment. Sphene is naturally occurring titaniferous mineral which may be regarded as a calcium—titanium silicate as distinguished from ilmenite, which is commonly regarded as iron titanate. Mr. Alessandroni's work resulted in the development of methods for the production of either composite titanium dioxide pigments or relatively

pure titanium dioxide from sphene. These methods are covered in the three above-identified patents.

Patent No. 2,167,626 covers the method of attacking sphene with hydrochloric acid having a concentration of over 12% to obtain a solution of all of the soluble constituents of the sphene which include the calcium and titanium values of the sphene. The resulting solution is then treated with sulfuric acid which transforms the titanium into titanium sulfate and forms at the same time a precipitate of calcium sulfate. The solution may then be either hydrolyzed, in which case a composite pigment is formed, or the precipitated calcium sulfate may be removed prior to hydrolysis, which in this case produces relatively pure titanium dioxide.

Patent No. 2,167,627 covers the treatment of sphene with hydrochloric acid having strength not exceeding 12%, whereupon the calcium and other alkali-alkaline-earth metal constituents of the sphene are dissolved by leaving unattacked the titanium values which may subsequently be processed as desired to form titanium pigment.

Patent No. 2,167,628 covers a method for preparing either relatively pure titanium dioxide or a composite titanium dioxide—silica pigment. The sphene is attacked with hydrochloric acid of a strength in excess of 12%, whereupon it is subsequently completely dissolved leaving a residue of silica. By concentrating the resulting solution leaving the silica—followed by hydrolysis—a composite titanium dioxide—silica composite is obtained. If relatively pure titanium dioxide is desired, the silica is removed prior to concentration and hydrolysis.

N. L. Exhibit 5

T. 219
2,170,800 August 29, 1939 L. E. Barton

This patent covers a method of making a composite titanium dioxide-calcium carbonate pigment. A titanium dioxide-calcium sulfate composite pigment is exposed to the action of a hot aqueous solution of carbon, e.g. sodium carbonate, whereupon the sulfate portion of the calcium sulfate in the composite pigment goes into solution and is replaced by the carbonate portion of the solution. There is thus obtained a titanium dioxide-calcium carbonate pigment in which the calcium carbonate has the external crystalline form of the calcium carbonate. It is understood since calcium carbonate is more insoluble than calcium sulfate, that the resulting titanium dioxide-calcium carbonate composite pigment is more suited for the preparation of surface coating compositions for exterior use.

This invention was made by Mr. Barton after his retirement, in his own private laboratory, at Winsor, Connecticut. He offered this invention to the National Lead Company without request for additional payment beyond his regular compensation. His offer was accepted and the Patent Department of National Lead Company prepared, filed, and prosecuted the application to patent.

T. 182
2,170,940 August 29, 1939 R. Dahlstrom

A method for increasing the reflectance properties of white TiO_2 by exposing hydrous TiO_2 containing a trace of one or both of the elements tungsten and molybdenum to a reducing atmosphere during calcination and/or cooled in a reducing atmosphere after calcination.

T. 137		
2,176,875	October 24, 1939	H. V. Alessandroni
T. 137B		
2,176,876	October 24, 1939	H. V. Alessandroni
T. 137C		
2,176,877	October 24, 1939	H. V. Alessandroni
T. 229		
2,212,629	August 27, 1940	H. V. Alessandroni

These four patents cover the results of a systematic investigation undertaken to study methods of preparation of titanium dioxide-composite pigments by methods other than the so-called "co-precipitated" method, which has been National Lead Company's standard commercial process. Prior to Mr. Alessandroni, Dr. J. E. Booge of E. I. du Pont had discovered a method for the preparation of composite pigments having pigment properties substantially the same as those obtained from co-precipitation methods, by simply intimately mixing together titanium dioxide and composite pigments having a selected predetermined particle size. Dr. Booge's patent is patent No. 2,048,054, June 30, 1936, issued on an application filed October 30, 1934. Mr. Alessandroni's work was undertaken to determine whether it would be possible to prepare composite pigments having properties substantially the same as those obtained by co-precipitation methods, by some means which would not necessarily depend upon the selection of titanium dioxide and composite pigments of a predetermined particle size. The first application was filed August 24, 1935 and matured into patent No. 2,176,875. In the course of the prosecution of this application, again because of the technical requirements

of the U. S. Patent Office, two divisional applications were filed, which matured respectively into patents Nos. 2,176,876 and 2,176,877.

Patent No, 2,176,876 broadly describes the subject matters embodied in the two divisional patents.

Alessandroni's invention as described in patent No. 2,176,875, covers a method for preparing a suspension of a primary pigment material (TiO_2 or any other relatively high tinting strength pigment, e.g. zinc sulfide) then separately preparing a dispersion of the extender pigment material, mixing these two suspensions and co-flocculating the dispersed pigment particles which are thereupon not only more finely divided than in their original state due to having been dispersed, but are also intimately and uniformly mixed together as a result of having been co-flocculated together. The separate dispersion can be carried out using dispersing agents which when they come in contact with each other produce a coagulating effect, or the dispersing agents need not be "antipathetic", but co-flocculation of the mixed pigment particles from the mixed dispersions can be effected by means of a coagulating agent. All of these procedures are described in patent No. 2,176,875 but that patent covers specifically only the preparation of titanium dioxide composite pigments by means of dispersions prepared from dispersing agents not antipathetic to each other followed by the use of a coagulating agent. Although the patent contains a generic claim covering the broad inventive concept, patent No. 2,176,876 is specific to the preparation of zinc sulfide composite pigments using dispersing agents which are not antipathetic to each other, followed by the use of a coagulating agent. Patent No. 2,176,877 covers specifically the use of antipathetic dispersing agents for the preparation of either TiO_2—or ZnS—composite pigments.

Patent No. 2,212,629 was applied for in November, 1938, about a year prior to the issuance of Mr. Alessandroni's three above-described patents. In this patent, Mr. Alessandroni covers a method for making composite pigments by mixing together aggregated particles of a primary pigment and extender pigment, dispersing them in a single aqueous medium and thereafter co-flocculating the mixed dispersed pigment particles by means of a coagulating agent. That latter procedure represented the culmination of Mr. Alessandroni's progressive study of the preparation of composite pigments by what may be termed dispersion methods.

These five patents, should be considered as a group for the purpose of this inquiry, since they cover separate features of a single inventive concept and illustrate how from such a single concept a group of patents may originate some of which cover commercial activities, while others do not.

The preparation of titanium dioxide of the rutile modification has constituted a hope of research in the industry

for considerable time because it was known that in this modification, titanium dioxide had a higher index of refration and would, therefore, be expected to possess clearly greater tinting strength and hiding power. It was known that when heated to sufficiently high temperatures, the anatase modification converted to the rutile modification, but such treatment resulted in impairment of the pigment properties. The converted product became aggrevated, hard and off-color. Under the direction of Dr. S. S. Cole of the Titanium Division, a systematic investigation of the possibilities of converting anatase to rutile without impairment of pigment properties was undertaken. Of the five above-listed patents, all represented the inter-related discoveries made during that investigation.

Dr. Cole first discovered that if a small amount of zinc oxide was mixed with titanium dioxide or hydrated titanium oxide of the anatase modification, and the mixture heated at temperatures up to about 1025°C., conversion of the anatase to rutile was accelerated and the product resulting therefrom had not suffered such impairment of pigment properties as would preclude its use as a pigment. This discovery in itself was naturally of great interest, but it was not necessarily the whole story. Still unknown were such factors as what effect impurities contained in the titanium dioxide would have on the coversion, and whether or not compounds other than zinc oxide existed which would also facilitate the conversion preparation more effectively of zinc oxide. Investigation of such factors were also undertaken by Dr. Cole. In this connection, he made other important discoveries, for instance, he found that there existed a group of chemical compounds classifiable within certain specific crystalline groups which facilitated the conversion of anatase to rutile, and he discovered that the presence of certain impurities, especially phosphate, tended to stabilize the anatase against conversion.

Upon analysis of the Patent Department of Dr. Cole's discovery, it was determined that he had made a broad fundamental discovery with respect to the conversion of anatase to rutile by means of what may be termed, accelerating agents, and that he had also discovered (using the word "discovery" in the patent sense) a means for stabilizing anatase against conversion to rutile. Three patent applications were simultaneously filed on August 7, 1937 to cover these discoveries.

The first of these applications to be allowed and to issue as a patent was No. 2,184,938 of December 6, 1939, covering the stabilization of anatase against conversion to rutile even when zinc oxide is present, by adding small amounts of phosphate. The second of these patents to issue was No. 2,280,795, covering the conversion of anatase to rutile by means of adding a small amount of zinc oxide of a compound of zinc resulting from the chemical combination of zinc oxide and titanium dioxide, i.e. zinc titanate. The third patent to issue was No. 2,290,539, covering broadly the use of converting agents classifiable within five different crystallographic groups: (1) the spinel group; (2) the corundum group; (3) the ilmenite group; (4) the sodium chloride group; (5) the phenacite group. Since zinc oxide forms with TiO_2 when heated together, a zinc titanate which is a compound having spinel crystalline characteristics, patent No. 2,290,539 is to be considered as dominating patent No. 2,280,795 and it may be clearly stated that if zinc oxide is used in the conversion of anatase to rutile as is the case commercially, the teachings of both patent No. 2,280,795 and No. 2,290,539 are used.

N. L. Exhibit 5

As just above pointed out, patent No. 2,290,539 covered the use of compounds within five different crystallographic groups in the conversion of anatase to rutile. According to technical patent usage, each group is considered a separate species and under the Rules of Practice of the Patent Office, it is not possible to individually cover in one patent more than three species, although they may be covered generically as a group. Accordingly, as a result of this Patent Office requirement, patent No. 2,290,539 covers generically the five crystallographic groups and individually the spinel, corundum, and ilmenite groups. In order to cover individually the sodium group and the phenacite group, two additional applications were filed as divisions of the broad or generic application. These matured into patents No. 2,316,840 and No. 2,316,841.

T. 176

2,202,594 May 28, 1940 H. D. Mudford

Process of improving TiO_2 for use in delustering rayon which consists in treating the TiO_2 with a water-soluble chromium compound before adding it to the spinning mass.

T. 212

2,211,828 August 20, 1940 F. L. Kingsbury et al.

This patent covers a method for preparing titanium dioxide pigments which includes adding to a titanium sulfate solution, small amounts of certain rare earth elements, e.g. cerium, yttrium, and lanthanum and hydrolyzing the solution. Products so obtained are found to contain enhanced tinting strength.

In the course of a study of the affect on pigment properties of titanium ores of various compositions, Mr. Kings-

bury and his co-worker Mr. Schmidt at the St. Louis plant, discovered that when a certain mineral called "monazite" was absent from ilmenite, the resulting products had inferior tinting strength. Ilmenite, as found in nature, is generally associated with monazite, and the titaniferous ore employed in pigment practice, usually contains some monazite. These investigators found that when the monazite was present, a superior product was obtained. They then added some monazite to ore which did not contain any and obtained products equal to those obtained from ore materially containing monazite. By further investigation, they found that the affect of the monazite was in a large measure due to its content of rare earth elements. These discoveries are described and covered in patent No. 2,211,828.

T. 172

2,215,857 September 24, 1940 W. W. Plechner et al.

This patent covers a method of preparing dispersions of titanium dioxide in alcohols, e.g. ethyl alcohol, and ketones, e.g. acetone, by using a tannic acid compound as a dispersing agent.

Although, the principal use of titanium dioxide is in surface coating compositions such as paints, where for the most part some vegetable oil or similar material constitutes the major part of the vehicle, this pigment has found use in many places where there is a requirement for a white pigment of high coloring power. For instance, in straight synthetic resin coating composition, the vehicle may consist only of a solution of resin in alcoholic or ketonic solvent. Aniline dye printing inks also use alcoholic or ketonic solutions of dye-stuffs as do many other industrial useful compositions, such as those in the manufacture of

artificial leather liquid shoe dressing, etc. In such compositions, the titanium dioxide unless dispersed, tends to settle out. By means of the invention covered by this patent, it is possible to prepare satisfactorily stabile suspensions of titanium dioxide pigments in alcohols or ketones.

T. 220
2,215,866 September 24, 1940 H. V. Alessandroni

This invention covers a method for preparing finely divided solvents of calcium and barium by dissolving the crude material of the solvent in a molten sodium chloride bath from which they are aspirated into a quenching bath of water as a fine spray. The water dissolves the sodium chloride solvent and the finely-divided and purified calcium or barium sulfates are recovered as solid particles.

This invention represents the final step in an investigation undertaken to determine whether it would be possible to prepare calcium and barium sulfates suitable for use in the preparation of titanium dioxide composite pigments from naturally occurring calcium or barium sulfates through what is known as the "salt fusion" method.

Prior to Mr. Alessandroni, Mr. Jean McCallum in patent No. 2,039,432 of May 5, 1936, owned by National Lead Company, had covered a means of preparing calcium sulfate and barium sulfate by the salt fusion method which included the use of a reducing agent in the molten mixture of calcium or barium sulfate and sodium chloride solvent in order to form a removable slag of impurities, whereupon the purified sulfate was recovered by pouring the melt into water. Prior to McCallum's invention, there had been suggested that the melt be forced, under pressure, through more or less small orifices in order to control the particles size of the sulfate.

Mr. Alessandroni discloses and covers the employment of aspirating means to obtain a fine spray of the melt and consequently a finely-divided calcium or barium sulfate.

T. 128
2,222,385 November 19, 1940 W. F. Washburn et al.

This invention covers the method of making anhydrite calcium sulfate by adding a slurry of calcium compound, e.g. CaO, $Ca(OH)_2$, $CaCO_3$ to concentrated sulfuric acid, while controlling concentrations of acid and lime slurry, rate of mixing and temperature of reaction.

T. 216
2,227,239 December 31, 1940 H. A. Wieneke

A rotary filter provided with a drag net functioning to distribute evenly the wash liquor over the surface of the material being filtered.

T. 2[illegible]
2,234,681 March 11, 1941 W. K. Nelson et al.

Titanium dioxide pigment having improved chalk resistance properties by coating the particles of such pigment with a basic titanium phthalate prepared by suspending the pigment particles in reaction solutions from which the phthalate is formed according to the method of Case T. 231.

T. 231
2,244,258 June 3, 1941 W. K. Nelson et al.

Method for the preparation of basic titanium phthalate by adding a water-soluble phthalate, e.g. sodium phthalate, to a titanium sulfate solution in which the mol ratio of

TiO_2 to H_2SO_4 is less than 2:1, the amount of phthalate being sufficient to furnish 1 mol phthalic acid for every 2 mols of TiO_2.

T. 218

2,246,062 June 17, 1941 W. W. Plechner et al.

Method for forming blended TiO_2-calcium sulfate pigment having improved oil absorption and "break" by dry-mixing calcium sulfate with TiO_2 and then subjecting the mixture to a pulverizing milling treatment in a mill of the ring roll type.

T. 247

2,278,709 April 7, 1942 W. H. Moran

Method for digestion of titaniferous ores. Titaniferous ores and strong sulfuric acid are reacted, the digestion cake dissolved in aqueous medium, the undissolved residues are separated from the resultant solution. The solution is hydrolyzed and a sufficient amount of the acid hydrolysis mother liquor is mixed with the digestion residues to form a free-flowing slurry and this slurry is admixed with another batch of ore and strong sulfuric acid, whereupon reaction is initiated.

T. 225

2,285,485 June 9, 1942 J. Barksdale et al.

This patent covers the preparation and use of nucleating sol of titanium tetrachloride from which a part of the active acidity has been neutralized by the addition of a neutralizing agent.

N. L. Exhibit 5

T. 246
2,285,486 June 9, 1942 J. Barksdale et al.

This patent covers the preparation and use of a nucleating sol of titanium tetrachloride containing added monovalent anions, for instance, as soluble chlorides.

T. 197
2,285,894 June 9, 1942 A. O. Brooks

This patent covers an improved filter septem supporting unit for rotary filters consisting essentially of a board strip having staggered recesses at the back.

T. 224
2,291,091 July 28, 1942 D. W. Robertson

This patent covers paste paint compositions, the pigment portion of which contains from about 1.0% to about 10% by weight of TiO_2 and the balance white lead, the vehicle portion contains an oil-soluble synthetic resin. In effect, this patent discloses and covers an improved paste white lead composition. In one sense it may be regarded as a "use" patent in that it discloses the use of titanium dioxide in the preparation of an improved paste white lead composition.

T. 239
2,291,082 July 28, 1942 J. M. Jarmus et al.

This patent covers a method for improving the resistance to chalking of titanium dioxide pigments and increasing the gloss of surface coating compositions containing such pigments by intimately associating with such pigments small amounts of organic compounds called

"phthalic acid esters", e.g. dimethyl- or diphenyl- phthalates. The invention covered in this patent may be considered as a culmination of a series of studies made by different individuals of the affect upon the properties of titanium pigments by associating with such pigments phthalic acid or compounds of phthalic acid. Dr. Henry A. Gardner, the eminent authority on surface coating compositions and materials useful in such compositions, Director of the Scientific Section of the American Paint and Varnish Manufacturer's Association, was among the first to discover that when certain phthalates, for instance titanium phthalate, was intimately associated with titanium dioxide pigments, the result was to improve the chalking resistance of the titanium dioxide pigments. His discoveries were disclosed and covered in patent No. 2,037,322 and No. 2,037,323 of April 14, 1936 under which National Lead Company was non-exclusively licensed. Investigation carried out by Dr. Nelson of the research laboratories of the Titanium Division lead to the preparation of an entirely new titanium phthalate, viz. basic titanium phthalate, which was found by Dr. Nelson to be also effective in increasing the chalking resistance of TiO_2. Mr. Jarmus' work during this investigation of effective phthalate was directed to a new group, namely, organic esters of phthalic acid.

T. 196

2,329,641 September 14, 1943 – W. G. Moran et al.

This patent covers a method for the continuous attack of titaniferous ore by concentrating sulfuric acid. The reaction mixture of ore and strong sulfuric acid is continuously fed upon a moving conveyor belt having interposed between the reaction mixture and the surface of the con-

veyor a carbonizable organic material, for instance, a layer of paper. The continuously moving conveyor belt carries the mixture through a heated zone where the reaction is initiated, thence out of the zone continuously discharging the reaction product. The layer of carbonizable paper prevents sticking of the reaction product to the surfaces of the conveyor.

T. 253

2,334,663 November 16, 1943 J. B. Whitney

This patent covers an improved dust seal for rotary kilns consisting essentially of two annular flat rings enclosing a gasket of fiber glass.

T. 260

2,341,994 February 15, 1944 F. L. Kingsbury et al.

This patent covers a method for lowering what is termed the "paint bodying tendency" of calcium sulfate pigments, including calcium sulfate itself and TiO_2-$CaSO_4$ composite pigments, by mixing the particles of such pigments with certain organic compounds called "aliphatic amines" containing at least 2 nitrogen atoms, e.g. triethylene tetramine.

Consistency of "body" of a paint composition is defined as its resistance to deformation of flow. This property is related to the brushing characteristics of a paint and its adherence as a non-flowing film when it is applied wet to a surface. Not all paint compositions prepared from pigments, or mixtures of pigments and vehicles, possess a desired consistency of body. In order to produce a desired body of consistency, the paint maker adds to the paint composition during its preparation, very small amounts, 1%

and less, of water or a soap solution. In connection with this means of increasing the body of paint compositions, it was observed that when calcium sulfate pigments were present in the compositions, erratic bodying results were obtained. In general, there was produced an excessive amount of body.

The Titanium Division undertook to study this problem and if possible, develop corrective methods therefor. It appeared that the bodying tendency, excessive or otherwise, of a calcium sulfate pigment was related to the sensitivity of that pigment to moisture. As it was extremely sensitive, it generally produced an excessive bodying. Mr. Kingsbury and his co-worker, Mr. Schultz, discovered that when calcium sulfate pigments were admixed with small amounts of the above-defined amine compounds, the bodying tendency of a calcium sulfate pigment was materially lowered. In other words, they discovered how a calcium sulfate pigment possessing excessive bodying tendency could be rendered useful for the preparation of bodied paint compositions.

T. 263

2,344,265 March 14, 1944 W. W. Plechner et al.

This patent covers a method for carrying out the hydrolysis of titanium sulfate solution by first dividing the solution into a major portion and a minor portion, hydrolyzing the major portion until the titanium values are partly precipitated, then mixing the minor portion with the partially hydrolyzed major portion and hydrolyzing the mixture until the titanium values have been substantially completely precipitated.

N. L. Exhibit 5

W-5

2,344,288 March 14, 1944 R. Dahlstrom

This patent covers a method for preparing titanium sulfate solutions by reacting titaniferous ore with strong sulfuric acid; dissolving the resulting digestion cake in an aqueous solution, separating this solution from undissolved residues, heating these residues in order to dehydrate them, and if desired, to reduce the content thereof to metallic state, admixing the heated residue with fresh ore and reacting the mixture with strong sulfuric acid.

In any process based upon the attack of titaniferous ore with strong sulfuric acid, the reaction which occurs does not render soluble all of the titanium content of the ore. Explaining this another way, it may be said that the reaction does not go to completion and that the yield of recovered titanium is less than 100%. The unattacked titanium values of the ore are to be found in the solid residues separated during the clarification of the titanium solution obtained by dissolving the digestion, or attack cake. In order to increase the recovery of titanium values, the possibility of returning this residue economically, to the process, was investigated by the Titanium Division. Various techniques for accomplishing this were investigated; returning the residue directly; reacting the residue with sulfuric acid and returning the reaction products to the process; heating the residues and returning the heated residues to the digestion reaction. This latter procedure is the basis for patent No. 2,344,288. It was found that when residues are heated prior to returning them to the process, various advantages accrue, e.g. the settling rate during subsequent dissolution is increased and the amount of ferric iron present in the solution is reduced.

N. L. Exhibit 5

W-21

2,344,319 March 14, 1944 W. F. Meister

This patent covers a method of purifying titanium tetrachloride by mixing a crude impure titanium tetrachloride with iron sulfate (ferrous sulfate heptahydrate), boiling the mixture under refluxing conditions and then distilling the purified titanium tetrachloride.

The invention covered in this patent results from a systematic investigation recently undertaken by the research laboratories of the Titanium Division directed to developing, or ascertaining, the essential conditions for a process for the preparation of titanium dioxide pigments using titanium chloride solutions in place of titanium sulfate solutions. As part of this work, the influence of the purity of the starting material, titanium tetrachloride, upon the pigment properties of the ultimately obtained titanium dioxide was studied. It was found that impurities contained in the titanium tetrachloride had a marked effect particularly on the color of the final titanium dioxide pigment. Accordingly, the research laboratory gave attention to the development of a method for purifying titanium tetrachloride. Mr. Meister developed one such method and it forms the basis for patent No. 2,344,319.

W-6

2,346,296 April 11, 1944 H. Espenschied

This patent covers the preparation of an improved pigmentary grade of calcium titanate (the chemical compound resulting from the combination of lime, CaO, and titanium dioxide, TiO_2), by calcining lime and titanium dioxide together with small amounts of silica, antimony oxide, and

magnesia. The improvement thereby obtained is with respect to increased brightness and stability against photosensitivity.

The pigmentary possibilities of various titanates, including those of calcium, barium, lead, magnesium, zinc, etc. have been known for a considerable length of time. V. M. Goldschmidt in his patent No. 1,436,164 of November 21, 1922, discloses the preparation and pigmentary usefulness of such titanates. However, with the exception of lead titanate, titanate pigments have not enjoyed any considerable commercial exploitation. Among the reasons for the lack of commercial interest may be mentioned that titanate pigments do not possess the high tinting strength of pure titanium oxide, and although, in general, they are more resistant to chalking than titanium dioxide, they nevertheless, possess a tendency to discolor when exposed to the actinic rays of the sunlight.

Several years prior to 1940, Dr. W. K. Nelson of the research staff of the Titanium Division of National Lead Company, investigated the pigment possibilities of various titanates including calcium titanate. He observed that calcium titanate made from lime and titanium dioxide has a poor greyish color and displays marked photosensitivity. While the use of purified starting materials gave some improvement, he found that it was not possible to prepare a calcium titanate having a satisfactory color tinting strength and photosensitive stability. In a sense, Dr. Nelson's work can be considered as an investigation of compounds disclosed earlier by Goldschmidt and a report on their pigment properties. Following the work of Dr. Nelson, Dr. H. Espenschied undertook the study of how the color tinting strength and photosensitivity and stability of calcium titanate could be improved. His study led to the discoveries

embodied in patent No. 2,346,296 of April 11, 1944. Calcium titanate prepared according to the method of this patent possesses superior color tinting strength and photosensitive stability over products prepared by prior art methods.

W-1

2,346,320 April 11, 1944 W. G. Moran

This patent covers a method for clarifying acid liquors, especially titanium sulfate solutions, by forming, in situ, an insoluble colloidal metal sulfide, e.g., antimony sulfide, then adding a coagulating colloid, e.g., glue.

T. 243B

2,346,188 April 11, 1944 D. W. Robertson

This patent covers a method for improving the chalk resistance of titanium pigments by coating the particles thereof with zirconium silicate resulting from the reaction between a soluble zirconium salt, e.g. zirconium chloride and an alkali metal silicate, e.g. sodium silicate.

W-2

2,346,322 April 11, 1944 W. K. Nelson

This patent covers a method for improving the chalk resistant properties of titanium dioxide pigments by coating particles of such pigments with an insoluble chromium-hydrate, an insoluble white metal silicate, preferably zirconium silicate and aluminum hydrate.

DIGEST SUMMARY

DuPont Patents Used by National Lead Co.

N. L. Exhibit 6

A—Patents:

Patent No.
1,707,248 April 2, 1929 J. Blumenfeld

Process for preparing titanium dioxide including the steps of: a) digestion of ilmenite with sulfuric; b) dissolution of digestion cake; c) removal of ferrous sulfate by crstallization; d) hydrolysis and e) concentration of sulfuric acid hydrolysis mother liquor.

Patent No.
1,796,467 March 10, 1931 J. Blumenfeld
(Re.18,854)

"Seeding hydrolysis" Nucler which favorably influence the hydrolysis of a titanium sulfate solution is formed by slowly adding a titanium sulfate solution to water, or to another titanium sulfate solution of lesser concentrate, after which hydrolysis is effected by boiling.

Patent No.
1,851,487 March 29, 1932 J. Blumenfeld

Nucleated hydrolysis. According to this patent the nuclei is a colloidal solution of titanium form external to the solution to be hydrolyzed to which it is then added and hydrolysis effected by heating the mixture.

Patent No.
1,885,921 November 1, 1932 G. Kubin

Method for reducing the oil absorption of titanium dioxide pigment by first wet milling said pigment; drying it and then dry grinding it.

N. L. Exhibit 6

Patent No.
1,892,693 January 3, 1933 J. Blumenfeld et al

This patent covers the calcination of hydrous titanium oxide admixed with a small amount of an alkali metal compound, e.g. potassium sulfate whereby a soft textured, smooth pigment is obtained.

Patent No.
1,937,037 November 28, 1933 M. L. Hanahan

Method for improving the texture which comprises dispersing a titanium dioxide pigment in water by means of an alkaline-reacting dispersing agent, separating the dispersed finer particles from the settled coarser particles, and coagulating the finer particles.

Patent No.
2,044,941 June 23, 1936 M. L. Hanahan

Covers specifically the fine textured titanium dioxide obtained according to the method of patent No. 1,937,037, q.2.

T. 200
DK 1
Patent No.
2,046,054 June 30, 1936 J. E. Booge

"Blended" composite pigments prepared by intimately and uniformily mixing titanium dioxide with an extender both of which have predetermined fineness of particle size and uniformity of particle size distribution.

Patent No.
2,047,208 July 14, 1936 I. J. Krchma

Method for reducing titanium sulfate solutions by subjecting such solutions to the action of two metals, e.g. iron and tin in the form of tin-plate scrap.

N. L. Exhibit 6

Patent No.
2,111,788 March 22, 1938 I. J. Krchma

Apparatus and method for removing colloidal impurities from titanium sulfate solutions. The method includes flowing the solution through a path having an increasing cross-section, introducing a flocculating agent, e.g. glue, into the flowing solution at a point close to where the cross-section of flow increases, allowing the treated solution to flow into a vessel in which the colloidal matter settles to the bottom and the clarified solution overflows at the top.

DK 29
Patent No.
2,150,235 March 14, 1939 R. M. McKinney

Method for controlling the oil absorption of titanium dioxide pigment by calcining hydrous titanium oxide in admixture with a phosphorous compound, e.g. alkali metal phosphate or phosphoric acid, and an alkali metal salt, e.g. potassium sulfate.

DK 15
Patent No.
2,151,339 March 21, 1939 R. W. Sullivan

Method for preparing anhydrite calcium sulfate useful in the preparation of composite titanium pigment by neutralizing strong sulfuric acid with an alkaline reacting calcium compound and heating the calcium sulfate so formed in an acid medium to effect dehydration of any hydrated calcium sulfate formed.

N. L. Exhibit 6

DK 33
Patent No.
2,163,385 June 20, 1939 R. W. Sullivan

Preparation of anhydrite calcium sulfate by controlled "slaking" of lime to form a milk of lime containing between 12% and 20% CaO and reacting this milk of lime with sulfuric acid.

DK 20
Patent No.
2,187,050 January 16, 1940 G. D. Patterson

Treatment of titanium pigments with alumina by mixing a titanium pigment with a small amount of a freshly precipitated, washed, moist aluminum oxide.

DK 12
Patent No.
2,192,501 March 5, 1940 R. M. McKinney

Controlling the subordinate tint of a titanium dioxide pigment to obtain a bluish tint by cooling to 750° C after calcination in 3-5 seconds, or to obtain a yellowish tint by cooling to 750° C after calcination in 5-7½ seconds.

DK 43
Patent No.
2,214,815 September 17, 1940 M. L. Hanahan; et al.

Titanium pigments of low oil absorption by first subjecting same to a pulverizing type milling then to a disintegrating type milling.

N. L. Exhibit 6

DK 32
Patent No.
2,218,704 October 22, 1940 A. M. Erskine

Titanium dioxide usual in the preparation of lithographic inks by coating particles of titanium dioxide with hydrous titanium oxide.

DK 45
Patent No.
2,220,952 November 12, 1940 H. C. Brill

Titanium pigments yielding paints of unimpaired gloss and flow properties which comprises admixing with a titanium pigment a small amount of a metal salt of a sulfonated aromatic petroleum, e.g. the barium salt.

DK 83
Patent No.
2,224,777 December 10, 1940 J. E. Booge

Titanium pigments having improved weather resistance by calcining hydrous titanium oxide in admixture with a small amount of an antimony-oxygen compound.

DK 87
Patent No.
2,232,168 February 18, 1941 D. H. Dawson

Titanium pigments having improved weather resistance coating the particles thereof with the hydrated oxides of chromium and aluminum.

N. L. Exhibit 6

DK 63
Patent No.
2,253,595 August 26, 1941 H. J. Wood

Hydrolysis of titanium sulfate solutions by maintaining same in turbulent condition during nucleating by mechanical agitation, allowing the solution to remain quiescent until it becomes cream-colored, then agitating it to turbulence again for the remainder of the hydrolysis.

DK 49
Patent No.
2,254,630 September 2, 1941 R. W. Sullivan

Titanium pigments having improved gloss retention by coating the particles thereof with naphthenic acid and salts thereof, e.g. the calcium salt.

DK 60
Patent No.
2,259,638 October 21, 1941 W. W. Heckert

In the preparation of pigmentary useful anhydrite calcium sulfate by reaction of an alkaline calcium compound with strong sulphuric acid the hydration of the resultant calcium sulfated is retarded by having present during the reaction a small amount of a water-soluble protein, e.g. gelatin or glue.

DK 59
Patent No.
2,280,590 April 21, 1942 I. J. Krchma

Cyclical returning of digestion residues from clarification. A titanium sulfate solution is clarified by forming,

in situ, an insoluble metal sulfide, e.g. arsenic sulfide, the settled residues are returned to a digestion reaction of ilmenite and sulfuric whereby the arsenic is solubilized. The resultant solution contains the arsenic in solution which upon addition of a soluble sulfide forms insoluble arsenic sulfide which effects clarification. The cycle is then repeated.

DK 71
Patent No.
2,296,636 September 22, 1942 M. L. Hanahan

Titanium pigment having improved surface hiding power by coating the particles of such pigment with silica gel.

DK 72
Patent No.
2,296,639 September 22, 1942 M. L. Hanahan

Titanium pigment having improved surface hiding power and low water sensitivity by precipitating upon the particles of such pigment a metal silicate, e.g. calcium silicate, by means of a reaction between a water-soluble silicate, e.g. sodium silicate, and a soluble salt of a metal forming an insoluble silicate, e.g. calcium chloride.

DK 84
Patent No.
2,305,368 December 15, 1942 R. K. Whitten

Eliminating of chromium and vanadium impurities from hydrous titanium oxide by suspending such oxide in sulfuric acid and boiling the same. No more than 15% of the hydrous oxide should be dissolved. Thereafter the purified hydrous oxide is recovered and calcined.

N. L. Exhibit 6

DK 150
Patent No.
2,342,483 February 22, 1944 C. M. Olson

Method of producing titanium dioxide by hydrolyzing a titanium solution in the presence of both anatase yield-producing and rutile-inducing nuclei, separating the precipitated hydrate and calcining it to rutile TiO_2.

DK 134
Patent No.
2,357,089 August 29, 1944 W. H. Daiger

Coating titanium pigment with the silicate of a 4th Group metal, e.g. zirconium silicate by carrying out the reaction between a soluble salt of a 4th Group metal and a soluble silicate in the presence of particles of the titanium pigment in such manner that the pigment has acidic properties.

B—Patent Applications:

DK 135
Ser. No.
392,941 Filed May 10, 1941 G. R. Seidel

Improved weather resistant titanium pigments by coating particles with hydrous oxides of titanium and aluminum.

DK 141
Ser. No.
426,248 Filed January 9, 1942 C. M. Olson et al.

Rutile producing nuclei by treating hydrous titanium oxide derived from the neutralization of a titanium chloride at an elevated temperature first in an alkaline medium, then in an acidic medium.

N. L. Exhibit 6

DK 142
Ser. No.
426,249 Filed January 9, 1942 J. N. Patterson

A rutile pigment obtained by calcination in presence of alkali metal salt and a compound forming an oxide of the metals: aluminum, zinc, magnesium and beryllium.

DK 144
Ser. No.
426,251 Filed January 9, 1942 J. L. Keats.

Rutile by calcining anatase hydrate in admixture with a hydrated which yields rutile on calcination.

DK 152
Ser. No.
472,876 Filed January 19, 1943 C. M. Olson et al.

Preparation of pure "syfithetic" titanium chloride solution by adding calcium chloride to a titanium sulfate solution, separating the precipitated calcium sulfate, then adding barium chloride to precipitate residual sulfate remaining in solution.

DK 153
Ser. No.
483,058 Filed April 14, 1943 L. F. Nerlinger

White pigments with improved flat hiding power by admixing with same a minor amount of collodial bentonite.

N. L. Exhibit 7

IN THE

DISTRICT COURT OF THE UNITED STATES

FOR THE SOUTHERN DISTRICT OF NEW YORK

UNITED STATES OF AMERICA, *Plaintiff,* v. NATIONAL LEAD COMPANY, TITAN COMPANY, INC., E. I. DU PONT DE NEMOURS & COMPANY, INC., *Defendants,*	Civil No. 26-258

ANSWER OF NATIONAL LEAD COMPANY TO PLAINTIFF'S INTERROGATORIES

The defendant National Lead Company answers the plaintiff's interrogatories served September 28, 1944 as follows:

STATE OF NEW YORK } ss.:
COUNTY OF NEW YORK }

CHARLES F. KAEGEBEHN, being duly sworn, deposes and says that he is Manager of the Patent Department of National Lead Company and that he answers Interrogatory No. 1 as follows:

1. National Lead Company's subsidiary, Titanium Pigment Company, Inc., owned as assignee or had a right to use as licensee, either exclusively or non-exclusively, the following United States or foreign patents or applications for letters patent relating to the manufacture or use of TiO_2 or TiO_2 composite pigments or products containing TiO_2, on or at any time prior to January 1, 1933:

I. U. S. Patents and Patent Applications.

A. U. S. patents owned by Titanium Pigment Company, Inc., as assignee, on and prior to January 1, 1933:

	Patent No.	Date of Issue	Inventor	
	1,080,718	Dec. 9, 1913	A. J. Rossi	*Reduced titanium (titanous) chloride as a bleaching agent*
	1,080,721	Dec. 9, 1913	C. M. E. Schroeder	
	1,105,308	July 28, 1914	A. J. Rossi	
	1,106,406	Aug. 11, 1914	A. J. Rossi L. E. Barton	*"Fusion" treatment ilmenite, caustic alkal. and reducing agent (carbon), fused together, melt trated to obtain concentrate of TiO_2*
	1,106,407	Aug. 11, 1914	A. J. Rossi L. E. Barton	
	1,106,408	Aug. 11, 1914	A. J. Rossi L. E. Barton	
*Used	1,106,409	Aug. 11, 1914	A. J. Rossi L. E. Barton	
*Used	1,106,410	Aug. 11, 1914	A. J. Rossi L. E. Barton	
	1,155,462	Oct. 5, 1915	L. E. Barton	*Composite, pigment—extender formed in situ*
	1,166,547	Jan. 4, 1916	A. J. Rossi L. E. Barton	*Fusion treatment of ilmenite*
Used	1,171,542	Feb. 15, 1916	A. J. Rossi L. E. Barton	
	1,179,394	Apr. 18, 1916	L. E. Barton	
	1,184,131	May 23, 1916	A. J. Rossi	*—Production of $TiCl_4$*
	1,189,229	July 4, 1916	L. E. Barton	*—Fusion treatment of ilmenite*
	1,196,029	Aug. 29, 1916	A. J. Rossi L. E. Barton	*Fusion treatment of ilmenite —processing of TiO_2 concentrate to pure TiO_2 pigment thru step of calcining "basic titanic sulfate"*
	1,196,030	Aug. 29, 1916	A. J. Rossi L. E. Barton	
	1,196,031	Aug. 29, 1916	A. J. Rossi L. E. Barton	
	1,201,541	Oct. 17, 1916	L. E. Barton	*—Fusion treatment of ilmenite*

"Used" means: commercially used

NOTE: Italic denotes handwriting on original exhibit.

N. L. Exhibit 7

3898

	Patent No.	Date of Issue	Inventor	
	1,205,144	Nov. 21, 1916	L. E. Barton	*Composite pigment—extender formed in situ*
"Use" Patent	1,205,267	Nov. 21, 1916	A. J. Rossi C. M. E. Schroeder	*Paint containing TiO_2*
"Use" Patent	1,205,268	Nov. 21, 1916	A. J. Rossi C. M. E. Schroeder	*Paint containing TiO_2 and white lead*
"Use" Patent	1,205,269	Nov. 21, 1916	A. J. Rossi C. M. E. Schroeder	*Paint containing TiO_2 and zinc oxide*
	1,206,796	Dec. 5, 1916	L. E. Barton	*Fusion treatment of ilmenite*
	1,206,797	Dec. 5, 1916	L. E. Barton	
Used	1,206,798	Dec. 5, 1916	L. E. Barton	
	1,218,161	Mar. 6, 1917	L. E. Barton	*Composite TiO_2-$BaSO_4$ pigment and paints containing same*
	1,223,356	Apr. 24, 1917	L. E. Barton	*—TiO_2 by dilution of TiO_2*
	1,223,357	Apr. 24, 1917	L. E. Barton	*Composite pigment—extender formed separately or in situ*
	1,223,358	Apr. 24, 1917	L. E. Barton	*Pure TiO_2 from dilute solution*
	1,234,260	July 24, 1917	L. E. Barton	*Composite pigment-extender formed separately or in situ*
	1,235,638	Aug. 7, 1917	L. E. Barton	*Pure TiO_2 from dilute solution by heat and electrolysis*
"Use" Patent	1,236,367	Aug. 7, 1917	L. E. Barton	*TiO_2 in linoleum*
	1,236,655	Aug. 14, 1917	L. E. Barton	*Composite TiO_2-$BaSO_4$ pigment $BaSO_4$ formed in situ*
	1,240,405	Sept. 18, 1917	L. E. Barton	*Composite pigment-extender formed separately or in situ*
	1,251,170	Dec. 25, 1917	L. E. Barton	*Composite pigments by mechanical mixing of TiO_2 + extender*
	1,272,855	July 16, 1918	A. J. Rossi	*Hydrolysis accelerated by organic matter*

	Patent No.	Date of Issue	Inventor	
"Use" Patent	1,283,455	Nov. 5, 1918	L. E. Barton H. A. Gardner	*TiO_2 in printing inks*
	1,286,916	Dec. 10, 1918	L. E. Barton H. A. Gardner	*Colored TiO_2 lake pigment*
	1,288,473	Dec. 24, 1918	L. E. Barton	*—Ternary composite TiO_2 pigment*
	1,313,874	Aug. 26, 1919	L. E. Barton	*—Composite TiO_2 Pigment plus ZnO*
"Use" Patent	1,317,854	Oct. 7, 1919	L. E. Barton H. A. Gardner	*Coated fabrics containing TiO_2*
"Use" Patent	1,322,518	Nov. 25, 1919	L. E. Barton	*—Rubber goods containing TiO_2*
"Use" Patent	1,326,319	Dec. 30, 1919	L. E. Barton H. A. Gardner	*Rubber goods containing composite TiO_2 pigment*
	1,338,473	Apr. 27, 1920	H. Wrigley H. Spence	*Oleum plus ilmenite—steam to start reaction—removal of iron sulfate by crystallization*
Used	1,348,843	Aug. 10, 1920	L. E. Barton	*—Fusion treatment of ilmenite*
"Use" Patent	1,362,917	Dec. 21, 1920	L. E. Barton H. A. Gardner	*Glass containing TiO_2*
	1,365,882	Jan. 18, 1921	L. E. Barton H. A. Gardner	*Cellulose plastic Containing TiO_2*
	1,396,924	Nov. 15, 1921	H. H. Buckman	*Composite TiO_2-$BaSO_4$ pigment*
Used	1,402,256	Jan. 3, 1922	H. H. Buckman	*Pressure digestion*
Used T. 25	1,409,648	Mar. 14, 1922	L. E. Barton	*Composite TiO_2-$BaSO_4$ pigment separately prepared extender*
Used	1,410,056	Mar. 21, 1922	H. H. Buckman	*Pressure digestion*
	1,411,839	Apr. 4, 1922	H. H. Buckman	*Composite pigment by heating together TiO_2 plus extender*
	1,429,841	Sept. 19, 1922	H. H. Buckman	*Pressure digestion*

N. L. Exhibit 7

3960

B. U. S. patent applications owned by Titanium Pigment Company, Inc., as assignee on and prior to January 1, 1933:

	Application Serial No.	Date of Filing	Patent No. if any	Date of Issue	Applicant-Inventor	
T. 28	115,106	June 10, 1926	Abandoned	July 9, 1929		
Used T. 77A	394,917	Sept. 24, 1929	1,906,729	May 2, 1933	W. F. Washburn et al.	*Composite TiO_2-$BaSO_4$ (anhydrite) pigment—pure TiO_2 by washing out $CaSO_4$; also TiO_2-$CaSO_4$-$BaSO_4$ composite*
Used T. 78	394,918	Sept. 24, 1929	1,906,730	May 2, 1933	W. F. Washburn et al.	
T. 79	420,811	Jan. 14, 1930	Abandoned	Feb. 1933		
T. 80	424,439	Jan. 29, 1930	Abandoned	Nov. 1932		
T. 81	475,385	Aug. 14, 1930	Abandoned	Feb. 1935		
T. 84A	509,264	Jan. 16, 1931	Abandoned	Nov. 1932		
T. 87	518,898	Feb. 27, 1931	Abandoned	Sept. 1934		
T. 88	525,605	Mar. 26, 1931	Abandoned	Mar. 1933		
T. 84B	528,964	Apr. 9, 1931	Abandoned	Apr. 1933		
Used T. 67	544,284	June 13, 1931	1,916,236	July 4, 1933	L. W. Ryan	*Pure TiO_2—solution poured into hot water, organic acid, H_3PO_4 present*
T. 93	555,529	Aug. 6, 1931	Abandoned	Jan. 1935		
T. 92	569,264	Oct. 16, 1931	1,929,521	Oct. 10, 1935	L. W. Ryan et al.	*Alkali Metal Titanate M_2TiO_3*
T. 90	572,439	Oct. 31, 1931	Abandoned	Feb. 1936		
T. 91	576,198	Nov. 19, 1931	Abandoned	Nov. 9, 1932		
T. 94	580,725	Dec. 12, 1931	Abandoned	Dec. 1932		
T. 99	640,006	Oct. 28, 1932	Abandoned	June 1933		
T. 100	640,007	Oct. 28, 1932	Abandoned	June 1933		
T. 101A	640,008	Oct. 28, 1932	Abandoned	Dec. 1935		
T. 102	640,341	Oct. 29, 1932	1,969,061	Aug. 7, 1934	W. J. Cauwenberg	*Cobalt titanate*
T. 103	640,342	Oct. 29, 1932	Abandoned	Apr. 1934		
T. 104	640,343	Oct. 29, 1932	1,957,528	May 8, 1934	W. J. Cauwenberg	*Hydrolysis of solutions containing amines*

N. L. Eshibit 7

3902

C. U. S. patents exclusively licensed to Titanium Pigment Company, Inc. on or prior to January 1, 1933:

1. PATENTS OWNED BY TITAN COMPANY A/S

	Patent No.	Date of Issue	Inventor
	966,815	Aug. 9, 1910	P. Farup—*Red pigment by roasting ilmenite*
	1,087,575	Feb. 17, 1914	P. Farup *Yellow pigment by heating ilmenite with H_2SO_4*
	1,156,220	Oct. 12, 1915	P. Farup *Heating ilmenite with H_2SO_4 Leaching iron sulphate*
T. 34	1,276,644	Aug. 20, 1918	V. M. Goldschmidt—*Clarification with sulfur*
T. 17	1,288,863	Dec. 24, 1918	M. Fladmark—*Hydrolysis—boiling conc. solution*
T. 9	1,317,164	Sept. 30, 1919	A. P. Jaeger—*Uncalcined Ti-phosphate Zno pigment*
T. 10	1,317,165	Sept. 30, 1919	A. P. Jaeger—*Calcining in presence of salts*
T. 11	1,325,561	Dec. 23, 1919	P. Farup—*Leaching iron from ilmenite with HCl*
Used T. 1	1,333,819	Mar. 16, 1920	G. Jebsen—*Direct sulfuric acid attack*
Used T. 15	1,333,849	Mar. 16, 1920	H. Olsen et al.—*Controlled reduction of Ti solutions*
T. 2	1,341,307	May 25, 1920	P. Farup—*Calcining in presence of NaCl*
T. 32	1,343,441	June 15, 1920	P. Farup—*TiO_2 from Ti-nitrogen compounds*
T. 22	1,343,446	June 15, 1920	V. M. Goldschmidt—*Lake composite pigment*
T. 29	1,343,447	June 15, 1920	V. M. Goldschmidt—*Composite TiO_2—silica pigment*
T. 30	1,343,468	June 15, 1920	R. Nielsen et al.—*TiO_2—iron oxide—$CaSO_4$ pigment*
Used T. 33	1,343,469	June 15, 1920	R. Nielsen et al. *Neutralizing hydrate with calcium compounds*
Used T. 18	1,348,129	July 27, 1920	V. M. Goldschmidt—*Calcination patent*
Used T. 4	1,360,737	Nov. 30, 1920	P. Farup—*Calcination with H_3PO_4*
Used T. 13A	1,361,866	Dec. 14, 1920	G. Jebsen *Neutralizing with salt forming insoluble sulfate*
T. 13B	1,361,867	Dec. 14, 1920	G. Jebsen *Neutralizing with salt forming soluble sulfate*
T. 8	1,368,392	Feb. 15, 1921	P. Farup *TiO_2 coated with alumina*

	Patent No.	Date of Issue	Inventor
T. 21A	1,389,191	Aug. 30, 1921	V. M. Goldschmidt *Reduced violet-blue Ti pigments*
Used T. 36	1,412,027	Apr. 4, 1922	W. F. Washburn *Calcination with phosphate*
T. 37	1,539,996	June 2, 1925	P. Farup—*TiO_2 from Ti nitrogen compounds*
T. 40	1,619,036	Mar. 1, 1927	A. J. Ravnestad—*Alginate settling*
T. 43	1,852,510	Apr. 5, 1932	P. Farup—*Leaching Ti from ores with H_2SO_4 using sulfide reducing agent*

2. Patents owned by I. G. Farbenindustrie

	1,813,649	July 7, 1931	P. Weise—*Dehydration and decomposition of $FeSO_4$*
T. 144	1,816,388	July 28, 1931	A. Mittasch et al.—*TiO_2 by combustion of $TiCl_4$*
T. 65	1,849,153	Mar. 15, 1932	F. Raspe et al. *Highly concentrated Ti sulfate solutions*
T. 64	1,850,154	Mar. 22, 1932	F. Raspe et al.—*Solid titanium sulfates*
	1,850,286	Mar. 22, 1932	A. Mittasch et al. *TiO_2 by combustion of $TiCl_4$*
	1,878,013	Sept. 20, 1932	K. Staib—*Preparation of $TiCl_4$ by chlorination*
	1,891,210	Dec. 13, 1932	H. Wolff—*Colored titanate pigments*
	1,891,911	Dec. 27, 1932	J. Brode et al. *Digestion with titanous salt in the acid*

N. L. Exhibit 7

3904

D. U. S. Patent applications exclusively licensed to Titanium Pigment Company, Inc. on or prior to January 1, 1933:

1. PATENT APPLICATIONS OWNED BY TITAN COMPANY A/S

	Application Serial No.	Date of Filing	Patent No. if any	Date of Issue	Applicant-Inventor	
T. 42	185,657	Apr. 21, 1927	1,919,425	July 25, 1933	P. Farup	*Direct digestion of ilmenite with H_2SO_4 to form solution*
	185,659	Apr. 21, 1927	Abandoned	June 1932		
	580,212	Dec. 10, 1931	Abandoned	Nov. 1932		

2. PATENT APPLICATIONS OWNED BY I. G. FARBENINDUSTRIE

	Application Serial No.	Date of Filing	Patent No. if any	Date of Issue	Applicant-Inventor	
	176,286	Mar. 17, 1927	Abandoned			
	176,288	Mar. 17, 1927	Abandoned			
	176,290	Mar. 17, 1927	Abandoned			
	240,650	Dec. 16, 1927	Abandoned			
	272,563	Apr. 28, 1928	Abandoned			
	353,254	Apr. 6, 1929	Abandoned			
	431,974	Feb. 27, 1930	Abandoned			
	555,141	Aug. 4, 1931	Abandoned			
	580,212	Dec. 10, 1931	Abandoned			
T. 123	590,774	Feb 3, 1932	2,068,294	Jan. 19, 1937	E. Korinth et al.	*Colored Ti- pigments*

II. Foreign Patents and Patent Applications

A. Canadian patents owned by Titanium Pigment Company, Inc. as assignee on and prior to January 1, 1933:

Patent No.	Date of Issue
172,736	Oct. 24, 1916
178,261	July 17, 1917
178,262	July 17, 1917
178,263	July 17, 1917
179,281	Sept. 11, 1917
179,282	Sept. 11, 1917
179,283	Sept. 11, 1917
179,284	Sept. 11, 1917
182,752	Mar. 5, 1918
182,753	Mar. 5, 1918
191,178	June 24, 1919
191,179	June 24, 1919
191,180	June 24, 1919
191,181	June 24, 1919
231,297	May 22, 1923
242,164	Aug. 12, 1924
274,070	Sept. 20, 1927
280,396	May 22, 1928
285,502	Apr. 2, 1929
287,387	Dec. 19, 1929
288,502	Apr. 2, 1929
293,020	Sept. 10, 1929
294,177	Oct. 22, 1927
297,835	Feb. 25, 1931
299,992	May 6, 1930
314,890	Sept. 1, 1931
317,076	Nov. 10, 1931
317,077	Nov. 10, 1931

N. L. Exhibit 7

B. Canadian patents exclusively licensed to Titanium Pigment Company, Inc. on or prior to January 1, 1933:

1. PATENTS OWNED BY TITAN COMPANY A/S

	Patent No.	Date of Issue
T. 34	188,808	Feb. 25, 1919
T. 2	201,703	July 6, 1920
T. 4	201,704	July 6, 1920
	Re. 221,526	July 25, 1922
T. 8	201,705	July 6, 1920
T. 12	201,706	July 6, 1920
T. 9	201,707	July 6, 1920
T. 10	201,708	July 6, 1920
T. 1	201,709	July 6, 1920
T. 13 A. + B	201,710	July 6, 1920
T. 14	201,711	July 6, 1920
T. 18	201,712	July 6, 1920
T. 21	201,713	July 6, 1920
T. 22	201,714	July 6, 1920
T. 29	201,715	July 6, 1920
T. 17	201,716	July 6, 1920
T. 30	201,717	July 6, 1920
T. 15	201,718	July 6, 1920
T. 33	201,719	July 6, 1920
T. 36	225,981	Nov. 14, 1922
T. 37	248,408	Mar. 31, 1925
T. 46	296,929	Jan. 21, 1930
T. 42	309,110	Mar. 3, 1931
T. 43	320,439	Mar. 8, 1932

2. PATENTS OWNED BY TITAN CO. INC.

	Patent No.	Date of Issue
T. 82	328,339	Dec. 6, 1932

3. PATENTS OWNED BY I. G. FARBENINDUSTRIE

	Patent No.	Date of Issue
T. 62	285,355	Dec. 4, 1928
T. 64	301,199	June 17, 1930
T. 65	301,200	June 17, 1930
T. 55	314,219	Aug. 11, 1931

N. L. Exhibit 7

C. Canadian patent applications exclusively licensed to Titanium Pigment Company, Inc. on or prior to January 1, 1933:

1. PATENT APPLICATIONS OWNED BY TITAN COMPANY A/S

	Serial No.	Date of Filing	Patent No.	Date of Issue
T.36	241,087	May 7, 1920	225,981	Nov. 14, 1922
T.83	384,569	Dec. 11, 1931	Abandoned	

2. PATENT APPLICATIONS OWNED BY I. G. FARBENINDUSTRIE

	Application Serial No.	Date of Filing	Patent No.	Date of Issue
T.59	342,140	Oct. 8, 1928	Abandoned	
T.66	349,044	Apr. 8, 1929	Abandoned	
T.76B	380,664	Aug. 26, 1931	Abandoned	
T.98	393,073	Sept. 29, 1932	339,670	Feb. 27, 1934

D. Newfoundland patents exclusively licensed to Titanium Pigment Company, Inc. on or prior to January 1, 1933:

	Patent No.	Date of Issue
T. 13	253	Nov. 28, 1917
T. 1	258	Apr. 4, 1918
T. 17	278	Nov. 11, 1918
T. 15	283	Dec. 19, 1918
T. 18	284	Dec. 18, 1918
T. 19	285	Dec. 19, 1918
T. 34	326	Feb. 14, 1920

E. Mexican patents exclusively licensed to Titanium Pigment Company, Inc. on or prior to January 1, 1933:

	Patent No.	Date of Issue
T. 36	19,396	Aug. 1, 1919

F. Brazilian patents owned by Titanium Pigment Company, Inc. on or prior to January 1, 1933:

	Patent No.	Date of Issue
T. 69	18,261	Mar. 11, 1930

	Patent No.	Date of Issue	Inventor	
T. 21B	1,436,164	Nov. 21, 1922	V. M. Goldschmidt	*Titanate pigments*
T. 39	1,501,587	July 15, 1924	C. A. Doremus	*TiO_2 from hydrofluoric acid solutions*
Used T. 28	1,680,316	Aug. 14, 1928	L. E. Barton	*—Composite TiO_2-Acicular $CaSO_4$ pigment*
T. 26	1,695,270	Dec. 18, 1928	L. W. Ryan, L. E. Barton, C. J. Kinzie	*Fusion treatment of ilmenite*
Used T. 27	1,697,929	Jan. 8, 1929	L. W. Ryan	*—Potassium titanate*
T. 54	1,738,765	Dec. 10, 1929 (*I. G.*)	F. Doerinckel, L. Mehler	*Hydrolysis of solutions reduced with sulfur reducing agents*
T. 63	1,758,472	May 13, 1930 (*I. G.*)	M. Schnetka	*Hydrolysis of solutions containing fluorides*
Used T. 41	1,773,727	Aug. 26, 1930 (*A/S*)	P. Farup	*Continuous hydrolysis*
Used T. 67	1,820,987	Sept. 1, 1931	L. W. Ryan	*Pure TiO_2 — solution poured into hot water; organic acid, H_3PO_4 present*
Used T. 68	1,820,988	Sept. 1, 1931	L. W. Ryan	
T. 44	1,831,852	Nov. 17, 1931 (*A/S*)	P. Farup	*Dissolving TiO_2 from reduced ore*
"Use" Patent T. 69	1,847,539	Mar. 1, 1932	A. H. Sabin	*Nitrocellulose paint containing TiO_2*
T. 151	1,856,565	May 3, 1932	C. A. Klein, R. S. Brown	*TiO_2-$BaSO_4$ composite pigment*
Used T. 47	1,889,027	Nov. 29, 1932	W. F. Washburn	*—Tank digestion*

N. L. Exhibit 7

G. Brazilian patents non-exclusively licensed to Titanium Pigment Company, Inc. on or prior to January 1, 1933:

1. By Titan Company A/S

	Patent No.	Date of Issue
T. 17	10,482	Aug. 31, 1917
T. 18	10,483	Aug. 20, 1919
T. 19	10,484	Aug. 20, 1919
T. 36	12,009	June 20, 1921

H. Argentine patents owned by Titanium Pigment Company, Inc. on or prior to January 1, 1933:

	Patent No.	Date of Issue
T. 69	33,282	Apr. 8, 1930

J. Argentine patents non-exclusively licensed to Titanium Pigment Company, Inc. on or prior to January 1, 1933:

1. By Titan Company A/S

	Patent No.	Date of Issue
T. 17	14,128	Dec. 28, 1917
T. 36	14,477	Dec. 30, 1921
T. 19	14,740	July 19, 1918
T. 18	14,862	Aug. 20, 1918

K. Other foreign patents and patent applications owned by Titanium Pigment Co., Inc. on or prior to January 1, 1933:

1. *Great Britain*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
U. S. P. 1,205,144	105,645	May 9, 1916
U. S. P. 1,106,409	105,646	May 10, 1916
U. S. P. 1,196,030	105,853	May 14, 1916
1,205,268		
U. S. P. 1,205,269	105,962	May 2, 1916
U. S. P. 1,206,798	106,428	Nov. 22, 1916
U. S. P. 1,206,797	106,584	Nov. 22, 1916
U. S. P. 1,206,796	106,585	Nov. 22, 1916
U. S. P. 1,189,229	108,693	June 15, 1916
1,206,269		
U. S. P. 1,218,161	108,805	Jan. 11, 1917

N. L. Exhibit 7

Patent No.		Date of Issue
U. S. P. 1,234,260	108,875	June 15, 1916
U. S. P. 1,236,367	110,324	June 14, 1917
U. S. P. 1,326,319	111,257	June 29, 1917
T. 25	180,089	Feb. 28, 1921
T. 39	206,809	Nov. 8, 1922
T. 28	281,459	Nov. 9, 1926
T. 47	288,569	Apr. 12, 1927
T. 27	289,111	Nov. 17, 1926
T. 68	308,723	Mar. 27, 1928
T. 69	329,333	Nov. 12, 1928
T. 78	364,112	Sept. 24, 1929
T. 77A	364,562	Sept. 24, 1929
T. 80	370,088	Jan. 29, 1930
T. 79	374,420	Jan. 14, 1930
T. 81A	387,720	Aug. 14, 1930
T. 84A	395,406	Jan. 16, 1931
T. 84B	399,183	Apr. 9, 1931
T. 93	405,340	Aug. 6, 1931
T. 92	408,215	Oct. 16, 1931
T. 90	409,354	Oct. 31, 1931
T. 91	410,749	Nov. 19, 1931
T. 102	413,915	Oct. 29, 1932
T. 103	415,602	Oct. 29, 1932
T. 101A	416,615	Oct. 28, 1932
T. 100	417,699	Oct. 28, 1932
T. 99	426,881	Oct. 28, 1932

b. Patent applications owned by Titanium Pigment Company, Inc. Ser. No. 28,948 of Nov. 16, 1926—Abandoned.

2. *France*

a. Patents owned by Titanium Pigment Company, Inc.

Patent No.		Date of Issue
	481,721	May 11, 1916
U. S. P. 1,205,144	481,722	May 11, 1916
U. S. P. 1,196,030	482,699	Aug. 29, 1916
U. S. P. 1,189,229	483,197	June 24, 1916
U. S. P. 1,234,260	483,198	June 24, 1916
U. S. P. 1,206,796	483,780	Dec. 12, 1916

N. L. Exhibit 7

	Patent No.	Date of Issue
U.S.P. 1,206,797	483,781	Dec. 12, 1916
U.S.P. 1,206,798	483,782	Dec. 12, 1916
U.S.P. 1,326,319	485,975	May , 1917
T. 25	533,866	Apr. 7, 1921
T. 39	566,890	May 31, 1923
T. 26	624,944	Nov. 22, 1926
T. 27	624,945	Nov. 22, 1926
T. 28	624,946	Nov. 22, 1926
T. 47	652,357	Apr. 7, 1928
T. 67	672,002	Mar. 25, 1929
T. 68	672,003	Mar. 25, 1929
T. 69	666,109	Dec. 20, 1928
T. 77A	704,044	Sept. 22, 1930
T. 78	704,585	Sept. 22, 1930
T. 80	709,953	Jan. 26, 1931
T. 81A	721,188	Aug. 10, 1931
T. 79	722,035	Jan. 10, 1931
T. 84A	729,798	Jan. 15, 1932
T. 87/88	732,219	Feb. 26, 1932
T. 84B	734,601	Apr. 4, 1932
T. 93	740,890	Aug. 5, 1932
T. 92	743,851	Oct. 10, 1932
T. 90	744,617	Oct. 27, 1932
T. 94	747,370	Dec. 10, 1932
T. 91	748,714	Nov. 19, 1932

3. *Norway*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
U.S.P. 1,206,798	28,673	
U.S.P. 1,236,367	29,191	Mar. 2, 1918
U.S.P. 1,206,796	29,194	Mar. 2, 1918
T. 25	35,887	Mar. 15, 1921
T. 39	40,481	June 5, 1923
T. 28	45,513	Oct. 28, 1926
T. 69	47,269	Nov. 26, 1928
T. 27	47,530	Sept. 27, 1926
T. 67	47,727	Mar. 26, 1929

N. L. Exhibit 7

	Patent No.	Date of Issue
T. 68	47,728	Mar. 26, 1929
T. 47	50,751	April 4, 1928
T. 77A	52,185	Sept. 18, 1930
T. 78	52,186	Sept. 18, 1930
T. 79	52,224	Jan. 8, 1931
T. 81A	52,225	Aug. 6, 1931
T. 80	52,716	Jan. 23, 1931
T. 84A	53,171	Jan. 15, 1932
T. 92	53,466	Oct. 11, 1932
T. 90	55,058	Oct. 25, 1932

b. Patent applications owned by Titanium Pigment Company, Inc.
Ser. No. 36,035 filed Sept. 27, 1926—Abandoned.

4. *Sweden*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
U. S. P. 1,205,144	43,728	Prior to 1920
U. S. P. 1,206,798	43,837	Prior to 1920
U. S. P. 1,206,796	44,896	Prior to 1920
U. S. P. 1,189,229	45,386	Prior to 1920
U. S. P. 1,206,797	45,387	Prior to 1920
U. S. P. 1,234,260	46,581	Prior to 1920
T. 25	56,548	Mar. 23, 1921
T. 28	66,352	Nov. 8, 1926
T. 47	70,868	Feb. 7, 1928

b. Patent applications owned by Titanium Pigment Company, Inc.
T. 69 Ser. No. 5,294/Dec. 7, 1928—Abandoned.

5. *Denmark*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 25	30,456	Oct. 4, 1922
T. 69	41,799	Feb. 26, 1930

6. *Finland*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 69	13,998	Dec. 24, 1928

7. *Germany*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 25	399,690	Mar. 18, 1921
T. 27	497,626	Nov. 17, 1926
T. 28	516,314	Nov. 11, 1926
T. 67	542,007	Mar. 16, 1929
T. 68	542,341	Mar. 16, 1929
T. 80	570,875	Jan. 28, 1931
T. 47	571,387	Mar. 13, 1928
T. 78	588,230	Sept. 23, 1930
T. 77A	588,446	Sept. 23, 1930
T. 77B.	602,499	Sept. 23, 1930
T. 90	604,311	Oct. 28, 1932
T. 81A	607,395	Aug. 2, 1931
T. 92	610,117	Oct. 9, 1932

b. Patent applications owned by Titanium Pigment Company, Inc.

T. 26	Ser. No. T. 32,629 filed Nov. 16, 1926—Abandoned
T. 69	Ser. No. T. 36,018 filed Nov. 28, 1928—Abandoned
T. 79	Ser. No. T. 93.30 filed Dec. 30, 1930—Abandoned
T. 84A	Ser. No. T. 40,042 filed Jan. 11, 1932—Abandoned
T. 87/88	Ser. No. T. 40,295 filed Feb. 1932—Abandoned
T. 100	Ser. No. T. 43,188 filed Oct. 25, 1933—

8. *Holland*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 25	11,137	Mar. 16, 1924
T. 27	20,175	May 16, 1929
T. 28	21,863	Apr. 17, 1930
T. 47	23,311	Nov. 16, 1930
T. 67	25,992	Dec. 16, 1931
T. 68	27,331	June 16, 1932
T. 77a	29,514	Mar. 16, 1933

b. Patent applications owned by Titanium Pigment Company, Inc.

T. 69	Ser. No. 44,144 filed Dec. 18, 1928—Abandoned
T. 26	Ser. No. 35,168 filed Nov. 20, 1926—Abandoned

9. *Belgium*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 25	295,265	Mar. 30, 1921
T. 26	337,705	Nov. 22, 1926
T. 27	337,706	Nov. 22, 1926
T. 28	337,707	Nov. 22, 1926
T. 28	339,131	Nov. 22, 1926
T. 47	350,408	Apr. 10, 1928
T. 69	356,909	Dec. 26, 1928
T. 68	359,277	Mar. 25, 1929
T. 67	359,278	Mar. 25, 1929
T. 77a	373,617	Sept. 22, 1930
T. 78	373,618	Sept. 22, 1930
T. 79	376,414	Jan. 10, 1931
T. 80	376,868	Jan. 27, 1931
T. 81a	381,873	Aug. 8, 1931
T. 84a	385,695	Jan. 15, 1932
T. 84b	387,571	Apr. 2, 1932
T. 93	390,257	Aug. 5, 1932
T. 92	391,522	Oct. 10, 1932
T. 90	391,907	Oct. 27, 1932
	392,999	Dec. 12, 1932

10. *Switzerland*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 47	139,175	Mar. 16, 1928
T. 69	140,420	Dec. 13, 1928

N. L. Exhibit 7

11. *Italy*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 25	197,237	Mar. 31, 1921
T. 26	254,774	Dec. 2, 1926
T. 28	254,805	Dec. 9, 1926
T. 27	255,007	Dec. 4, 1926
T. 47	268,607	Apr. 11, 1928
T. 68	278,869	Mar. 26, 1929
T. 67	278,951	Mar. 26, 1929
T. 69	280,791	Dec. 15, 1928
T. 77a	292,859	Sept. 23, 1930
T. 79	295,579	Jan. 13, 1931
T. 80	296,005	Jan. 27, 1931
T. 78	297,295	Sept. 23, 1930
T. 81a	307,945	Aug. 10, 1931
T. 93	308,908	Aug. 5, 1932
T. 92	309,791	Oct. 13, 1932
T. 94	321,995	Dec. 10, 1932
U. S. P:1,325,319	473/249	

12. *Austria*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 25	91,173	July 15, 1922
T. 28	111,241	June 15, 1928
T. 27	113,110	Dec. 15, 1928
T. 47	121,436	Apr. 15, 1929
T. 69	123,793	Mar. 15, 1931

b. Patent applications owned by Titanium Pigment Company, Inc.

Ser. No. 72,540 filed Nov. 20, 1926—Abandoned

N. L. Exhibit 7

13. *Czechoslovakia*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 25	12,757	Dec. 15, 1923
T. 28	28,664	Oct. 15, 1929
T. 27	31,456	Oct. 15, 1929
T. 67	34,295	July 15, 1930
T. 68	36,167	Jan. 15, 1931
T. 47	39,354	Dec. 15, 1931

b. Patent applications owned by Titanium Pigment Company, Inc.

T. 26 Ser. No. P. 5,837 filed Nov. 22, 1926—Abandoned
T. 69 Ser. No. 653 filed Jan. 28, 1929—Abandoned

14. *Poland*

a. Patent applications owned by Titanium Pigment Company, Inc.
Ser. No. 25,246 filed Dec. 22, 1928—Abandoned
Ser. No. 27,764 —Abandoned

15. *Hungary*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 25	85,218	Mar. 24, 1921

16. *Spain*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 25	77,912	July 11, 1921
T. 47	106,364	Apr. 12, 1927
T. 69	110,633	May 4, 1929
T. 67	112,061	Mar. 27, 1928
T. 68	112,062	Mar. 27, 1928
T. 80	123,695	Sept. 5, 1931
T. 81a	123,746	Aug. 14, 1930

17. *Portugal*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 25	12,228	May 31, 1922
T. 69	15,625	Aug. 12, 1929

18. *Irish Free State*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 69	10,696	Jan. 26, 1929
T. 25	180,089	Feb. 28, 1921
T. 39	206,809	Apr. 12, 1927
T. 47	288,569	Apr. 12, 1927

19. *British India*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 25	7,165	July 4, 1921
T. 69	15,361	Nov. 12, 1928

20. *Japan*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 25	45,241	Apr. 17, 1923
T. 28	75,851	Dec. 9, 1927
T. 77a	94,271	Oct. 7, 1931
T. 78	94,534	Oct. 9, 1931

b. Patent applications owned by Titanium Pigment Company, Inc.

T. 68	Ser. No. 1,509 filed Feb. 8, 1929—Abandoned
T. 69	Ser. No. 5-1929 filed Dec. 31, 1928—Abandoned

N. L. Exhibit 7

21. *Australia*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 80	225/31	Jan. 29, 1930
T. 25	2,775	July 25, 1921
T. 92	9,515	Oct. 16, 1931
T. 47	12,371	Apr. 12, 1927
T. 67	19,134	Mar. 27, 1928
T. 69	19,766	Apr. 29, 1929
T. 68	25,578	Mar. 27, 1928
T. 77a	29,173/30	Sept. 24, 1929
T. 78	29,174/30	Sept. 24, 1929

22. *New Zealand*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 25	46,364	Aug. 9, 1921
T. 47	60,291	Apr. 12, 1927
T. 69	62,626	May 1, 1929
T. 92	69,759	Oct. 16, 1931

23. *South Africa*

a. Patents owned by Titanium Pigment Company, Inc.

	Patent No.	Date of Issue
T. 25	671-21	July 8, 1921

CHARLES F. KAEGEBEHN

Sworn to before me this
20th day of October, 1944.

OLGA ISABEL HORVATH
Notary Public, Nassau County
Nassau Co. Clk's No. 652
N. Y. Co. Clk's No. 104
Register's No. 59-H-6
Commission Expires March 30, 1946

(NOTARIAL SEAL)

N. L. Exhibit 7

STATE OF NEW YORK }
COUNTY OF NEW YORK } ss.:

JOHAN R. KNOFF, FRANKLIN L. KINGSBURY, and LOUIS E. BARTON, each being duly sworn, depose and say that said JOHAN R. KNOFF and said Franklin L. Kingsbury are research chemists of the Titanium Division of National Lead Company and that said Louis E. Barton is a director of Titanium Pigment Corporation, a subsidiary of National Lead Company, and that they answer Interrogatory No. 2 as follows:

2. The Titanium Pigment Company, Inc. on or prior to January 1, 1933 used the following United States or foreign patents or applications for Letters Patent in the manufacture of TiO_2 or TiO_2 composite pigments or products containing TiO_2:

I. United States Patents

A. Patents owned by Titanium Pigment Company, Inc.:

	Patent No.	
Where explanatory titles are not given they will be found in patents listed in answer to No. 1	1,106,409 1,106,410 1,171,542 1,196,236 1,206,798 1,348,843	*Fusion treatment of ilmenite*
	1,402,256	*Pressure digestion of ilmenite*
	1,409,648	*Composite pigment TiO_2-$BaSO_4$ pigment separately prepared extender*
	1,410,056	*Pressure digestion of ilmenite*
T. 28	1,680,316	*Composite TiO_2-acicular $CaSO_4$ pigment*
T. 27	1,697,929	*Potassium titanate*
T. 41	1,773,727	*Continuous hydrolysis*
T. 68	1,820,988	*Pure TiO_2—solution poured into hot water organic acid, H_3PO_4 present*
T. 47	1,889,027	*Tank digestion*
T. 67	1,820,987	*Pure TiO_2—solution poured into hot water organic, H_3PO_4 present*

N. L. Exhibit 7

B. Patent applications owned by Titanium Pigment Company, Inc.:

(The following statement of use is made with respect only to those patent applications listed in answer to Interrogatory No. 1, Sec. I. B, which matured to letters patent.)

	Application Serial No.	Patent No.
T. 77a	394,917	1,906,729
T. 78	394,918	1,906,730
T. 67	544,284	1,916,236

C. Patents exclusively licensed to Titanium Pigment Company, Inc.:

1. PATENTS OWNED BY TITAN COMPANY A/S

	Patent No.
T. 1	1,333,819
T. 15	1,333,849
T. 33	1,343,469
T. 18	1,348,129
T. 4	1,360,737
T. 13	1,361,866
T. 36	1,412,027

JOHAN R. KNOFF
FRANKLIN L. KINGSBURY
LOUIS E. BARTON

Sworn to before me this 20th day of October, 1944.

(NOTARIAL SEAL)

COUNTY OF NEW YORK }
STATE OF NEW YORK } ss.:

CHARLES F. KAEGEBEHN, being duly sworn, deposes and says that he answers Interrogatory No. 3 as follows:

3. National Lead Company now owns as assignee or has the right to use as licensee, either exclusively or non-exclusively, the following United States or foreign patents or applications for letters patent relating to the manufacture or use of TiO_2 or TiO_2 composite pigments or products containing TiO_2:

I. U. S. Patents and Patent Applications

A. U. S. patents now owned by National Lead Company as assignee:

	Patent No.	Date of Issue	Inventor	
T. 28	1,680,316	Aug. 14, 1928	L. E. Barton et al.	*Composite TiO_2—acicular $CaSO_4$ pigment*
T. 26	1,695,270	Dec. 18, 1928	L. E. Barton et al.	*Fusion treatment of ilmenite*
T. 27	1,697,929	Jan. 8, 1929	L. W. Ryan	*Potassium titanate*
T. 54	1,738,765	Dec. 10, 1929 (*I. G.*)	F. Doerinchel et al.	*Hydrolysis of solutions reduced with sulfur reducing agents*
T. 63	1,758,472	May 13, 1930 (*I. G.*)	M. Schnetka	*Hydrolysis of solutions containing fluorides*
T. 41	1,773,727	Aug. 26, 1930 (A/S)	P. Farup	*Continuous hydrolysis*
T. 67	1,820,987	Sept. 1, 1931	L. W. Ryan	*Pure TiO_2—solution poured into hot water; organic acid, H_3PO_4 present*
T. 68	1,820,988	Sept. 1, 1931	L. W. Ryan	
T. 44	1,831,852	Nov. 17, 1931 (*A/S*)	P. Farup	*Dissolving TiO_2 from reduced ore*

	Patent No.	Date of Issue	Inventor
"Use" Patent T. 69	1,847,539	Mar. 1, 1932	A. H. Sabin *Nitrocellulose paint containing TiO_2*
T. 151	1,856,565	May 3, 1932	C. A. Klein et al *composite TiO_2-$BaSO_4$ pigment*
T. 47	1,889,027	Nov. 29, 1932	W. F. Washburn—*Tank digestion*
†*Used T. 77a*	1,906,729	May 2, 1933	W. F. Washburn et al. *Composite TiO_2-$CaSO_4$ (anhydrite) pigment — pure TiO_2 by washing out $CaSO_4$; TiO_2-$CaSO_4$-$BaSO_4$ composite*
Used T. 78	1,906,730	May 2, 1933	W. F. Washburn et al.
†*Used T. 67*	1,916,236	July 4, 1933	L. W. Ryan—*Pure TiO_2—of 1,820,987-988 above*
T. 92	1,929,521	Oct. 10, 1933	L. W. Ryan et al. *Alkali metal titanate M_2TiO_3*
T. 104	1,957,528	May 8, 1934	W. J. Cauwenberg *Hydrolysis of solution containing amines*
T. 102	1,969,061	Aug. 7, 1934	W. J. Cauwenberg—*Cobalt titanate*
T. 114	2,034,923	Mar. 24, 1936	C. L. Schmidt *Nuclei precipitated from iron-free Ti solutions*
†*Used T. 119*	2,039,432	May 5, 1936	J. McCallum *Salt fusion preparation of $CaSO_4$ and $BaSO_4$*
Used T. 81B	2,055,222	Sept. 22, 1936	W. F. Washburn et al. *Hydrolysis using $CaSO_4$ anhydrite plus ortho nuclei*
T. 101B	2,084,826	June 22, 1937	L. W. Ryan et al.—*Leached ilmenite*
T. 116	2,084,917	June 22, 1937	W. K. Nelson—*Acidic ($AlCl_3$) dispersing in wet milling*
"Use" Patent T. 173	2,084,918	June 22, 1937	W. K. Nelson *Alcoholic dispersions of TiO_2*
T. 108	2,091,799	Aug. 31, 1937	(*T. G*) P. Weise *Hydrolysis in presence of Ti-phosphate*
T. 113	2,098,278	Nov. 9, 1937	R. Dahlstrom et al.—*Nuclei precipitated from Ti solutions*
T. 162	2,113,945	Apr. 12, 1938	W. W. Plechner et al.—*Rutile from chloride solution*
T. 179B	2,113,946 Re. 21,693	Apr. 12, 1938	W. W. Plechner et al.—*Rutile from halide solutions*
"Use" Patent T. 164	2,130,560	Sept. 20, 1938	W. W. Plechner et al.—*Wax dispersions of TiO_2*

†*Use discontinued—cf Answer to No. 6.*

N. L. Exhibit 7

3922

	Patent No.	Date of Issue	Inventor
T. 150	2,130,565	Sept. 20, 1938	C. L. Schmidt—*Readily soluble digestion cake*
"Use" Patent T. 175	2,132,491	Oct. 11, 1938 (*I.C.I.*)	H. D. Mudford—*Artificial silk delustered with chromium treated TiO_2*
T. 154B	2,133,251	Oct. 11, 1938	A. T. McCord—*Purification of acid liquors*
Used T. 184	2,140,222	Dec. 13, 1938	H. Espenschied—*Improved lead titanate pigment*
Used T. 158	2,148,283	Feb. 21, 1939	W. F. Washburn—*Bleaching hydrous TiO_2*
† *Used T. 203*	2,154,130	Apr. 11, 1939	F. L. Kingsbury—*Digestion in presence of H_3PO_4*
Used T. 171	2,166,082	July 11, 1939	W. F. Washburn et al.—*Control of color tone*
T. 209	2,167,626	Aug. 1, 1939	H. V. Alessandroni
T. 210	2,167,627	Aug. 1, 1939	H. V. Alessandroni — *Ti pigments from sphene*
T. 211	2,167,628	Aug. 1, 1939	H. V. Alessandroni
T. 219	2,170,800	Aug. 29, 1939	L. E. Barton—*TiO_2-$CaCO_3$ composite pigment*
† *Used T. 182*	2,170,940	Aug. 29, 1939	R. Dahlstrom—*Control of color tone*
T. 137	2,176,875	Oct. 24, 1939	H. V. Alessandroni
T. 137B	2,176,876	Oct. 24, 1939	H. V. Alessandroni
T. 137C	2,176,877	Oct. 24, 1939	H. V. Alessandroni
T. 206	2,184,938	Dec. 26, 1939	S. S. Cole
Used T. 176	2,202,594	May 28, 1940	H. D. Mudford
T. 212	2,211,828	Aug. 20, 1940	F. L. Kingsbury et al.
T. 229	2,212,629	Aug. 27, 1940	H. V. Alessandroni
"Use" Patent T. 172	2,215,857	Sept. 24, 1940	W. W. Plechner et al.
T. 220	2,215,866	Sept. 24, 1940	H. V. Alessandroni
Used T. 128	2,222,385	Nov. 19, 1940	W. F. Washburn et al.
Used T. 216	2,227,239	Dec. 31, 1940	H. A. Wiencke
† *Used T. 231B*	2,234,681	Mar. 11, 1941	W. K. Nelson et al.
† *Used T. 231*	2,244,258	June 3, 1941	W. K. Nelson et al.
† *Used T. 218*	2,246,062	June 17, 1941	W. W. Plechner et al.

† *Use discontinued—cf Answer to No. 6.*

	Patent No.	Date of Issue	Inventor	
Used T. 247	2,278,709	Apr. 7, 1942	W. H. Moran	
Used T. 205	2,280,795	Apr. 28, 1942	S. S. Cole et al.	
Used T. 225	2,285,485	June 9, 1942	J. Barksdale et al.	
Used T. 246	2,285,486	June 9, 1942	J. Barksdale et al.	
Used T. 197	2,285,894	June 9, 1942	A. O. Brooks	
Used T. 204	2,290,539	July 21, 1942	S. S. Cole	
T. 224	2,291,091	July 28, 1942	D. W. Robertson	
T. 239	2,291,082	July 28, 1942	J. M. Jarmus et al.	
T. 204B	2,316,840	Apr. 20, 1943	S. S. Cole	
T. 204C	2,316,841	Apr. 20, 1943	S. S. Cole	
T. 196	2,329,641	Sept. 14, 1943	W. G. Moran et al.	
Used T. 253	2,334,663	Nov. 16, 1943	J. B. Whitney	
T. 260	2,341,994	Feb. 15, 1944	F. L. Kingsbury et al.	
Used T. 263	2,344,265	Mar. 14, 1944	W. W. Plechner et al.	
W. 5	2,344,288	Mar. 14, 1944	R. Dahlstrom	
W. 21	2,344,319	Mar. 14, 1944	W. F. Meister	
W. 6	2,346,296	Apr. 11, 1944	H. Espenschied	
Used W. 1	2,346,320	Apr. 11, 1944	W. G. Moran	
† *Used T. 243B*	2,346,188	Apr. 11, 1944	D. W. Robertson	
Used W. 2	2,346,322	Apr. 11, 1944	W. K. Nelson	

B. U. S. Patent applications now owned by National Lead Company as assignee:

	Serial No.	Filing Date	Applicant
T. 243	302,116	Oct. 31, 1939	D. W. Robertson et al. *Silica coated Ti-pigments*
Used T. 195	364,986	Nov. 9, 1940	S. W. Martin—*Milling method*
T. 251	371,587	Dec. 24, 1940	R. Dahlstrom—*Stabilizing Ti-sulfate solutions*
Pat. No. 2,365,559 12/19/44 T. 259	391,098	Apr. 30, 1941	F. L. Kingsbury et al.—*Lowering "body" of $CaSO_4$ pigments*

† *Use discontinued—cf Answer to No. 6.*

N. L. Exhibit 7

3924

	Patent No.	Date of Issue	Inventor	
DK 17	2,113,380	Apr. 5, 1938	J. B. Nichols	
DK 10	2,125,340	Aug. 2, 1938	C. R. Hager	
DK 16	2,127,247	Aug. 16, 1938	D. H. Dawson	
	2,136,313	Nov. 8, 1938	G. D. Patterson	
	2,138,090	Nov. 29, 1938	O. T. Coffelt	
DK 23	2,138,118	Nov. 29, 1938	G. D. Patterson	
DK 50	2,149,329	Mar. 7, 1939	R. W. Bale	
DK 11	2,149,370	Mar. 7, 1939	C. E. Smith	
† *Used DK 29*	2,150,235	Mar. 14, 1939	R. McKinney	*Calcination with phosphate and alkali metal salt.*
DK 35	2,150,236	Mar. 14, 1939	R. McKinney	
—	2,151,331	Mar. 21, 1939	R. S. Roberts	
Used DK 15	2,151,339	Mar. 21, 1939	R. W. Sullivan	*Preparation of anhydrite post-reaction boiling*
Used DK 33	2,163,385	June 20, 1939	R. W. Sullivan	*Use of controlled lime slaking in making anhydrite*
DK 31	2,166,221	July 18, 1939	G. D. Patterson	
DK 24	2,166,257	July 18, 1939	J. Blumenfeld	
DK 26	2,177,250	Oct. 24, 1939	M. L. Hanahan	
DK 27	2,177,254	Oct. 24, 1939	W. W. Heckert	
DK 40	2,177,269	Oct. 24, 1939	R. W. Sullivan	
DK 58	2,180,961	Nov. 21, 1939	E. N. Kramer	
DK 46	2,183,365	Dec. 12, 1939	J. E. Booge	
† *Used DK 20*	2,187,050	Jan. 16, 1940	G. D. Patterson—*Alumina-gel Treatment*	
Used DK 12	2,192,501	Mar. 5, 1940	R. McKinney	*Controlled cooling for color tone control*
DK 38	2,192,687	Mar. 5, 1940	R. L. McCleary	
DK 80	2,193,559	Mar. 12, 1940	J. L. Keats	
DK 79	2,193,563	Mar. 12, 1940	R. M. McKinney	

† *Use discontinued—cf Answer to No. 6.*

3931

N. L. Exhibit 7

	Serial No.	Filing Date	Applicant
Used *W. 4*	425,852	Jan. 7, 1942	F. L. Kingsbury et al.—*Rutile composite pigments*
W. 9	440,982	Apr. 29, 1942	D. W. Robertson et al.—*X-ray protective rubber compositions containing lead titanate*
W. 10	441,990	May 6, 1942	W. Grafe et al.—*Basic Ti-chloride nuclei*
W. 13	453,300	Aug. 1, 1942	J. L. Turner et al.—*Cyclical rutile TiO_2 process*
W. 15	454,185	Aug. 8, 1942	H. V. Alessandroni—*Extraction of iron from ilmenite*
W. 16	454,187	Aug. 8, 1942	B. Freeman—*Cyclical extraction of ilmenite*
Abandoned *W. 17*	454,191	Aug. 8, 1942	W. Y. Agnew—*Separation of $TiCl_4$ from $FeCl_3$*
W. 18	454,192	Aug. 8, 1942	W. Y. Agnew—*Halogenation process*
W. 19	454,193	Aug. 8, 1942	S. S. Cole et al.—*Recovery of chlorine from gases*
W. 20	454,194	Aug. 8, 1942	W. Y. Agnew—*Cyclical electrolysis of $FeCl_3$*
W. 22	457,971	Sept. 11, 1942	W. F. Meister—*Purification of $TiCl_4$ ($NaOH$, Fe and H_2O)*
Abandoned *W. 23*	457,972	Sept. 11, 1942	S. S. Cole et al.—*Removal of chlorine from $TiCl_4$*
W. 24	459,026	Sept. 19, 1942	C. W. Rau et al.—*Reduction of Ti-sulfate solutions*
W. 25	459,875	Sept. 25, 1942	J. Barksdale—*Hydrolysis of Ti-chloride solutions*
T. 260B	489,576	June 3, 1943	F. L. Kingsbury et al.—*Lowering "body"—paints*
T. 260C	497,368	Aug 4, 1943	F. L. Kingsbury et al.—*Lowering "body"—pigments*
W. 29	500,921	Sept. 2, 1943	W. Y. Agnew *Condensation and separation of $TiCl_4$ and $FeCl_3$*
Used *W. 30*	505,082	Oct. 5, 1943	A. P. Honchar *Treatment with alkali metal salt zinc oxide, and alumina*
T. 260D	526,130	Mar. 11, 1944	F. L. Kingsbury—*Lowering "body"—paints*
Used *W. 31*	538,549	June 2, 1944	A. P. Honchar—*Rutile calcination with magnesia*
W. 32	539,332	June 8, 1944	J. M. O'Shaughnessy *Treatment of waste H_2SO_4 with FeS*
W. 17B	539,375	June 8, 1944	W. Y. Agnew—*Apparatus for separating $TiCl_4$ from $FeCl_3$*
W. 33	546,903	July 27, 1944	J. Barksdale—*Rutile nuclei from orthotitanic acid*
W. 23B	555,902	Sept. 26, 1944	S. S. Cole et al.—*Removal of chlorine from $TiCl_4$*

C. U. S. patents now exclusively licensed to National Lead Company:

1. PATENTS OWNED BY TITAN COMPANY A/S

	Patent No.	Date of Issue	Inventor	
T. 43	1,852,510	Apr. 5, 1932	P. Farup	*Leaching Ti from ores with H_2SO_4 using sulfide reducing agent*
Used T. 42	1,919,425	July 25, 1933	P. Farup	*Direct digestion of ilmenite with H_2SO_4 to form solution*

2. PATENTS OWNED BY TITAN CO., INC.

	Patent No.	Date of Issue	Inventor	
T. 82	2,055,221	Sept. 22, 1936	A. J. Ravnestad	*Hydrolysis using "ortho" nuclei*
T. 112	2,111,460	Mar. 15, 1938	J. Rockstroh	*Low temperatures for preparation of alkali metal titanates*
Used T. 125C	2,121,213	June 21, 1938	P. Weise et al.	*Water addition during hydrolysis*
"Use" Patent T. 136	2,130,554	Sept. 20, 1938	P. Lusseyran	*Wax dispersion of Ti pigments*
T. 115B	2,139,686	Dec. 13, 1938	E. Lederle et al.	*—Zinc-magnesium titanate pigments*
T. 115A	2,140,235	Dec. 13, 1938	E. Lederle et al.	*—Zinc titanate pigments*
Used T. 115C	2,140,236	Dec. 13, 1938	E. Lederle et al.	*—Titanates by coprecipitation*
Used T. 165	2,161,755	June 6, 1939	R. W. Ancrum	*Hydrolysis and calcination with antimony*
T. 217	2,200,373	May 14, 1940	A. G. Oppegaard et al.	*Calcination with columbium or tantalum*
Used T. 240	2,224,987	Dec. 17, 1940	F. Raspe et al.	*Calcination with antimony; coating with alumina*
T. 232	2,242,320	May 20, 1941	G. F. New	*—Chromium naphthenate treatment*
T. 208	2,246,030	June 17, 1941	R. W. Ancrum et al.	*—Basic chloride dispersion*
Used T. 242	2,260,177	Oct. 21, 1941	H. Giese	*—Alumina coating method*
Used T. 187	2,303,305	Nov. 24, 1942	P. Tillmann et al.	*—Rutiox nuclei*

N. L. Exhibit 7

3926

	Patent No.	Date of Issue	Inventor	
DK 73	2,233,358	Feb. 25, 1941	R. D. Nutting	
DK 55	2,237,764	Apr. 8, 1941	R. M. McKinney	
DK 54	2,253,551	Aug. 26, 1941	J. E. Booge	
DK 86	2,253,590	Aug. 26, 1941	R. W. Sullivan	
Used DK 63	2,253,595	Aug. 26, 1941	H. J. Wood	*—Agitation hydrolysis*
†*Used DK 49*	2,254,630	Sept. 2, 1941	R. W. Sullivan	*Treatment with naphthenic acid and salts thereof*
DK 99	2,257,278	Sept. 30, 1941	H. Schaumann	
†*Used DK 57*	2,259,638	Oct. 21, 1941	W. Heckert	*Anhydrite formation in presence of protein*
	2,260,826	Oct. 28, 1941	J. E. Booge	
DK 76	2,260,871	Oct. 28, 1941	R. H. Sawyer

3933

	Serial No.	Date of Filing	Inventor
Used T. 227	2,303,306	Nov. 24, 1942	P. Tillmann et al.—*Rutiox nuclei by dispersion*
Used T. 187F	2,303,307	Nov. 24, 1942	P. Tillmann et al.—*Rutiox nuclei—dilution in water*
Ferox	2,339,793	Jan. 25, 1944	O. Moeklebust et al.—*Concentration of minerals*
T. 250	2,339,808	Jan. 25, 1944	A. J. Ravnestad et al.—*Concentration of ilmenite*

3. Patents owned by I. G. Farbenindustrie

	Patent No.	Date of Issue	Inventor
Used	1,813,649	July 7, 1931	P. Weise—*Dehydration and decomposition of $FeSO_4$*
T. 144	1,816,388	July 28, 1931	A. Mittasch et al. } *TiO_2 by combustion of $TiCl_4$*
T. 144	1,850,286	Mar. 22, 1932	A. Mittasch et al. }
T. 145	1,878,013	Sept. 20, 1932	K. Staib—*Preparation of $TiCl_4$ by chlorination*
T. 146	1,891,210	Dec. 13, 1932	H. Wolff—*Colored titanate pigments*
T. 55	1,891,911	Dec. 27, 1932	J. Brode et al. *Digestion with titanous salt in the acid*
T. 98	1,995,580	Mar. 26, 1935	J. Rockstroh *Catalytic conversion of anatase to rutile*
T. 123	2,068,294	Jan. 19, 1937	E. Korinth et al.—*Colored Ti pigments*
T. 126	2,118,916	May 31, 1938	J. Drucker *Pressure treatment in lieu of calcination*
"Use" Patent T. 142	2,121,408	June 21, 1938	F. Raspe et al. *Artificial silk delustered with hydrous TiO_2*
T. 186	2,122,180	June 28, 1938	E. Lederle et al. *Synthetic spinels*
T. 170	2,138,384	Nov. 29, 1938	G. Meder—*Pigments of mixed crystals TiO_2-Ti_2O_3*
T. 120	2,144,577	Jan. 17, 1939	K. W. Petersen—*Treatment with fluorides*
T. 201	2,158,520	May 16, 1939	O. Meyer—*Titanium carbide*
T. 155	2,161,975	June 13, 1939	K. W. Petersen *Treatment with highly basic aluminum chloride*
T. 156	2,187,821	Jan. 23, 1940	J. Nelles—*Titanium alcoholates*
"Use" Patent T. 236	2,280,223	Apr. 21, 1942	R. Dümpelmann et al. *Welding rod coating containing TiO_2*
T. 65	1,849,153	Mar. 15, 1932	F. Raspe et al.—*Highly conc. $Ti(SO_4)_2$ solutions*
T. 64	1,850,154	Mar. 22, 1932	F. Raspe et al. *Solid titanium sulfates*

DK 122	2,296,066	Sept. 15, 1942	C. K. Sloan

N. L. Exhibit 7

3934

	Patent No.	Date of Issue	Inventor	
Used DK 134	2,357,089	Aug. 29, 1944	W. H. Daiger et al.	*Treatment with zirconium silicate*
DK 137	2,357,101	Aug. 29, 1944	J. A. Geddes	
DK 125	2,358,167	Sept. 12, 1944	J. L. Keats	

2. PATENTS OWNED BY INTERNATIONAL PULVERIZER CORP.

	Patent No.	Date of Issue	Inventor	
Used	2,032,827	Mar. 3, 1936	N. H. Andrews	*"Micronizer" patent*
	2,191,095	Feb. 20, 1940	A. C. Hobbie	

3. PATENTS OWNED BY REDUCTION ENGINEERING CORP.

	Patent No.	Date of Issue	Inventor	
	2,214,905	Sept. 17, 1940	C. H. Kidwell	
Used	2,219,011	Oct. 22, 1940	C. H. Kidwell	*"Jet" mill patents*
Used	2,284,746	June 2, 1942	C. H. Kidwell	

4. PATENTS OWNED BY LOUISVILLE DRYING MACHINERY CO.

	Patent No.	Date of Issue	Inventor	
†*Used T. 180*	2,090,177	Aug. 17, 1937	C. E. Bill	*—Improved Louisville Dryer*

5. PATENTS OWNED BY OLIVER UNITED FILTERS, INC.

	Patent No.	Date of Issue	Inventor	
Used	2,083,887	June 15, 1937	H. A. Weineke	*—Precoat filter patent*

6. PATENTS OWNED BY ABNER J. BARRETT

	Patent No.	Date of Issue	Inventor	
†*Used*	2,057,814	Oct. 20, 1936	A. J. Barrett	*—Septum for tube filters*

† *Use discontinued—cf Answer to No. 6.*

7. Patents owned by I. G. Farbenindustrie

	Patent No.	Date of Issue	Inventor	
T. 238	2,337,103	Dec. 21, 1943	W. Heimsoeth et al.	*Enamel containing TiO_2*

8. Patents owned by Henry A. Gardner

	Patent No.	Date of Issue	Inventor	
†*Used*	2,037,322	Apr. 14, 1936	H. A. Gardner	*Coating Ti pigments with phthalates*
†*Used*	2,037,323	Apr. 14, 1936	H. A. Gardner	
	2,155,539	Apr. 25, 1939	H. A. Gardner	
	2,172,505	Sept. 12, 1939	H. A. Gardner	

F. U. S. Patent Applications now non-exclusively licensed to National Lead Company:

AIR MAIL

January 16, 1940

"TITANOX"-A NC

MR. D. W. EDGERLY

I. D. HAGAR

In this morning's mail we received from Krebs, an announcement card, postmarked Wilmington, January 15th, 6:30 P.M., in which they advised that effective January 15, 1940, Ti-Pure O is reduced 1¢ per pound.

We are following suit immediately, making our prices effective January 15th, and the schedule for "TITANOX"-A NC will be as follows:

Carloads	15¢ per pound
5 tons single delivery	15¼¢ per pound
Less than 5 tons to 1000 lbs.	15½¢ per pound
999 lbs. to 50 lbs.	15¾¢ per pound
Less than 50 lbs.	18¢ per pound

I notified you of this change by telegram and asked you to advise your salesmen promptly.

New price card notices are being prepared and the printer hopes to have them in our hands so that part can be mailed out tonight and the balance tomorrow morning.

The buff-colored price cards, effective January 2, 1940, will be superseded by these new announcements of which a supply will be sent to you in addition to the regular mailing to all customers.

This pigment moves in such small quantities that we imagine there will be little to contend with in the way of price adjustments, but should any of these arise, where some consideration seems advisable, either use your own judgment or communicate with me in regard thereto.

No other grades of "TITANOX" Pigments will be affected.

Yours very truly,

d

1

N. L. Exhibit 28

Minutes of a quarterly meeting of the Board of Directors of AMERICAN ZIRCONIUM CORPORATION, held at the offices of the Metal & Thermit Corporation, No. 120 Broadway, Borough of Manhattan, City of New York, on the 20th day of December, 1939, at 10:30 o'clock A.M.

PRESENT: Messrs. Adrian D. Joyce, Fletcher Rockwell, F. H. Hirschland, H.E. Rogers, W.J. O'Brien and F.W. Cohen.

The meeting was called to order by the President.

The minutes of the previous quarterly meeting of the Board of Directors held on the 4th day of October, 1939, copies of which were sent to each of the directors, were read and approved.

The royalty agreement dated January 1, 1935, with the Krebs Pigment & Color Corporation was brought up for discussion, there being brought to the Board's attention the substantial amount of royalties which had been paid under this agreement to Krebs Pigment & Color Corporation during the year 1938 and this year. Also in this connection, attention was brought to the marked decrease in the profits of the Corporation this year as compared with previous years; that a larger production seemed necessary to remedy the situation. After the views of the different members of the Board had been given, the following resolution was duly made, seconded and carried:

RESOLVED: That it was the consensus of opinion of the members of the Board that the provisions in the agreement between this Corporation and Krebs Pigment & Color Corporation, dated January 1, 1935 which limit the production of titanium oxide by this Corporation to certain specific quantities per year, particularly paragraphs 1 (a) and (b),

should be eliminated; that the President of the Corporation be and hereby is authorized and directed to confer with Krebs Pigment & Color Corporation and insist upon a modification of the agreement with that Corporation by the elimination therefrom of all limitation as to quantities of titanium oxide which may be produced, and further to take such steps as may be necessary to procure such elimination.

The matter of the purchase of a tow-boat and two barges was discussed, and on motion duly made, seconded and unanimously carried, it was

RESOLVED: That the officers of the Corporation be and hereby are authorized to purchase a tow-boat and two barges at the best price or prices obtainable.

The matter of the sale of two Tolhurst centrifuges, no longer needed, and which had been written off the books, was discussed.

Mr. O'Brien reported that active efforts had been made to sell them, but that the best offer received was $500.00. He also stated that the Chemical & Pigment Company, a division of The Glidden Company, was willing to purchase them for the sum of $525.00, and on motion duly made, seconded and carried, Mr. Joyce and Mr. O'Brien, not voting, it was

RESOLVED: That the officers of the Corporation are authorized and empowered to sell the two Tolhurst centrifuges for the sum of $525.00 to the Chemical & Pigment Company.

Mr. O'Brien reported that to recover titanium oxide in the acid at the acid recovery plant, it would be necessary to install additional equipment. The equipment necessary to

carry this out would consist of another vacuum crystalizer, cooling slurry tank, either another Bird machine or a filter, a Sharpless centrifuge, additional piping, etc., at an estimated cost of approximately $65,000.

The above matter was discussed, and upon the recommendation of Mr. O'Brien, it was on motion duly made, seconded and unanimously carried,

RESOLVED: That the officers are authorized and empowered to purchase a vacuum crystalizer, cooling slurry tank, either another Bird machine or a filter, a Sharpless centrifuge, additional piping, and other equipment incidental thereto, the total expenditure to be approximately $65,000.

The matter of declaring a dividend on the PREFERRED STOCK of the Corporation was discussed, and on motion duly made, seconded and unanimously carried, it was

RESOLVED: That out of the earnings of the Corporation there be and hereby is declared as the fourth quarterly dividend for the year 1939 on the PREFERRED STOCK of the Corporation, of one and three-quarter percent (1¾%) per share, payable December 31st, 1939, to stockholders of record as of this date.

The affairs of the Corporation generally were discussed. There being no further business, on motion, the meeting adjourned.

HUBERT E. ROGERS
Secretary.

N. L. Exhibit 28

Letterhead of

THE GLIDDEN COMPANY

November 6, 1939

Mr. C. F. Garesche, Manager,
Titanium Division,
National Lead Company,
111 Broadway,
New York, N. Y.

Dear Mr. Garesche:

We have been advised by the International Pulverizing Company that you have the sole rights for grinding titanium oxide with their micronizer. I would appreciate very much your advising me what arrangements we could make with your company to investigate this process further and, in the event we were interested, if arrangements could be made to take out a license.

Very truly yours,

W. J. O'BRIEN
Vice President

WJO'B-B

N. L. Exhibit 28

November 8, 1939

Mr. W. J. O'Brien, Vice President
The Glidden Company,
1396 Union Commerce Building,
Cleveland, Ohio

Dear Mr. O'Brien:—

In the absence of Mr. C. F. Garesché, who is at present away on an extended business trip, the writer takes the liberty to acknowledge your letter of November 6th on the subject of the International Pulverizing Company.

We anticipate that there will be no difficulty in working out arrangements whereby your company can investigate the process in which you are interested and go farther with respect to a license should that be desired.

However, we think it best that Mr. Garesché handle the details in this connection and, therefore, would like to suggest that the matter be held in abeyance until his return, which will be on or about November 27th.

We trust that this brief delay will not inconvenience you.

Yours very truly,

TITANIUM PIGMENT CORPORATION

I. D. HAGAR—General Sales Manager

d.

N. L. Exhibit 28

November 29, 1939

Mr. W. J. O'Brien, Vice President
The Glidden Company,
1396 Union Commerce Building
Cleveland, Ohio

Dear Mr. O'Brien:

With reference to your exchange of letters with Mr. Hagar during my absence, we have an exclusive license from the International Pulverizing Company for the use of their micronizer for grinding titanium dioxide.

It gives me pleasure to advise you that we will be very glad to give you full information regarding the operation and installation of this equipment. May I suggest that someone from your organization call upon Mr. F. J. Shirley, Superintendent at Sayreville, N. J., who will be pleased to furnish you with full details.

You appreciate, however, that we cannot permit your representatives to view the equipment in operation, for reasons which have been previously explained to you.

If you decide to make use of the equipment, we will be very pleased to arrange for a sub-license which will entail no expense to your company, except the payment of the same royalty for which we ourselves are obligated. Briefly, I might say, that we (in combination with our sub-licensees) agreed to pay 50 cents per ton on the first 4000 tons milled in any year, and that for all tonnage in excess of 4000, the royalty is 25 cents per net ton.

Yours very truly,

Manager

cc Mr. Turner
Mr. Shirley

N. L. Exhibit 28

Letterhead of

THE GLIDDEN COMPANY

September 23, 1940

Mr. C. F. Garesché, Manager,
Titanium Division,
National Lead Company,
111 Broadway,
New York, N. Y.

Dear Mr. Garesché:

Confirming my telephone conversation with you Friday, I would appreciate your forwarding to us a license arrangement permitting us to operate the micronizer mill on titanium oxide. It is my understanding that this license arrangement will be the same as Krebs' and that the minimum guarantee of 4,000 tons will be split equally between National Lead, Krebs and ourselves or that we will pay a royalty of 50 cents a ton on one-third of 4,000 tons of 1,333⅓ tons. On any tonnage produced above this the royalty will be 25 cents per ton as per Krebs' license.

All this is in accordance with our conversation Friday and I assume that you will mail the license to us in the near future. I have accordingly ordered the mill from Mr. Stackhouse.

In the near future I will want Mr. Rhodes to interview the proper party whom you designate to go further into the details of operation, collection, etc., which you very kindly agreed to.

With kind personal regards and best wishes, I am.

Yours very truly,

W. J. O'Brien
Vice-President.

WJO'B-B

N. L. Exhibit 28

Letterhead of

AMERICAN ZIRCONIUM CORPORATION

December 20, 1940

National Lead Company
Titanium Division
111 Broadway
New York City

Attention: Mr. C. F. Garesché, Manager

Gentlemen:

Mr. W. J. O'Brien has handed me the correspondence and license agreeement relating to patent 2,032,827 owned by International Pulverizing Corporation.

The license agreement submitted between National Lead Company and American Zirconium Corporation has been executed by American Zirconium Corporation and I am returning to you herewith a signed copy. I have dated this the 19th day of December, 1940 as the date of signing.

I understand that payment of royalty begins July 1, 1940 as indicated in paragraph 3 on page 3. Mr. O'Brien informs me that the Micronizer Reduction Mill is in the process of installation and will not be in operation until sometime next March or April. I assume that under the circumstances, American Zirconium Corporation will commence to report royalties just as soon as titanium dioxide has been treated in the mill.

N. L. Exhibit 28

We have your comments with respect to the first 4000 tons and the method of handling the royalties and your statements will be carried out. If there is anything further you want us to do in this connection, please let me know.

Very truly yours,

CLIFTON M. KOLB.
Assistant Secretary

N. L. Exhibit 28

Letterhead of

AMERICAN ZIRCONIUM CORPORATION

May 8, 1941.

Mr. Garesche,
National Lead Company,
111 Broadway,
New York,N.Y.

Dear Mr. Garesche:

In talking with our patent attorney, Mr. Charles Silver, he advises me there are some difficulties encountered in handling the exchange of information between our two companies relative to patent applications. In looking the agreement over I find that Article VI states:

> Each party hereto agrees, to the extent that its prior obligations to other licensors do not prevent, to cooperate with the other by imparting semi-annually to such other party full and accurate information in detail as to knowledge obtained by it in and applicable to the "licensed Field" since its last report hereunder, and to permit such other party to adopt, apply and use the same; *provided*, however, that neither party shall be obligated hereunder to impart or otherwise disclose to the other party, or to permit the other party to adopt, apply or use, any knowledge, information, method, process or apparatus acquired by it from any third party under or pursuant to an agreement which precludes it from so imparting or disclosing the same or permitting the use thereof.

N. L. Exhibit 28

I find further that we have been living up to this agreement in giving you copies of applications *two months after filing, as called for in Article VIII.* By receiving these applications at this early date you are fairly well informed as to what we are doing. However, I find that we have never received similar information from you, nor have we received a semi-annual report as to what work your laboratory has been doing in the licensed field.

Your company's failure to send this information has no doubt been an oversight, and we would very much appreciate receiving these reports at an early date.

Very truly yours,

W. J. O'BRIEN

Vice President

N. L. Exhibit 28

May 23, 1941

Mr. W. J. O'Brien, Vice President
American Zirconium Corporation,
6401 St. Helena Ave.,
St. Helena, Baltimore, Md.

Dear Mr. O'Brien:

Since receiving your letter of May 8, 1941, we have given the matter of exchange of technical information very careful consideration.

The purpose of specifying in Article VIII of the Agreement that you should send copies of your patent applications to us two months before filing is not in order to inform us of what you are doing, but is for the purpose of enabling us to forward the applications abroad to permit the filing of corresponding foreign applications as we may desire and as provided in Article VIII.

As far as I am able to ascertain, neither party to the agreement ever exchanged semi-annual reports covering its work within the Licensed Field. It appears that the reason for this was that we are so bound by prior obligations that it was virtually impossible to prepare such reports without including information which we had no right to give. The same problem exists today. Nevertheless, whenever we could, we have endeavored to inform you fully on whatever matters were of interest to you and which were strictly our own to give. For instance, you will recall that we furnished you blueprints and even the services of one of our engineers in connection with the installation of the Washburn tank. Another instance which might be mentioned is in connection with the use of the Micronizer, a development which

is our own and which we turned over to you with complete information concerning its use in processing titanium pigments.

We suggest as a way of meeting the obligations of Article VI that both companies prepare and submit semi-annual questionnaires to the other, covering points of particular interest to each party and that we exchange such questionnaires and answers. In this way we are sure all developments of particular interest, practiced by both parties would be disclosed to the other.

We should be glad to have your comments.

Yours very truly,

Manager,

cc Mr. Kaegebehn

N. L. Exhibit 28

[COPY]

NATIONAL LEAD CO.
111 Broadway
New York

June 5, 1941.

Mr. Hubert E. Rogers, Secretary
American Zirconium Corporation
52 Wall Street
New York City

Dear Mr. Rogers:

I wish to acknowledge receipt of copy of Minutes of Meeting of Board of Directors of American Zirconium Corporation held on May 9th, with copy of report from Mr. W. J. O'Brien, which you sent me. It was with regret I could not remain through the meeting but in view of the bank loans, money due Glidden for advances, etc., I asked that Mr. Joyce submit a plan for taking care of those loans. On May 15th Mr. Joyce wrote me presenting a recap of the figures, and recommended that arrangements be made to increase the capital of the American Zirconium Corporation by $750,000.

I have given the matter considerable attention and feel that on a production of 6,000 tons of TiO_2 per annum, with careful management and modified financing, a profit can be made.

Under the present operation there is provision for depreciation of $150,000 to $160,000 annually, and with adjustments in view of the present unsatisfactory conditions as follows:

N. L. Exhibit 28

Reduction of the management fee from $25,000 to $10,000 per annum,

Reduction of selling commission from 5% to 3%, and

Reduction of the interest on the 600,000 preferred shares from 7% to 4%,

there will be an annual saving of $63,000 which, together with the above mentioned depreciation, will release $223,000 per annum. If this is effected, it seems possible to meet the present financial difficulties.

As to changing the process to a rutile type pigment. The National Lead Company has not brought out a rutile TiO_2 pigment of high tinting strength but only a C pigment of high tinting strength containing the rutile crystal type. DuPont has marketed a rutile TiO_2 pigment but only to a very limited extent for which a premium is charged. This type of pigment has considerable interest but the situation in the titanium pigment industry is not such that it is advisable to hurry an appropriation of $300,000 for changes in the factory for such production. It is not clear from Mr. O'Brien's letter whether his estimate of $300,000 is sufficient to cover the changes necessary to turn the full production of the factory over to a rutile pigment as indicated or whether he expects for his purpose an additional expenditure of $650,000 will be necessary.

The Board should be provided with information concerning the following:

1. What process is to be used.
2. A full and well-prepared estimate as to the cost of the necessary changes for a definite tonnage (not a

"hurried estimate", to use Mr. O'Brien's own words).

3. An estimate of production costs of the new pigment.

We should also know definitely from where the ilmenite supply is to come, and if a domestic source, does the $15.00 a ton referred to in Mr. O'Brien's letter cover the full cost or will there be further costs to help defray the expense of equipment for mining and milling.

Dr. Hirschland and I have discussed this matter and I am sending him a copy of this letter. I think it would be helpful if Dr. Hirschland, you and I could meet to discuss the matter before the next Zirconium board meeting.

Very sincerely,

(Signed) Fletcher W. Rockwell

President

Copy to Dr. Hirschland

N. L. Exhibit 28

Minutes of a Special Meeting of the Board of Directors of AMERICAN ZIRCONIUM CORPORATION, held at the offices of the Metal & Thermit Corporation, No. 120 Broadway, in the Borough of Manhattan, City of New York, on the 25th day of June, 1941, at 2:00 o'clock P.M.

PRESENT: Messrs. Adrian D. Joyce, Fletcher Rockwell, F. H. Hirschland, H. E. Rogers, W. J. O'Brien, R. H. Horsburgh and Walton Smith.

The meeting was called to order by the President.

As copies of the minutes of the previous meeting of the Board of Directors held on the 9th day of May, 1941, were sent to each of the directors, and as no suggested amendments or corrections thereto were submitted, on motion the minutes of the meeting of the 9th day of May, 1941, as recorded were approved.

The President reported that the operations for the month of May resulted in a profit of $6,927.55.

The ilmenite situation was referred to and discussed at length. Mr. O'Brien, in answer to questions, stated that the supply on hand at the present rate of consumption would last until some time in December, but that he hoped an additional source of supply would be found, but he could not give definite assurance to the Board that an additional supply would at that time be on hand or available. He stated that efforts to procure a supply of domestic ore would continue to be made, otherwise he admitted the plant would have to shut down.

The matter relating to the entries made in the books, following the adjustment with the United States Treasury as to the value of patents allowed by it as the basis of depreciation of the patents was discussed, and on motion duly made, seconded and unanimously carried, it was

N. L. Exhibit 28

RESOLVED: That as the entries made with respect to the write-down of the value of the patents was due to a misunderstanding of the resolution adopted at the meeting of the directors held on the 28th day of February, 1941, the entries made in the books with respect to the write-down of the value of the patents and their amortization based upon the reduced value fixed by the United States Treasury as the basis of depreciation for income tax purposes be and hereby are reversed and the Treasurer is hereby instructed to take the necessary steps accordingly.

The President referred to his letter to the directors dated May 15, 1941, regarding the need of additional capital, and asked for action thereon. The matter was discussed at considerable length. Reference was made to the fact that the plant has finally reached an assured production of between 500 and 600 tons of titanium oxide a month; that largely as a result, costs had been reduced and the operations produced the profit for the month of May referred to by the President; further that beginning July 1st, 1941 the price of titanium oxide would advance one cent a pound, which should add materially to such profit even though it was expected that labor costs would increase. Mr. Horsburgh, after making a rough estimate, stated that with additional capital of $300,000, the loan of the New York Trust Company and the advance of The Glidden Company of $100,000 would be paid off and that the other obligations could be met from the results of operations, unless others should occur which could not now be foreseen. Mr. Horsburgh was asked to prepare a budget setting forth the estimated income and the obligations, including those known and expected for equipment &c. not enumerated in the last monthly statement, which would have to be met between now and the end of the year. Mr.

O'Brien was asked to prepare a statement answering certain specific questions, asked him by Mr. Rockwell, as to what is being done to assure a supply of ilmenite, whether the use of domestic ores would affect, and the extent, the output of the plant and the cost of operations and necessitate the installation of additional equipment, and what he estimated the quality of domestic ores, which could be used, and also those asked by Dr. Hirschland. Both budget and statement to be sent to the directors as soon as prepared so that an answer could be made to the President's statement of the need for additional capital.

The President requested consideration by the stockholders as to whether they would loan to the Corporation the sum stated by Mr. Horsburgh needed to pay off the loans specified by him. The President also stated that The Glidden Company was prepared to purchase, at a price to be fixed, enough common stock of the Corporation to provide $300,000, provided the other stockholders do not desire to take their pro rata share, and asked that such be given consideration.

There being no further business presented, on motion, the meeting adjourned.

HUBERT E. ROGERS
Secretary.

N. L. Exhibit 28

AMERICAN ZIRCONIUM CORPORATION

Mr. Fletcher Rockwell
National Lead Company
111 Broadway
New York City

September 8, 1941

Mr. Hubert E. Rogers
c/o Rogers & Condon
52 Wall Street
New York City

Dear Mr. Rogers:

This will confirm my telephone conversation with you this afternoon in which I asked you to call a Directors' Meeting on Friday, September 12 for the following purposes:

1. To discuss the proposition of the National Lead Company regarding the development of a supply of ilmenite in Essex County, New York, and decide whether the American Zirconium Corporation wishes to take a participation.

2. To discuss and arrange for adequate financing of the American Zirconium Corporation.

3. To discuss the plan of increasing the productive capacity of the American Zirconium Corporation to 9,000 tons per annum of titanium dioxide.

4. To discuss the matter of purchasing ilmenite for the manufacturing operations of the American Zirconium Corporation from The Glidden Company.

N. L. Exhibit 28

As I explained to you over the telephone, I had a telephone call today from a representative of the OPM who insisted that the American Zirconium Corporation must have a Directors' Meeting and come to a decision regarding its participation in the National Lead Company proposition. The OPM representative stated that September 20 was the end of the time limit for the examination of the title and for the acceptance of the contract.

I wish also to explain that the Government authorities indicated that they are very anxious for the American Zirconium Corporation to increase their productive capacity to 9,000 tons per annum of titanium dioxide. I explained to the OPM that the Glidden stockholders are extremely anxious to increase the productive capacity to 9,000 tons but that the Directors representing the Metal & Thermit Corporation and the National Lead Company are reluctant to make the necessary additional investment in the stock of the American Zirconium Corporation to enable American Zirconium Corporation to properly carry out such plans. They have stated that they are doubtful of a supply of raw material, etc.

As I explained to you over the telephone, Mr. Herbert L. Rhodes, who owned the lease on the mining property in Caldwell County, North Carolina, notified our Mr. O'Brien under date of August 15 that owing to difficulties encountered it would be necessary to install additional equipment. On August 22 Mr. Rhodes wrote Mr. O'Brien as follows:

"In further reference to my letter to you of August 15, I would suggest that you consider the purchase of the lease that I now hold from Lloyd B. Williams for the mine in Caldwell County, North Carolina, also the purchase of the

mill and machinery that I have now on the property. I believe that in view of the difficulties in obtaining equipment and supplies especially by an individual of limited means, that both my interest and The Glidden Company's interest will be better served. In addition, I believe that it will be possible to put the equipment into production at an earlier date than is possible by working alone.

"I, of course, realize that there is a great deal of uncertainty in the possibility of developing any property due to the chaotic conditions of business at the present time. I also feel that there should be a great deal more exploration and development work than I am in any position or capacity to carry on at the present time. I would like to discuss with you a plan which would be fair and equitable to both The Glidden Company and myself at your convenience."

In view of these letters from Mr. Rhodes a conference was arranged with him and a plan was worked out under the terms of which The Glidden Company agreed to purchase the mining machinery and equipment and to take over the lease from Mr. Rhodes and to engage Mr. Rhodes as General Manager of the mining proposition. Inasmuch as The Glidden Company had already advanced $25,000 to Mr. Rhodes, this seemed to be the necessary thing to do in order to protect The Glidden Company's interests and to be in position to supply ilmenite to the American Zirconium Corporation in the event that corporation wished to purchase said ilmenite. This contract was negotiated September 3, 1941.

Mr. O'Brien arranged for our mining engineer to visit the property and to make an inspection, and also to go to Washington to consult with the Bureau of Mines in connection with the proper equipment that would be needed to adequately supply ilmenite that would be suitable for the

production of titanium dioxide. We are now proceeding in installing additional machinery and equipment, and according to the judgment of the technical men of The Glidden Company, that company will be able to start deliveries of ilmenite not later than December 1, 1941.

The Glidden Company is willing to supply ilmenite to the American Zirconium Corporation in a sufficient quantity to take care of its requirements for a 9,000 ton production; this ilmenite to be supplied at the market price, and it is important that the Directors of the American Zirconium Corporation decide whether they wish to purchase said ilmenite from The Glidden Company for the requirements of the American Zirconium Corporation, or whether they prefer to participate in the National Lead Company proposition. I understand that in the event it is decided to participate in the National Lead Company proposition that we cannot hope for adequate supplies of ilmenite from that source until approximately one year from the present date. This would mean that the American Zirconium Corporation would be out of business from December until ore was available from the National Lead Company property.

It is important that a decision be arrived at as to the purchase of ilmenite ore because in the event the American Zirconium Corporation does not desire to avail itself of the ore that will be available from North Carolina, then The Glidden Company would feel free to dispose of this ore in other quarters.

Yours very truly,

ADRIAN D. JOYCE
President.

ADJ-V

N. L. Exhibit 28

MEMORANDUM ON AMERICAN ZIRCONIUM CORP.

September 10, 1941

History

Zirconium was organized in 1935 to manufacture titanium pigments near Baltimore. At that time, The Glidden Co. paid $600,000 in cash for 6,000 shares of 7% cumulative preferred stock and received 5,000 shares (45%) of common as a bonus; Metal & Thermit Corp. received 5,000 shares (45%) of common in exchange for patents; National Lead Co. received 1,112 shares (10%) of common for a license to operate under certain patents; and Du Pont gave a license to Zirconium to use certain patents on a royalty basis.

The company called on its stockholders to supply more capital in 1937 and 1938 as follows:

	Shares of Common	*Amount Subscribed*	*%*
Glidden	1800	$90,000.	45
Metal & Thermit	1800	90,000.	45
N. L. Co.	400	20,000.	10
	4000	$200,000.	100

Dividends have not been paid to Glidden on the preferred stock for four quarters and, as a result, these shares now vote share for share with the common giving Glidden about 60% of the votes on all matters except the change of the charter or the by-laws of the corporation. This latter

change can be made only with the consent of the holders of 51% of the common stock.

PRESENT CAPITALIZATION

Issue	*Stockholder*	*No. of Shares*	*% of Total*	*Value Per Balance Sheet*	*Cash Subscribed*
7% Pfd.	Glidden	6,000	100	$ 600,000.	$600,000.
Common	Glidden	6,800	45	680,000.	90,000.
"	Metal & Thermit	6,800	45		90,000.
"	N. L. Co.	1,512	10	75,600.	20,000.
		21,112		$1,355,600.	$800,000.

NATIONAL LEAD CO. INVESTMENT IN ZIRCONIUM

National Lead Co. investment in the company consists of $20,000. in cash and a license to Zirconium to operate under certain patents. This license cannot be terminated prior to August 7, 1951 except upon the failure of performance by Zirconium of the terms of the license agreement. National Lead Co. has received cash dividends of $14,388 from its investment in this company.

RESULTS OF ZIRCONIUM OPERATIONS IN RECENT YEARS

	Net Profits Per Books
1937	$155,702
1938	130,760
1939	62,286
1940	92,323 Loss
1941—1st six months	$ 7368
July	15938 23,306

N. L. Exhibit 28

PAYMENTS BY ZIRCONIUM TO GLIDDEN IN RECENT YEARS

	Total	Preferred Dividends	Common Dividends	5% Sales Commissions	Management Fee	10% of Com. Stock Profits
1937	$161,166	$ 42,000.	$37,530	$ 44,003	$ 25,000	$12,633
1938	141,834	42,000.	27,216	37,756	25,000	9,862
1939	120,519	42,000.		51,265	25,000	2,254
1940	96,254	21,000		50,254c	25,000	—
1941 (7 Mos.)	53,039			40,539	12,500	
Total	$572,812	$147,000	$64,746	$223,817	$112,500	$24,749

The 5% sales commission, the management fee, 25,000.00, and the 10% payment of common stock profits & operation of Plant are made to Glidden under the terms of a contract which cannot be terminated prior to December 18, 1943 and then only upon one year's prior written notice.

COMPARISON OF ZIRCONIUM AND TITANIUM DIVISION OPERATIONS

Zirconium percentage of operating profits to sales has been far smaller than that made by the Titanium Division. An analysis for 1941 indicates that this results largely from poor recoveries on TiO_2 content of ilmenite, much higher acid costs per ton, and from higher fixed charges, such as patent depreciation.

PRESENT PROPOSALS FOR FINANCING ZIRCONIUM

Zirconium officials are proposing that about 10,600 new shares of common be issued at $30. per share (estimated book value) to yield about $318,000. With this amount, a present bank loan of $275,000 due on Sept. 8, 1941 to New York Trust Co. can be paid off and the balance, along with

cash to be realized from operations and from liquidation of accounts receivable, can be used to meet proposed other requirements as shown below.

	Amount Required
Cost of changing over present equipment to handle new type of ilmenite.	50,000
Pilot plant to study rutile operation...	15,000
Machinery contracted for at July 31, 1941	63,000
Additional machinery required to increase capacity from 6000 tons to 9000 tons per annum	185,000
Current debt due to Glidden Co.	110,000
Total	$423,000

The requirements listed above do not include possible future needs for changing over to a rutile process (which has been estimated by Zirconium officials at $300,000, on a 6000 ton per annum production basis) nor cost of possible participation in the MacIntyre venture.

President Joyce says that government officials are anxious to have Zirconium increase its capacity from 6000 to 9000 tons and that he has advised the OPM that Glidden is anxious to do so but that Metal & Thermit and National Lead Co. are reluctant to make the necessary additional investment. He also says that permission has been obtained from Du Pont to make the increase from 6,000 to 9,000 tons. The Du Pont license agreement with Zirconium had

restricted its production to 6000 tons per annum prior to 1943.

Of the 10,688 shares proposed to be issued, 4,888 shares are presently authorized but corporate action will be necessary to authorize the remaining 5,800 shares.

ZIRCONIUM ILMENITE SUPPLY

Zirconium expects to obtain future ilmenite supplies either from the "Rhodes" mines in North Carolina (which is being financed by Glidden) or from the MacIntyre mines. It is estimated that ore delivered from North Carolina to Baltimore will cost about $16. per ton.

ZIRCONIUM PLANT INVESTMENT AT JULY 31, 1941

Plant Investment	$1,373,332
Depreciation Reserve	496,108
Net, per balance sheet	$ 877,224

N. L. Exhibit 28

[COPY]

Minutes of a Special Meeting of the BOARD OF DIRECTORS of NATIONAL LEAD COMPANY held at No. 111 Broadway, New York City, Thursday, September 11, 1941, at 2:00 P. M.

At the call of the President a Special Meeting of the Board of Directors was held at 111 Broadway, New York City, on Thursday, September 11, 1941, at 2:00 o'clock P. M.

PRESENT:	L. T. Beale	F. W. Rockwell
	W. V. Burley	Harold Rowe
	W. H. Croft	H. G. Sidford
	C. F. Garesche	Charles Simon
	W. F. Meredith	H. T. Warshow

PRESENT BY INVITATION: M. Douglas Cole
G. Jebsen

ABSENT:	E. F. Beale	Kendall Marsh
	C. A. Geatty	J. J. Morsman
	J. A. Taylor.	

The President, Fletcher W. Rockwell, acted as Chairman of the meeting and H. O. Bates acted as Secretary.

The President stated that he had called the Board together for its consideration of two matters, one with respect to the Company's interest in American Zirconium Corporation and the other with respect to an enlargement of the MacIntyre development by the addition of another milling unit to meet the Company's own requirements of ilmenite.

The Board was reminded that the Company held a 10% common stock interest in American Zirconium Corporation, and that by virture of such stock interest the Company had

since been represented on the Board of Directors of said corporation, the President himself being now that representative. He explained that the business of that corporation in recent years had not show the profit that was reasonably to be expected, that a substantial bank indebtedness existed which should be provided for and that a meeting of its Board had been called for the following day to consider the matter of new financing, the matter of participation in the Company's own Adirondack ilmenite development pursuant to the recent directive of the Office of Production Management or, as an alternate, the purchase of ilmenite from recently acquired North Carolina properties of The Glidden Company, contract manager of the corporation's operations, and the matter of proposed enlargement of the titanium pigment capacity of the corporation's plant from 6000 tons to 9000 tons annually. He requested the Board's instructions as to the position to be taken by him on these various questions at the Board Meeting referred to.

After thorough discussion it was the sense of the meeting that on account of the Company's interest in the Adirondack ilmenite development the President should refrain from voting on the question of participation in that development and also on the alternate question of the purchase of ilmenite from The Glidden Company. In the matter of new financing presently required and additional financing required for any expension of production capacity it was felt that the Company's representative should not oppose authorization of the issuance at a fair price of the 4888 shares of common stock now authorized but unissued and that it would be only proper for the Company to subscribe to its pro rata share thereof, but that as respects expansion of capacity at this time and any increase of the present author-

ized capital stock for that purpose it was felt that the important questions of ilmenite supply, delivery of plant equipment and, above all, the existing obstacles to profitable operation should first be satisfactorily settled before any such expansion would be justified. It was further felt that the Company should not refuse any reasonably fair offer for the purchase of its interest by other stockholders, should such an offer be made.

The meeting then took up the question of the expansion of mill capacity under the Adirondack ilmenite development, recommended by Mr. Garesche as desirable to provide a reserve capacity against possible shutdowns, transportation and labor difficulties and expansion of business, and after some discussion it was decided to postpone final consideration of that matter until the regular meeting of the Board scheduled for September 23, especially in view of the arrangements which had been made for an inspection of the properties by the Directors in the meantime.

There being no further business the meeting, upon motion, adjourned.

Secretary.

N. L. Exhibit 28

Minutes of a Special Meeting of the Board of Directors of the AMERICAN ZIRCONIUM CORPORATION, held at the offices of the Metal & Thermit Corporation, No. 120 Broadway, in the Borough of Manhattan, City of New York, on the 12th day of September 1941, at 2:00 o'clock P.M.

Present: Messrs. Adrian D. Joyce, Fletcher Rockwell, F. H. Hirschland, H. E. Rogers, W. J. O'Brien, R. H. Horsburgh and Walton Smith.

The meeting was called to order by the President.

The Secretary stated that the meeting was called at the request of the President, and presented notice of the meeting, also letter of the President dated September 8, 1941, requesting the call, and stated that the notice of the meeting, as well as a copy of the letter of the President referred to, would be attached to the minutes of the meeting.

The Secretary reported that a copy of the minutes of the Special Meeting of the Board held on July 31st last, together with a copy of his notes taken at the meeting had been sent to each director, and that he had received a letter from the President making certain changes in the notes referred to. That he had received no objections to the minutes of the meeting.

On motion duly made, seconded and unanimously carried, the minutes as recorded were approved. The Secretary was instructed to attach to the minutes of the meeting of July 31st, 1941, a copy of his notes and also a copy of the President's letter dated August 12th last, referred to.

A letter from the National Lead Company to the American Zirconium Corporation, dated September 10, 1941, setting out an amendment to the agreement of National Lead Company covering the right of the American Zirconium

Corporation to participate in National Lead Company's Adirondack titanium mining enterprise, was submitted by the President and read by the Secretary. The Secretary stated that a copy would be attached to the minutes.

The matter of the American Zirconium Corporation participating the National Lead Company's Adirondack titanium mining enterprise was discussed at length. In the course of the discussion, Mr. Rockwell stated that the amount which the American Zirconium Corporation would have to invest, if it participated in such enterprise, had been computed by the National Lead Company to be about $1,000,000. Mr. Rockwell further stated that the production and delivery of ilmenite from the mine was not likely to occur before July 1942. Also in connection with the discussion, reference was made by the President to the Yadkin Valley Ilmenite Deposit at Lenoir, North Carolina, which had formerly been referred to in the minutes as the so-called Rhodes mine, and in that connection the President read from a report which he had received from Edward L. Ralston, the Glidden Company's mining engineer, and also referred to a memorandum made by Mr. O'Brien, covering the cost of increasing the plant to 9,000 ton production. Reference was also made by the President to his letter of September 8, 1941, setting forth that The Glidden Company had purchased from Rhodes his interest in the project under a contract "negotiated on September 3, 1941", and also to his statement in the letter referred to, that The Glidden Company is willing to supply ilmenite (from this mine) to the American Zirconium Corporation in sufficient quantity (and suitable quality) to take care of its requirements for a 9,000 ton production; this ilmenite to be supplied at the market price. Reference was made that the

changes needed at the plant at Baltimore, to use the ilmenite from the Yadkin Valley Ilmenite Deposit might require an expenditure of possibly $50,000.

The President stated that it was to be understood that if a contract were made by the American Zirconium Corporation with The Glidden Company, for the ilmenite from the deposit referred to, it would contain a provision that if ilmenite could be procured from other sources at a lower price than the price under the contract, American Zirconium Corporation would be at liberty to purchase such other ilmenite.

The President recommended that American Zirconium Corporation purchase 10,000 tons of ilmenite from The Glidden Company, of suitable quality, for use by the American Zirconium Corporation at its plant at Baltimore, shipment to be made by The Glidden Company to the American Zirconium Corporation when the ilmenite becomes available from the project referred to on or about December 1st next, at $20 per long ton, delivered f.o.b. Baltimore, Maryland, and the President also recommended that the proposition from the National Lead Company regarding the participation of the American Zirconium Corporation in the National Lead Company's titanium mining enterprise, referred to, be declined.

On motion duly made, seconded and carried, it was

Resolved, That this Corporation do not avail itself of the offer of participation received by it from the National Lead Company, with respect to the National Lead Company's titanium mining enterprise, and it was

Further resolved: That the Secretary inform the National Lead Company of this action, and furnish it with a certified copy of this resolution.

N. L. Exhibit 28

Mr. Rockwell desired to be recorded as not voting on the foregoing resolution.

On motion duly made, seconded and carried, it was

Resolved: Upon the recommendation of the President that in view of the Corporation's limited supply of ilmenite which will not carry its operations beyond December 15th next, necessitating a shut down of the plant unless a supply of ilmenite is provided at once and therefore the urgent necessity to procure its requirements at once, and in view of the inability of procuring the same elsewhere, the officers of the Corporation be and hereby are authorized and empowered to accept the offer of The Glidden Company to sell to this Corporation 10,000 tons of ilmenite of suitable quality for use by the American Zirconium Corporation at its plant at Baltimore, Maryland; shipment to be made when the ilmenite is available from the Yadkin Valley Ilmenite Deposit, on or about December 1st next, the price to be $20 per long ton, delivered at Baltimore, and to enter into a purchase agreement with The Glidden Company, pursuant to the terms herein stated.

Messrs. Joyce, Horsburgh, O'Brien and Rockwell wished to be recorded as not voting on the foregoing resolution.

The President referred to the matter of the production of objectionable gases in connection with the operations at the Baltimore plant, and to the decision of the Court holding that these gases created a nuisance, and directing that the nuisance be corrected and fixing a time within which this must be done. A discussion followed with respect to the matter and the possible necessity of installing additional equipment to comply with the Court's decision. Mr. O'Brien

stated that it might require an expenditure of approximately $50,000 to provide the necessary equipment to remedy the situation.

The matter of increasing the production of the plant at Baltimore to 9,000 tons, as well as the matter of financing, was discussed. A memorandum of the Treasurer dated September 10, 1941, a copy of which had been sent to each director, was referred to. (A copy is filed with the minutes of this meeting).

Dr. Hirschland stated in behalf of himself, Mr. Rogers and Mr. Smith, that they were prepared to approve the issuance of the 4888 shares of treasury stock and its offer for sale pro rata to stockholders at $30 per share. Mr. Rogers stated that he had understood from Mr. Joyce that if such were done, The Glidden Company would take such portion of these shares as were not taken by the other stockholders. Mr. Joyce stated that Mr. Rogers had misunderstood him. That his suggestion was that if the common shares of the Corporation were increased sufficiently so that at least 10,000 shares were available for sale, and offered for sale at $30 per share, The Glidden Company would take such portion as the other stockholders were entitled to take under their preemptive right of subscription, but did not take.

Dr. Hirschland stated that in his judgment, a sale of the 4888 shares of treasury stock at $30 per share would produce sufficient funds to care for the Company's present requirements. Mr. Joyce disagreed to this.

Mr. Horsburgh stated that the Corporation's note for $275,000 held by the New York Trust Company fell due on September 18th next, and that he positively refused to ask the New York Trust Company to renew it; further he objected to the Secretary making such request of the New York Trust Company.

N. L. Exhibit 28

Dr. Hirschland stated that in view of the unsolved plant problems and the uncertainty as to the supply of ilmenite he was not prepared to approve, at this time, the increase of the plant to 9,000 ton production and the expenditure incident thereto.

There being no further business, on motion, the meeting adjourned.

HUBERT E. ROGERS
Secretary

OFFICE OF PRODUCTION MANAGEMENT
Social Security Building
Washington, D. C.

Office of
Donald M. Nelson
Director of Purchases

Fletcher W. Rockwell, President
The National Lead Company
111 Broadway
New York, New York

Dear Sir:

In view of the fact that it is desirable to cease importing ilmenite ore from India into this country, in order to release shipping space for other critical and strategic materials, it is the wish of this office to open up domestic production in this country to the point where all necessary titanium dioxide can be supplied from such sources.

Accordingly, there have been conferences between representatives of the Division of Purchases, Office of Production Management, and the manufacturers of titanium pigments, with a view to developing a program to accomplish this end. Based upon the information furnished at said conferences, we are issuing this directive to you.

We understand that you are planning to operate an open-cut mine in Essex County, New York, with a proposed estimated capacity of some 180,000 gross tons of concentrates per annum, estimated by you to be about 45% titanium dioxide, to supply your own requirements. This, we

understand, will come from the operation of three units. We also understand that each unit of the proposed mining operation has a capacity estimated at approximately 60,000 gross tons per annum of concentrates.

We feel that it is desirable in the interests of national defense and in the interests of increasing the amount of titanium dioxide available for civilian uses, for you to make ilmenite ore available to such other manufacturers of titanium pigments as may desire to obtain the same from you. We regard this as desirable because it is our understanding that the ore bodies in Essex County, New York, are among the largest in the United States, and will have the greatest commercial yield of pure titanium dioxide per ton of ore.

Accordingly, we direct you to offer, for reasonably prompt acceptance, each of the other producers of titanium pigments in the United States the right to participate in the said mining operations by purchasing their ilmenite requirements from you, to such extent as they may indicate, not exceeding, however, a total of approximately 180,000 tons per annum additional estimated capacity. You will make the ilmenite available either by setting up additional units or by allocating a portion of the output of one of your units, in order to supply their requirements.

We direct you to offer to supply such ore for a period of at least ten years at an over-all cost which shall include the cost of extraction and treatment of the ore, maintenance and repair of equipment (excluding depreciation), and transportation to railhead, plus a share of the cost of this development (as enlarged by acceptances of your said offer), and of overhead, proportionate to the share of total capacity allocated to each participating producer, plus a charge of 20¢ per ton of crude ore for depletion, and plus

reimbursement for any tax liability (not otherwise included in the costs of extraction or costs of development) which you shall incur by reason of the participation of such producer in this development, in excess of any offsetting reduction in your tax liability which is occasioned by its participation. We understand and appreciate that, to secure participation at this time, you will make no charge for profit, and that you cannot renew any offer on this basis subsequently. You will furnish to each such producer and to this Office all of your present detailed estimates of the costs involved. You appreciate, of course, that the Government reserves the right, in case it becomes necessary in the interest of national defense or for proper civilian supply during the existence of a national emergency, to allocate titanium dioxide to non-participating producers, and that the titanium dioxide furnished pursuant to any allocation program must be furnished at a fair price.

In order to avoid an undesirable increase in the price of raw materials going into paint, we direct you to charge your share of the cost of development against the price of titanium pigments over a period of not less than five years.

In your contracts with the participants, you will give each participant the same privileges with respect to the time of payment of his share of the cost of the development. You will also give each participant, not in default under its contract of participation, the right to suspend purchases of ore for such reasonable period or periods as he may desire, or to discontinue purchases entirely, upon six months' notice in writing. In the event of any suspension of purchases, each participant shall pay to you, in addition to any payments due on account of cost of development, his share of maintenance costs and his share of all appli-

cable taxes; provided, however, that in case you use any of the idle capacity during the period of any such suspension, you will cease to collect the maintenance cost and the share of applicable taxes allocable to the idle capacity so used by you, and provided further that, in the event that you reserve a right to pre-empt the idle capacity to your own use after a participant shall have given you notice of a suspension for an indefinite or lengthy period, you will agree to refund to such participant a portion of his share of the cost of development proportionate to the unexpired period of his contract to purchase ore. In the event of any discontinuance of purchases, you will continue to receive additional installments on account of the cost of development.

You will give each participant the right to investigate and audit your books of account relating to cost and you will keep such cost records as will adequately reflect the true costs of extraction and maintenance of equipment, in accordance with accepted accounting procedures. You will also permit an annual investigation or audit of your said books of account to be made by auditors selected by the Office of Production Management or by any agency succeeding to its functions or having similar duties during the period of existing national emergency and, in the event that such emergency should terminate prior to the end of the ten-year period, then, by auditors selected by the Department of Justice.

You will give each participant the right to cancel his commitment within thirty days after acceptance of your said offer, in the event that his investigation of your title to the said properties reveals defects or clouds which, in his opinion, constitute a risk which he does not care to assume.

N. L. Exhibit 28

We understand that you will make no warranty of title in your contracts with participants. We also understand that you are willing to make available to counsel or others designated by each participant all title searches, abstracts, and opinions of counsel with respect to title, which you may have.

Since your arrangements with the participants may include further provisions not inconsistent with the foregoing; you will submit to us for clearance, prior to final execution, all contracts between yourself and other participants relating to their participation in this mining operation.

For your information and files, we enclose herewith copies of the correspondence between the Honorable John Lord O'Brian, General Counsel of the Office of Production Management, and the Honorable Francis Biddle, Acting Attorney General of the United States, concerning this proposed mining operation.

We also enclose herewith for your information a list of other manufacturers of titanium pigments to whom your offer should be made.

Very truly yours,

D. M. NELSON

The Honorable

The Attorney General

My dear Mr. Attorney General:

I enclose herewith a copy of a memorandum addressed to Donald M. Nelson, Director, Division of Purchases, Office of Production Management, from James MacPherson, Chief, Equipment and Supplies Branch, Office of Production Management, concerning a request upon industry for specific collective action with respect to opening up a domestic supply of ilmenite, the ore from which titanium dioxide pigments are made. A decision to cease importation of this ore has rendered a domestic source of supply necessary.

I am forwarding this memorandum to you for clearance of the proposed program, in accordance with your letter, dated April 9, 1941.

In view of the necessity of filing your reply in several places, may I request that you be kind enough to reply in triplicate?

Sincerely yours,

(Sgd.) John Lord O'Brian

August 7, 1941

John Lord O'Brian, Esq.
General Counsel
Office of Production Management
Social Security Building
Washington, D. C.

Dear Sir:

I have your letter of August 7, 1941, together with the memorandum enclosed in it which is addressed to Donald M. Nelson, Director, Division of Purchases, Office of Production Management, from James MacPherson, Chief, Equipment and Supplies Branch, Office of Production Management, relating to a program for opening up a domestic supply of ilmenite, and copies of the letters which it is proposed to send to The National Lead Company and to other producers of titanium pigments.

I understand that this action will be undertaken at the request of the Office of Production Management and that the Office of Production Management deems this course of action a measure necessary for the national defense. In my view this program, if carried out in the manner described in your letter and in the documents which accompanied it, would not raise any questions under the Federal antitrust laws.

Sincerely yours,

FRANCIS BIDDLE
Acting Attorney General

August 14, 1941

Mr. Donald M. Nelson
Director, Division of Purchases
Office of Production Management
Washington, D. C.

Dear Sir:

Your recent directive letter, undated, with respect to the supply of ilmenite concentrates from our recently acquired properties in Essex County, New York, for the manufacture of titanium pigments, reached me last Monday morning, 11th inst., in an envelope postmarked Washington, Aug. 9, 6:30 P.M.

Your instructions in this matter are carefully noted and are being carried out as expeditiously as possible. In this connection we assume that the mention of "crude ore" in the seventh line of the sixth paragraph of your letter, as the basis of the depletion charge referred to, was an oversight and that "ilmenite concentrate" was intended; and that the mention of "titanium dioxide" in the third from last and next to last lines of the same paragraph, with reference to allocation, was a similar oversight and that "ilmenite concentrates" was intended.

We beg to submit herewith for your consideration two copies of our offering letter to other titanium pigment manu-

facturers and of the form of contract and other enclosures therein mentioned, which we trust you will find to be entirely in conformity with the letter and spirit of your directive and which we expect to mail today. You will note from the copy of contract that we have entirely eliminated any provision for the permanent preemption of idle equipment as originally contemplated.

Yours respectfully,

President

Attention: Mr. George Martin, President

Gentlemen:—

As you already know, we are opening up and developing an ilmenite mine near Tahawus, Essex County, New York.

Pursuant to a directive from the Office of Production Management received by us on August 11th, of which we understand you have been directly informed in detail by that Office, we hereby offer to contract to supply you with the quantity of ilmenite you may desire for a period of ten years at the bare cost of production without profit to us, provided that you now underwrite a proportionate share of all the risks incident thereto, all as more fully to be embodied in a definitive contract. We enclose herewith a tentative draft of contract, which we believe is consistent with the directive issued to us by the Office of Production Management, and which sets forth in detail the terms of our offer. You will understand that this tentative draft of contract is subject to such modifications as may be suggested by our counsel with the approval of the Office of Production Management.

N. L. Exhibit 28

There is also enclosed a statement showing the estimated cost of providing for an annual capacity of about 180,000 long tons and the estimated additional cost of increasing the annual capacity to 240,000 long tons and to 300,000 long tons. If the requirements of a single purchasing company, or more than one in combination, do not total 60,000 tons, there will be a somewhat larger proportionate payment required to the extent that it is more costly to install capacity for less than that of a full 60,000 ton unit.

In order that the necessary mill expansion may be gotten underway before cold weather interferes too greatly, we are, with the approval of OPM, asking that you give us your decision before August 20th. Should you elect to accept our offer, we shall be pleased to permit you during a period of 30 days from your acceptance to make a careful investigation of the title to the lands upon which the development is located in order to acquaint yourself with the accompanying risks. If you decide that the risks involved are greater than you care to assume you may withdraw your offer at any time during the said 30 day period. You will, however, appreciate that we cannot place orders for equipment and materials which may be necessary to provide facilities for your requirements until the expiration of the 30 day period, or until such time during the 30 day period you inform us of your willingness to assume your proportionate share of the risks.

Please keep all information furnished herewith in strictest confidence.

Yours very truly,

C. F. GARESCHÉ
Manager.

Letterhead of

OFFICE OF THE ATTORNEY GENERAL
Washington, D. C.

September 23, 1941

John Lord O'Brian, Esq.
General Counsel
Office of Production Management
Social Security Building
Washington, D. C.

Dear Sir:

I have your letter of September 22, 1941, together with the copy of the *proposed contract between National Lead Company and E. I. du Pont de Nemours & Company* which was enclosed in it. I understand that this contract conforms to the provisions set forth in a letter from Donald M. Nelson, copy of which was enclosed in your letter of August 7, 1941, to Attorney General Jackson, except that the National Lead Company has not reserved a right to pre-empt the capacity of the du Pont Company in the event of a suspension by du Pont of purchases, and that in consideration for this du Pont has agreed to pay its share of general maintenance and overhead expenses during the period of any operation except that in computing the prices to be paid for renewals of equipment du Pont will be given credit for the period of time during which such equipment is used by the National Lead Company.

I understand that in the opinion of the Office of Production Management this contract is a measure necessary for the national defense and that in your opinion the pro-

posed contract is in accordance with the spirit of the directive. In my view this proposed contract, if executed, will come within the antitrust law enforcement policy described in the letter which Attorney General Jackson sent you on April 29, 1941.

Sincerely yours,

FRANCIS BIDDLE
Attorney General

N. L. Exhibit 28

Minutes of a special meeting of the stockholders of AMERICAN ZIRCONIUM CORPORATION, held at the offices of Metal & Thermit Corporation, No. 120 Broadway, Borough of Manhattan, City of New York, on the 30th day of September, 1941, at 2:30 o'clock P.M.

Mr. Walton Smith was elected Chairman of the meeting and Mr. Hubert E. Rogers was elected Secretary thereof.

Proxies representing all the stock of the Corporation, i.e. 6,000 shares of Preferred Stock and 15,112 shares of Common Stock were presented and approved. The names of the shareholders, proxy and number of shares represented were as follows:

Stockholder	Proxy	Shares Preferred	Shares Common
The Glidden Company	Adrian Joyce	6,000	6,800
Metal & Thermit Corporation	F. H. Hirschland	—	6,800
National Lead Company	Douglas N. Cole	—	1,512

There were also present at said meeting, in addition to the above, Messrs. Hubert E. Rogers, Walton Smith and John F. Condon, Jr., representing Metal & Thermit Corporation; Messrs. R. H. Horsburgh and Clifton M. Kolb, representing The Glidden Company; and Mr. Fletcher Rockwell, representing National Lead Company.

The Chairman declared that proxies representing all of the stock of the Corporation, both Common and Preferred were present and represented.

The Secretary stated that the Board of Directors, at a meeting just held, had unanimously approved a Plan of

Reorganization of the Corporation which Plan was thereupon read to the meeting.

After discussion, on motion duly made and seconded, the following resolutions were unanimously adopted:

Resolved: That it is in the best interest of the Corporation and its stockholders that the Plan of Reorganization of the Corporation presented to the meeting be adopted as and for the Plan of Reorganization of the Corporation. and that the officers of the Corporation be and they hereby are authorized and directed to take all necessary steps and to perform all necessary acts that may be requisite with respect to the execution of any instruments approving the adoption of the Plan of Reorganization and necessary for the consummation thereof; and it was

Further resolved: That a copy of the Plan of Reorganization be made a part of the minutes of this meeting which Plan is as follows:

"AGREEMENT AND PLAN OF REORGANIZATION OF AMERICAN ZIRCONIUM CORPORATION

Agreement of Reorganization dated the 30th day of September, 1941, made by and between THE GLIDDEN COMPANY (hereinafter referred to as "Glidden"), METAL & THERMIT CORPORATION (hereinafter referred to as "M. & T.") and AMERICAN ZIRCONIUM CORPORATION (hereinafter referred to as "Zirconium")

WITNESSETH:

WHEREAS, Glidden is the owner of 6,000 shares of preferred stock and 6,800 shares of common stock

of American Zirconium Corporation; and M. & T. is the owner of 6,800 shares of the common stock of Zirconium; and

WHEREAS, Glidden manages the affairs of Zirconium pursuant to management and sales agreements and finds that the expansion of the operations of Zirconium is desirable and desires to acquire upwards of 80 per cent. of all the stock of Zirconium; and

WHEREAS, M & T is desirous of exchanging the shares of common stock of Zirconium owned by said corporation for common stock of Glidden,

NOW, THEREFORE, the parties agree as follows:

(1) Pursuant to this agreement Glidden will exchange 22,700 shares of common stock of Glidden for 6,800 shares of Common Stock of Zirconium owned by M. & T. and to cause good delivery of said 22,700 shares of Common stock of Glidden to be made to M. & T. simultaneously with the delivery to Glidden of the said 6,800 shares of Zirconium, owned by M. & T.

(2) Upon consummation of this plan of reorganization, Glidden will become the owner of more than 80 per cent. of the shares of common stock and all the shares of preferred stock of Zirconium.

(3) The Boards of Directors of the parties to this agreement have authorized and approved the consummation of the transactions herein set forth in this agreement.

N. L. Exhibit 28

(4) The directors and stockholders of Zirconium have authorized and approved the consummation of the transactions herein set forth in this agreement.

(5) The officers and directors of Zirconium elected pursuant to designation of M. & T. will resign upon the consummation of the transactions set forth herein.

(6) This agreement and plan shall be consummated at the office of the Metal & Thermit Corporation, on the 30th day of September, 1941.

IN WITNESS WHEREOF, the parties hereto have caused these presents to be duly executed by their respective officers hereunto duly authorized and their respective corporate seals to be hereunto affixed and duly attested the day and year first above written.

N. L. Exhibit 28

Letterhead of

THE GLIDDEN COMPANY

October 1, 1941

Mr. Fletcher W. Rockwell, President
National Lead Company
111 Broadway
New York City

Dear Mr. Rockwell:

Referring to our meeting yesterday and our conversation at lunch, I told you that it is a matter of indifference to The Glidden Company as to whether your company carried out its arrangement made with Mr. Rogers of the Metal & Thermit Corporation, or whether you chose to cancel that arrangement.

My statement was correct insofar as its relation to the American Zirconium Corporation is concerned. I wish to call your attention, however, to the fact that our company is permitted to purchase its own stock where such stock is used for the acquisition of other properties, and upon Mr. Rogers' assurance that the National Lead Company was going to turn in its stock on the same basis as the Metal & Thermit Corporation, our company purchased slightly over 5,000 shares of The Glidden Company common stock to complete the transaction with your company. We now have this stock on hand. I assume you will be glad to take this stock off our hands for our company does not make it a practice to deal in its own stock.

N. L. Exhibit 28

In the rush of the meeting yesterday I neglected to thank you for the very good luncheon I enjoyed with Mr. Cole and yourself. I want you to know that I did appreciate your courtesy.

Yours very truly,

ADRIAN D. JOYCE

ADJ-V

N. L. Exhibit 28

October 3, 1941

Mr. Adrian D. Joyce, President
The Glidden Company
1396 Union Commerce Building
Cleveland, Ohio

Dear Mr. Joyce:

Mr. Rockwell left Wednesday for a short holiday at Ponte Vedra, to return Tuesday or Wednesday of next week, and your letter to him of the 1st was accordingly referred to me for acknowledgment, pending final reply by Mr. Rockwell upon his return.

I am very sorry that this question of any obligation on our part to take over the Glidden shares was not raised before, either during our conversation at luncheon or in the discussion of the general subject during the first part of the following meeting when you were present. Our final decision on the main question was reached, in consultation with our other officials, without notice of any such claim, as I explained to Mr. Horsburgh when he first mentioned the matter upon our return to the meeting and after your departure. I therefore think it most unfortunate that we should be asked to consider such an important question now, after we had supposed that the entire matter had been disposed of to the satisfaction of all concerned.

You will understand of course that I am only expressing my personal view and that Mr. Rockwell will answer your letter promptly upon his return.

Yours very truly,

(Signed) M. D. Cole
Assistant to the President

THE GLIDDEN COMPANY

[Written in pencil under letterhead: Rec'd 10/7

Mr. Rockwell 1.15 P.M.

Please note. Pretty cagey as usual. He implies that he had heard nothing of our desire in the matter, through Rogers before our luncheon conversation—which I understand is not so. I can't imagine what he means by the last paragraph.

M. D. C.
10/7]

October 6, 1941

Mr. M. D. Gole
Assistant to the President
National Lead Company
111 Broadway
New York City

Dear Mr. Cole:

I am in receipt of your letter of the third and pleased to know that Mr. Rockwell will reply to my letter of the first upon his return from his holiday.

I am sorry that I did not think to bring up the matter of the Glidden shares at our conversation at luncheon, but truth to tell, I was so shocked to think that such an entirely extraneous matter as the changing of a definite contract should be brought up as the condition precedent to the carrying out

of a definite agreement, that naturally I did not think of all of the other matters involved.

I am pleased to have your asurance that Mr. Rogers and the other officers of the Metal & Thermit Corporation are satisfied with the disposition of the matter under discussion.

Yours very truly,

ADRIAN D. JOYCE
President.

October 9, 1941

Mr. Adrian D. Joyce, President
The Glidden Company
1396 Union Commerce Building
Cleveland, Ohio

Dear Mr. Joyce:

Your letter of October 1st, already acknowledged by Mr. Cole, with reference to shares of The Glidden Company stated to have been purchased by it for exchange for our shares of American Zirconium Corporation, under the negotiations recently had between us, came to me as an unpleasant surprise, and I hope that on further consideration you will be glad to withdraw the request that we take over those shares.

The time to have raised this question was during the open discussion and consideration of the matter of our participation in the proposed exchange of shares, at the time of our meeting on the afternoon of September 30th, for which ample opportunity was offered. Aside from other considerations, the fact that it was not so raised and that our decision not to participate in the exchange, for the reasons then explained, was reached and announced without notice of any such claim, and with your express consent and approval, clearly precludes such a claim from recognition.

We are still prepared to go through with the exchange on the same terms, including that with respect to the License Agreement, which we consider only logical in the circumstances, viz., that both parties to that Agreement be released from future obligations thereunder.

Yours very truly,

(Signed) FLETCHER W. ROCKWELL

N. L. Exhibit 28

Letterhead of

THE GLIDDEN COMPANY

Cleveland, Ohio
October 13, 1941

Mr. Fletcher W. Rockwell, President
National Lead Company
111 Broadway
New York City

Dear Mr. Rockwell:

I am in receipt of your letter of October 9 and regret that apparently we do not see eye to eye as to our request that the National Lead Company take over the common shares of The Glidden Company which we purchased for the purpose of carrying out the agreement made with your Company and confirmed by Mr. Hubert Rogers.

In your letter you state that: "The time to have raised this question was during the open discussion and consideration of the matter of our participation in the proposed exchange of shares, at the time of our meeting on the afternoon of September 30th." I wish to call your attention, however, to the fact that when I left the Directors' meeting in order to catch my plane, both Mr. Cole and yourself were at your office conferring with your Board of Directors as to what would be your final decision regarding the matter of carrying out the stock exchange agreement. You will realize, therefore, that not until I knew of your final decision, could I bring to your attention the matter of any obligations incurred by your decision not to carry out the agreement mentioned above.

N. L. Exhibit 28

In the event you do not desire to purchase the common shares which we now hold in our Treasury, we are still prepared to go through with the exchange on the original basis. We cannot, however, consider any change in the License Agreement for as you well know, the value of the common shares of the American Zirconium Corporation is largely dependent on the License Agreements which we have with the Dupont Company and with your Company.

In the event you decide to carry out the original agreement, I will ask you to agree to an assignment of the License Agreement to The Glidden Company for the reason that the American Zirconium Corporation would then we liquidated.

Yours very truly,

ADRIAN D. JOYCE,
President.

ADJ-V

N. L. Exhibit 28

October 16, 1941

Mr. Adrian D. Joyce, President
The Glidden Company
1396 Union Commerce Building
Cleveland, Ohio

Dear Mr. Joyce:

I have your letter of October 13th and am sorry that you still adhere to your original position in this matter.

I can not understand how you can consider that the proper time to introduce so important and fundamental a question as the purchase of 5000 Glidden shares was after and not before we had come to a decision on the main subject. Before leaving the meeting to consult our associates we had made very clear our own inclination not to participate in the exchange of shares unless the License situation were disposed of as we had specified.

As heretofore explained to you we would not feel justified in surrendering our Zirconium shares unless, as part consideration therefor, an agreement could be reached for the mutual release of future obligations under the License Agreement, as heretofore proposed. We have never suggested any modification of the License Agreement as to patents already issued or applied for, and I would point out to you that only to the extent of those patents can the license be regarded as a factor in the valuation of the Zirconium shares for the purposes of present exchange.

As any surrender of our Zirconium shares must thus be conditioned upon a satisfactory adjustment of the license position as above indicated, and as we seem to be stalled on that, it is unnecessary to consider at this time the matter of

our consent to an assignment to The Glidden Company, in the event of its acquisition of our Zirconium shares, of the Zirconium interest under the License Agreement, which I note you now introduce for the first time.

Yours very truly,

(Signed) FLETCHER W. ROCKWELL
President

VIA AIR MAIL

N. L. Exhibit 28

Letterhead of

THE GLIDDEN COMPANY

October 17, 1941

Mr. Fletcher W. Rockwell, President
National Lead Company
111 Broadway
New York City

Dear Mr. Rockwell:

I have your letter of October 16 and you apparently miss the main point of our contention which is this: You made a definite agreement, confirmed by Mr. Hubert Rogers, to make the exchange of shares. When this agreement was made it was not contingent upon any change in the License situation. In other words, your introduction of a proposition to change the License was after the arrangement had been consummated. When you found that our Company was not willing to consider the making of the License change a condition for the exchange of shares, you wished to withdraw from the agreement.

Now I am sure you will agree that as a matter of business ethics, when a party to an agreement wishes to withdraw from an agreement, the least he can do is to put the other party to the agreement in the same position he was before the agreement was made.

In the case under discussion, when Mr. Hubert Rogers informed me that the agreement with your Company and with Metal & Thermit Corporation was concluded, I found we did not have a sufficient number of shares to carry out the agreement and therefore purchased additional shares for this purpose. Based on the present market, these shares so purchased represent a loss of approximately $9,000. I

am sure that neither you, nor your Directors, wish to place this burden upon the Glidden Company. The loss was incurred through no fault of our own but merely in the furtherance of carrying out a definite agreement.

If it will embarrass your Company to make an outright purchase of these shares of The Glidden Company, will you be willing to give us an equal number of shares of the National Lead Company common stock in exchange for these Glidden shares? If you are willing to do this we could carry the National Lead Company shares in our Investment Account and could dispose of them when an opportunity offered.

In the second paragraph of your letter you write: "We have never suggested any modification of the License Agreement as to patents already issued or applied for and I would point out to you that only to the extent of those patents can the License be regarded as a factor in the valuation of the Zirconium shares for the purposes of present exchange."

I cannot agree with this statement, and this because our License Agreement reads in part as follows: "Titanium hereby gives and grants to Zirconium * * * * a non-exclusive right and license to make, use and/or sell, * * * * to the same extent that Titanium itself is free to make, use and/or sell the same, each and every invention, improvement or subject matter in the "Licensed Field" claimed in or covered by Letters Patent hereinabove enumerated and in or by any and all other Letters Patent now or hereafter owned by or otherwise at the disposal of Titanium."

If, in connection with this, you read the definition of the designation "Licensed Field" I am sure you will realize that the future obligation of Titanium to give to Zirconium the rights to use each and every invention, improvement, etc. made by Titanium, is of very great value and naturally

it was because of this value element that it was considered in fixing the value of the Zirconium shares.

I realize that even if The Glidden Company owned all of the shares of the American Zirconium Corporation that your Company could refuse to consent to an assignment to The Glidden Company, and this would necessitate the continuance of the American Zirconium Corporation as a definite corporate entity, but I cannot conceive that your Company would take such an attitude when its only effect would be to place an additional burden in connection with accounting, etc.

I would call your attention to the fact that regardless of what you finally decide to do in connection with your shares in the American Zirconium Corporation, that your Company has a definite obligation to the American Zirconium Corporation to assist in its development and future growth. The Glidden Company has contributed $200,000 for the payment of the bank loan, and I will appreciate it if your Company will send us your checks for $20,000 as your proportion of this obligation. We do not think that it will be wise to increase the capital stock at this particular time but American Zirconium Corporation is going ahead with plans for increasing the production to 9,000 tons and in due course you will be advised of the contribution we shall ask of your Company for this purpose.

I sincerely hope this matter can be settled on a friendly and amicable basis because it is my earnest desire to have our relations with all of our competitors in the field characterized by mutual friendliness.

Yours very truly,

ADRIAN D. JOYCE
President.

ADJ-V

N. L. Exhibit 28

Mr. Adrian D. Joyce, President
The Glidden Company
1396 Union Commerce Building
Cleveland, Ohio

Dear Mr. Joyce:

I acknowledge receipt of your letter of the 17th inst. There appears to be no useful purpose to be served in continuing the correspondence with regard to our Zirconium shares. Our position has, I think, been made clear. There was no intention and no agreement on our part to sell those shares unless as a part of the transaction our future obligations under the License Agreement should be terminated. As you know, our original acquisition of Zirconium stock and the License Agreement were parts of one and the same transaction and we could not consider continuing the executory features of the License Agreement after disposing of the stock.

We had no reason to suppose that any purchase by your Company of its own shares was involved in our negotiations. If your Company purchased its own shares in anticipation of reaching an agreement with us that is, of course, to be regretted, but we accept no responsibility for the failure of the negotiations. I assume that the decline in the market price of your stock is merely temporary and that in the end your Company will suffer no actual loss on the shares. In any event, the purchase was on your own responsibility and we do not recognize any obligation in connection with it.

N. L. Exhibit 28

With regard to your suggestion that we now contribute to the amount required to pay off the bank loan and that we are under some obligation to do so I should be interested to learn the basis for this suggestion. We recognize no such obligation with respect to either the bank loan or the future development of the productive capacity of the Zirconium Corporation.

Yours very truly,

(Signed) FLETCHER W. ROCKWELL
President

VIA AIR MAIL

N. L. Exhibit 28

Letterhead of

THE GLIDDEN COMPANY

October 29, 1941

Mr. Fletcher W. Rockwell, President
National Lead Company
111 Broadway
New York City

Dear Mr. Rockwell:

I received your letter of October 23 and did not reply to it immediately because I desired to contact Mr. Hubert Rogers who conducted the negotiations with you for the exchange of your Zirconium shares for shares in The Gildden Company. I desired to find out from Mr. Rogers whether, in making the arrangements with you for the exchange of these shares, there were any strings attached and whether there was any agreement concerning a cancellation or termination of the License Agreement.

Mr. Rogers has told me that nothing was said about the License Agreement and that he had reported the arrangements to me exactly as they were made in all details. Mr. Rogers will either telephone you or talk to you about this so that you will be convinced that there is no misunderstanding on my part concerning the nature of this transaction.

In your letter you say: "There appears to be no useful purpose to be served in continuing the correspondence with regard to our Zirconium shares." I can assure you that I have no desire to continue the correspondence but I do want you to either carry out the trade as arranged with Mr. Rogers, or if you choose not to carry out that trade, then to

put our company back in the position that it was in before the trade was negotiated. I must say in all candor that our company will insist upon your taking definite action concerning the matter I have brought to your attention.

In the last paragraph of your letter you refer to that portion of my letter of the 17th where I wrote: "I would call your attention to the fact that regardless of what you finally decide to do in connection with your shares in the American Zirconium Corporation, that your Company has a definite obligation to the American Zirconium Corporation to assist in its development and future growth. The Glidden Company has contributed $200,000 for the payment of the bank loan, and I will appreciate it if your Company will send us your check for $20,000 as your proportion of this obligation," and you write as follows:

"With regard to your suggestion that we now contribute to the amount required to pay off the bank loan and that we are under some obligations to do so, I should be interested to learn the basis for this suggestion. We recognize no such obligation with respect to either the bank loan or the future development of the productive capacity of the Zirconium Corporation."

I am surprised that you should bring this question up because I well remember that at the time the Glidden representatives were asking for an increase in the capital stock of the company, your Company and the Metal & Thermit Corporation offered to loan your proportions of the necessary amount to reduce the bank loan. Now, I submit that your obligation is no less now that it was at that time and that if we do not increase the capital stock of the corporation that the stockholders should contribute their proportionate amount of the necessary funds. Aside from all this, you

have the same obligation as every other stockholder of a corporation has to do anything possible to help promote the corporation in which you are interested.

I think it is quite unnecessary for me to enlarge on this point because surely you are familiar with the obligations of stockholders as well as that of Directors and Officers.

In closing I wish to make clear to you that we stand ready to carry out the original agreement as arranged by Mr. Rogers. I also want to repeat that in the event your Company chooses not to carry out the agreement, then we ask to be put back to our original position without loss.

Yours truly,

ADRIAN D. JOYCE
President.

We submit the following questions:

1. Sulfate Process — Anatase TiO_2

   A. Grinding

      1. What should the fineness run on ground ore to obtain most efficient attack?

   B. Attack

      1. What is the optimum acid concentration to use?
      2. Should the acid and ore be agitated for any definite time before the attack is initiated with steam?
      3. Is any third agent added to the acid and ore before the attack?
      4. What is the most suitable quantity of air during the attack?
      5. At what temperature should the steam be cut off?
      6. How long should the attack be aged before dissolving?
      7. What % recovery should be expected on an average?

   C. Solution of Mass

      1. What is the best way of adding water to the mass?
      2. When should the scrap iron be added for reduction of the ferric iron?

3. What concentration should be maintained during solution and what should the final concentration be?
4. How much reduced TiO_2 should be present when attack is completely dissolved?
5. How much mother liquor is it advisable to use for the dissolution of each attack?
6. What is the optimum Factor of Acidity for these solutions?

D. Clarification

1. How is it best to add the hydrogen sulfide for coagulation and what quantity?
2. Is it better to add the glue before or after the hydrogen sulfide coagulation and what quantity is found necessary?
3. What should the clarity be before crystallization of the copperas?

E. Crystallization and Copperas Removal

1. What should be the maximum losses of TiO_2 on crystallization and removal of copperas?
2. What should the Fe-TiO_2 ratio run after crystallization?
3. How long should the residue be before concentrating the solution for hydrolysis?

F. Hydrolysis

1. What concentration (grams TiO_2 per liter) should the liquor be concentrated to before hydrolysis?

2. What should be the temperature of this solution when added to the water for the Blumenfeld Hydrolysis?
3. What should be the temperature of the water at the time of introduction?
4. What should be the relative volume of solution to water?
5. What should be the rate at which the solution is added to the water?
6. What should be the temperature when all the solution has been added?
7. How long should it take to bring the mixture to the BP after the introduction is complete?
8. How long should the solution be boiled to get optimum recovery
9. What should the average recovery be from hydrolysis

G. Filtration of Acid Cake

1. How long should the iron be after filtration of the acid cake is complete?
2. How is it best to remove last traces of iron?

H. Calcination.

1. What should the moisture be on the cake fed to the calciner?
2. How much and what is the best conditioning agent for calcination?
3. How high should the oxygen content of the calciner gases be maintained uring calcination?

4. Should the calcined pigment be cooled under any special conditions as it leaves the calciner?
5. How much and what form should antimony oxide be added to get optimum results on semi-chalking TiO_2?
6. What is the best method for making N. C. type chalk resisting TiO_2?

I. Grinding and Hydro-separation

1. What dispersing agent has been found most suitable for TiO_2?
2. What coagulating agent?
3. How should the aluminium hydroxide be deposited upon the TiO_2 to give maximum resistance to light?
4. How may the best texture be maintained without recourse to micronizing?

II. Rutile Process

A. Production of Chloride solution

1. What is the most suitable method for producing chloride liquors?
2. What is the best factor of acidity to use?

B. Hydrolysis of chloride solution

1. How much seeding solution (% TiO_2) is necessary for optimum results?
2. What concentration should the seed solution be before the formation of the seed?

3. At what temperature and for how long should the seed solution be heated to form the nuclei?
4. What is the best concentration to have after the seed has been added?
5. How long is it necessary to boil to get best yields?
6. What is a typical analysis for the chloride solution?
7. What are the best conditions to prevent peptization during the washing of the acid cake?
8.

C. Calcination

1. What salt and in what quantities is most suitable for conditioning?
2. How is it best to make non-chalking rutile TiO_2?
3. How may light sensitivity be avoided, what is its cause?

D. Other processes for making rutile

1. Has it been found advisable to use other acid such as nitric for rutile formation?

Maintenance Questions

1. Type of feeder used to charge acid cake into calciner.
   (a) What materials are used to prevent contamination of pigment and corrosion of machine from the acid gases?
   (b) What is the reasonable life of such equipment?

N. L. Exhibit 28

2. Specification of cloth used for filtration of the monohydrate of iron sulphate from acid solution, and at what temperature and concentration is this done?

(a) What life can be expected from this cloth?

AMERICAN ZIRCONIUM CORPORATION

November 28, 1941

The National Lead Company
111 Broadway
New York, N.Y.

A special meeting of the Common shareholders of American Zirconium Corporation will be held at the office of the Company, 1396 Union Commerce Building, Cleveland, Ohio, on Tuesday, December 9, 1941, at 10:30 o'clock, A.M., pursuant to action taken by the Board of Directors of American Zirconium Corporation at a special meeting held on November 28, 1941.

This special meeting of the Common shareholders of American Zirconium Corporation has been called for the purpose of considering and acting upon the following propositions:

1. Changing the fiscal year of the company from the calendar year to a fiscal year ending October 31.

2. Changing the stated value of the Common shares of the Company to provide a capital surplus sufficient to eliminate the profit and loss deficit and to reduce the net value of patents owned by the company to $14,709.34.

3. Increase the Common shares of the Company and authorize the sale of the same in an amount sufficient to provide adequate capital for the operations of the company.

N. L. Exhibit 28

4. Increase the capacity of the plant at St. Helena, Baltimore, Maryland to 9,000 tons of TitaniumDioxide per year.

5. The securing of adequate supplies of raw materials.

6. The expansion of the research department of the company.

CLIFTON M. KOLB
Secretary.

Dear Mr. Rockwell:

Referring to our exchange of telegrams today, I am very glad to know that we have arrived at an amicable understanding.

Concerning the shipping instructions, as I have stated in my telegram, we prefer Colachel 54% ilmenite and would like to have this material shipped one car each day for the next five days, and two cars thereafter until the entire quantity is shipped. The Sherwin-Williams Company and the Dupont Company have shipped in part of the material they have loaned us, and by having your shipments coming in as indicated, it will take care of our immediate requirements.

I confirm your understanding that we are to return this ilmenite not later than May 1st next.

Yours very truly,

ADRIAN D. JOYCE
President.

Dear Mr. Joyce:

I was very glad to receive your first telegram of December 11th reading as follows:

"Your telegram received. DuPont has loaned American Zirconium five hundred tons ilmenite and Sherwin-Williams has loaned two hundred tons to help keep plant operating Stop Will your Company loan us one thousand tons for immediate shipment with understanding that our Company will cancel claim against your Company for loss on Glidden stock Please wire prompt reply"

to which I replied the same day as follows:

"Telegram of today received. Glad to accommodate you with one thousand tons returnable not later than May first next upon the understanding stated. Please wire shipping instruetions stating preference as between Colachel fifty-four percent or Norwegian forty-four percent".

I also duly received your second telegram of the 11th covering necessary shipping instructions, and also, this

N. L. Exhibit 28

morning, your letter of yesterday confirming our understanding in the matter.

It is a satisfaction to me to have our dispute out of the way and have given instructions that ore shipments go forward as nearly as possible in accordance with your instructions. Indications are that we will not be able to get the first shipment off until Monday but will try to get two cars off that day.

Yours very truly,

(Signed) FLETCHER W. ROCKWELL
President

N. L. Exhibit 28

Letterhead of

THE GLIDDEN COMPANY

July 14, 1942

Mr. C. F. Garesche, Manager,
Titanium Division,
National Lead Company,
111 Broadway,
New York, N. Y.

Dear Mr. Garesche:

I am in receipt of your letter of July 10 relative to ilmenite and wish to advise you that a 5 pound sample was sent on July 12.

Relative to rate of shipments, we can ship between 3 to 4 carloads a week. I believe these cars will run somewhere between 40 to 50 tons. The material will run approximately somewhere between 50-53%, and I believe you will find it exceptionally high grade, being very low in vanadium, phosphorus and other impurities.

As to completing shipments by July 31, I am very much afraid that we will not be able to do so at this rate. We will therefore expect some leniency from you in regard to completing shipment by July 31. It is unfortunate that the installation of the large additional mill will not be completed for at least another two or three weeks.

We would appreciate hearing from Mr. Pfoutz as soon as possible as to sample so that we can start shipments promptly.

Trusting this arrangement will be satisfactory to you, I am

Yours very truly,

W. J. O'BRIEN
Vice-President.

WJO'B-B

N. L. Exhibit 28

July 24, 1942

Mr. W. J. O'Brien, Vice President
The Glidden Company
1396 Union Commerce Building
Cleveland, Ohio

Dear Mr. O'Brien:

Your letter of July 14th is acknowledged and from it we note that you are planning to ship us between three and four carloads of ilmenite per week. We have today wired you to ship a five pound sample to our Director of Research, Mr. J. L. Turner, at Sayreville. The reason for this is that the St. Louis plant is reporting some difficulty in getting our usual quality of pigment from your ilmenite. The sample to Mr. Turner will be used for analysis to, if possible, determine what is causing the trouble.

As regards your request for permission to continue shipments after July 31st if you are not able to complete the return of our loaned tonnage on or before that date we do not feel that you should ask us to do this. We have loaned you costly ore which was purchased by us for the sake of insurance against pigment plant shut-downs during the period that we were getting our domestic ore development into production. We hope you will agree with us that we have been more than liberal in offering to accept as returned ore any shipments you can make on or before July 31st and that our request that you pay for any unshipped balance at the price we have billed it to you is properly in order.

Yours very truly

Manager

N. L. Exhibit 28

Re: American Zirconium Company—National Lead Company

The most important item in the relations between the National Lead Company and the American Zirconium Company, respectively, the Glidden Company, is the license agreement providing for exchange of licenses under patents —existing patents as well as future patents. This agreement lasts until the end of 1951. The agreement provides that it is not transferable except in the case of a transfer of the entire business of the American Zirconium Co. and in that case only with the National Lead Co.'s approval of the successor. When the National Lead Co. and Metal & Thermit Corp. sell their shares to the Glidden Co., this company becomes the owner of all the shares of the American Zirconium. The sale of the shares has been done because the cooperation between the companies has been unsatisfactory. For that reason it is logical that the National Lead Co. ceasing as a shareholder also wish to cease a cooperation as regards exchange of future licenses. Faced with such a proposal, Mr. Joyce will have to weigh in his mind the possibilities of the value of future licenses received from the National Lead Co. against the value of licenses which he grants. Normally, considering the organizations and the amount of money which the two companies spent on research work, it is to be expected that the National Lead Co. will produce considerably more technical developments than the American Zirconium-Glidden Co.

However, it happens sometimes that the research staff of a small organization has hit on a special development and overestimates the importance of this. In addition to this, Mr. Joyce's companies would be free to exploit these future developments in South America and Canada—and

abroad when the war is over. If Mr. Joyce, influenced by his research staff, has this opinion—well and good. If he has not, I do not think that any representative of the National Lead Co. will be able to influence him in this direction.

There is another aspect to the case which presumably must be in Mr. Joyce's mind, namely, the inconvenience and extra expenses involved by a continued operation of the American Zirconium Co. instead of a transfer of the whole business to the Glidden Co. According to Mr. Cole, the license agreement cannot be transferred without the National Lead Co.'s approval, even if the Glidden Co. has acquired all the shares of the American Zirconium Co.

The advantages of a dissolution of the American Zirconium weighed together with the advantages and disadvantages of losing future exchange of licenses with the National Lead Co. may be sufficient for Mr. Joyce to follow this course. However, he may wish to accomplish the transfer of the business to the Glidden Co. without losing the future exchange of licenses, in which case Mr. Joyce presumably first will see the deal regarding the shares being consummated without mentioning or taking up the question of the transfer of the business, respectively, the dissolution of the American Zirconium Co. The situation will, I believe, be particularly improved for Mr. Joyce if the share transaction as indicated by Mr. Rogers takes the form of a reconstruction dissolving the Zirconium Co. by exchange of shares of this company for Glidden shares to the purpose of saving taxes for the sellers. This seems to me to involve an acknowledgment and approval by the National Lead Co. of the Glidden Co. as successor.

If this idea has not been brought to the attention of Mr. Joyce, he may have in mind to dissolve the American

Zirconium Co. after having acquired all the shares and it seems to me that particularly if some time elapses during which the Zirconium Co. has operated under 100% ownership of the Glidden Co., it would be very difficult for the National Lead Co. to decline its approval of the Glidden Co. as successor.

Considering this situation, the course to follow by the National Lead Co. seems to me to be *now in connection with the sale of the shares* to inform Mr. Joyce (the Glidden Co.) that the National Lead Co. would like to see the license agreement terminated as regards future exchange of licenses on the grounds that the corporation as partners or shareholders in the enterprise has been a failure and the license agreement was made in connection with the creation of that partnership. This will put Joyce on notice that the National Lead Co. is not willing to accept the Glidden Co. as successors to the American Zirconium Co. as regards the license agreement with the following two advantages:

a. It will put the National Lead Co. in a better position at a later date to deny its approval of a transfer of the license agreement to Glidden in case it should come up.

b. Joyce may in view of this be more inclined to agree to terminate the license agreement now.

Sept. 29, 1941.

N. L. Exhibit 29

AGREEMENT made and entered into this 9th day of March, in the year One thousand nine hundred and forty-four by and between THE GLIDDEN COMPANY (hereinafter called "Glidden"), a corporation of the State of Ohio, AMERICAN ZIRCONIUM CORPORATION (hereinafter called "Zirconium"), a corporation of the State of Maryland, and NATIONAL LEAD COMPANY (hereinafter called "National"), a corporation of the State of New Jersey,

WITNESSETH:

WHEREAS certain agreements, hereinafter referred to, bearing date the 6th day of May, 1935, were entered into between Glidden, Zirconium, National, Titanium Pigment Company, Inc. and Metal & Thermit Corporation; and

WHEREAS National is the successor in interest to all the rights and obligations of Titanium Pigment Company, Inc. under said agreements; and

WHEREAS Glidden and Zirconium have proposed to National that the above mentioned agreements and each of them and all rights and obligations thereunder of the parties and their successors and assigns be terminated and cancelled and that National transfer to Glidden one thousand five hundred and twelve (1,512) shares of the common capital stock of Zirconium, being all of such stock owned by National;

NOW, THEREFORE, in consideration of the premises and of the sum of One Dollar ($1.00), lawful money of the United States, by each to the other in hand paid, and of

other good and valuable considerations, the receipt of which is hereby acknowledged, the parties herto do hereby agree with each other as follows:

I. The following agreements and all rights and obligations of the parties thereto, their successors and assigns, are hereby cancelled and terminated as of the date of this agreement:

(1) Agreement made the 6th day of May, 1935, by and between Titanium Pigment Company, Inc. and American Zirconium Corporation;

(2) Agreement made the 6th day of May, 1935, by and between National Lead Company and Titanium Pigment Company, Inc., of the one part, and The Glidden Company, Metal & Thermit Corporation, and American Zirconium Corporation, of the other part;

(3) Agreement made the 6th day of May, 1935, by and between Titanium Pigment Company, Inc., American Zirconium Corporation, The Glidden Company, and Metal & Thermit Corporation

II. National agrees to assign, transfer and deliver forthwith to Glidden or its nominee or nominees one thousand five hundred and twelve (1,512) shares of the common capital stock of Zirconium. Such delivery is to be made by delivery to Glidden or upon its order of certificates for said shares duly endorsed in blank or otherwise endorsed as Glidden may direct.

N. L. Exhibit 29

III. Nothing herein contained shall affect or limit in any manner any licenses or sub-licenses heretofore granted by Zirconium or by Titanium Pigment Company, Inc. or by National or by any sub-licensee, or any of them, under or pursuant to the provisions of Article VIII of the agreement referred to in subdivisions (1) of Article I hereof, or affect, limit, or impair in any manner the rights of any such licensee or sub-licensee under any such license or sub-license.

IV. National agrees to remise, release and forever discharge and does hereby remise, release and forever discharge Zirconium and Glidden and each of them, their and its successors and assigns, of and from all and all manner of action and actions, cause and causes of action, suits, debts, dues, sums of money, covenants, contracts, controversies, agreements, promises, trespasses, damages, claims and demands whatsoever, whether in law or in equity, which against said Zirconium and Glidden or either of them National ever had, now has or which National or its successors or assigns hereafter can, shall or may have for, upon or by reason of any matter, cause or thing whatever from the beginning of the world down to the date of these presents.

V. Glidden agrees to remise, release and forever discharge and does hereby remise, release and forever discharge National, its successors and assigns, of and from all and all manner of action and actions, cause and causes of action, suits, debts, dues, sums of money, covenants, contracts, controversies, agreements, promises, trespasses,

damages, claims and demands whatsoever, whether in law or in equity, which against said National Glidden ever had, now has or which Glidden or its successors or assigns hereafter can, shall or may have for, upon or by reason of any matter, cause or thing whatever from the beginning of the world down to the date of these presents.

VI. Zirconium agrees to remise, release and forever discharge and does hereby remise, release and forever discharge National, its successors and assigns, of and from all and all manner of action and actions, cause and causes of action, suits, debts, dues, sums of money, covenants, contracts, controversies, agreements, promises, trespasses, damages, claims and demands whatsoever, whether in law or in equity, which against said National Zirconium ever had, now has or which Zirconium or its successors or assigns hereafter can, shall or may have for, upon or by reason of any matter, cause or thing whatever from the beginning of the world down to the date of these presents.

VII. Nothing herein contained is intended to or shall alter or affect the rights or obligations of any party with respect to the ordinary open and current merchandise accounts between the parties or any of them.

IN WITNESS WHEREOF the parties hereto have caused these presents to be duly executed by their respective officers thereunto duly authorized, and their respective corporate

seals to be hereunto affixed and duly attested, the day and year first above written.

N. L. Exhibit 30

THIS AGREEMENT made the day of 1944 BETWEEN IMPERIAL CHEMICAL INDUSTRIES LIMITED hereinafter called ICI, IMPERIAL SMELTING CORPORATION LIMITED hereinafter called ISC, GOODLASS WALL AND LEAD INDUSTRIES LIMITED hereinafter called Goodlass Wall, TITAN COMPANY, INC. hereinafter called Titaninc, BRITISH TITAN PRODUCTS LIMITED hereinafter called British Titan, and NATIONAL LEAD COMPANY hereinafter called National.

WITNESSETH:

WHEREAS by agreements made in February and March 1933 British Titan acquired certain rights with reference to the manufacture and sale of titanium compounds, and

WHEREAS British Titan is controlled by Titaninc, ICI, ISC and Goodlass Wall, and

WHEREAS Titaninc is owned 100% by National, and

WHEREAS the parties desire to make provision for development and expansion of the manufacture and sale of titanium compounds consistent with the laws to which each is subject;

NOW, THEREFORE, in consideration of the foregoing, and notwithstanding the terms of the 1933 agreements above referred to, the parties agree as follows:—

1. As used herein 'titanium compounds' means substances, materials, and compositions in which the element Titanium is contained to the extent of 2% or more in a chemically or physically combined state. (For example,

composite pigments such as 'TITANOX'-B and 'TITANOX'-C will be deemed titanium compounds. Simple mixtures will not be deemed to come within this definition. Also excluded are substances, materials or compositions which contain by weight more than 5 per cent of a metal other than Titanium in its purely metallic, i.e. chemically uncombined, state).

As used herein 'National' (where and to the extent the context permits) refers to or includes Titanine.

2. British Titan grants and agrees to grant (but subject always as hereafter provided) to National a non-exclusive royalty-free and whenever possible irrevocable license under all United States letters patent and applications for letters patent which British Titan now owns, may hereafter own, or under which it now possesses or may hereafter become possessed of the right to grant such licenses, solely for the purpose of the production of titanium compounds as hereinabove defined, with full rights to manufacture, use, and sell titanium compounds so produced, with the right to grant non-exclusive sublicenses thereunder but only to parties who shall grant to British Titan for the same purpose and with like rights non-exclusive, royalty-free, and whenever possible irrevocable licenses under any letters patent and applications for letters patent they may possess or acquire in countries within the British Empire and Commonwealth of Nations, except Canada and Newfoundland.

PROVIDED ALWAYS that this clause and the provisions therein contained shall not become operative or have any effect until such provisions shall have received the approval of the Competent Authority in Great Britain

pursuant to the Defense (Patents Trade Marks, etc.) Regulations 1941 or (whichever is the earlier) until such approval is no longer required by English Law.

3. National grants and agrees to grant to British Titan a non-exclusive, royalty-free, and whenever possible irrevocable license under all letters patent and applications for letters patent of countries within the British Empire and Commonwealth of Nations, except Canada and Newfoundland, which National now owns, may hereafter own, or under which it now possesses or may hereafter become possessed of the right to grant such licenses, solely for the purpose of the production of titanium compounds as hereinabove defined, with full rights to manufacture, use, and sell titanium compounds so produced, with the right to grant non-exclusive sublicenses thereunder but only to parties who shall grant to National for the same purpose and with like rights non-exclusive, royalty-free, and whenever possible irrevocable licenses under any United States letters patent and applications for letters patent they may possess or acquire.

PROVIDED ALWAYS that this clause and the provisions therein contained shall not become operative or have any effect until such provisions shall receive the approval of a competent authority in the United States pursuant to war time regulations or (whichever is the earlier) until such approval is no longer required by United States Law.

4. THE foregoing grants are made without restriction as to production, shipment, sale, or use of titanium com-

pounds, and nothing contained therein will be construed as or be applied or be claimed to effect a restraint of trade or commerce in titanium compounds within, from, or to the United States.

5. NEITHER the 1933 agreements above referred to nor the 1920 agreement (referred to in said 1933 agreements) between the Titanium Pigment Company Inc. and Titan Co. A/S will at any time preclude British Titan or National from manufacturing, selling, or using in, or from shipping from or to, any place in the world, titanium compounds or any products, finished or unfinished, or from otherwise fully exercising the grants herein made by British Titan and National.

6. IT is agreed between the parties hereto that the present holdings of 'A' shares in British Titan shall so soon as possible be rearranged so as to ensure that one-quarter of % of the issued 'A' shares in British Titan shall be held either by Titaninc or by National one-quarter by ICI one-quarter by ISC and one-quarter by Goodlass Wall and this rearrangement shall be carried out by means of the purchase of 'A' shares in British Titan from Titaninc or National by ICI ISC and Goodlass Wall respectively. The price to be paid for such shares shall be the price which the Auditors of British Titan shall determine to be the value of the Shares in accordance with the basis defined in Schedule I hereto, and in making that determination the Auditors of British Titan shall act as experts and their decision shall be final and binding on all parties.

7. THE right of National to nominate and from time to to time to remove and replace three directors of British

Titan is hereby cancelled, and National will refrain from taking any part in or exercising any influence in respect of deliberations or decisions of the board of directors or management of British Titan concerning any business of British Titan within, from or to the United States.

8. ALL restrictions on the disposition by National of its shares of British Titan contained in the 1933 agreements above referred to are hereby cancelled, and the Articles of Association of British Titan will be amended to remove therefrom all such restrictions. The parties hereto express their intention that in the event that National decides to dispose of any of its shares in British Titan, National will first offer such shares to the other parties in proportion to their holdings at the time of such offer.

9. NOTWITHSTANDING the 1933 and 1920 agreements above referred to or any other agreement, the parties are free to enter into agreements consistent with this agreement with any other company, firm, or individual anywhere in the world.

10. THIS agreement supersedes, in so far as inconsistent therewith, the 1933 agreements, and to the extent that any provision or provisions of the 1933 agreements are inconsistent herewith they are deemed to be hereby amended.

11. THE license agreement between Titaninc and British Titan made March 10, 1933 (entitled Scheduled Agreement No. 1 and attached to the principal agreement of February 16, 1933) is hereby cancelled.

12. THIS agreement shall be binding on controlled subsidiaries of the parties hereto.

13. THE rights of British Titan and National under paragraphs 2 and 3 hereof may be assigned but only in connection with the sale by British Titan or National of the whole of its business in manufacture and sale of titanium compounds.

14. NATIONAL may at any time terminate the agreement (referred to in the 1933 agreements) made July 30, 1920, between the Titanium Pigment Company Inc. and Titan Co. A/S and such termination shall not entitle any of the parties hereto to retire from the agreement of February 16, 1933, or otherwise make operative the provisions of paragraph 14 of said 1933 agreement.

15. THE agreements contained in paragraphs 2 and 3 hereof to grant licenses under patent rights hereafter acquired may be terminated:

(a) by British Titan or National at the end of any year by three (3) years' previous notice in writing delivered or mailed not later than January 1st of any year; or

(b) by National by notice given at any time pursuant to the order of the Court having jurisdiction of the pending Antitrust Proceedings in the United States; or

(c) by British Titan by notice given at any time pursuant to the order of the Competent Authority in Great Britain pursuant to the Defense (Patents Trade Marks, etc.) Regul .tions 1941

or pursuant to the order of any competent Court in Great Britain.

PROVIDED ALWAYS that the termination of those agreements pursuant to this clause shall not in any way prejudice or affect any licenses, sub-licenses or other rights that have previously to such termination been granted in pursuance of the said agreements or the rights of any licensee, sub-licensee or other grantee thereunder.

SCHEDULE I

VALUATION OF "A" SHARES

1. The basis of the valuation shall be the Company's Balance Sheet as at 31 December 1943 as adjusted by:

   (a) re-instatement of the value of Goodwill at £125,000

   (b) revaluation of the Fixed Assets as at 31st December 1943 by the Company's officials.

2. To the valuation as above computed, there shall be added a sum estimated by the Auditors as representing the profits, (after provision has been made for all taxes, interim dividend on 'A' shares, (if any), and the dividend accruing on the 125,000 'B' shares) arising between 1st January 1944 and the signing of this agreement.

N. L. Exhibit 31

AGREEMENT made this 20th day of October, 1944, by and between INTERNATIONAL PULVERIZING CORPORATION, a corporation organized and existing under the laws of the State of New Jersey, having its principal place of business at Moorestown, New Jersey (hereinafter called the Licensor), and NATIONAL LEAD COMPANY, a corporation organized and existing under the laws of the State of New Jersey, having its principal place of business at 111 Broadway, in the City and State of New York (hereinafter called the Licensee),

WITNESSETH:

WHEREAS the Licensor and the Licensee have heretofore entered into an Agreement dated April 10, 1939, (hereinafter referred to as "Agreement of April 10, 1939"), among other things granting to Licensee an exclusive license under United States Letters Patent No. 2032827, relating to equipment known as the "Micronizer Reduction Mill"; and

WHEREAS the parties hereto desire to modify and amend the said Agreement of April 10, 1939,

NOW, THEREFORE, in consideration of these premises and of the mutual terms and conditions herein contained, the Licensor and the Licensee mutually agree and covenant as follows:

I. Notwithstanding the provisions of said Agreement of April 10, 1939, it is understood and agreed that from and after the date of this Agreement the Licensee's license under said Agreement of April 10, 1939 shall be non-

exclusive and the Licensee shall have no right to grant sub-licenses to others under or pursuant to said Agreement of April 10, 1939.

II. That Article 3(a). of said Agreement of April 10, 1939 be amended and modified, effective as of the date of this Agreement, by substituting therefor the following:

> "3(a). Commencing the 1st day of July, 1944, the Licensee, and each of its Sub-Licensees hereunder, shall pay to the Licensor a royalty for the processing of all titanium pigments and titaniferous ores in said Micronizer Reduction Mills at 25¢ per ton of 2000 pounds on dry basis processed in any accounting year subsequent to said 1st day of July, 1944; said royalty shall be based on the aggregate tonnage processed by the Licensee and that of all other parties to whom licenses have been granted by Licensee pursuant to Article 1 hereof."

The obligations of the Licensee under each sub-license heretofore granted by it are hereby modified to correspond herewith.

III. That Licensee's obligation, as provided in Article 3(b). of said Agreement of April 10, 1939, to pay to Licensor a minimum royalty guarantee be cancelled, and said Article 3(b). be amended and modified, effective as of the date of this Agreement by substituting therefor the following:

> "3(b). Whenever after the 1st day of July, 1944 the Licensor shall notify the Licensee that it has granted a bona fide non-exclusive license to a

responsible party within the field of this Agreement, at a higher rate of royalty which in the aggregate will yield and does yield a return as great or greater than the yearly total dollar royalty payment of the Licensee and all other parties to whom licenses shall have been granted by the Licensee prior to the 1st day of July, 1944, pursuant to Article 1 hereof, then it is agreed that the Licensee and/or Sub-Licensees hereunder shall from the beginning of the next quarterly royalty period pay royalties in pursuance of Section 3(a). hereof at the same rate as that which may be specified in that other Agreement; and provided, further, that, in the event a non-exclusive license shall be granted at a royalty rate lower than that specified in Article 3(a). hereof, then the Licensee and Sub-Licensees hereunder shall from the beginning of the next quarterly royalty period be obligated only to pay royalties to Licensor at such lower rate."

IV. That Article 12 of said Agreement of April 10, 1939 be amended and modified, effective as of the date of this Agreement, to read as follows:

"The Licensor agrees to grant and hereby grants to Licensee and to Licensee's associate, Canadian Titanium Pigments, Ltd., and to each of them, a non-exclusive license for the processing of titanium pigments and titaniferous ores under Licensor's Canadian Letters Patent No. 359,089 upon the same terms and conditions as herein specified pertaining to the license granted to Licensee under Licensor's United States Letters Patent. For the

purpose of establishing a rate of royalty, Canadian Titanium Pigments, Ltd. shall be considered as another Sub-Licensee under Articles 1 and 3 hereof."

V. That, except as herein otherwise provided, all the terms and conditions of said Agreement of April 10, 1939 and of all sub-licenses granted pursuant thereto by the Licensee prior to July 1, 1944, are continued in full force and effect.

IN WITNESS WHEREOF the parties hereto have caused this Agreement to be executed by their duly authorized officers, and their corporate seals to be affixed hereto the day and year aforesaid.

"TITANOX" PIGMENT GRADES

and

PATENTS RELATED THERETO

C. F. Kaegebehn, Mgr.
Patent Department
National Lead Company
March 9, 1945

In connection with this statement of the patents which cover the various TITANOX pigment products (sometimes hereinafter called "grades") and methods of producing them, attention is directed to the following explanatory notes:

1.) The term "pure TiO_2" is used here as it is employed in the trade to distinguish from "composite" pigments. As so used it includes pigments which contain 95% or more TiO_2.

2.) Where it is indicated that a patent covers a certain product or its method of manufacture, or both, this does not mean that all of the claims of the patent apply, but that one or more of the claims do.

3.) Where a patent is indicated as covering both process and product, it means that the particular patent contains both process and product claims.

4.) Where it is indicated that a certain product is covered by more than one patent, this means that the several patents are interrelated through their product laims in one or more ways, for instance:

a) as generic to subgeneric;

b) as covering an invention which is combined with others in the product.

5.) Where it is indicated that one or more patents cover the process of manufacture of a certain product, this means that the process of manufacture is covered in one or more of its essential steps, but not necessarily all, by one or more of the process claims of each patent listed.

6.) Where it is indicated that a certain patent covers a plurality of products or processes of manufacture, this means that the particular patent has a general applicability to these several products or processes.

7.) Patents owned by Titan Co. Inc. and Titan Co. A/S are listed as if owned by National Lead Company.

TITANOX-A MO:

A pure TiO_2 (anatase) general purpose pigment useful where opacity, inertness, whiteness, and ready dispersion in various media are the principal requirements and high resistance to chalking is not important. The "MO" means medium oil absorption which is an expression indicative of the amount of linseed oil a given quantity of the pigment will absorb before forming a free-flowing mixture.

This product is covered by the following patents:

A. Owned by National Lead Company

2,166,082 of July 11, 1939—White TiO_2 Pigments having Controlled Color Tone

B. Owned by du Pont

2,044,941 of June 23, 1936—TiO_2 Pigments Free from Particles in Excess of 15 Microns

The process of manufacture is covered by the following patents:

N. L. Exhibit 33

A. Owned by National Lead Company

1,889,027 of Nov. 29, 1932
1,919,425 of July 25, 1933
2,121,215 of June 21, 1938
2,148,283 of Feb. 21, 1939
2,166,082 of July 11, 1939
2,278,709 of Apr. 7, 1942
2,346,320 of Apr. 11, 1944

B. Owned by du Pont

1,707,248 of Apr. 2, 1929
Re.18,854 of Mar. 10, 1931
1,892,693 of Jan. 3, 1933
1,937,037 of Nov. 28, 1933
2,047,208 of July 14, 1936
2,192,501 of Mar. 5, 1940
2,253,595 of Aug. 26, 1941
2,280,590 of Apr. 21, 1942
2,305,368 of Dec. 15, 1942

TITANOX-A LO:

This grade resembles in all respects TITANOX-A MO except for a lower oil absorption capacity.

All patents (product and process) which cover Tx-A MO also apply as to this grade. In addition, the process of manufacture of Tx-A LO includes steps covered by du Pont patents No. 1,885,921 and No. 2,214,815.

TITANOX-A No. 168 MO:

A pure TiO_2 (anatase) pigment whose qualities resemble the regular TITANOX-A (MO and LO) pigments

but No. 168 when incorporated in coatings possesses better color (whiteness), less tendency to color changes, and greater resistance to chalking.

This product is covered by the following patents:

A. Owned by National Lead Company

2,166,082 of July 11, 1939—White TiO_2 Pigments having Controlled Color Tone

B. Owned by du Pont

2,044,941 of June 23, 1936—TiO_2 Pigments Free from Particles in Excess of 15 Microns

The process of manufacture is covered by the following patents:

A. Owned by National Lead Company

1,889,027 of Nov. 29, 1932
1,919,425 of July 25, 1933
2,121,215 of June 21, 1938
2,148,283 of Feb. 21, 1939
2,166,082 of July 11, 1939
2,260,177 of Oct. 21, 1941
2,278,709 of Apr. 7, 1942
2,346,320 of Apr. 11, 1944

B. Owned by du Pont

1,707,248 of Apr. 2, 1929
Re.18854 of Mar. 10, 1931

1,892,693 of Jan. 3, 1933
1,937,037 of Nov. 28, 1933
2,047,208 of July 14, 1936
2,192,501 of Mar. 5, 1940
2,253,595 of Aug. 26, 1941
2,280,590 of Apr. 21, 1942
2,305,368 of Dec. 15, 1942

TITANOX-A No. 168 LO:

This grade resembles in all respects TITANOX-A. No. 168 MO except for a lower oil absorption capacity.

All patents (product and process) which cover Tx-A No. 168 MO also apply as to this grade. In addition, the process of manufacture of Tx-A No. 168 LO includes steps covered by du Pont patents No. 1,885,921 and No. 2,214,815.

TITANOX-AA:

A pure TiO_2 (anatase) pigment possessing good color (whiteness), and high tinting strength but greatly improved chalk resistances as compared with the regular A's and the No. 168's. It is particularly useful in the formulation of enamels, for instance, automobile finishes where a high degree of chalk resistance is required.

This product is covered by the following patents:

A. Owned by National Lead Company

2,224,987 of Dec. 17, 1940—TiO_2 Pigments Associated with Antimony Compound and Alumina

N. L. Exhibit 33

B. Owned by du Pont

2,044,941 of June 23, 1936—TiO_2 Pigments Free from Particles in Excess of 15 Microns

2,224,777 of Dec. 10, 1940—TiO_2 Pigments Associated with Antimony Compounds

The process of manufacture is covered by the following patents:

A. Owned by National Lead Company

1,889,027 of Nov. 29, 1932
1,919,425 of July 25, 1933
2,121,215 of June 21, 1938
2,161,755 of June 6, 1939
2,224,987 of Dec. 17, 1940
2,260,177 of Oct. 21, 1941
2,278,709 of Apr. 7, 1942
2,346,320 of Apr. 11, 1944

B. Owned by du Pont

1,707,248 of Apr. 2, 1929
Re.18,854 of Mar. 10, 1931
1,885,921 of Nov. 1, 1932
1,892,693 of Jan. 3, 1933
1,937,037 of Nov. 28, 1933
2,047,208 of July 14, 1936
2,192,511 of Mar. 5, 1940
2,224,777 of Dec. 10, 1940
2,253,595 of Aug. 26, 1941
2,280,590 of Apr. 21, 1942
2,305,368 of Dec. 15, 1942

N. L. Exhibit 33

TITANOX-A No. 24:

A pure TiO_2 (anatase) pigment which possesses even greater resistance to chalking but a slightly diminished brightness as compared with AA.

This product is covered by the following patents:

A. Owned by National Lead Company

2,202,594 of May 28, 1940—TiO_2 Pigment Associated with Antimony Compound

2,224,987 of Dec. 17, 1940—TiO_2 Pigment Associated with Antimony Compound and Alumina

2,346,322 of Apr. 11, 1944—TiO_2 Pigment Associated with Chromium Compound, White Metal Silicate and Alumina

B. Owned by du Pont

2,044,941 of June 23, 1936—TiO_2 Pigments Free from Particles in Excess of 15 Microns

2,218,704 of Oct. 22, 1940—TiO_2 Pigments Coated with Hydrous Titanium Oxide

2,224,777 of Dec. 10, 1940—TiO_2 Pigment Associated with Antimony Compound

2,232,168 of Feb. 18, 1941—TiO_2 Pigment Associated with Chromium Compound and Alumina

2,296,636 of Sept. 22, 1942—White Pigments Coated with Uncalcined Silica

2,296,639 of Sept. 22, 1942—White Pigments Coated with White Metal Silicate

The process of manufacture is covered by the following patents:

A. Owned by National Lead Company

1,889,027 of Nov. 29, 1932
1,919,425 of July 25, 1933
2,121,215 of June 21, 1938
2,148,283 of Feb. 21, 1939
2,161,755 of June 6, 1939
2,202,594 of May 28, 1940
2,224,987 of Dec. 17, 1940
2,260,177 of Oct. 21, 1941
2,278,709 of Apr. 7, 1942
2,346,320 of Apr. 11, 1944
2,346,322 of Apr. 11, 1944

B. Owned by du Pont

1,707,248 of Apr. 2, 1929
Re.18,854 of Mar. 10, 1931
1,885,921 of Nov. 1, 1932

1,892,693 of Jan. 3, 1933
1,937,037 of Nov. 28, 1933
2,047,208 of July 14, 1936
2,192,501 of Mar. 5, 1940
2,218,704 of Oct. 22, 1940
2,224,777 of Dec. 10, 1940
2,232,168 of Feb. 18, 1941
2,253,595 of Aug. 26, 1941
2,280,590 of Apr. 21, 1942
2,296,636 of Sept. 22, 1942
2,296,639 of Sept. 22, 1942
2,305,368 of Dec. 15, 1942
2,357,089 of Aug. 29, 1944

TITANOX-A NC:

A pure TiO_2 (rutile) pigment which, although its color and tinting strength are not quite as good as the other A's, is practically non-chalking.

This product is covered by the following patents:

A. Owned by National Lead Company

2,166,082 of July 11, 1939—White TiO_2 Pigments having Controlled Color Tone

2,280,795 of Apr. 28, 1942—Rutile TiO_2 Pigments Associated with Zinc Compounds

2,290,539 of July 21, 1942—(Generic to 2,280,795)

N. L. Exhibit 33

B. Owned by du Pont

2,044,941 of June 23, 1936—TiO_2 Pigments Free from Particles in Excess of 15 Microns

The process of manufacture is covered by the following patents:

A. Owned by National Lead Company

1,889,027 of Nov. 29, 1932
1,919,425 of July 25, 1933
2,121,215 of June 21, 1938
2,166,082 of July 11, 1939
2,278,709 of Apr. 7, 1942
2,280,795 of Apr. 28, 1942
2,290,539 of July 21, 1942

B. Owned by du Pont

1,707,248 of Apr. 2, 1929
Re.18,854 of Mar. 10, 1931
1,892,693 of Jan. 3, 1933
1,937,037 of Nov. 28, 1933
2,047,208 of July 14, 1936
2,253,595 of Aug. 26, 1941
2,305,368 of Dec. 15, 1942

TITANOX A-WD and TITANOX A-WDL:

Pure TiO_2 (anatase) special pigments which disperse more readily in water vehicles than other grades; Tx A-WDL permits a higher concentration of pigment in water pastes than does Tx A-WD.

N. L. Exhibit 33

This product is covered by the following patents:

A. Owned by National Lead Company

2,166,082 of July 11, 1939—White TiO_2 Pigments having Controlled Color Tone

B. Owned by du Pont

2,044,941 of June 23, 1936—TiO_2 Pigments Free from Particles in Excess of 15 Microns

The process of manufacture is covered by the following patents:

A. Owned by National Lead Company

1,889,027 of Nov. 29, 1932
1,919,425 of July 25, 1933
2,121,215 of June 21, 1938
2,148,283 of Feb. 21, 1939
2,166,082 of July 11, 1939
2,278,709 of Apr. 7, 1942
2,346,320 of Apr. 11, 1944

B. Owned by du Pont

1,707,248 of Apr. 2, 1929
Re.18,854 of Mar. 10, 1931
1,885,921 of Nov. 1, 1932
1,892,693 of Jan. 3, 1933
1,937,037 of Nov. 28, 1933
2,047,208 of July 14, 1936
2,192,501 of Mar. 5, 1940

2,214,815 of Sept. 17, 1940
2,253,595 of Aug. 26, 1941
2,280,590 of Apr. 21, 1942
2,305,368 of Dec. 15, 1942

TITANOX-B-30:

A composite pigment containing 30% TiO_2 (anatase) and 70% barium sulfate which is a generally useful all-purpose pigment for ready mixed, and paste paints.

This product is covered by the following patents:

A. Owned by National Lead Company

—

B. Owned by du Pont

—

The process of manufacture is covered by the following patents:

A. Owned by National Lead Company

1,889,027 of Nov. 29, 1932
1,919,425 of July 25, 1933
2,148,283 of Feb. 21, 1939

B. Owned by du Pont

2,047,208 of July 14, 1936
2,305,368 of Dec. 15, 1942

TITANOX-B-30AA:

In composition and other general properties, B-30AA resembles B-30 but possesses superior resistance to chalking in the order of the pure TITANOX-AA.

This product is covered by the following patents:

A. Owned by National Lead Company

2,224,987 of Dec. 17, 1940—TiO_2 Pigments Associated with Antimony Compound and Alumina

B. Owned by du Pont

2,224,777 of Dec. 10, 1940—TiO_2 Pigments Associated with Antimony Compound

The process of manufacture is covered by the following patents:

A. Owned by National Lead Company

1,889,027 of Nov. 29, 1932
1,919,425 of July 25, 1933
2,148,283 of Feb. 21, 1939
2,161,755 of June 6, 1939
2,224,987 of Dec. 17, 1940

B. Owned by du Pont

2,047,208 of July 14, 1936
2,224,777 of Dec. 10, 1940
2,305,368 of Dec. 15, 1942

TITANOX-B-30WD

This grade resembles regular B-30 but is more readily dispersible in water vehicles.

This product is covered by the following patents:

A. Owned by National Lead Company

—

B. Owned by du Pont

—

N. L. Exhibit 33

The process of manufacture is covered by the following patents:

A. Owned by National Lead Company

1,889,027 of Nov. 29, 1932
1,919,425 of July 25, 1933
2,148,283 of Feb. 21, 1939

B. Owned by du Pont

2,047,208 of July 14, 1936
2,214,815 of Sept. 17, 1940
2,305,368 of Dec. 15, 1942

TITANOX-C:

A composite pigment containing 30% TiO_2 (anatase) and 70% calcium sulfate especially useful in the preparation of interior finishes either gloss or flat.

This product is covered by the following patents:

A. Owned by National Lead Company

1,906,730 of May 2, 1933—Composite TiO_2—Anhydrite Calcium Sulfate Pigment

2,166,082 of July 11, 1939—White TiO_2 Pigments having Controlled Color Tone

2,222,385 of Nov. 19, 1940—Synthetic Pigmentary Anhydrite Calcium Sulfate used in "C" grades

B. Owned by du Pont

—

The process of manufacture is covered by the following patents:

A. Owned by National Lead Company

1,773,727 of Aug. 26, 1930
1,889,027 of Nov. 29, 1932
1,906,730 of May 2, 1933
2,055,222 of Sept. 22, 1936
2,166,082 of July 11, 1939
2,222,385 of Nov. 19, 1940
2,344,265 of Mar. 14, 1944

B. Owned by du Pont

1,851,487 of Mar. 29, 1932
2,151,339 of Mar. 21, 1939
2,163,385 of June 20, 1939

TITANOX-CX:

In composition and other general properties CX resembles regular C but is characterized by being more easily wet by, and dispersible in vehicles than C.

All patents (product and process) which cover Tx-C also apply as to this grade. In addition, the process of manufacture includes a pulverization treatment which is attained through the employment of methods covered in patents No. 2,219,011 and No. 2,284,746, owned by Reduction Engineering Co., or in No. 2,032,827 owned by International Pulverizer Corp., all of which are licensed to National Lead Company.

N. L. Exhibit 33

TITANOX-RC-HT:

A recently developed composite pigment consisting of 30% TiO_2 (rutile) and 70% calcium sulfate possessing the highest tinting strength of any composite pigment so far produced commercially. It has universal application in interior architectural finishes, either flat or gloss.

This product is covered by the following patents:

A. Owned by National Lead Company

1,906,730 of May 2, 1933—Composite TiO_2—Anhydrite Calcium Sulfate Pigment

2,166,082 of July 11, 1939—White TiO_2 Pigments having Controlled Color Tone

2,222,385 of Nov. 19, 1940—Synthetic Pigmentary Anhydrite Calcium Sulfate used in "C" grades

B. Owned by du Pont

—

The process of manufacture is covered by the following patents:

A. Owned by National Lead Company

1,773,727 of Aug. 26, 1930
1,889,027 of Nov. 29, 1932
1,906,730 of May 2, 1933

2,055,222 of Sept. 22, 1936
2,166,082 of July 11, 1939
2,222,385 of Nov. 19, 1940
2,344,265 of Mar. 14, 1944

B. Owned by du Pont

1,851,487 of Mar. 29, 1932
2,151,339 of Mar. 21, 1939
2,163,385 of June 20, 1939

In addition to the patents listed above this grade is covered by process and product claims of recently issued patents, details of which are withheld for competitive reasons.

TITANOX-RC-HTX:

In composition and other general properties RC-HTX resembles regular RC-HT but is characterized by being more easily wet by and dispersible in vehicles.

All patents (product and process) which cover Tx-RCHT also apply as to this grade, including those withheld for competitive reasons. In addition, the process of manufacture includes a pulverization treatment which is attained through the employment of methods covered in patents No. 2,219,011 and No. 2,284,746 owned by Reduction Engineering Co., or in No. 2,032,827 owned by International Pulverizer Corp., all of which are licensed to National Lead Company.

TITANOX-RC:

A recently developed composite pigment consisting of 30% TiO_2 (rutile) and 70% calcium sulfate possessing

greater chalk resistance than RC-HT. It is especially recommended for outside finishes.

All patents (product and process) which cover Tx-RC-HT also apply as to this grade, including those withheld for competitive reasons.

TITANOX-L:

In composition, TITANOX-L consists of about 93% lead titanate ($PbTiO_3$) and about 7% lead sulfate. It has a very pale yellow color. Because of its high resistance to chalking and erosion, it is especially suited for use in protective finishes, for instance, for metal.

This product is covered by the following patents:

A. Owned by National Lead Company

2,140,222 of Dec. 13, 1938—Improved Lead Titanate Pigment

B. Owned by du Pont

—

The process of manufacture is covered by the following patents:

A. Owned by National Lead Company

2,140,222 of Dec. 13, 1938

B. Owned by du Pont

—

One of the raw materials for the preparation of this product is uncalcined hydrous titanium oxide. Hence, all

patents previously listed as covering the preparation of hydrous titanium oxide also apply to this grade.

TITANOX- RA 10 MO:

A recently developed pure TiO_2 (rutile) general purpose pigment useful where opacity, inertness, whiteness, and ready dispersion in various media are the principal requirements and high resistance to chalking is not important, having 20%—40% higher tinting strength than the anatase pure TiO_2 pigments.

This product is covered by the following patents:

A. Owned by National Lead Company

—

B. Owned by du Pont

2,044,941 of June 23, 1936—TiO_2 Pigments Free from Particles in Excess of 15 Microns

The process of manufacture is covered by the following patents:

A. Owned by National Lead Company

1,889,027 of Nov. 29, 1932
1,919,425 of July 25, 1933
2,148,283 of Feb. 21, 1939
2,346,320 of Apr. 11, 1940

B. Owned by du Pont

1,707,248 of Apr. 2, 1929
1,937,037 of Nov. 28, 1933

2,047,208 of July 14, 1936
2,214,815 of Sept. 17, 1940
2,280,590 of Apr. 21, 1942
2,305,368 of Dec. 15, 1942

In addition to the patents listed above this grade is covered by process and product claims of issued patents, details of which are withheld for competitive reasons.

TITANOX-RA 10 LO:

This grade resembles in all respects TITANOX-RA 10 MO except for a lower oil absorption capacity.

All patents (product and process) which cover Tx-RA 10 MO also apply as to this grade, including those withheld for competitive reasons. In addition, the process of manufacture of Tx-RA 10 LO includes steps covered by du Pont patents No. 1,885,921 and No. 2,214,815.

TITANOX-RA:

A recently developed pure TiO_2 (rutile) general purpose pigment, having 20%-40% higher tinting strength than the antase pure TiO_2 pigments and possessing greater resistance to chalking that TITANOX-RA 10 MO.

This product is covered by the following patents:

A. Owned by National Lead Company

—

B. Owned by du Pont

2,044,941 of June 23, 1936—TiO_2 Pigments Free from Particles in Excess of 15 Microns

The process of manufacture is covered by the following patents:

A. Owned by National Lead Company

1,889,027 of Nov. 29, 1932
1,919,425 of July 25, 1933
2,148,283 of Feb. 21, 1939
2,346,320 of Apr. 11, 1940

B. Owned by du Pont

1,707,248 of Apr. 2, 1929
1,937,037 of Nov. 28, 1933
2,047,208 of July 14, 1936
2,280,590 of Apr. 21, 1942
2,305,368 of Dec. 15, 1942

In addition to the patents listed above this grade is covered by process and product claims of issued patents, details of which are withheld for competitive reasons.

TITANOX-RANC:

A recently developed pure TiO_2 (rutile) pigment with good color (whiteness), having 20%—40% higher tinting strength than the pure anatase TiO_2 pigments and being practically non-chalking.

This product is covered by the following patents:

A. Owned by National Lead Company

—

B. Owned by du Pont

2,044,941 of June 23, 1936—TiO_2 Pigments Free from Particles in Excess of 15 Microns

The process of manufacture is covered by the following patents:

A. Owned by National Lead Company

1,889,027 of Nov. 29, 1932
1,919,425 of July 25, 1933
2,148,283 of Feb. 21, 1939
2,346,320 of Apr. 11, 1940

B. Owned by du Pont

1,707,248 of Apr. 2, 1929
1,885,921 of Nov. 1, 1932
1,885,921 of Nov. 1, 1932
1,937,037 of Nov. 28, 1933
2,047,208 of July 14, 1936
2,192,501 of Mar. 5, 1940
2,214,815 of Sept. 17, 1940
2,280,590 of Apr. 21, 1942
2,305,368 of Dec. 15, 1942

In addition to the patents listed above, this grade is covered by process and product claims of issued patents, details of which are withheld for competitive reasons.

TITANOX-RA WD:

A recently developed pure TiO_2 (rutile) special pigment which disperses more readily in water vehicles than the other rutile grades, having 20%—40% higher tinting strength than the pure anatase TiO_2 grades.

This product is covered by the following patents:

A. Owned by National Lead Company

—

B. Owned by du Pont

2,044,941 of June 23, 1936—TiO_2 Pigments Free from Particles in Excess of 15 Microns.

The process of manufacture is covered by the following patents:

A. Owned by National Lead Company

1,889,027 of Nov. 29, 1932
1,919,425 of July 25, 1933
2,148,283 of Feb. 21, 1939
2,346,320 of Apr. 18, 1940

B. Owned by du Pont

1,707,248 of Apr. 2, 1929
1,937,037 of Nov. 28, 1933
2,047,208 of July 14, 1936
2,192,501 of Mar. 5, 1940
2,214,815 of Sept. 17, 1940
2,280,590 of Apr. 21, 1942
2,305,368 of Dec. 15, 1942

In addition to the patents listed above, this grade is covered by process and product claims of issued patents, details of which are withheld for competitive reasons.

APPARATUS PATENTS:

In noting above patents which apply to the various grades of TITANOX pigments with two exceptions (Tx-CX

and Tx-RC HTX) only patents the claims of which were directed either to processes or products, or both, have been included. However, National Lead Company owns certain patents the claims of which cover apparatus used in the manufacture of its titanium dioxide pigments as well as the methods of operation involved in the use of such apparatus. National Lead Company is also licensed under other patents covering apparatus and methods. Below is given a statement of these patents together with an indication of the various grades of TITANOX pigments in the manufacture of which they apply:

A. Owned by National Lead Company

1.) 2,227,239 of Dec. 31, 1940—An improved rotary filtering device, employed in the washing of all grades.

2.) 2,285,894 of June 9, 1942—An improved filter septum for use on rotary filters, employed on filters used in washing all grades.

3.) 2,334,663 of Nov. 16, 1943—An improved dust seal for rotary furnaces, used on furnaces in which all grades are calcined.

B. Owned by du Pont

1.) 2,111,788 of Mar. 22, 1938—An improved settling tank, used in the manufacture of all TITANOX-A's, Tx-ANC, and all Tx-RA's.

C. Owned by Oliver United Filters, Inc.

1.) 2,083,887 of June 15, 1937—An improved rotary filter used in the washing of all grades.

D. Owned by International Pulverizer Corp., Inc.

1.) 2,032,827 of Mar. 3, 1936—An improved pulverizing and classifying apparatus used in the manufacture of TITANOX-A WD, WDL, LO, 168 LO, No. 24, AA, ANC, RANC, RA, RA 10 LO, CX and RC HTX.

E. Owned by Reduction Engineering Corp.

1.) 2,219,011 of Oct. 22, 1940

2.) 2,284,746 of June 2, 1942

Both patents cover an apparatus and method of pulverizing and classifying which are used interchangeably with the International Pulverizing Corp. patent No. 2,032,827 in the manufacture of TITANOX-A WD, WDL, LO, 168 LO, No. 24, AA, ANC, RANC, RA, RA 10 LO, CX and RC HTX.

FOREIGN TRADE AND INDUSTRIAL ORGANIZATION

The following memorandum will survey first the organization of industry in Great Britain; second, the organization of industry in Germany; third, the foreign exchange problems of the interwar period; fourth, the nature of competition in manufacturing; and lastly, the effect of all these factors on American business operations abroad.

I. The Organization of British Industry

1. Prior to the First World War

Several good sources of information exist regarding the organization of British industry prior to the First World War.

J. H. Clapham's "An Economic History of Modern Britain" (Macmillan, N. Y., University Press, Cambridge, England, 1938) is the standard work on its subject. Part III of this work, dealing with the period 1837-1914 (with an Epilogue 1914-1929), is especially valuable for an understanding of modern industrial developmen in the United Kingdom. Its approach is, however, primarily historical-descriptive.

Specifically as regards the beginnings of the concentration movement in modern British industry, the pioneering work is H. W. Macrosty's "Trust Movement in British Industry" (London, 1907). The same author's "Trusts and the State" (London, 1901), and D. H. Macgregor's "Industrial Combination" (London, 1906), though more theoretical, are also interesting. Among American sources the "Report of the Industrial Commission on Industrial Combinations in Europe", prepared by J. W. Jenks, Washington, D. C., 1901, is still worth consulting.

The best historical descriptive treatise on British industrial organization prior to 1914 is Hermann Levy's "Monopoly and Competition", published in London in 1911. The following description is largely based on the material of Professors Clapham and Levy.

English industrial organization has gone through transformations that were at times extreme but are now in part forgotten. Industrial capitalism in England was cradled in monopoly, not in competition. The system of monopolies was from the beginning the expression of a definite royal policy, pursued with ever growing eagerness, in spite of statutory opposition from the days of Queen Elizabeth, and so successfully developed under the Stuarts that, in almost every important trade, national monopolies arose. Opposition to this policy came from the most diverse quarters. As monopolies steadily increased, the various strains of opposition met in a single movement which succeeded in extirpating, after a comparatively short but exceptionally effective existence, the monopoly system. The main center of the anti-monopoly movement was the House of Commons. This opposition was so successful that, so far as our knowledge of industrial England in the eighteenth century goes, national monopoly based on legal privilege no longer existed, at that time, in any industry. Adam Smith knew only colonial trade monopolies and a few town monopolies.

In addition to colonial and foreign trade, substantial monopolist combinations existed in English mining at times. The most famous is the Newcastle Coal Vend which lasted with certain interruptions from 1771 to 1844. It rested on its ability to supply coal to the London market by coastwise shipping more economically than competing

coal mining areas. Similar combinations existed in tin mining and copper mining. English manufacturing industry was, however, by and large competitive during most of the nineteenth century.

"During the eighteenth, and still more in the first half of the nineteenth century—that epoch of unexampled industrial development—the industries of England present a picture of increasing production, rapid increase in the number of single undertakings and, in each separate area of production, the keenest competition between the various manufacturers only giving way occasionally and under pressure of certain exceptional conditions to a monopolist organization." (Levy, p. 169)

". . . The classical economists' doctrine, that competition was equally to the interest of the consumer and of the producer, had been regarded as an invariable truth, not because it was in any way correct, but because for a long time it was borne out by existing facts. . . ." (Levy, p. 172)

All authorities agree that an aggressive spirit of competition pervaded British industry during the middle of the nineteenth century. The repeal of the Corn Law in 1846 assured cheap food for the workers. The abandonment of the Navigation Act assured relatively cheap ocean freights. The essential fact of being the first in the field of manufacturing by a wide margin, both in point of time and in costs, made free competition and the greatest possible freedom of trade eminently desirable to British manufacturers.

". . . as the subjective conditions of monopoly have obviously existed in spite of the doctrine of individualism,

we can only conclude that the external essentials of monopolist control were not as fully developed in England as in other countries, and that even at present they are in part lacking. . . ." (Levy, pp. 177-8)

These deficiencies in monopolistic foundations Levy attributes first of all to a poverty in scarce mineral resources. He points out that when English coal, tin, and copper were in a position to benefit from monopolistic forms of organization these industries were monopolistically organized.

With respect to the fabricating industries, Levy points out that the establishment of free trade, *i. e.*, the disappearance of a protective tariff and of import prohibitions was a sufficient explanation of the non-existence of cartels and trusts in a large section of British industry. To the extent that the purpose of combination is to raise prices there is no advantage to be derived from combination if an increase of the price over prevailing levels will bring in additional imports. In other words, where the costs of British industry were so high that imports were competitive, only cost-reducing combinations and mergers were possible.

The deterrent effects of a tariff with respect to industrial combination are easy to over-rate. A tariff is merely the equivalent of an exceptionally high freight rate. In many cases, where English costs were sufficiently low, actual freights were sufficient to protect English producers from competing imports. Wherever the gap between English costs and delivered import prices was wide enough, there was an opportunity within that gap for industrial combination aimed at raising prices.

The fact that British industry developed competitively during most of the nineteenth century was partly due to

England's leadership in the industrial revolution. At that time English costs of industrial production were the lowest in the world. Once, however, a large number of firms came into being in each major industry, their very existence became a deterrent to combinations. The good-will of each one of them was a valuable asset which it was afraid to lose in a merger. Cartel agreements, on the other hand, are notoriously more difficult to negotiate among specialized competitors, each one of whom claims to have specialties slightly different from those of the others, than they are among producers of homogeneous staples.

Lastly, owing in part to free trade and to the resultant lesser need for vertical combination, the size of undertakings in England has been traditionally smaller than in Germany or the United States. ". . . In a country where protective duties and monopolies of raw goods hinder the manufacturer of finished goods from obtaining supplies of materials, and where at the same time it is impossible for the finishing manufacturer to make the consumer pay directly for the monopolist higher price of material, an intimate connection with raw production and half manufacture is unavoidable. . . ." (Levy, pp. 200-201) In England the exact opposite was the case.

Even so, by the late nineteenth century the combination movement progressed considerably in England and was highly successful in a number of industries. Robert Liefmann in a study made in 1897 (Die Unternehmerverbände) listed forty international cartels in which German companies participated, twenty-two of which were formed in combination with British enterprises. Moreover, as the competitive advantages of large size became more apparent, and especially as the financial success of monopolies resulting from the combination of a few powerful firms became

obvious, a large number of huge industrial mergers took place. The control of the market exercised by the merged enterprises was further strengthened in many cases by cartel agreements with the companies that remained outside the merger.

Levy discusses fifteen major English cartels and trusts existing in 1911 (Portland cement, steel, industrial alcohol, wall paper, cables, salt, fine cotton spinners, sewing cotton, bleaching and dyeing, calico printing, locomotives, whiskey, rails, soda, and tobacco). His survey did not aim in any way at comprehensiveness, and only included the largest and most important economic concentrations of which he had knowledge.

It is worth noting that even in that most competitive and subsequently sickest of British industries, coal mining, a national monopoly was proposed as early as 1893. This was Sir George Eliot's proposal, discussed in Clapham, Volume II, p. 220. It was followed in 1896 by D. A. Thomas's remarkable proposal to cartelize the coal industry. D. A. Thomas, later Lord Rhondda, was a member of Parliament and a Welsh coal mine owner. He published in Cardiff in 1896 "Some Notes on the Present Situation of the Coal Trade . . . with a Plan for the Prevention of Undue Competition and for Maintaining Prices at a Remunerative Level." (Clapham, Volume III, p. 271)

World famous instances of the evolution of concentration can be found in banking (cf. W. F. Crick and J. E. Wadsworth: "One Hundred Years of Joint Stock Banking", London, 1936; J. Sykes: "The Amalgamation Movement in British Banking, 1825-1924", London, 1926), in soap manufacture (Lever Bros.—see Clapham, Volume III, passim), petroleum refining and distribution (Royal Dutch-

Shell-Mexican Eagle, see Clapham, Volume III, pp. 275-6). The cartel movement penetrated many minor industries as well, and to such an extent that Clapham, looking back in 1938, could write (Volume III, p. 316): "The trade without an association of some kind was by 1914 rare."

2. The First World War and Its Aftermath

The basic source of information regarding industrial combination in England immediately after the First World War is the "Report of the Committee on Trusts", issued in 1919. The Committee was appointed in February 1918 by the Ministry of Reconstruction. After a year's study it published a report which is fundamental to the knowledge and understanding of the effects of the First World War on the industrial structure of Great Britain. The following quotations are from its report. (Cd. 9236, H. M. Stationery Office, 1919)

"We find that there is at the present time in every important branch of industry in the United Kingdom an increasing tendency to the formation of Trade Associations and Combinations, having for their purpose the restriction of competition and the control of prices.

"Many of the organisations which have been brought to our notice have been created in the last few years, and by far the greater part of them appear to have come into existence since the end of the nineteenth century. For reasons which we shall presently discuss, there has been a great increase in the creation of trade associations during the period of the war." (p. 2)

"Many of these Associations appear to have been created as a result of a temporary depression in their trades. One witness stated as his opinion that it was 'seldom that

an association came into being until a trade was faced with all-round disaster if it did not combine.'

"There was considerable evidence before us that the growth and power of these Associations has been greatly strengthened during the period of the war, and that this result appears to have come about primarily from the novel circumstances of war, under which the Government, acting through the Ministry of Munitions or other Departments, found it necessary sometimes to consult the most informed opinion in a trade, and sometimes to ration material through an organisation representative of the trade. Unassociated firms which found themselves not consulted by the Government were thus led to join existing Associations, or in some cases to form representative groups for the purpose of advising the Government on matters concerning the trade.

"There appears to be no doubt that a large number of definite Trade Associations have been formed during the war which may certainly be expected to control and regulate prices and the conditions of industry in the same manner as the pre-war Associations were already doing, and it is also probable that the habit of co-operation and discussion on matters of common concern, which has been the result of the formation of purely advisory groups of manufacturers or distributors for the purposes of the war will lead to a transformation of at least a part of such advisory groups into definite Trade Associations as soon as Government control over trade or industry is withdrawn. The advisory committees will disappear, but will reappear in the form of new Trade Associations." (p. 4)

". . . But we are satisfied that Trade Associations and Combines are rapidly increasing in this country, and may within no distant period exercise a paramount control over all important branches of the British trade." (p. 11)

The Report of the Committee as well as its recommendations were unanimous. The four "liberal" members of the Committee, Mr. Ernest Bevin, Mr. J. A. Hobson, Mr. W. H. Watkins, and Mr. Sidney Webb wrote an Addendum, which begins as follows:

"We have signed the above Report because we find nothing to disagree with in its recommendations; but we feel that it does not adequately express the gravity of the situation, . . ." (p. 13)

It continues in part as follows: "The fact is that Free Competition no longer governs the business world. . . ." (p. 13)

"We do not suggest that any action should be taken to prevent or obstruct combination or association in capitalist enterprise. Apart from the experience that no such interference can be made effective, we have to recognize that association and combination in production and distribution are steps in the greater efficiency, the increased economy, and the better organization of industry. We regard this evolution as both inevitable and desirable. It is, however, plain that the change from competitive rivalry to combination calls for corresponding developments to secure for the community, both safeguards against the evils of monopoly, and at least a large share of the economic benefits of the better organization of industry which it promotes." (p. 13)

The Secretary of the Committee was Mr. John Hilton who submitted "A Study of Trade Organisations and Combinations in the United Kingdom" (pp. 15-30) which was also attached to the Report. This study is more analytical than descriptive, but a brief section is devoted to the extent

and significance of combinations. The following passages are derived from this section:

". . . Associations concerned with the regulation of price or output, or both, are to be found in almost every branch of British industry. Their number cannot be computed, for many are not registered either as companies or trade unions, and some are purposely carried on as secretly as possible. It may be taken, however, that there are considerably more than five hundred associations, all exerting a substantial influence on the course of industry and price, in being at the present time in the United Kingdom. The most painstaking enquiry yet undertaken into combination in any section of British industry is that made in respect of building materials, and the conclusion there reached was that 25 per cent. of the materials that go to the building of an average house are subject to full control and 33 per cent. are partially controlled. If particular industries in which combination has made most headway be taken it transpires that in innumerable lines of manufacture anything from 80 to 100 per cent. of the whole national output of the articles concerned is either in the hands of one dominant consolidation or of manufacturers grouped together for purposes of concerted price and other control in a trade association. It would, however, be fallacious to take these latter as typical of the whole range of industry. There are many industries, trades, and services, great as well as small, in which combination has made hardly any headway, and competition is still the determining factor in the fixing of price. The shipbuilding industry may be quoted as a case in point. . . ." (p. 20)

"*Influence of War Conditions on Combination.*—Moreover, there can be no question that the whole trend of industry and commerce is towards combination. 'The movement,

indeed, is inevitable, for what machinery and invention have done in the past for production, this disposition of smaller bodies to consolidate in larger units is doing for administration.' Within recent years the number of trade associations in this country has increased enormously, and, under the influence of war conditions, not only have numbers of existing listless bodies been galvanised into greater activity and enterprise, and the membership of others been increased, but many new associations have been formed, some at the instance of the Government Departments, since it was found easier to deal with a group than with separate firms. Still more, the necessity for fixing the prices of many articles and materials required by the State during the war and the need for rationing materials has compelled the Government to call representative conferences of manufacturers in many industries, and to impose on them duties which have entailed frequent consultations and meetings, and when people who, before the war, were competitors have been thus compelled to meet and discuss common arrangements, it is inevitable that they should discover the advantages of working in concert and establish relations which will make for concerted working for the future. Again, the war period has been marked by a remarkable increase in the number of amalgamations. One effect of the excess profits tax has been to encourage the buying up of unprofitable businesses by highly profitable concerns, for such purchases were in effect paid for by monies which would otherwise have gone in excess profits duty to the Revenue. Another war influence making for the extension of combination after the war is the enormous development of standardisation and repetition manufacture. The lessons learnt in this connection during the war will not be lost in the change back from war to peace production, but their application to peace production will necessitate collaboration among

the various firms composing the particular branch of industry, and collaboration for specific purposes prepares the ground for combination for the regulating of trade." (p. 20)

There are also attached to the Report "Notes as to the Law Relating to Combinations" by Sir John Macdonell (p. 31); a "Report Presented to the Committee on Trusts on Combinations in Building Material Trades" (p. 35); and a "Memorandum on Industrial Combinations" presented by Mr. Percy Ashley. (p. 38)

This last memorandum is largely factual. It mentions a very large number of existing combinations for the regulation of trade, and attempts a simple classification.

3. The First Interwar Decade: 1920-1930

Information with respect to privately sponsored mergers of large enterprises is plentiful in the files of periodicals like The Economist. Clapham, op. cit., in an Epilogue gives a brief summary and interpretation from the angle of the economic historian which is useful. The standard work on the subject is Patrick Fitzgerald's "Industrial Combination in England", London, 1927. A revised edition of Levy's book (1927) brought some of his material up to date. An increasing number of Parliamentary Committee reports on various industries,—especially the important reports of the Committee on Industry and Trade, also known as the Balfour Committee,—and legislative intervention in many instances, shed a great deal of additional light on the concentration movement. With respect to the coal and cotton industries in particular, Temporary National Economic Committee Monograph No. 40 provides easily accessible information.

The strong statements of the Royal Commission on Trusts indicate the progress of cartelization and trustification of England during the crucial decade of the First World War. The requirements of the war economy promoted the concentration of industry, for which conditions were propitious anyway. While after the war the purposes of the wartime combinations disappeared, the institutional changes remained. The big companies continued to grow bigger and the small companies continued to strive for agreements with competitors and for mergers in order not to go under in the competitive struggle.

This latter factor became of considerable importance after 1921, when England failed to recover from the post-war slump with the rest of the world, and chronic unemployment appeared for the first time as an identified malady of modern industry.

It is only too often forgotten that the real purpose of many mergers and cartels is defensive. The defensive advantages of large size, and especially of diversified assets are, after all, obvious. Similarly, in times of stagnation, agreements to regulate competition are chiefly valuable as defensive measures.

The transitional difficulties of the post-war period provided a powerful incentive for defensive measures on the part of industry. Many mergers and cartels were aimed not so much at raising prices and gouging consumers in times of boom, as they were aimed at diversifying risks and/or controlling markets more successfully in times of depression. This was especially the case with many combinations in British industry, which was pervaded by a justified feeling that it was losing out in the international competitive race with the more modern industries of the

United States, Germany, Japan, and even of the smaller European industrial countries like Belgium, Sweden, and Switzerland.

Whatever the specific causes, the results were the same. A large further growth of concentration in British industry occurred during the 1920s. Many enormous mergers took place, *e. g.*, in the steel industry and in chemicals. Sometimes these mergers were government-sponsored, *e. g.* in communications (Cables and Wireless, Ltd.) and in railroads (pursuant to the Railway Act of 1921). Imperial Airways, Ltd., the airline monopoly, was also a government-sponsored merger, pursuant to a Report of the Civil Air Transport Subsidies Committee of 1923.

In the field of chemicals, to quote Clapham, Vol. III, pp. 535-6, ". . . The greatest of the new amalgamations, Imperial Chemical Industries, already had a half-public character, built up as it was with the good wishes and, so far as its inherited function of making the country independent of fine imported dyestuffs went the help, of the State. . . ." (Under the Dyestuffs Import Regulations Act of 1920 dyestuff imports became subject to special license—see "Trade Regulations & Commercial Policy of the United Kingdom", National Institute of Economic and Social Research, Cambridge, 1943, pp. 132, 266; also: Frederic Benham: "Great Britain under Protection", New York, Macmillan, 1941.)

In 1926 a Royal Commission on the Coal Industry recommended amalgamation as a cure for the ills of the coal industry. (Cd. 2600.) The Coal Mines Act of 1930 put a Coal Mines Reorganization Commission in operation, which was, however, not conspicuously successful (Hermann Levy: "The New Industrial System", London, 1936, p. 187).

The great mergers in banking continued apace, resulting eventually in a virtual merging of the entire general commercial banking system of Great Britain in five large institutions. (See Report of the Treasury Committee on Bank Amalgamations, 1918; J. Sykes: op. cit.; Clapham: op. cit., Volume III, pp. 537-8; Crick and Wadsworth: op. cit.) Both the mergers and cooperation between the merged institutions developed with the unofficial sanction of the Bank of England and the British Treasury.

The first government-sponsored cartel appeared in 1922, when the notorious Stevenson plan for the control of rubber production was put into operation.

A brand new, subsidized beet sugar manufacturing industry was established in 1925 by special legislative enactment (British Sugar Subsidy Act of 1925).

By 1926 the Liberal Party was thoroughly alarmed with respect to its political future by the challenge to orthodox liberalism inherent in post-war developments. It appointed a committee to study the situation, including W. T. Layton, the editor of The Economist, Lloyd George, H. D. Henderson, Philip Kerr (subsequently Lord Lothian), J. M. Keynes, Sir Herbert Samuel, Sir John Simon, R. H. Brand, D. H. Robertson, Sir Josiah Stamp, and others less well known in the United States. These men constituted the intellectual leadership of the Liberal Party and in a large measure that of England. Their report was published after eighteen months of deliberations, entitled "Britain's Industrial Future being the Report of the Liberal Industrial Inquiry." It commands great attention, reflecting the ideas of leading English liberals and academicians as to how much of the liberal ideology of the nineteenth century could be salvaged. Chapter VIII of the

report is devoted to trusts and trade associations. The report states that ". . . this very proper objective [the protection of the public interest] is not to be secured in these days by mere attempts to restore the old conditions of competition, which often involve waste and effort, the uneconomic duplication of plant or equipment, and the impossibility of adopting the full advantages of large-scale production.

"In modern conditions a tendency towards some degree of monopoly in an increasing number of industries is, in our opinion, inevitable and even, quite often, desirable in the interests of efficiency. It is, therefore, no longer useful to treat trusts, cartels, combinations, holding companies, and trade associations as inexpedient abnormalities in the economic system to be prevented, checked, and harried. The progression from purely private individualistic enterprises to the Public Concern is one of endless gradations and intermediate stages. . . ." (pp. 92-3)

Perhaps the most remarkable feature of the analysis of trusts and trade associations in this important Liberal Party document is the conclusion that publicity is a completely adequate safeguard of the public interest. The report further proposed that when a trade association comprised more than 50% of a trade or industry it should or could become an incorporated association, supervised by the Board of Trade; and that when an incorporated association could show that 75% of those affected were in favor of a rule, it could—if sanctioned by the Board of Trade—issue an order enforcing the rule in question on all members of the trade or industry.

By the end of the decade British industry was among the leaders of the world-wide concentration movement. It

exercised a tight control over its domestic and imperial markets.

In addition to the growing complexity of industrial production, marketing, and trade, the tariff protection of key industries, which was enacted after the World War, considerably assisted trustification and cartelization.

The tariff protection of industries had begun with the McKenna Duties of 1915—33⅓% on motor cars, cycles, clocks, watches, musical instruments, and a flat rate on films. The Key Industries Duties of 1921 applied the same rate of 33⅓% to many instruments and chemicals, and 50% to optical instruments and magnetos. These were the first breaches in the free trade system of England, where the only duties previously in force were a few levies raised for revenue (*e. g*; on tobacco). The profit possibilities to be derived from economic concentration were enhanced by the tariff which raised the delivered price of potentially competitive imports.

The highly tolerant view British legislation and courts took with respect to restraints of trade, the narrowness of their interpretation of what was an unreasonable restraint, and their refusal to consider any but the most specific evidence, contributed to the development of highly restrictive practices throughout British industry. This meant that what would be considered competitive behavior in the United States was at a discount and would have tended to provoke violent retaliation by an entire industry against the aggressor enterprise. A tacit code of non-competitive industrial discipline was built up which was and is of the greatest effectiveness.

4. Economic Concentration in the Thirties

The source material regarding cartelization and the concentration movement in general becomes very abundant in this period. In addition to voluminous information in economic and financial periodicals and some books previously mentioned, like Hermann-Levy's "The New Industrial System", London, 1936, and the Temporary National Economic Committee Monograph No. 40, there is especially abundant material on international cartels organized by British producers, frequently under British Government supervision. (See Alfred Plummer: "International Combines in Modern Industry", second revised edition, London, 1938; William Oualid: "International Raw Materials Cartels", International Institute of Intellectual Cooperation, League of Nations, Paris, 1938; Erwin Hexner: "The International Steel Cartel", Chapel Hill, 1943; D. L. Burn: "The Economic History of Steelmaking 1867-1939", Cambridge University Press, 1940; W. Y. Elliott and others: "International Control in the Non-Ferrous Metals", New York, 1937; Ballande: "Les Ententes Economiques Internationales", Paris, 1937; "Intergovernmental Commodity Control Agreements", International Labour Office, Montreal, 1943.)

Parliamentary papers regarding individual industries are also increasing in numbers and importance. Noteworthy among them are the report of the so-called May Committee on the steel industry, and its sequels, including a "Report of the Import Duties Advisory Committee on the Present Position and Future Development of the Iron and Steel Industry" (Cmd. 5507, 1937), the "Memorandum on Clause 6 of the Finance Bill, 1936" (Cmd. 5201, 1936) (concerning the steel tariff), &c. Relevant legislation includes the Cotton Spinning Industry Act of 1936, the Cotton Industry Re-

organization Act of 1939, the Coal Act of 1938, the Sugar Industry Reorganization Act of 1936, and numerous other enactments.

Regarding government sponsored international cartels in which British producers participated, data can also be found in British Government papers dealing with the respective agreements. In addition to the familiar cases of rubber, tin, tea, &c., the international regulation of whaling (Cmd. 5757 and 5827, 1938) deserves mention as a new type of production control.

Economic concentration developed during the 1920s largely in a haphazard manner. It developed as and when conditions permitted. During the 1930s two major changes occurred, both of which propelled industry further in the direction of concentration and coordination.

First was the adoption of protectionist foreign trade policies. England adopted a full-fledged protectionist tariff in 1932. At the Ottawa Conference in the same year, moreover, a system of Imperial preference was established which went far to guarantee the Imperial market for British manufactured products. Having become a protectionist country, England enabled a number of her industries, in which previously the absence of a tariff enforced some measure of competition, to reduce their competitive activities.

The tariff rates imposed in 1932 were: a blanket 10% ad valorem on imports, excepting raw materials on the free list, and manufactures. The latter were mostly taxed at 20%, furs and jewelry at 30%, iron and steel products at 33⅓%. An Import Duties Advisory Committee was also formed to advise the Treasury on tariff questions. The Committee interpreted its task as essentially protective and

has advised the Treasury accordingly in most cases. The Treasury has tended to follow the advice it received.

The second major development was the gradual realization that cartels, trusts, and other forms of industrial agreements and mergers are helpful tools of national policy. Compulsory cartelization was attempted in cotton spinning, coal, and steel, among others. The British Government took an active interest in the international steel cartel negotiations, it made tariff and quota protection of the industry conditional on rationalization and reorganization, it backed the numerous international commodity agreements that involved British Empire producers.

The British Iron and Steel Federation was first organized under a slightly different name in 1934. The full history of the cartelization of the steel industry is so well written up in the literature that it is probably not worth reviewing here in detail. (Hexner, op. cit., Burn, op. cit.)

The Sugar Industry Reorganization Act of 1936 enacted a compulsory merger of all beet sugar manufacturing companies in the British Sugar Corporation, Ltd., which was to be privately owned and was allowed a maximum 7% dividend on its common stock. It was also during this period that the Federation of British Industries became a major power in Great Britain.

The Federation of British Industries published an undated pamphlet entitled "Industry and Action", quoted in Robert A. Brady: "Business as a System of Power", Columbia University Press, 1943 (p. 177), in which the Federation boasted of its influence on British fiscal policy and commercial policy. The influence of the Federation on import duties, and its success as a channel of consultation with the government in commercial treaty negotiations, are particularly emphasized.

The extensive business affiliations of Conservative members of Parliament and the resultant possibilities of combination to exclude imports and to promote cartelization are emphasized by Brady and also by Simon Haxey's "Tory M. P.", London, 1939. The latter showed, among other evidence, that the 181 Conservative members of Parliament who held company directorships held no less than 775 such directorships. This did not include directorships previously held by members of Cabinet, who, according to British custom, resigned all corporate affiliations when they entered the Cabinet. The book also brought out the fact that the vice president of the Federation of British Industries, Sir Patrick Hannon, was also a member of Parliament.

With the German example before their eyes, British Government officials and corporation executives became increasingly aware of the advantages to the execution of national policies that could be derived from well-functioning industrial organization.

Advantages and disadvantages in international trade have an exceptionally voluminous literature in England going back to the early seventeenth century. The economic literature of no country pays as much attention as does the British to the "terms of trade", *i. e.*, to the relationship of export prices to import prices. Methods of making the terms of trade favorable to England and to the colonies received a great deal of study. The advantages of selling at monopoly prices and buying at competitive prices did not go unobserved.

They saw that monopolistic agreements among raw materials producers were a very effective way to increase the total proceeds of exports, and the total revenues accruing therefrom both to the producing interests and to the na-

tional economy as a whole. These considerations were powerful in the formation of raw materials cartels throughout the British Empire, such as the rubber cartel, the tin cartel, and numerous other agreements among British Empire producers.

They also became aware of the advantages of regulating trade and payments relations between England and foreign nations on a comprehensive basis, in which regulations organized trade played a considerable part.

Among the first of such English payments agreements was the one negotiated with Argentina in 1933, the so-called Roca-Runciman Agreement. There were a number of subsequent agreements before 1939. A whole network of them was put into operation quickly after the outbreak of the war. The most interesting such agreements were those reached with Germany, first the several payments agreements, and, early in 1939, after Munich, an agreement between British and German industrialists, concluded at Dusseldorf, but never ratified because of the outbreak of the war, virtually amounting to a division of world markets between German and British industry on a non-competitive basis.

The Dusseldorf Agreement is reviewed in the Report of the Kilgore Committee (Subcommittee on War Mobilization of the Committee on Military Affairs, United States Senate; 78th Congress, 2nd Session), Part I, page 7. A list of both English payments agreements and special import regulations can be found in "Trade Regulations & Commercial Policy of the United Kingdom", previously quoted.

5. The Future

While it is obviously dangerous to make prophecies, current indications are unanimously in the direction of

cartelization in the post-war organization of British industry.

Attorney General Biddle is reported by the Associated Press to have said, on January 24, 1945, that England will seek to keep the markets she now has, frustrating, through cartels if possible, American attempts to expand into those markets. "The countries who undoubtedly are behind the cartel movement are England and Belgium and most of the other European nations, but primarily England because England is in a position where she is afraid of American competition." (Wall Street Journal, January 25, 1945)

An interesting article by Mr. Geoffrey Crowther, editor of The Economist, in the latest issue of the Yale Review, Winter 1945, points in a similar direction. The British delegation to the International Chamber of Commerce Conference at Rye, New York, in November 1944 clearly indicated that this was its position. As early as December 1942 the Commission to study the Organization of Peace (8 West Fortieth Street, New York) published a study of "British Business Associations on Post-war Reconstruction" which even then strongly indicated this much. British Government action has hitherto not given any signs of reversing the previous trend towards government-encouraged cartelization of private industry. Indeed, all its actions towards post-war planning and reconversion planning indicate that it expects to pursue a vigorous policy of intervention in economic affairs. Integration of industries in cartel forms is an inevitable concomitant to such a policy, short of outright nationalization.

In other words, tight organization of British industry, which has been forged for purposes of the war economy, is not going to be abandoned in favor of a freely competitive

system after the war. On the contrary, it seems that the British Government will take an active part in the leadership of the industrial combination movement. The policy will be one of active government participation in business, including participation in and cooperation with industrial combinations, rather than one of checking and controlling them from the outside. In this respect the antithesis drawn by Crowther in his recent article is revealing. The real purport of the article is that complete socialization of specified activities, and governmental responsibility for them, are preferable to government interference by bureaucratic control from the outside.

". . . There are two ways of combining governmental direction with individual enterprise; the marriage may be happy or unhappy. The unhappy alternative is the negative method of 'control'. This is the infertile compromise to which countries are driven that recognize the necessity for some intervention by the government and yet shy away from the brutal logic—and the difficult political problems—of socialism. It is the infertile compromise to which both the American and British democracies have had increasing recourse since the First World War—that of leaving the business man with all the initiative and responsibility, with the obligation of covering his costs and satisfying his creditors, but burdening him with any number of prohibitions, restrictions, and controls. This is the bureaucrat's paradise. He carries no real responsibility; he has no pay roll to meet and no shareholders to confront. But his permission has to be sought, his rules have to be observed, his day-long questionnaires have to be filled out. It is a negative system; for while both the business man and the bureaucrat have to be in agreement before a new enterprise can be inaugurated, either one can prevent it.

"The second alternative method of combining government and business is the positive one. Its weapon is organization rather than control. Where public policy requires the intervention of the government in some economic situation, this method would have the government itself assume the initiative and the responsibility, instead of attempting to control the actions of others without assuming their burdens. . . ." (The Yale Review, Winter 1945, p. 221)

II. The Organization of German Industry

1. Before 1914

The literature relating to the organization of individual German industries is enormous and even the literature relating to the concentration movement in German industry is vast. The bulk of this output is, however, largely hidden in German scientific periodicals and doctoral dissertations, in the writings of the so-called historical school of German economists headed by Professor Schmoller of the University of Berlin; and in the works of economic historians like Werner Sombart. The most important official publication relating to the early period of cartelization is the Bericht Ueber Kartellwesen published in Berlin in 1905. Among the more accessible sources are Francis Walker: "Monopolistic Combinations in the German Coal Industry", American Economic Association, 1904; W. F. Bruck: "Social and Economic History of Germany from William II to Hitler, 1888-1938", Oxford University Press, 1938; Alfred Marshall: "Industry and Trade", Cambridge University Press, 1919; Hermann Levy: "Industrial Germany", Cambridge University Press, 1935; Robert Liefmann: "Cartels, Concerns and Trusts", New York, 1932; as well as English and American literature discussing the history of international cartels.

The economic history of German monopolies goes back to privileges granted in the eighteenth century. These monopolies granted by edict disappeared in the course of the nineteenth century, but there does not appear to have existed great popular hostility against them.

The modern industrial development of Germany began with the wars waged for the unification of the Reich (1864, 1866, 1870-71), much as the modern industrial development of the United States dates from the Civil War. The new industries of Germany grew from 1870 to 1914 at a pace that was second only to the growth of industry in the United States. These industries developed in the form of large-scale enterprise, the largest outside the United States.

The occasional cyclical interruptions to this rapid growth promoted further mergers and cartelization in the industries affected. German industry became a leader of the movement towards industrial concentration. This movement was not wholly unopposed, but the opposition was on the whole quite ineffective. Even Socialist opposition was largely restricted to the capitalistic features of concentration rather than aimed at the idea of concentration itself.

The technological advantages of large-scale organization were clearly realized and well appreciated in a nation of technicians, such as the Germans increasingly became. Moreover, there being no well-entrenched ideological free competition tradition in the many small German states that eventually made up the Empire, this concentration movement had no major political obstacles to overcome. In fact, from the viewpoint of national policy industrial concentration was something of an advantage. It permitted a stabler, more even, and more calculable rate of growth at a time

when the politically controlling elements of the Reich were intensely preoccupied with the political and military power position of the country.

Supervision of mergers and cartels was spasmodic and largely unofficial, though a Parliamentary commission conducted a fairly extensive investigation into the cartelization of industry in 1903-04.

2. War and Inflation: 1914-1923

The frightful economic strains of the First World War accelerated the concentration movement in German industry. They resulted, under the direction of Walter Rathenau, then Minister of Economics, in the first comprehensive plan for the direction of an economy for the purposes of total war. (See H. Kessler: "Walter Rathenau", London, 1929, Chapters 8 and 9.) This integration of the German economy for war purposes was, however, rapidly forgotten as soon as the war was over.

The first socialist government of the Weimar Republic had ambitious plans for the socialization of the economy. These found their most interesting expression in the work of W. von Moellendorff, the Permanent Secretary of State in the Ministry of Economics (see Bruck, op. cit., pages 157-162). He is considered the wartime originator of the concept of a planned economy. His plans were unanimously rejected by the Cabinet in 1919 because they were considered too bold, but his spiritual influence remained considerable and had an effect on subsequent developments in Germany.

Problems of industrial organization were very acute during the four years of post-war inflation. These years were, however, a period of such economic turmoil that their

influence on subsequent development was more of a deterrent than otherwise. Many huge mergers took place during this time, often on a purely speculative basis, and most of them had to be undone or recapitalized after the stabilization of the currency.

Inflationary conditions had a disruptive effect on existing cartel agreements. It was patently impossible to exercise rational price and sales control in times of wild currency inflation and material shortages. On the whole, few lessons of any significance could be derived from a detailed account of the futile attempts that were made to organise German production and marketing during inflation.

3. The Liberal Regulation of Cartels: 1923-1933

The literature of German cartelization during the 1920s is extremely voluminous. In addition to the general sources previously listed (Liefmann, op. cit., Bruck, op. cit., Hexner, op. cit., Hermann Levy, op. cit.) periodicals like the Kartell Rundschau and the Weltwirtschaftliches Archiv cover innumerable phases of the evolution of cartelization. The League of Nations published an important set of relevant documents partly in preparation for and partly as a sequel to the World Economic Conference in 1927, which contain a substantial amount of information on German cartelization. An impressive amount of material specifically on cartels was published by the German Parliamentary Commission delegated to study the cartel question, the so-called Enquete-Ausschuss. This series of documents is briefly reviewed in Temporary National Economic Committee Monograph No. 40. H. Wagenfuhr: "Kartelle in Deutschland", Nurnberg, 1931, is in many respects a useful compilation. See also Arnold Wolfers: "Das Kartellproblem im Lichte der deutschen Kartell-Literatur", Munich, 1930.

The liberal governments of the post-war era recognized the national problem that lay hidden in the cartel system. The first Kartellverordnung was issued in 1923. It gave cartels a well-defined legal status and placed them under government supervision. The text of this cartel ordinance is reprinted in Robert Liefmann, op. cit., page 351 and subs. and discussed ibid. page 168.

Temporary National Economic Committee Monograph No. 40, page 39, contains an interesting tabulation of the estimated number of German cartels at various times, which is reproduced below. The author points out that it is frequently difficult to distinguish between a cartel and a harmless trade association and that consequently the estimates are none too accurate.

Year	Number	Estimated by—
1865	4	Sombart
1875	8	Sombart
1887	70	Philippovich
1888	75	Philippovich
1889	106	Philippovich
1890	117	Sombart
1895	143	Bücher
1896	250	Sombart
1900	300	Central Ass'n. of German Industry
1905	385	Government Enquete
1911	550-600	Tschierschky
1922	1,000	Liefmann
1924	1,500	Reich Ass'n. of German Industry
1925	2,500	Government
1930	2,100	Wagenfuhr

Unfortunately the number of cartels is no indication of the extent of their coverage of the German economy; it is,

however, well known that in all major German industries extensive agreements existed, regulating competitive practices, allocating outputs and markets.

German thinking viewed agreements among independent competitors as a phenomenon distinct from the general movement towards industrial concentration. This was reflected primarily in a state-as-policeman attitude, leading to solutions of the cartel problem by purely formal tests applied in judicial and administrative regulation.

After 1923 there were two factors that acted powerfully in the direction of increasing the economic concentration of German industry. One was the need for new capital for industrial reconstruction and modernization. The other was the disruption of the structure of both production and marketing that resulted from the First World War.

With respect to the former, the shattered condition in which German industry emerged from the First World War was the major factor. Machinery was worn out, repairs had been neglected for years, and the financial position of most enterprises was unsound, owing to the rapid progress of inflation. Inflation itself and the ability to finance plant expansion with paper money promoted the process of physical reconstruction up to a point. It stimulated, however, an unplanned, widely competitive overbuilding of industrial plant, regardless of its post-inflation costs of operation and future uses, merely as a matter of flight from the depreciating currency.

Moreover, when stabilization came, the working capital position of the whole German economy was found to be woefully inadequate. Both cash and inventories, especially inventories of imported raw materials, had been squandered

during the war and inflation. Large new liquid capital resources had to be found. Especially in view of the heavy reparations burdens imposed on the German economy it was essential to attract new foreign capital investment. Such foreign capital was, however, only obtainable on well-founded prospects of profits and would not have been available to industries in which conditions of cut-throat competition prevailed. In the absence of legal obstacles to mergers and cartel agreements, these financial requirements were alone sufficient to give powerful impetus for a tight organization of German industry.

Added to this there was a second, and, in the long run, probably even more important incentive—the disruption of productive and marketing processes due to the loss of the First World War.

For instance, the Ruhr steel industry relied heavily on Lorraine iron ore and shipped coal into the Lorraine in return. This two-way traffic was interrupted by the return of the Lorraine to France (see Weltwirtschaftliches Archiv, April 1927). A somewhat similar cleavage occurred in the Silesian coal and steel industry, which was partly given to Poland. Lastly, the breakup of the Hapsburg Empire created six small nations where there had been one large economic area before. This broke up trade interchange into completely unfamiliar and in many respects unworkable patterns.

International cartelization was thought to be the one effective solution of the problems so created. French economic interests were among the most powerful promoters of international cartelization in the interests of post-war international economic collaboration and a return to stable conditions required for a durable peace.

A conference to discuss problems of the post-war economic organization of Europe is believed to have been first proposed by Mr. Jouhaux, the French labor leader, in 1924. Mr. Louis Loucheur, a leading French industrialist and a Cabinet member of several French governments, proposed such a conference officially at the League of Nations Assembly of September 1925. He more than anybody else was responsible for the eventual convocation of the World Economic Conference held by the League of Nations in 1927. One of the objectives of this Conference was to attempt to create order out of chaos, to attempt systematic economic reconstruction by the coordination of European industries and the rational organization of their mutual trade.

Even before the World Economic Conference French and German steel makers were able to conclude agreements. (See Hexner, op. cit., p. 220.) A large number of cartels sprang up also among the industries of the successor states, as well as between the successor state industries and German industries.

In July 1930 the government issued a second executive order to regulate cartels, which revised and strengthened the ordinance of 1923 in the light of subsequent experience.

The network of national and international cartels that was created during the 1920s was subjected to violent strain after Germany's foreign exchange difficulties in 1931, which will be discussed in a separate section below. Since, however, the central position of the German economy on the Continent of Europe remained unaffected, all that was necessary, and indeed possible, was to readjust the cartel agreements to the changed conditions. These readjustments, however, did not occur under the old Kartellverordnung any more. The depression washed away the founda-

tions of the liberal capitalistic reconstruction of Europe that was attempted during the twenties.

4. After 1933: Compulsory Cartelization

The source material with regard to the Nazi reorganization of the German economy is described in Fritz Weike's "Der Aufbau der Gewerblichen Wirtschaft", Berlin, 1935, which prints the texts of the relevant laws and regulations to the end of 1935. Other sources are Hans E. Priester: "Das Deutsche Wirtschaftswunder", Amsterdam, 1936; the "Jahrbuch der Nationalsozialistischen Wirtschaft", Munich, 1937; Fritz Haussmann: "Konzerne und Kartelle im Zeichen der 'Wirtschaftslenkung'", Zurich-Leipzig, 1938; and "Die wirtschaftliche Konzentration an ihrer Schicksalswende", Basel, 1940.

Much of the voluminous American literature on German industrial organization under the Nazis tends to project backwards the phenomena of Nazification. This obscures the revolutionary character of the Nazi movement and the revolutionary nature of the changes it has caused in German economic organization.

The advent of the Nazis to power created a radically new situation. They first resorted to deficit spending, on a scale never previously attempted in peacetime, for the purpose of reemployment. Presently they converted their reemployment expenditures into rearmament expenditures, and proceeded to integrate the whole German economy in the service of this rearmament effort.

On July 15, 1933, they issued a new cartel decree establishing the right of the Reich to compel cartelization wherever the authorities considered it desirable. By their law for the reorganization of the German economy, issued in

February 1934, they gave themselves authority for the most far-reaching economic reorganization, which authority they then proceeded to use to the full.

In November, 1934, a new cartel order reorganizing the whole German economy was issued. It compulsorily cartelized the whole of German industry, both horizontally and vertically. An industrial supercartel was created, called the Reichsgruppe Industrie, and a whole system of public cartels was fitted into it; the previously existing private cartels had to fit into this system as best they could. The approach of the Nazis towards industry was radically different from that of the liberal Republic which merely concerned itself with the question of how to police cartels. From 1934 on the German Government used German industry and German cartels as instruments of national policy, frequently against the wishes of the industries and industrialists involved, and thus created patterns of economic control that had previously been considered only permissible or even possible in wartime.

In the international sphere this use of German industry for the promotion of what the Nazi Government considered to be Germany's national interest was further complicated by foreign exchange policies also aimed at the promotion of these genuine or supposed national interests of Germany.

The actual evolution of German foreign exchange and trade controls will be discussed below. Suffice it here to say that international trade by German industry was subjected to regulation not only from the viewpoint of overall national policy, but also from the specific angle of providing the national government with foreign exchange resources of the quantity and composition that they thought

they required. As often as not, international cartel agreements of German industry had to be revised to meet government requirements, regardless whether the German companies affected and their managements considered these modifications to be in their or their associates' interests.

Since about 1937 German industry has been wholly dominated by military requirements. What the postwar position of German industry will be, nobody can say; but it is self-evident that a freely competitive industrial structure cannot exist in Germany for decades to come, if ever.

5. I. G. Farben and the Competitive Situation in the German Chemical Industry

"History: Organized under German laws in 1925, as a merger of six German dye and chemical companies, the Badische Anilin-und Soda-Fabrik, the Farbenfabriken vormals Friedr. Bayer & Co. (Elberfelder Farben), the Farbwerke vormals Meister Lucius & Bruning (Hochster Farbwerke), the A. G. fur Anilin-Fabrikation (Agfa), the Chemische Fabrik Griesheim-Elektron, and the Chemische Fabriken vormals Weiler-ter Meer.' These companies, representing the largest chemical and dye producers of Germany, had operated under a 'Community of Interest Agreement' (Interessengemeinschaft) since 1916.

"Merger of these companies was accomplished through absorption of other companies by Badische Anilin-und Soda-Fabrik, on a share for share basis, name of Badische Anilin shares then being changed to I. G. Farbenindustrie A. G. In 1926, I. G. Dyes absorbed the Koln-Rottweil A. G. formerly engaged in the manufacture of hunting and sporting ammunition and explosives and which since the war had converted some of its factories to manufacture of rayon." (Moody's Manual of Investments, 1943, p. 2528.)

The beginnings of what later became the I. G. Farbenindustrie A. G. go back to cartel agreements between large chemical companies shortly after the turn of the century. The original agreements preserved the independence of each constituent company, but contained profit-sharing provisions at least in the case of the 1904 agreement between the Hoechst and the Casella company, and probably in others. (Haussmann, 1938, p. 40) A tighter integration of German chemical enterprises was undertaken in 1916, under the necessities of the First World War; the "community of interest agreement" determined the key according to which the profits of all members were to be distributed.

After 1928 the merged enterprise had a total capitalization in excess of R. M. 1 billion, *i. e.*, over $250 million at the then rates of exchange ($420 million after the devaluation of the dollar).

From the viewpoint of the technical excellence of its management and research operations it was the leading chemical enterprise of the world. The two most spectacular discoveries in the industrial chemistry of the present century, namely, synthetic nitrogen and the hydrogenation process, were both developed in the laboratories of I. G. Farben.

The technological excellence of the research work of I. G. Farben made it a most formidable competitor. Its widespread and well-entrenched sales organization and its comprehensive cartel connections within Germany and throughout Europe gave it an extraordinarily high degree of control over its European markets. It had excellent political connections with the Weimar Republic as long as the Republic lasted; and after the Nazis came into power, it was coordinated with the Nazi system of industrial organization, which meant that it was converted into a vehicle for German power politics. These three factors

made I. G. especially formidable as a competitor to manufacturers of new products seeking markets. Conversely, these same factors of strength in I. G. Farben made it a very desirable ally with respect to developing new products and opening up new markets. Many foreign companies entered into agreements with I. G. Farben and some even established jointly owned production facilities in Germany during the liberal era of the Weimar Republic, when Germany joined the League of Nations and cooperation between Germany and the Western Powers was at its height. (For a list of I. G.'s agreements, see Report of the Kilgore Committee, Part II, pp. 3-35.)

I. G. Farben was not a Nazi company prior to 1933. The most authoritative historian of Nazism prior to 1932, Mr. Konrad Heiden ("Geschichte des Nationalsozialismus; die Karriere einer Idee", Rowohlt, Berlin, 1932), who investigated very carefully the origins of the movement, its sources of funds, and the hidden support it was receiving from various sources, never suggested that I. G. Farben was in any way involved in the Nazi movement. Evidence is, on the other hand, available that I. G. Farben was to some extent involved in politics on the liberal side. It has been said that it subsidized the leading liberal daily of Western Germany, the Frankfurter Zeitung. It was the leading German company in the camp that wanted collaboration with the Western Powers. It even attempted to internationalize its operations and ownership as much as possible. Obviously, after 1933 it was "coordinated" to Nazi aims and methods, like everything and everybody else in Germany.

By contrast, the German heavy industries were undeniably engaged on the Nationalist side in politics. Whether and how far back they subsidized the Nazi movement is

difficult to determine. Konrad Heiden shows that prior to 1930 such help was intermittent; but there is no doubt that the leadership of the steel industry was sympathetic to all nationalistic political movements and often gave such movements financial support.

The economic logic of the contrasting political attitude of I. G. Farben and the heavy industries under the Republic was fairly obvious. The steel industry by and large only had debts abroad and was no doubt delighted at prospects of selling bigger armaments to a nationalistic German Government. I. G. Farbenindustrie, on the other hand, had assets and markets all over the world, including extremely valuable patents. Its highly sophisticated and experienced management could not have been blind to the jeopardy in which these assets would be placed by adventurous foreign policies. After all, its predecessor "community of interests" was the principal victim of the expropriation of German assets and German patents by Allied nations during the First World War.

III. Foreign Exchange Problems

The patterns of national income and expenditure for each country are set by natural resources, technology, previous economic development, and consuming habits. These patterns change very slowly even if the aggregate totals of national income and expenditure show fairly ample fluctuations from year to year.

Expenditure on imports is part of the national expenditure pattern, and as such it is in a very stable relationship to national income. It will rise and fall as national income rises and falls, though in most countries it will tend to go up and down faster. (See "Imports and Income in the United States and Canada" by Imrie de Vegh, Review

of Economic Statistics, Harvard University Press, August 1941, p. 135, chart 3.) It takes major economic dislocations to affect this pattern.

1. The Dollar Shortage

Subsequent to the hectic years immediately following the First World War foreign nations were able to import vast quantities of materials for reconstruction and development purposes, largely financed by loans from the United States. The resultant business activity provided a powerful stimulus to world recovery during the years 1924-29.

Subsequent to 1929 there occurred a drastic reduction in the total supply of dollars available to foreigners. The reduction resulted from the cessation of foreign lending and from the drop in imports into the United States that was caused partly by the beginning of the depression, partly by the Hawley-Smoot Tariff.

Since dollars and sterling were the principal media for the financing of international trade, and sterling itself was endangered by the shortage of dollars that developed, the effects of this dollar shortage on international trade were catastrophic.

In the United States the quantity of imports continued to be closely related to industrial production. Their value declined faster than national income only because of the greater price decline of internationally traded commodities. The quantity of imports into foreign countries dropped disproportionately as compared to their industrial production; and their imports from the United States dropped much faster than their total imports. In other words, under the impact of the world-wide dollar

shortage there was a drastic reduction in the ratio of world trade to world production, and a further reduction in the proportionate share of the United States in total international trade. (See "The United States in the World Economy" by Hal B. Lary, United States Department of Commerce, Bureau of Foreign & Domestic Commerce, Economic Series No. 23, Washington, 1943. Chart 1, table 1, and chart 2.)

The methods by which the use of dollars was restricted in foreign countries were numerous and sophisticated. Their primary objective in each case was to reduce total imports from the United States and to substitute for them either domestic production or at least imports from other sources. Helping to reduce both the dollar shortage and domestic unemployment in one fell swoop was usually the official policy.

2. Sterling Exchange during the Depression

In the United Kingdom the abandonment of the gold standard in September, 1931, immediately made goods from the United States and Germany 33% more expensive and eventually 50% more expensive than they had been prior to the devaluation of the pound. This situation was rectified by the devaluation of the dollar in 1934, but in the meantime, in 1932, Great Britain established a new protective tariff and Imperial preference; she progressively strengthened her economy on bilateral and exclusive patterns, which tended to discriminate against American goods.

"Buy British", by no means a new slogan, received added popularity. The Federation of British Industries and lesser trade associations also made determined efforts to organize British markets so as to present maximum resistance to foreign merchandise. Renewed impetus was

given to cartelization among the exporting industries and raw material producers of the British Empire—whose best customer was the United States—so as to maximize the dollar proceeds of export sales by a monopolistic price policy.

3. German Exchange Problems of the Depression

In Germany the situation in 1930-31 was similar to the English situation, only much worse. The collapse of the German banking system in the spring of 1931 was primarily the consequence of excessive short-term borrowing in London and New York, and to the freezing of the funds so borrowed in loans that became uncollectible after the onset of the world depression.

On July 15, 1931, after all the banks had been closed, a presidential emergency decree was issued regulating commerce in foreign exchange.

The basic principle of the allocation of import exchange was that every enterprise in Germany was entitled to spend on imports an amount of foreign exchange equal to its average monthly foreign exchange expenditures on imports during the period July 1, 1930, through June 30, 1931.

This allocation of import exchange was already far below pre-depression levels, but still very liberal as compared to subsequent restrictions. The shortage of exchange of the German authorities became so serious after the depreciation of the pound sterling in September 1931 that in May 1932 this allocation of import exchange had to be reduced to 50% of the base period maximum.

The depreciation of the dollar in 1933 caused major additional difficulties to the German export trades and thus

reduced further the supply of foreign exchange. Moreover, the Nazi government was intent to build up the war potential of the German economy; the supply of foreign exchange began increasingly to be diverted to the requirements of defense. As a result, beginning in February, 1934, drastic measures became necessary for the further curtailment of ordinary commercial imports. The import exchange quotas to which enterprises were entitled without special license were in very short order reduced from the previous 50% to 5% of the base period level; many imports were altogether prohibited except under license, and foreign trade became partly a tool, partly a weapon, of economic warfare. (See "Die Massnahmen Deutschlands zum Ausgleich der Zahlungsbilanz, mit besonderer Berucksichtigung des Neuen Plans," by Gaston Adolf von Bleichert, Berner Wirtschaftswissenschaftliche Abhandlungen, Vol. 27, Bern, 1940.)

4. Developments After the Devaluation of the Dollar

The dollar shortage ceased to be acute in England after 1934. The combined effect of the protective tariff, Imperial preference, and the raising of the price of gold in the United States (which accrued largely to the benefit of the gold producers of the British Empire) was to ease considerably the foreign exchange situation. Sterling once more became a reasonably safe currency. By then, however, the damage was done. While imports from the United States revived, they never attained previous totals. After 1937 new pressures developed on the dollar resources of England, partly as a result of the renewed slump in the United States, which cut down all our imports, and partly owing to rearmament needs.

On the Continent of Europe and in the non-British world generally the dollar shortage remained acute throughout the nineteen thirties. In the ultimate analysis this dollar shortage was responsible for the abandonment of the gold standard by the three "rich" countries, Holland, Switzerland, and France in 1936, as well as for the maintenance, and (after 1937) renewed intensification of exchange restrictions, in all the "poor" countries. It was this dollar shortage that kept the share of the United States in total world trade lower than it had been in the previous decade.

After a temporary alleviation of the dollar shortage in 1936-37 the slump at the end of 1937 once more intensified the worldwide dollar shortage, when solely due to a drop in our imports we rapidly changed from a small import surplus to a billion dollar a year export surplus.

During the thirties the armaments race became an increasingly important factor in confining more and more to products of military necessity the imports to the Continent of Europe from the United States. The renewed dollar shortage in 1938 further increased the need to restrict the utilization of dollars to the purchase of military necessities.

The import licensing systems and foreign exchange control systems that were in effect in most continental countries over most of the period strongly militated against American exports of products that were directly competitive with domestic products in those countries. Full employment policies as well as foreign exchange considerations both led to import restrictions. Even less good or more expensive domestic products were preferable as long as they did not require dollar exchange, and as long as their domestic production provided additional employment. (See

also Howard S. Ellis: "Exchange Control in Central Europe", Harvard University Press, 1941.)

The Continental European countries were thoroughly cartelized. (See J. W. Reichert: "Die Kartellgesetze der Welt", Berlin, 1935; Fischer-Wagenfuhr: "Kartelle in Europa Ohne Deutschland", Nurnberg, 1929.) Exchange controls suited these cartels and entrenched their control over domestic and neighboring markets. The cumulative effect of dollar shortage, reemployment and rearmament made the Continental European markets virtually impregnable to American products aimed for general consumption.

In view of the factors described, any United States company starting an aggressive policy of exporting to the Continental markets would have faced major obstacles at this time if its products had not been militarily useful. The total volume of exports that could have been sold would have been negligible before restrictions would have been clamped down by these countries, based on considerations of foreign exchange and employment, strongly supported by domestic cartels. Thus there was little incentive for American companies to engage in an export trade whose total proceeds would have been trifling and whose net effect would have been the establishment of lasting bad relations with well-entrenched European interests.

IV. Effects of the Economic Environment

The sweep of industrial concentration through the English and German economies has been paralleled by a similar evolution in virtually all European countries. The question suggests itself whether the cause of so universal—and so universally accepted—a movement can be sheer wickedness, whether there is not an inner logic or necessity

that prompts corporate managements to organize in such patterns and that induces governments to accept this process.

The concentration movement does, in fact, possess considerable inner logic. From the viewpoint of management this logic may be irresistible. From the viewpoint of the public interest it may be compelling in the long run, though not necessarily for short periods or without supervision.

There are two distinct phenomena in the concentration movement. For one of them a good technical term exists, namely, "imperfect competition." The other we shall call, for lack of a universally accepted name, "monopolistic behavior." The distinction between them is profoundly significant.

"Imperfect competition" is a technical term that describes a kind of competition that does not meet the formal tests of "perfect competition," but that, from the viewpoint of behavior, is fully as competitive as so-called "perfect competition." "Monopolistic behavior" is behavior aimed to exclude competition, or to prevent it, or to use economic power or political means for the purpose of destroying competitors.

The forms of competition known in real life are necessarily all "imperfect." This imperfection can vary in degree. Probably the most obvious measure of the degree of imperfection is the number of competitors and the share of the market any small number controls. When the number is very small or a very few control the market, we speak of oligopoly. Other measurements of the degree of imperfection may, however, be more useful at times.

4155

The degree of imperfection is in no way a criterion of the competitiveness of the competitors. In fact, the "free competition" of the law is descriptive of the "imperfect competition" of the economist. Monopolistic behavior, on the other hand, connotes kinds of destructive action that may be taken by competitors at almost any degree of imperfection. The higher degrees of imperfection often make it easier for rivals to behave in such a manner, but this is not necessarily so. Nothing could be less helpful than to imagine that there exists not only a continuous shading from "perfect competition" through "monopolistic" or "imperfect" competition to total monopoly, but also a *parallel* shading from competitive to monopolistic behavior.

1. Imperfect Competition

It has been increasingly recognized in recent economic literature that neither the perfect monopoly nor the perfect competition of the theoretician, nor any reasonable approximation to them, has ever existed, or can exist in modern industry. Competition has always been, and can only be, "imperfect." (Joan Robinson: "The Economics of Imperfect Competition", Macmillan, London, 1933; Edward Chamberlin: "The Theory of Monopolistic Competition", Harvard University Press, 1933; A. R. Burns: "The Decline of Competition", McGraw-Hill, New York, 1936.)

Perfect competition as defined by the economist is a timeless concept in which price is determined by the costs of the most expensive producer still needed to satisfy the demand that exists at that price. If the price were higher, the demand would be less than the larger amount offered at that higher price. If the price were lower, the amount that could be offered would be insufficient to meet the greater demand. In describing such a perfectly competitive market

the theoretician carefully postulates homogeneity of product, continuous market, perfect knowledge, perfect mobility of the factors of production, perfect independence of the participants, and such a size distribution of buyers and sellers that the market price is given for any one of them, *i. e.*, no action taken by any single one or small group could have any effect on the price.

It will be appreciated why these conditions cannot exist in the mining, manufacturing, and service industries. It takes time to get factors of production into or out of industry; sometimes it takes a very long time. This in itself makes nonsense of the stipulation of a perfect mobility of the factors of production. Knowledge of the market is also restricted; but that is less important than the size distribution of the buyers and sellers. The efficiencies of large-scale production are usually so decisive over handicraft operation that most manufacturing cannot be conducted on a small scale except at a prohibitive cost to the consumer. Large-scale manufacturing implies that only a relatively small number of producers can exist concurrently and that the action of any one of them is likely to have a substantial effect on the market.

This inevitable technological factor removes the automatism with respect to price that the theoretician imputes to perfect competition. It does not mean, however, that imperfect competition is necessarily less competitive than perfect competition. Highly imperfect competition may be so, contrary to what is generally recognized as "monopolistic" as to be competitively far more violent than market situations much less imperfect.

The reason for this is relatively simple. Since it takes time to get into and out of an industry, there must exist most

of the time excess capacity in every industry requiring large plant investment. This follows from the fact of industrial fluctuations. If additional capacity is built in an industry during a boom,—and it is the nature of booms that additional industrial capacity is built while they are in progress,—then during the ensuing recession and for indeterminate periods thereafter that industry will necessarily have excess capacity. This excess capacity can be called into production at the will of the owner. It would pay the owner to utilize his excess capacity as long as the price of the products stays above prime costs. His depreciation charge would run on whether he operated his factory or not; and if he operated it, he would amortize some part of his depreciation charge provided he attained a price above prime costs. Consequently, in industries suffering from over-capacity there is a tendency to price wars. Price wars bring prices below the levels that would prevail under conditions of "perfect" competition. They destroy capital values. Occasionally prices are pushed below prime costs in order to preserve the goodwill of the business.

Excess capacity in an industry sometimes rests on the market for a very long time, because the extreme durability of capital goods prevents healthy competitive conditions from developing. This is harmful not only to the industry primarily affected, but also to capital goods industries, because no new machinery can be introduced into the over-built industry until the old machinery has completely obsolesced. In a capitalist economy prolonged cycles of unemployment in capital goods industries are an inevitable consequence of booms and of the durability of capital goods.

Young industries, small enterprises, and highly specialized enterprises are highly vulnerable to the demoralizing

effects of imperfect competition. They can come into being only if their costs of production are lower than those of existing firms; the cost advantages of mass production have to be assumed to have been offset by special skills. Their risks consist partly in their inability to compete with their larger competitors with respect to selling and overhead costs and partly in their lack of diversification.

The larger the firm, the more efficient its sales effort can be. Large corporate enterprise, controlling several plants, possibly in several sections of an industry, derives tremendous competitive cost advantages from being able to distribute its overhead over a variety of products and over greater areas than a small enterprise could. It also derives great competitive advantages from a diversification of its production: each product helps to advertise the name of the enterprise; booms and slumps will not hit every line of business at exactly the same time; nor are the long-term trends of various lines of its business by any means likely to parallel each other. Consequently, new discoveries, new fashions, even cyclical fluctuations are far more dangerous to a small single-product enterprise than to diversified businesses.

The imperfections of competition and the hazards they create for various types of enterprise put a premium on large units and large-scale diversification of corporate enterprise. In the interests of a better diversification of risks, of a wider distribution of overhead costs, of a better resistance to the competitive struggle,—in other words, in the interest of self-preservation,—small enterprise is forced to try to become big, by merger if not by growth. The reduction of competitive hazards consists in the stronger control the more diversified, larger enterprise can exercise over its own fate.

While larger size does not mean reduced competitiveness, defensive measures against the hazards of the competitive struggle invariably tend to increase what we have termed the imperfections of competition. Agreements with other enterprises are the minimum means available to small enterprise to obtain the benefits of bigness without sacrificing identity.

The problems of over-capacity or lack of organization lead to efforts to stabilize business and to create more favorable growth conditions by cooperative action. Failing these, the difficulties may become so extreme that agreements and even legislation to restrain competition may be necessary. We have seen numerous British efforts along such lines. Public policy in the United States has recognized this need in the cases of the export trades, agriculture, coal mining, air transportation, shipping, marine insurance, petroleum, railroads, and labor.

2. Monopolistic Behavior

Monopolistic behavior may be defined as the use of destructive methods of competition or attempts at exclusion from competition. As we have seen, combination is occasionally forced upon producers by the extreme dangers resulting from imperfections of competition. At other times deliberate restraints are imposed by certain producers or groups of producers for no other reason than that they have the power to do so; these are different in character from steps merely changing the degree or the impact of imperfections of competition. They are especially frequently applied against competition from abroad.

The concept of monopoly as such is a singularly awkward one. "Perfect monopoly" does not and cannot exist any more than perfect competition can. Every monopoly

is rigidly hemmed in by the availability of an ever increasing number of substitutes. Conversely, within a very narrow limit, almost every enterprise is a quasi-monopoly. The relevant issue is not whether an enterprise is big or small in itself, nor even whether it controls a large percentage of a given market, or even the entire production of a single homogeneous commodity, but whether its conduct is such as to be in the public interest.

Truly fair competitive conduct is difficult enough to enforce in the United States, where the long tradition of antitrust prosecutions has established—albeit haltingly and with many contradictions—what type of conduct is competitive and what type of conduct imposes restraints that are deemed unreasonable. In foreign countries, where no such tradition exists, regulation of the competitive—or monopolistic—behavior of enterprise is managed on a different level.

Well-entrenched large enterprises and cartels abroad use any and every method to prevent new competition from entering what they have come to consider their own reserved territory. In many, if not most, countries of the world, domestic industry is strongly favored against foreign competition. In many countries industry is heavily or even systematically cartelized. Practices classed as unfair or monopolistic in the United States, and accordingly subject to prosecution, are considered entirely fair and proper in the legal systems and business mores of the rest of the world. Cartelization is an accepted phenomenon. A substantial proportion of the industrial production of the world is controlled by monopolistic combinations of one form or another.

In countries where monopolistic combinations are allowed or even encouraged, they are often able not only to control domestic production but also to exercise influence over the foreign trade policies of their own governments. Increasingly they have become instruments for the execution of national policies.

A new competitor, especially a new foreign competitor, may not claim entry into such controlled markets as a matter of right. Unless he comes to terms with existing combinations, he is unlikely to be able to develop a substantial business.

3. Effects of the Combination Movement

For young industries, for new developments, there exists not only a substantial incentive but an unavoidable need to seek, first, substantial financial backing, and, second, a working arrangement with leading local interests in each country.

The first purpose of such arrangements is to secure entry. The second is to secure the most rapid development possible for the new product, unhampered by attempts at exclusion and other similar practices of entrenched organizations.

Owners of incomplete sets of patents are especially vulnerable to competition from owners of other groups of similarly incomplete patents. The hazards of patent litigation are always present, especially if one group of patentees has resources adequate to finance prolonged litigation. Moreover, if two sets of incomplete patents are used competitively, the development of the new product is likely to be much slower, less efficient; and the hazards of capital

losses and misdirections of investment are likely to be much greater than if patent rights and technical information are exchanged. To that extent a reduction of potential competition among rival patent owners eliminates one of the more obvious wastes of imperfect competition.

It should be realized in this connection that though a patent confers a monopoly it does so in law only.

In the first place, new inventions are frequently developed more or less simultaneously by several inventors working in the field. Thus incomplete sets of patents or processes frequently become complementary and one is not particularly useful without the other. Even independent new inventions often obtain greatly enhanced usefulness by being put into operation jointly. Cross-licensing may be the best means of exploiting them, the best means to get the new product to the consuming public promptly and at the lowest possible price.

In the second place, even patent exchanges made for the speeding up of the development and commercial exploitation of new inventions seldom result in a real monopoly. Competition of slightly different products that are in practice substitutes for each other prevents or at least restricts and limits effectively the operations of a patent monopoly. To quote John Maurice Clark: "As to substitution it is a commonplace that the triumphs of modern industrial chemistry have vastly increased its range and flexibility. . . . . It seems that the differences between substitute products . . . . are nowadays no more serious than similar differences between different varieties of what we think of as the 'same' product. . . . ." ("Toward a

Concept of Workable Competition", American Economic Review, June 1940, p. 247.)

In other words, even if a group of patents constitutes a complete world monopoly, as long as there exist adequate substitutes for the product it will be sold in a competitive market. In this market all producers of substitutes will make every effort to maintain their position and to preserve the value of their assets. As long as there is no understanding between producers of the new product and its substitutes, the limitations to the monopoly of the patentee are fully as real as those of almost any manifestly competitive producer. After all, it is obvious that almost any purveyor of almost anything is a near-monopolist with respect to certain rigidly defined markets; hardly any monopoly is ever more complete than that of the village store.

Under the conditions of the interwar period, owners of patents, and especially owners of rival sets of patents in different countries, had no genuine alternative to a network of agreements.

4. The Combination Movement and the Public

With respect to the advantages or disadvantages to the public, it is necessary to distinguish between development products and those already fully developed.

Development products are more likely to reach the public in quantity if the development is organized and in strong hands than if it is weakly promoted on an individualistic, free-for-all basis. Dependent on the nearness of substitutes, and on the rate of progress in solving cost problems, even the pricing of the development products can only seldom be exploitative.

Fully developed products present a slightly more complex case.

The consumer often benefits temporarily from the very sickness that besets an industry, from the fact that producers selling their product below total replacement cost are giving him, as it were, a small piece of their assets as a bonus with each purchase. But in the long run the public is hurt both by the violent and irregular replacement cycles of capital assets that develop if cut-throat competition prevails over a large enough segment of industry, and by the high prices that have to be paid for years in order to induce new capital investment in unstable industries.

Moreover, the direct protection of the consumer is not the only concern; the wastes of imperfect competition of the cut-throat variety should be measured in terms of losses to investors and wage earners, as well as to the consumer, all of whom would probably receive more, and with greater assurance, if imperfections of competition did not retard industrial progress.

As mentioned before, the trait of modern industry discussed in the present section is usually referred to as oligopolistic, to express the small number of firms that control each industry. This oligopolistic character creates social, political, and economic problems for the oligopolists themselves. The great instability and competitive hazards of imperfect competition impel towards concentration, mergers, ever larger enterprises. The large units into which industry is organized obtain, by their very size and diversification, a certain degree of stability in output, employment, and revenues. At the same time their size exposes them

to envy, and to much closer scrutiny, than if they were less conspicuous. For this reason, if for no other, higher reasons, they have social responsibilities with respect to giving the public the maximum supply at the lowest possible cost. They also have a responsibility towards their own employees with respect to affording stability of employment, and to their stockholders with respect to not squandering their assets by waging purposeless economic warfare among themselves.

The final section of the present survey presents an outline of how the public interest can best be served in United States foreign trade, in the light of the findings of the foregoing discussion with respect to the organization of industry abroad and oligopolistic tendencies in general.

V. American Business Operations Abroad

There are three types of business operations in which American corporations may engage internationally: (1) exports, (2) imports, (3) production abroad. Production abroad may take place by wholly-owned subsidiaries, by partly owned foreign enterprise, or by licensing enterprise wholly owned by foreigners.

Each of these possible methods of operation has its own advantages and disadvantages as well as its own rules of conduct.

1. Exports

With respect to exports the situation is seemingly unambiguous, but actually major national issues are involved.

Three of these issues usually occupy the foreground of discussions.

(a) First in importance in American discussions is usually the quantity of exports. Possibly as a result of the country having been a debtor country after the Civil War, we seem to have been highly conscious of the economic advantages of paying off debt, and stimulating employment at the same time, by a high level of exports. Whatever the reason, the American approach seems to have been that from a national point of view a high level of exports was very desirable.

As we became more and more an exporter of manufactured products, fierce competition tended to develop in third markets to which both American and European industries tried to export their products. Fierce competition by local producers and efforts at the exclusion of the American product became increasingly frequent also in national markets that American producers tried at various times to invade.

More recently, foreign governments have used tariff increases to force American exporters to build up manufacturing production within the foreign frontiers, first by transferring finishing operations, and then increasingly by fabricating locally the products previously exported from the United States.

(b) In recognition of the problems created by the competitive situation in export markets, the Webb-Pomerene Act of 1918 permitted the formation of export associations, and to that extent exempted the export trade from provisions of the antitrust laws. Producers may cooperate in controlling prices and sales in the export trade without any limitation upon their activities, provided the domestic prices of the commodities concerned remain unaffected. As Arthur R. Burns remarks ("The Decline of Competition",

New York, 1936): ". . . the full significance of this proviso has never become evident." (p. 21)

With respect to the national interest in foreign trade, the Webb-Pomerene Act clearly envisaged that, where United States exporters are competing against foreign interests, it would be an advantage to them, and consequently of benefit to the total national economy, if they strengthened their bargaining position by acting collectively. The economic logic of that position is that it improves the terms of trade for the United States; that is to say, it tends to make the unit price of American exports higher as compared to the unit price of American imports, though it is not obvious that the legislators of 1918 saw this aspect of the matter at all clearly.

Moreover, the Department of Justice issued a ruling in 1924, in connection with the silver cartel, saying that it is legal for a Webb Association to join in an agreement with foreign cartels, provided other American exporters are not discriminated against and any effect on the domestic price is only incidental. (See Temporary National Economic Committee Monograph No. 6, pp. 124-8.)

Good reasons exist in support of this position. It is clearly not in the national interest to force exporters to compete singly against well organized, well entrenched, and government-sanctioned cartels abroad, nor for American exporters to be forced to compete against each other for orders from buying monopolies and cartels abroad. The result of such competition can only be that the prices we obtain for our exports will decline as compared to the prices we have to pay for our imports.

(c) A further problem often arises in connection with patented processes and products. When they are licensed

by Americans to foreigners, or vice versa, an attempt is frequently made to restrict the right of the American patent owner or patent licensee to export to foreign countries. The legal aspects of such restrictions are outside the scope of the present memorandum.

2. Imports

To the extent that American corporations are importers of foreign products, or processors of foreign raw materials, their interest is to buy at the lowest possible price. To the extent that they are producers of products that are competitive with potential imports, their interest lies in having tariff protection and other legal means to reduce the threat of foreign competition.

The legal aspects of geographical limitations on the use of patents by foreign licensees of American corporations are outside the scope of this memorandum. Their economic aspects present a difficult problem of economic policy. If a foreign licensee or a foreign company partly owned by an American company can produce more cheaply than the American owner of the patents, why should not the American consumer be allowed to benefit from the lower foreign costs?

The obvious answer that this low-cost foreign competition reduces employment in the United States does not hold water; from that angle a geographically restricted license is no less than a privately imposed tariff of prohibitive height. Let Congress decide whether the low foreign cost should be offset by tariff protection.

There is, however, another aspect to this question. If territorial limitations were impossible, self protection would prevent American corporations from licensing foreign cor-

porations that have lower costs. This would hardly be in the interests of anyone.

Even here there is a difference between a new development and an established product. In the latter case the burden of proof might rest on one who advocated geographical limitations. In the case of new inventions, however, it is obviously not in our national interest to insist that all licenses granted abroad be unrestricted, if lower foreign costs of production might result in the production of the new product being retarded or stopped in the United States.

3. Production Abroad

American corporations can engage in production abroad directly by wholly-owned subsidiaries or by partly owned foreign enterprise, or indirectly by licensing an enterprise wholly owned by foreigners.

The Webb Act dealt with a period in which American interests abroad were still predominantly export interests. With the worldwide trend towards trade restriction and tariff increases, as well as with the increase in the economic power and foreign assets of the United States, the acquisition or building up of subsidiaries of American corporations engaged in productive operations abroad became an increasingly typical case. It is not possible to make an estimate of how large a percentage of the total foreign business of American corporations took the form of production or processing abroad. The probabilities are that, prior to Lend-Lease, the latter were considerably more important than exports from this country.

The American owner of a wholly-owned foreign subsidiary has been in an increasingly difficult position for

the last ten to fifteen years. The pressure to replace exports from the United States by local facilities was followed, whenever the local facilities were American owned, by a pressure to have the local facilities at least partly locally owned.

A wholly-owned American subsidiary is handicapped with respect to adaptation to local customs, tastes, sales methods. What is worse, it remains a "foreign" enterprise against which local interests can always stir prejudice. Examples abound of discriminatory action against such wholly-owned American subsidiaries abroad.

Partnership with local groups and royalty agreements based on patent licensing are the two ways of forming a community of interests with someone inside the fort. These two methods are the only ways to stay in the foreign business and avoid discrimination directed against "foreign" enterprise. Short of withdrawal from business abroad, they are the only practicable alternatives to a policy of economic aggression from the outside by competitive exports, or to a policy of economic aggression from the inside by wholly-owned subsidiaries.

Foreign nations have demonstrated that they will use every known means to resist these types of economic aggression. In such a fight the enterprise trying to invade foreign territory is always in a weak position. Especially in view of high American wage costs and of the important steps that have been taken in recent years to teach American technology to foreign nations, it is hard to believe that we shall be able to maintain a major position in foreign markets without cooperation with local interests.

Barring "trade" based on open or concealed subsidies, the only further alternative to economic aggression or economic cooperation is a withdrawal from business abroad. Such an ostrich policy of economic isolationism would not only be costly in terms of lost sales and assets, but it would eventually also show up in a slowing down of our technological and economic progress.

Lack of agreement regarding export markets would not only not necessarily result in increased total exports, it might result in less. Small local enterprises would spring up behind each new tariff wall, the cost of production would be higher, and the price to the consumer more erratic. This in turn might mean a failure of the product to be developed properly and to reach the public in quantity, except after considerable delays.

The problem thus resolves itself into deciding what the proper range of agreements and cooperation with local interests should be, and what the effective practical significance of various provisions is on which foreign participants in such agreements usually insist.

4. The Problem of the Future

In a sense, all agreements between potential competitors are cartel agreements. The typical cartel agreement is, however, an understanding in a mature industry, regulating competition among fully developed enterprises. No useful purpose can be served by viewing agreements aimed at the development of new products in the same light as agreements aimed to raise the price of rubber or mercury to the consumer, or agreements aimed to prevent competitive bidding for government contracts.

With respect to the future it is apparent that cartels and other agreements represent the standard forms of organization of foreign business. There is no serious prospect that the Government of the United States will be able unilaterally to force American standards of competition on foreign countries. The latter have developed their own—and in their opinion adequate—methods of dealing with business organization, and they predominantly favor government-supervised cartelization of industry.

The problem is to find a solution that will not force surrender of the foreign business of American corporations, that will afford American corporations a practical means of engaging in business in a cartelized world, and that will not offend the spirit of anti-trust legislation in the United States.

DR. J. E. BOOGE
NEWPORT

SHERWIN-WILLIAMS

In general, you are familiar with the process which Sherwin-Williams are developing to produce TiO2. Sherwin-Williams contemplate purchasing a special grade of ilmenite which runs lower in silica content than the material which we normally receive from India. You have explained that this is caused by the fluorine combining with the silica, and thereby lowering the recovery of this chemical.

Since we are anxious to sell Sherwin-Williams their requirements of ilmenite, we would like to learn whether garnet will be harmful to the same extent as silica. If garnet is an objectionable impurity, then we will have a better opportunity to sell Sherwin-Williams because our competitor, Hopkin-Williams, who produces only the M.K. grade of ilmenite will find it very difficult to reduce the combined garnet and silica content to meet S-W specifications.

Please advise.

September 30, 1938

Travancore Minerals Co., Ltd.,
Aldwych House, Aldwych,
London, W. C. 2, England.

Gentlemen:

We are continuing to contact Sherwin-Williams in the effort to later sell them their requirements of ilmenite.

The fact that this new producer will be a competitor of ours naturally handicaps us somewhat in getting reliable information regarding their future plans. We understand, however, that they have a pilot plant and are actively working on the development of their process for the manufacture of titanium dioxide, and that if this process works out successfully they will then promptly erect a plant to produce this pigment on a commercial scale.

We have again sent Sherwin-Williams samples of your "Q" grade of ilmenite, and attach copy of their letter for your information.

Yours very truly,

Z. P.

Aldwych House, Aldwych,
London, W. C. 2, England.

Gentlemen:

We have advice that Sherwin-Williams are still working to develop their process for manufacturing titanium dioxide and at the present time are working this out on a small pilot unit scale.

They inform us that they will not be in the market to consider the purchase of ilmenite until sometime after February 15, 1939. It is our plan to keep in close touch with them and we will again approach Sherwin-Williams early next year, at which time we hope to be able to advise you more definitely regarding their interest in the purchase of ilmenite.

Yours very truly,

Z. PHELPS, ASST. GENERAL MANAGER

Incorporated

COPY

April 24, 1939

W. J. O'Brien, Vice President,
American Zirconium Company,
Baltimore, Maryland.

Dear Mr. O'Brien:

In line with our previous correspondence, we confirm the sale of one 6,000 to 7,500 gross ton cargo (buyer's option) of M.K. ilmenite to your company for shipment from Colachel, India, between February 15th and April 15th, 1940.

The price is 22 shillings per gross ton, free alongside steamer, for loading in bulk at the Port of Colachel. The quality of the ilmenite is to be substantially the same as the M.K. material shipped you this season, and is guaranteed to contain not less than 53.75% TiO_2. Any moisture in excess of 1% is to be deducted from the outturn weights (at P.R.R. Canton Pier, Port of Baltimore) on which settlement is to be based. Settlement (in pounds sterling, terms cash) is to be made promptly after the unloading weights and ore analysis are available.

It is understood that the usual type of force majeure clause is to apply since, in event of war or unexpected circumstances beyond the control of both parties, American Zirconium Company may be prevented from receiving all of the ilmenite or du Pont may find it impossible to completely fulfil this contract.

D. P. Exhibit 6

We offer to arrange for your account the chartering of the steamer to move this lot of ilmenite within the shipping period specified. When the freight rate is later established, we will make you an offer on the price per ton for your cargo of ilmenite delivered into open top cars at P.R.R. Canton Pier, Baltimore. We will keep you informed of the ocean freight rates from India, and will naturally obtain your approval before we will charter a vessel to move the ilmenite which you have purchased.

We are sending you this letter in duplicate, and request that you note your acceptance on one copy and return same to us.

With kindest personal regards, I am

Yours very truly,

Z. PHELPS, ASST. GENERAL MANAGER

LETTER No. 3269

Travancore Minerals Co. Ltd.,
2 High Street,
Woking, Surrey, England.

Gentlemen:

We recently approached the Glidden Company and Sherwin-Williams, and now find that neither of them is interested to purchase Indian ilmenite at this time.

They feel that the high ocean freight rate is prohibitive and, that furthermore it is improbable that steamers can be secured to move any of this material. They think that under existing conditions the purchase of Indian ilmenite involves considerable speculation since they have no assurance that the material can be delivered.

We would expect at a later time to have some information as to what arrangements these two companies make in regard to obtaining domestic ilmenite, and will advise you fully.

Yours very truly,

D. P. Exhibit 10 4183

Letterhead of

KREBS PIGMENT & COLOR CORPORATION

Newark, New Jersey,
March 4, 1932.

Dr. J. E. Booge—Office:

I do not recall ever seeing any memorandum of information sent over to De Rohden on technical matters. Have you sent any, and if so, I would like a copy to clear my desk, which can, of course, be returned to you.

I want to make certain that nothing definite has been put into writing with De Rohden on this exchange of information which might be construed as having reached an agreement. It is, as you know, all tentative, and was subject to working out something definite with Dr. Blumenfeld when he came back through this country. We are just as well pleased that he is not coming through here, as we are not disposed to make a final agreement with him at this time.

This brings me to the question of patents. I want to make dead certain that any patent applications we may put through in this country on our own developments are withheld from De Rohden in every way, and no mention made thereof in technical information to him, for the reason that we must comply with the du Pont policy to obtain approval of the Finance Committee before we give away any rights under patents.

Up to the present time it is my understanding that all patents are an inheritance from Commercial Pigments, no new ones having been applied for in the United States by Krebs. It is on the new ones that we must be careful to keep them in our own hands until we come to a definite decision as to what we want to do regarding sending them abroad.

C. H. RUPPRECHT.

CHR:s CHR

D. P. Exhibit 11

April 30, 1932.

Mr. C. H. Rupprecht, President
Krebs Pigment & Color Corp.
256 Vanderpool Street
Newark, N. J.

Dear Mr. Rupprecht:

Referring to our conversation of this morning about the exchange of information with Blumenfeld and his licensees, the circumstances surrounding this are as follows.

Last summer, after the completion of the Krebs arrangement, Mr. Ticknor and myself met Mr. Blumenfeld in Paris and told him that we had sold the business of the Commercial Pigments Company to the Krebs Company, consequently the arrangement heretofore existing between himself and the Commercial Pigments Company regarding the exchange of technical and patent information was terminated.

The arrangement having been a direct one with Commercial Pigments was not assignable. Since the Commercial Pigments was about to be dissolved, Mr. Blumenfeld was told that if he wished to make a similar agreement with the new Company, he would have to arrange it with the officials of the Krebs Company.

We said, however, that we would be willing to discuss with him the basis on which we thought such an arrangement might be made. As a result of this discussion, a suggested form of agreement was drafted with the understanding that it was to be submitted to the Krebs officials. Mr. Blumenfeld then informed us that he expected to come to the United States later on, and that he would then talk

the matter over with Mr. Rupprecht, President of the Krebs Company.

Mr. Blumenfeld did come to the United States, and together with yourself, Mr. Ticknor and myself discussed the matter. No definite agreement was reached but it was left that for the time being, there would be an informal exchange of information. Mr. Blumenfeld said he would be back in the United States in December of '31 at which time the matter could be discussed in detail as both parties would then be in a better position to know what the contract, if any, should cover.

Mr. Blumenfeld did not return to the United States and no formal agreement has ever been made.

In our opinion, the formal arrangement between Mr. Blumenfeld and the Commercial Pigments was actually terminated at the time of the sale to Krebs, and Mr. Blumenfeld fully understood this. Any exchange of information between Krebs and Blumenfeld has been entirely informal and was made merely for the purpose of mutual benefit until a formal contract, if any, was entered into.

We cannot see that there is either moral or legal obligations to enter into an agreement with Blumenfeld.

He has had plenty of time and opportunity to approach Krebs on the subject but his failure to do so plainly indicates that he does not feel that the matter is of much importance to him.

Very truly yours,

M. F. CHASE

CONFIDENTIAL

T. S. GRASSELLI, PRESIDENT,
CLEVELAND.

You will recall that mention was made at our last Board Meeting of a proposed visit from Dr. Joseph Blumenfeld of Paris, and this will report that a conference was held with Dr. Blumenfeld on Monday of this week, attended by Mr. Chase and also Dr. Orrison, Superintendent of Dr. Blumenfeld's TiO_2 plant in France.

The important matter on Dr. Blumenfeld's mind was, of course, the question of a possible exchange of information agreement with him and his associates, and it was explained to him very clearly that because of a number of conditions, particularly those of prior commitments of the du Pont Company, it was impossible to consider any such exclusive arrangement as formerly in effect between himself and Commercial Pigments Company. It was also explained to him that his former agreements were not assignable to Krebs and had not been assumed by the new Krebs Corporation. He was, of course, disappointed, but finally

stated very clearly that if that was the case, there was nothing else to be done about it. We can, therefore, assume that this matter is closed.

We told Dr. Blumenfeld that we were, of course, desirous of maintaining a friendly relationship with him, and that if he at any time had any developments on titanium dioxide which he wanted to offer us, we would be very glad to consider them and negotiate for their acquisition if of interest.

Of next importance was a new process he has developed for the manufacture of Cerium Oxide and reclaiming some of the rare earths present as by-product, which, you will recall, was brought to our attention at the last Board Meeting by Mr. Chase. Mr. Chase and the writer told Dr. Blumenfeld that it would be given careful consideration, and toward that end it was arranged that he discuss the matter more fully with our Dr. Booge, so that the question could then be reviewed further and decide whether it was of interest to Krebs. If not, Mr. Chase suggested that they would give it some thought, and there might even be a possibility of suggesting some other connection for Dr. Blumenfeld if Commercial or Krebs were not interested.

On Wednesday morning Dr. Blumenfeld had opportunity to discuss the proposition with Dr. Booge, and sometime within the next week we will probably proceed further in discussing the matter with Mr. Chase.

The writer escorted Dr. Blumenfeld to Wilmington yesterday as our guest, and arranged meeting with Mr. Swint, to whom Dr. Blumenfeld made known some ideas he had on foreign matters in which he was interested, which Mr. Swint has taken under advisement and will probably inform Dr. Blumenfeld direct of what can be done, or

through London Office. None of the suggestions seem to indicate any possibility of du Pont participation, because of other commitments or connections, but Mr. Swint very kindly offered to think them over.

We further extended the courtesy of a visit to the Newark Plant to Dr. Blumenfeld's associate, Dr. Orrison, and Dr. Booge also entertained him for a day in visiting the Baltimore Plant.

30th August, 1933,

Monsieur C. H. Rupprecht
Krebs Pigment & Color Corporation
256 Vanderpool Street
Newark, New Jersey (U.S.A.)

Dear Mr. Rupprecht:—

We have your letter of the 16th current, and I have seen with great interest the two papers that you have sent.

I think you very sincerely. I regret much that you have interpreted my demand concerning the rotary kiln as a desire on my part by a roundabout way to obtain an exchange of information. I have always understood that an apparatus as the rotary kiln, which is not of your construction, had nothing specific and would almost be equivalent of a method of construction pure and simple of the method of the constructor.

In any case, I beg you once again not to put such an interpretation to my question.

I hope that you are well and I pray you think, dear Mr. Rupprecht, of the expression of my best sentiments.

(s) J. Blumenfeld.

D. P. Exhibit 15

CC—Foreign Relations Dept.—Wil.
T. R. Hanley, Legal " — "

Newark, New Jersey,
October 10, 1933.

Confidential
H. H. Ewing, Manager,
Du Pont London Office.

Under the old agreement which Commercial Pigments Corporation had with Dr. Blumenfeld and his foreign associates there was a fairly regular exchange of samples of finished product. As you know, we have not made any agreement whatsoever with Dr. Blumenfeld and his associates, on which, however, there continues to be correspondence, as you will note from letter written yesterday.

It comes to my attention that one group, namely, Montecatini in Italy, are continuing to send samples to us, and since there has never been any understanding or correspondence between us on this subject, we think it inadvisable to open up anything. There is no obligation on our part in any way, and we would just as soon have Montecatini discontinue sending these samples.

We feel, however, that the matter has to be handled tactfully, and we would suggest that when you or one of your staff next sees our Italian friends, in some casual way mention be made of the fact that Krebs has noticed these samples coming in from time to time and wondered why they were being sent, and that the suggestion would be to discontinue same. We can in no way exchange samples, and consequently would not want to approach it, even by intimating anything of this kind, but they could be made

to see that Krebs is not interested in receiving such samples and they might just as well be discontinued. It is important that all reference to agreements be left out of the conversation.

Therefore, I hope that when the opportunity presents itself you can get them to discontinue sending these samples, and will appreciate your cooperation toward that end.

D. P. Exhibit 16

PATENT POLICY

EXECUTIVE COMMITTEE ACTION
NOVEMBER 2, 1938

The following resolution was offered and unanimously adopted:—

WHEREAS, the growth of the chemical industry and the development by this Company of a diversified line of chemical products have given increasing importance in recent years to the relation of patents to its business; and

WHEREAS, it is deemed advisable to set forth, for convenient guidance, the principles of patent policy, which have become established in the course of the Company's experience in such matters;

THEREFORE, BE IT RESOLVED, that the following statement of the Company's practices be accepted as the Company's patent policy and serve as a guide to all departments (the term "Company" as used herein being understood to include subsidiaries, and the term "Heads of Departments" being understood to include officers of subsidiaries:—

A. FILING UNITED STATES APPLICATIONS

Experience has shown that ownership of inventions usually can not be safeguarded by attempting to maintain secrecy, and that public use in plant operations is not a practical means of preventing others from obtaining letters patent and thereby preventing the use by the Company of its own inventions. Adequate protection of the large expenditures of the Company in research and development work requires, therefore, the prompt filing of applications for

D. P. Exhibit 16

United States letters patent covering all patentable inventions which may possess commercial value. The following types of inventions are deemed to possess commercial value:

(1) Inventions which the Company is practicing or intends to practice in its own manufacturing operations;

(2) Auxiliary inventions covering modifications or alternatives which it may be found practical or desirable to introduce in the Company's manufacturing operations;

(3) Inventions covering uses of the products sold by the Company;

(4) Inventions which may be a source of income or other benefit through licenses to others.

B. LICENSES UNDER UNITED STATES PATENTS

1. *Grants.* The Company's patented inventions should be utilized wherever commercially practicable, either in the Company's own operations or by licenses to others, or by both methods. Since most inventions developed by the Company are of the first three types mentioned in Section A, ordinarily it is preferable to utilize them in the manufacture or use of the Company's own products, rather than to attempt to exploit them as a source of profit through licenses to others. In some instances, however, others may be interested in obtaining licenses under the Company's patents, and fair consideration should be given to such requests.

The advisability of granting licenses can only be determined in the light of the circumstances involved in each

case; but, as a general guide, such grants may be desirable in the following instances:

(a) Where the invention is not being or likely to be practiced by the Company itself, but can be used by others to serve a sound commercial need;

(b) Where the market in some areas can be served more economically by other concerns with existing manfacturing and distributing facilities;

(c) Where, if the invention is practiced by the Company itself, the revenue obtainable from such licenses will compensate adequately for the waiver of the Company's exclusive rights;

(d) Where such licenses will serve the purposes described in paragraph 3 of this section.

On the other hand, requests for licenses ordinarily should be denied under the following circumstances:

(a) Where the Company is developing and promoting an important new product or process, economic factors may justify the withholding, either temporarily or permanently, of licenses under patents relating thereto. This is apt to be the situation where the project requires a heavy investment and an introductory period of losses.

(b) The licensing of additional production may be unsound where the market already is adequately supplied by existing manufacturing and operating facilities, or where the Company contemplates such coverage with its own facilities.

(c) Licenses may be refused where the Company is not satisfied as to the financial or technical responsibility of the applicant.

(d) It may be impossible to grant licenses under a patent because of having already granted exclusive rights thereunder; but to avoid this situation licenses should be confined, wherever practicable, to non-exclusive grants.

Under the procedure set forth in Section C below all licenses to be granted by the Company are submitted to the Executive Committee. In order that this Committee may be familiar with negative as well as affirmative actions in respect to granting licenses under the Company's patents, the departments concerned shall report to the Executive Committee all cases where requests for licenses are refused.

2. *Conditions and Restrictions.* Any conditions or restrictions included in licenses granted by the Company shall be confined to matters clearly within the scope of the patent grant. The following types of provisions are deemed either to be outside such scope or to be otherwise contrary to the general policy of the Company:

(a) A considerable part of the Company's research and development work relates to the uses of its products. Ordinarily, it is impractical from a business standpoint to charge royalties for the use of such inventions by customers. As for the Company's only direct reward for such efforts, it might seem reasonable to grant licenses which are conditioned upon and limited to the use of its products with its patented inventions. Such conditions are regarded by the courts, however, as going beyond the scope of the patent grant. Accordingly, in such cases the Company's reward must be through goodwill engendered by these

contributions to the progress of the industry, and through the wider outlets thereby created for its products. No license shall be conditioned upon the use of the Company's products.

(b) Most patents in the chemical industry cover process rather than product claims. While the prevailing view is that it is permissible, in licenses under process patents, to fix the price at which the resulting product may be sold by the licensee, uncertainty as to the soundness of this view makes it preferable not to attempt such control.

(c) As a matter of law, a licensee is estopped from denying the validity of the patent under which he has accepted a license, so long as he retains the license. Frequently the licensee is required, as a condition of the license, to admit such validity throughout the term of the patent, notwithstanding any earlier termination of the license. The Company is opposed to requiring such admission beyond the continuance of the license.

It is legally permissible for a licensor, at least where the patent covers the product, to control the licensee's selling territory, output, method of marketing, and selling price. Nevertheless, price control should not be imposed unless the validity of the licensed patent has been established in litigation or in the opinion of the Legal Department is beyond reasonable doubt; and the reasons for including any such conditions should be explained to this Committee before approval of the contract, accompanied by an opinion of the Legal Department as to the validity of the patent.

D. P. Exhibit 16

3. *Cross-licenses.* The practice of exchanging licenses between holders of separate patents is desirable, particularly in the following situations:

(a) Where different parties hold conflicting patents or patent applications, cross-licensing may avoid long and expensive interference proceedings or litigation.

(b) Different parties may hold patents covering different steps in producing a finished product, such as inventions covering a basic material, a process of manufacture, a machine used in such manufacture, an improvement patent, and a compound produced from several basic materials. Efficient exploitation is obstructed by the divided ownership of these supplementary patents, and this obstruction may be removed by exchange of licenses.

Because cross-licensing is susceptible of abuse, care should be exercised to conform strictly to the rules previously stated governing the imposition of restrictions or conditions in license agreements generally.

C. Acquisition and Disposition of Rights

The procedure with reference to entering into agreements with other parties relative to the acquisition or disposition of rights under patent applications, patents and inventions, shall be governed by this Committee's resolution of March 3, 1937, which sets forth the following rules:

1. During the progress of negotiation of an agreement looking to the acquisition or disposition of rights of the

character above-mentioned, and prior to definite commitment of the Company thereunder, the Head of the Industrial Department conducting such negotiation should submit the proposed agreement to the Legal Department in order to make certain that the merits of the agreement are adequately coverd in an approvel legal manner, and, after approval as aforesaid by the Legal Department, should determine, with the assistance of the Legal Department—

(a) Whether the proposed agreement directly affects other departments or affiliates of the Company; and

(b) Whether any commitment of an indeterminate nature is involved. (Examples of such indeterminate commitments might be:—

The acknowledgment of the validity of patents.

Any restrictions of the scope of the Company's activities in the future.

The granting of licenses under specific du Pont-owned patents coupled with an obligation to license "any patents of which the Company may subsequently become possessed within the same field").

In either of these cases, "a" or "b", the head of the department conducting such negotiations shall, thorugh the Legal Department if he so desires, secure the vise of such other department as would probably be affected thereby, including the vise of the Chemical Department and Patent Board whenever it is apparent that the interest of more than one other department would be involved, and of the Engi-

D. P. Exhibit 16

neering Department with respect to all mechanical matters therein referred to, as well as the vise of the Foreign Relations Department if there is any probability that any of our foreign agreements would be affected.

2. The authority for the approval of expenditures for the acquisition of rights under agreements of this character shall be the same as authorized in "Rules Governing Method of Handling Appropriations" for Heads of Departments and Boards of Directors of 100% owned Subsidiaries, and amendments thereto. In arriving at the contemplated expenditure, there should be added to the initial cost any other expected expenditures such as expenditures for royalties, research, development, and the like.

3. If the agreement falls in any one or more of the following categories it should be presented by the Industrial Department to the Executive Committee for approval, and in the case of a Subsidiary Company the approval of its Board of Directors should precede such presentation to the Executive Committee:—

(1) The contemplated cost of the rights to be acquired is in excess of the approval authority of the individual or Board.

(2) In case a commitment of an indeterminate nature is involved.

(3) In case a protest is registered by some division of the Company.

(4) In every case of the disposition of rights.

4. It is further understood that the disposition of rights will require the authorization of the Finance Committee

only when the total amount involved is in excess of $300,000, but it will be the duty of the Executive Committee to inform the Finance Committee of all actions taken by the Executive Committee on matters of major importance in connection with the authorization of licenses to others under patents owned or controlled by the Company, and authorization of assignments or sales to others of patents so owned or controlled, such matters of major importance being defined as follows:

> "Where the granting of a license will produce an estimated annual royalty of $10,000 or more; where the assignment or sale of patents, patent applications or inventions is estimated to be worth $100,000 or more; or where, in the opinion of the Executive Committee, the effect of such license, assignment or sale is to importantly affect the Company's status patentwise in any broad field of the Company's present or prospective operations."

In submitting future reports the Heads of Departments should advise specifically as to whether the proposition which they are presenting is considered to be a matter of major importance and to what extent.

D. INFRINGEMENT

The following rules shall be observed as a means of avoiding, so far as possible, infringement of patents not owned by or licensed to the Company:

1. Every department should take care not to commit any infringement of a patent, and to this end should regularly obtain and keep on file copies of all United States

D. P. Exhibit 16

Patents granted in their respective art; and should examine such patents for infringement before undertaking any new industrial operation or change in existing practices.

2. Upon discovering a patent that might be infringed by an existing or contemplated operation, the case should be immediately submitted to the Patent Division for an infringement opinion and a preliminary opinion on validity.

3. Unless the Patent Division definitely decides that no infringement is being or would be incurred, the department should study and consider ways and means of altering the device, process or product so as to clearly avoid infringement.

4. If the department finds that it can not reasonably avoid infringement without abandoning the project, then the department may request a complete validity opinion on the patent or patent claims involved, and the Patent Division will render such opinion, in which, after reviewing the facts and the law, a statement will be made regarding the probable chances of defending any suit that might be brought. After receiving the opinion, the department should proceed as follows:

(a) If the patent is clearly invalid, the department sh ald secure the final approval of the Patent Board and the permission of the Executive Committee for infringement, before any infringement is committed.

(b) In all other cases, even though the valdity of the patent is of doubtful character, the department shall explore the possibilities of a settlement by

a license or otherwise, such exploration to include discussion with the owner unless there should be important objections to doing so from the legal, economic or business aspects. If a settlement is under the circumstances reasonably possible, it should be made. If not, then the department, if it wishes to proceed with infringement, should submit the case to the Patent Board in the usual manner, and shall then prepare a statement of the case for the Executive Committee accompanied by a copy of the Patent Board action, and secure the final permission of the Executive Committee for infringement or other mode of disposition of the case.

(c) It is recognized that most patent litigation involves complicated technological and legal aspects which often render the outcome uncertain even after attempted careful appraisal, but nevertheless the Company's judgment on validity will be based upon a fair appraisal of the probable outcome in each particular case.

(d) The department is requested, in connection with any statement made to the Patent Board or Executive Committee in accordance with these provisions, to include the recital of any previous dealings with the patent owner or his predecessors in title, so that that Company may be regularly and fully advised in each case of any special circumstances of legal or equitable nature that might have a bearing upon a successful defense of a patent suit.

D. P. Exhibit 16

The foregoing shall supersede the resolution on this subject adopted by this Committee on October 13, 1937.

E. PRICES

The general policy of the Company, as stated in the 1937 Annual Report to the Stockholders, is to endeavor to increase consumption of its patented and other new products by aiming at a low profit per unit on a large volume of sales rather than a high margin on a small volume.

The possession of patent protection covering a product, its method of manufacture, or its use, may be helpful in carrying out this policy, since it can absorb initial losses from low selling prices with greater assurance that the volume thereby created will flow to it. The ability to accomplish this purpose is of course largely dependent upon other factors which enter into the determination of selling prices, including the fact that every chemical product is competitive with natural or synthetic substitutes; but the industrial departments should give due weight to any protection that may be afforded by existing patents, insofar as it can be used as a factor in carrying out the general price policy stated above.

As a corollary, the industrial departments shall not permit the existence of patent protection to influence higher selling prices than can be economically justified on the basis of the other factors involved.

F. EMPLOYEES' RELATIONS

Research and the inventions resulting therefrom constitute one of the important phases of the Company's business. It employs hundreds of chemists and technicians to performs such work. To the results of these joint efforts it

makes substantial contributions: the expenditure of millions of dollars annually, at the risk of negative results; the maintenance of properly equipped laboratories; direction and supervision of the employee's line of research; the assistance of associates and of past experience; the cost of filing prosecuting and defending applications and patents; the cost and risk of exploiting the resulting inventions, involving the combined efforts of capital, engineering, manufacturing, market studies, advertising, selling, and general business experience. From the standpoint of the employee inventor, he is relieved of the risk attending such research and exploitation, receives a regular salary, and is given the opportunity of additional reward in the form of bonus for successful inventions as provided in the Company's Bonus Plan.

The product of such an employee's efforts is the property of the Company. To protect its ownership of this property, employees engaged in work of a technical nature dealing with research or manufacturing operations, particularly where their experience might lead to inventions or the development of secret processes, should be required to execute agreements in the form approved by the Legal Department, safeguarding the Company's rights.

G. Foreign Patents

1. It is the general policy of the Company to limit applications for foreign patents to those inventions which appear to be of considerable importance, and then to limit the number of countries in which applications are filed. Several considerations are deterrents to applying for foreign patents to a greater extent:

(a) The filing fees, annual renewal fees, and legal expense involved;

(b) The necessity of working the inventions in most countries to avoid revocation or compulsory licensing;

(c) The inability in some countries to obtain product patents;

(d) The difficulty of discovering and preventing infringement;

(e) The effect of unsettled or unknown political policies and conditions in some countries.

2. Where an invention comes within the scope of an agreement with a foreign associate, under which the parties are offered licenses under their respective inventions, the acceptance of a license by the other party relieves the Company from determining whether to apply for patents on the invention in the countries covered by license.

3. In other cases no attempt shall be made to obtain patents in foreign countries unless the industrial department concerned determines that such action is advisable because (a) the country has an industry which may be interested in a license to use the invention, or (b) the Company has or expects to have an export business in the country which will be protected by such a patent.

4. It is considered undesirable to enter into any broad patents and processes agreements with foreign concerns, other than those concerns with whom such agreements are already in effect, but there is no objection to making arrangements with foreign manufacturers as follows:

D. P. Exhibit 16

(a) Such arrangements shall provide (1) that each party expresses the intention of bringing to the attention of the other developments which they believe might be of interest; (2) that there is no obligation to offer any invention to the other or to refrain from offering it to third parties; (3) that no offer is to be made that is in conflict with other commitments; and (4) that each process offered under such arrangements is to be the subject of separate negotiations.

(b) Each such arrangement is to be reviewed with the Legal, Development and Foreign Relations departments and receive the approval of the Foreign Relations and Executive committees before being concluded.

(c) Such arrangements are to be covered by exchange of letters which make it clear that the arrangement is merely an expression of intention to offer processes on a voluntary basis and that no other significance is to be read into it.

(d) The Foreign Relations Department is to be consulted in advance of negotiations relation to the sale of specific processes under such arrangements to enable that department to determine whether the interests of any other department or general Company policy are affected. (In addition, the Executive or Finance Committee must give final authorization in accordance with regular Company procedure.)

(e) In the event negotiations for the sale of a specific process are successfully concluded, a formal license or other agreement is to be executed.

D. P. Exhibit 16

H. RESPONSIBILITY FOR PATENT APPLICATIONS

It shall be the responsibility of the Heads of Departments to arrange for the filing of applications for patents on inventions made under their jurisdiction, wherever such action is advisable, and to cause suitable technical and administrative efforts to be made to secure satisfactory patents.

It shall be the responsibility of the Legal Department that the filing and prosecution of patent applications be carried out properly and efficiently.

It shall be the responsibility of the Patent Board to review all allowed United States patent applications, and the final fee for issuance of patent shall not be paid without its authorization. Also, the departments shall obtain the approval of the Patent Board before filing applications for foreign patents.

P. Exhibit 17

COPY

MR. C. H. RUPPRECHT, NEWARK. December 22, 1932.

I have read Mr. G. W. Thompson's letter, and I am quite well aware of the point he makes that there is not recorded in the decisions a case where it was squarely held on a direct issue between the parties, that an admitted and proved prior secret use by the defendant, prior to plaintiff's earliest patent date, was insufficient to protect defendant. The contrary is also true—that there is no recorded case where the Court held that it was sufficient to protect defendant. In every case in which this possible direct issue arose the case was decided on some other ground. The closest decisions are the two I gave you, and I think they are ample authority for getting a ruling that a secret use is no defense even in the hands of the user.

I believe I should point out that which you naturally would realize anyhow from your previous experience in patent matters, namely, that in many of the decided cases the prior use that was set up by the defendant was not proved or admitted to be secret. It eventuated that the said use was held to be public. That is how many of the cases got off the track and became non-pertinent to our present consideration.

In other cases the patents were declared invalid for lack of invention or some other defense was upheld which made it unnecessary for the Court to consider the present issue.

In many of the other cases the Court held that the facts did not show that a prior use existed and therefore threw the defense out on that ground.

D. P. Exhibit-17

Every patent case has a number of defenses and it has so happened that no court, to my knowledge, has so far had the aforesaid issue squarely before it and passed upon it directly. The circumstances in Kendall v. Winsor and Macbeth-Glass case were very parallel to the case we are here considering, but the issues were slightly different in that the plaintiff in the Macbeth-Glass case was attempting to enforce a patent that the Court said was void because of previous reliance on the plaintiff's trade secrets. In Kendall v. Winsor the defendant was not attempting to put up a secret use. Nevertheless, the reasoning of the Courts in those two cases are in my opinion sufficient to sustain the position we are advancing against National Lead Company. I have often discussed this matter with other patent attorneys and they coincide with the views herein expressed.

Re: Marking of Ti-Bar and Ti-Cal Products

I believe that on Ti-Bar and Ti-Cal we should show the same patent numbers as on straight TiO_2.

I reviewed our report of Oct. 26, 1932, and on the basis of our discussion therein I suggest that the N.L.Co. patents be shown as follows:

Licensed under U. S. patents: 1,288,863, 1,333,819,
Fladmark Jebsen
1,333,849, 1,338,473 and 1,348,129.
Olsen & Forland Wrigley & Spence Goldschmidt

This list differs from the patents mentioned under No. 4 (page 3 of the above) report: It includes the Olsen and Forland reduction and Goldschmidt calcination patents for the reason that while we might not strictly infringe the specific claims which formed the basis of our discussion, we actually use processes which would be covered by other claims in these patents.

I also omitted the Farup and Washburn phosphate patents as they are so remote from our operations that it would

seem doubtful that any one would consider actual infringement.

I suppose that this marking will be done in agreement with N.L.

J. F. DALEY—OFFICE:

PATENT NOS. ON PACKAGES OF TiO_2 AND EXTENDED PIGMENTS

As per conversation of yesterday, it is understood that on preparation of your next labels for barrels or bags of TiO_2 you will extend the list of patents to show our product as produced under the following patents, which include not only those we have heretofore shown, but some additions, and patents under which we are now licensed.

U.S.P. 1,288,863
1,333,819
1,333,849
1,338,473
1,348,129
1,357,690
1,412,027
1,504,669
1,633,621
1,707,248
1,845,633
1,892,693
Re-Issue 18,790
Re-Issue 18,854

These process patents should simply be listed by number, in numerical rotation. The last two patents mentioned as

(41B)

D. P. Exhibit 19

Re-Issues, should show the words "Re-Issue". You understand that they take the place of the original patents on which they were based.

Furthermore, packages should show the following patents in a separate column under the heading: "Uses of Product Covered by U. S. Patents", and listed numerically as herewith, with the word covering the product in which used, as shown:

U.S.P. 1,205,267—Paint
1,205,268—Paint
1,205,269—Paint
1,236,367—Linoleum
1,283,455—Printing Ink
1,286,916—Lake Color
1,317,854—Pliable Filled Fabric
1,365,882—Nitrocellulose Plastics
1,322,518—Rubber
1,326,319—Rubber
1,847,539—Oil-Nitrocellulose Paint

The same patent numbers already listed above should appear on the Ti-Bar and Ti-Cal packages, but in addition, the Ti-Cal packages should carry:

1,906,730.

The Ti-Bar packages will not carry any extra patent number.

If there are any further questions, please speak up.

Blind copies to:
Mr. C. H. Biesterfeld — Wil.
Dr. G. Lutz — Cleve.

June 29, 1934.

CONFIDENTIAL

Dear Dr. Thompson:—

In accordance with the terms of the licensing agreement of January 1, 1933 between your subsidiary, The Titanium Pigment Company, Inc., and Krebs Pigment & Color Corporation, it is understood that Krebs will offer your German and British associates opportunity to negotiate non-exclusive rights under any patents relating to the "Licensed Field" as covered by the agreement, and issued to us in countries of Continental Europe or Great Britain.

Enclosed are two copies of a patent application filed in the United States Patent Office in Washington under date of March 2, 1934 in the name of Robert M. McKinney and assigned to Krebs Pigment & Color Corporation, covering an invention under the subject of "Colored Titanium Oxide Pigments and Paints". If agreeable to you we would suggest that you forward the enclosed copies of this application to your German and British associates and ascertain whether or not they are interested in negotiating licenses on any corresponding patents which we may take out in Europe or Great Britain.

If they are interested and we arrive at mutually satisfactory terms and conditions, it may be advisable to have

your associates undertake prosecution of the applications, since being on the spot they can probably do so more advantageously. We, of course, will in any case require that applications in foreign countries shall not be filed until the very latest Convention date.

I presume the above is entirely in accord with your understanding, and if not please communicate with me. otherwise would appreciate your forwarding these applications so that we can learn at an early date whether or not your associates are interested.

Very truly yours,

C. H. RUPPRECHT
PRESIDENT.

CHR:s

Encls.

D. P. Exhibit 21

Newark, New Jersey,
October 8, 1934.

CONFIDENTIAL
DRG Lutz, Manager
Patent Dept., Cleveland

You will recall that in our licensing agreement on titanium operations with Titanium Pigment Company we have agreed to offer their foreign associates first refusal on any patents we make take out in Europe.

Based on our experience with foreign patents, we would not be very much disposed to take out patents unless they were unusual. However, a patent may mean a good deal more to a foreign operating company than it would to us. By that I mean that a patent we might not consider registering in any foreign country might be very worthwhile to an actual manufacturer on the spot. Under the circumstances we might decide to act as we have in connection with the McKinney patent on Tinted TiO2, namely, submit them copies of our U.S. application and ask whether they are interested in negotiating rights.

I would, therefore, like to set up with you some basis by which all applications we file in this country can be reviewed from the standpoint of whether or not we would consider filing foreign applications, and if not, arrange to submit such applications to these foreign associates of T.P.Company to determine whether they are interested. We may realize a little money in this way, although it is difficult to tie a big amount of royalty onto a lot of process patents on just one product. However, we may at the same time be able to establish some goodwill to enable us to obtain

licenses on fairly reasonably terms on any U.S. patents their foreign associates may file.

Consequently, I think as soon as we have filed any U.S. Titanium application we should quickly decide whether it justifies foreign application. Then we must determine whether we will offer it to the foreign associates of T.P. Company, after taking out the application ourselves, or, in case we do not consider important enough for ourselves. to offer it to them on the basis of their applying, provided they are interested and we can come to terms. The McKinney Tinted TiO2 patent has been put up to them on the latter basis, and I would appreciate knowing how you feel about our filing foreign applications in the event they should not be interested.

This should be kept actively before us, so that we have time to approach these European people, and not be in the position of rushing, such as happened in connection with the Duol-Rosin Substitute patents, where we were nearing expiration of convention date for filing.

I do not propose to keep a follow-up in this office on patent applications, and I think it is a matter that should be worked out between you and Booge, in order to bring these to my attention along some lines as above, or in any other way that you suggest.

C. H. RUPPRECHT.

D. P. Exhibit 22

Blind copy to Dr. Sparre

July 8, 1937

To: EXECUTIVE COMMITTEE

FROM: KREBS PIGMENTS DEPARTMENT

PROPOSED LICENSE TO TITAN CO., INC. UNDER FOREIGN PATENTS: GREAT BRITAIN 464,836; ITALY 336,407; FRANCE 796,587; GERMANY APPLICATION SERIAL NO. K.139.771 IV b/22 f; AND CZECHOSLOVAKIA APPLICATION SERIAL NO. P6251/35

Herewith is submitted proposed license agreement to Titan Co., Inc. under foreign patents and applications above mentioned, covering blended titanium dioxide pigments.

These patents and applications cover blended pigments of the type of "Ti-Bar" and "Ti-Cal", which are covered by patents in the United States, and were filed in these five foreign countries as of possible future value.

Titan Co., Inc. is owned 87% by National Lead Company, and serves as a clearing house and sales agent on patents and sales matters for National Lead Company and its foreign manufacturing associates in the titanium dioxide field. The latter includes Titangesellschaft m.b.H. of Leverkusen, Germany, which is owned 50% by National Lead Company and 50% by I.G. and the British Titan Products Company of England, in which National Lead Company has a 49% interest and I.C.I. 17%.

Under this agreement Titan Co., Inc. is granted a royalty-free license, which is exclusive, except for du Pont, I.C.I., and any Company in which du Pont holds a 50% interest.

D. P. Exhibit 22

Titan Co., Inc. is permitted to sub-license its associates, royalty free. Other sub-licenses may be granted subject to du Pont approval, and the payment of 50% of any royalties received by Titan Co., Inc.

This agreement has been approved by the Legal Department.

Since the patents covered by this agreement offer little possibility of return, this agreement will permit the Company to maintain these patents without expense, and it is, therefore, recommended that the Management be authorized to execute the license as herewith submitted.

FROM: KREBS PIGMENTS DEPARTMENT

Proposed License with Titan Company, Inc.
Covering Specific Titanium Pigment Patents

Herewith is submitted proposed license agreement with Titan Company, Inc., covering exchange of rights under a number of their United States Letters Patent and Applications for rights under a number of du Pont foreign applications in several countries, as listed hereafter, all rights being restricted to the titanium pigment field.

Titan Company, Inc. is owned 87% by National Lead Company, and handles all patent matters in foreign countries for National Lead Company and its foreign associates, also acting as Sales Agent for the latter. Foreign associates involved in this license are Titangesellschaft m.b.H. of Leverkusen, Germany, owned 50% by National Lead Company and 50% by I.G.; British Titan Products Company, Billingham, England, in which National Lead Company has a 49% interest and I.C.I. 17%; Societe Industrielle du Titane, Paris, France, in which Titan Company, Inc. has a 57% interest; and Titan Kogyo Kabushiki Kaisha, Kobe, Japan, in which Titangesellschaft of Germany is a minority stockholder.

The du Pont foreign patent applications involved correspond to the following twelve United States applications,

the same application being filed in more than one country in several instances:

In France:

Serial 17,379, Filed April 20, 1935—"Process for making Calcium Sulphate";

Serial 145,051, Filed May 27, 1937—"Process for Producing Calcium Sulphate";

Serial 145,044, Filed May 27, 1937—"Process for Producing Blended Pigments";

Serial 155,231, Filed July 23, 1937—"Titanium and Zirconium Hydrate Treated TiO_2 Pigments";

Serial 146,541, Filed June 5, 1937—"Treatment of Titanium Pigments";

In Great Britain:

Serial 145,051, Filed May 27, 1937—"Process for Producing Calcium Sulphate";

Serial 145,044, Filed May 27, 1937—"Process for Producing Blended Pigments".

In Holland:

Serial 138,584, Filed April 23, 1937—"Titanium Oxide Pigments and Process for Producing Same";

In Germany and Japan:

Serial 138,584, Filed April 23, 1937—"Titanium Oxide Pigments and Process for Producing Same";

D. P. Exhibit 24

Serial 147,485, Filed June 10, 1937—"Titanium Pigments Containing Water-Soluble Salts of Organic Acids";

Serial 26,790, Filed June 15, 1933—"Preparation of Compounds of Titanium" (now issued U. S. Patent 2,127,247);

Serial 138,583, Filed April 23, 1937—"Titanium Pigments and Process for Producing Same";

Serial 139,497, Filed April 28, 1937—"Titanium Pigments and Process for Producing Same";

Serial 145,930, Filed June 2, 1937—"Water Dispersing Titanium Pigments";

Serial 144,759, Filed May 25, 1937—"Water-Insensitive Hydrophillic Pigments".

Under this agreement, Titan Company, Inc. is granted a non-assignable, royalty-free license, in each case restricted to countries as specified above. License is exclusive except for du Pont or any company controlled by du Pont, and for I. C. I. in Great Britain. Titan Company, Inc. is permitted to sub-license its associates, as specifically defined in the agreement, on a royalty-free basis. Other sub-licenses may be granted subject to du Pont approval and the payment of 50% of any royalties obtained. Titan Company, Inc. assumes all costs incidental to the filing and prosecution of our applications under this license; pays all necessary maintenance fees during their life; and cannot permit abandonment without our approval.

D. P. Exhibit 24

Du Pont obtains from Titan Company, Inc. a non-exclusive, royalty-free, non-assignable license under the following twelve United States Letters Patent and/or Applications:

Serial 33,383, Filed July 26, 1935—"Titanium Dioxide Pigments";

Serial 136,502, Filed April 12, 1937—"Preparation of Titanium Oxygen Compounds";

Patent No. 2,118,916, Dated May 31, 1938—"Titanium—Containing Pigments";

Serial 119,625, Filed January 8, 1937—"Titanium Dioxide Pigments";

Serial 137,494, Filed April 17, 1937—"White Pigments";

Serial 137,044, Filed April 15, 1937—"Titanium Pigments" (now Patent No. 2,138,384);

Patent No. 2,111,460, Dated March 15, 1938—"Alkali Metal Titanates";

Serial 11,164, Filed March 14, 1935—"White Pigments";

Serial 142,918, Filed May 15, 1937—"White Pigments";

Serial 142,928, Filed May 15, 1937—"White Pigments";

Serial 88,851, Filed July 3, 1936—"Pigment Suspensions and Methods of Preparing Same";

Serial 155,040, Filed July 22, 1937—"Manufacture of Titanium Pigments".

D. P. Exhibit 24

Du Pont rights under the patents listed are confined to the United States of America, its territories and dependencies. Du Pont is not obliged to pay any expenses incidental to preparation, filing and prosecution of United States patents covered by this license.

License specifically provides that where patent extends or applies outside titanium, no rights are granted except insofar as they pertain to the manufacture of titanium compounds which can be used as pigments. Each admits validity of the patents involved, during period of license.

This agreement has been formally approved by the Legal Department.

This exchange of patent rights is desirable, inasmuch as it permits us freedom of action in adopting process refinements covered by several Titan Company, Inc. United States patents and applications, which are of varying importance, and we retain all rights of manufacture and sales for the Company under our foreign patents, without any filing or maintenance costs.

It is, therefore, recommended that the Management be authorized to execute license as herewith submitted.

Proposed License Agreement with Titan Company, Inc. Covering Specific Titanium Pigment Patents:

The following resolution was offered and unanimously adopted:—

RESOLVED, that C. H. Rupprecht, General Manager, or Z. Phelps, Assistant General Manager, Krebs Pigments Department, or the President or any Vice-President of this Company, together with the Secretary or an Assistant Secretary, be and they are hereby authorized to execute an agreement with Titan Company, Inc., in form substantially as per copy attached to letter to this Committee from Mr. Rupprecht, dated April 27, 1939, whereby duPont receives from Titan a royalty-free, non-exclusive, non-assignable license under each of twelve (12) U. S. Letters Patent and/or Applications and Titan receives from duPont royalty-free, non-assignable licenses, with the right to sub-license its associates, under patent applications filed in France, Great Britain, Holland, Germany, and Japan corresponding to twelve (12) U. S. applications filed by

D. P. Exhibit 25

duPont, all rights being restricted to the titanium pigment field.

This is to certify that the foregoing is a true and correct copy of resolution unanimously adopted by the Executive Committee of E. I. duPont deNemours & Company at meeting held on May 3, 1939, at Wilmington, Delaware.

D. P. Exhibit 26

April 15, 1940

To: EXECUTIVE COMMITTEE

FROM: KREBS PIGMENTS DEPARTMENT

PROPOSED LICENSE WITH TITAN COMPANY, INC. COVERING SPECIFIC TITANIUM PIGMENT PATENTS

Herewith is submitted proposed license agreement with Titan Company, Inc., covering exchange of rights under a number of their United States Letters Patent and Applications, for rights under a number of du Pont foreign applications in several countries, as listed hereafter, all rights being restricted to the titanium pigment field.

Titan Company, Inc., a Delaware Corporation, is owned 87% by National Lead Company, and handles all patent matters in foreign countries for National Lead Company and its foreign associates, also acting as Sales Agent for the latter. Foreign associates involved in this license are Titangesellschaft m.b.H. of Leverkusen, Germany, owned 50% by National Lead Company and 50% by I.G.; British Titan Products Company, Billingham, England, in which National Lead Company has a 49% interest and I.C.I. 17%; Societe Industrielle du Titane, Paris, France, in which Titan Company, Inc. has a 57% interest; and Titan Kogyo Kabushiki Kaisha, Kobe, Japan, in which Titangesellschaft of Germany is a minority stockholder.

The du Pont foreign applications involved correspond to the following thirteen United States applications, the same applications being filed in more than one country in a number of instances:

D. P. Exhibit 26

In France:

Serial No. 183,127, Filed January 3, 1938—"Procedure for Treating Residual Sulfuric Acid Liquors";

Serial No. 177,739, Filed December 2, 1937—"Process for Making Anhydrite";

Serial No. 172,378, Filed November 2, 1937—"Process for Making Titanium Pigments";

Serial No. 183,322, Filed January 4, 1938—"Stabilization of Soluble Crystalline Materials";

Serial No. 183,311, Filed January 4, 1938—"Dispersible Pigments";

Serial No. 181,990, Filed December 27, 1937—"Titanium Oxide Pigments and Process of Producing Same";

Serial No. 192,314, Filed February 24, 1938—"Pigment Milling Process";

Serial No. 191,967, Filed February 23, 1938—"Pigment Treating Process and Agents Therefor";

In Great Britain, Northern Ireland and the Isle of Man:

Serial No. 166,943, Filed October 2, 1937—"Process for Production of Improved Titanium Pigments";

Serial No. 172,378, Filed November 2, 1937—"Process for Making Titanium Pigments";

D. P. Exhibit 26

Serial No. 177,739, Filed December 2, 1937—"Process for Making Anhydrite";

Serial No. 191,967, Filed February 23, 1938—"Pigment Treating Process and Agents Therefor";

In Holland:

Serial No. 177,739, Filed December 2, 1937—"Process for Making Anhydrite";

Serial No. 172,378, Filed November 2, 1937—"Process for Making Titanium Pigments";

In Germany:

Serial No. 172,378, Filed November 2, 1937—"Process for Making Titanium Pigments";

Serial No. 183,322, Filed January 4, 1938—"Stabilization of Soluble Crystalline Materials";

Serial No. 183,311, Filed January 4, 1938—"Dispersible Pigments";

Serial No. 211,797, Filed June 4, 1938—"Pigment Materials and Process of Producing";

Serial No. 181,990, Filed December 27, 1937—"Titanium Oxide Pigments and Process of Producing Same";

Serial No. 191,967, Filed February 23, 1938—"Pigment Treating Process and Agents Therefor";

D. P. Exhibit 26

In Japan:

Serial No. 177,739, Filed December 2, 1937—"Process for Making Anhydrite";

Serial No. 166,943, Filed October 2, 1937—"Process for Production of Improved Titanium Pigments";

Serial No. 166,564, Filed September 30, 1937—"Calcium Sulfate Pigments";

Serial No. 172,378, Filed November 2, 1937—"Process for Making Titanium Pigments";

Serial No. 183,311, Filed January 4, 1938—"Dispersible Pigments";

Serial No. 211,797, Filed June 4, 1938—"Pigment Materials and Process of Producing";

Serial No. 181,990, Filed December 27, 1937—"Titanium Oxide Pigments and Process of Producing Same";

Serial No. 191,967, Filed February 23, 1938—"Pigment Treating Process and Agents Therefor";

Serial No. 198,899, Filed March 30, 1938—"Production of Titanium Pigments";

Serial No. 200,748, Filed April 7, 1938—"Preparation of Titanium Concentrates";

In Italy and Belgium:

Serial No. 177,739, Filed December 2, 1937—"Process for Making Anhydrite."

Under this agreement, Titan Company, Inc. is granted a non-assignable, royalty-free license, in each case restricted

to countries as specified above. License is exclusive except for du Pont or any Company controlled by du Pont, and for I. C. I. in Great Britain. Titan Company, Inc. is permitted to sub-license its associates, as specifically defined in the agreement, on a royalty-free basis. Other sub-licenses may be granted subject to du Pont approval and the payment of 50% of any royalties obtained. Titan Company, Inc. assumes all costs incidental to the filing and prosecution of our applications under this license; pays all necessary maintenance fees during their life; and cannot permit abandonment without our approval.

Du Pont obtains from Titan Company, Inc. a non-exclusive, royalty-free, non-assignable license under the following seven United States Letters Patent and/or Applications:

Serial No. 204,838, Filed April 28, 1938—"Rutile Seeding Process";

Serial No. 238,358, Filed November 2, 1938—"Rutile Seeding Process";

Serial No. 228,326, Filed September 3, 1938—"Methods of Dispersing Titanium Dioxide Pigments";

Serial No. 247,843, Filed December 27, 1938—"Chromium Naphthenate Treatment of TiO_2";

Patent No. 1,539,996, Dated June 2, 1925—"Process of Recovering Titanic Oxide from Titanium Nitrogen Compounds";

Patent No. 1,919,425, Dated July 25, 1933—"Process for Dissolving Titaniferous Materials in Acids";

D. P. Exhibit 26

Patent No. 2,055,221, Dated Septemb.. 22, 1936—"Process of Producing Titanium Pigments."

Du Pont rights under the patents listed are confined to the United States of America, its territories and dependencies. Du Pont is not obliged to pay any expenses incidental to preparation, filing and prosecution of United States patents covered by this license.

License specifically provides that where patent extends or applies outside titanium, no rights are granted except insofar as they pertain to the manufacture of titanium compounds which can be used as pigments. Each admits validity of the patents involved, during period of license..

This exchange of patent rights is desirable, inasmuch as it permits us freedom of action in adopting process refinements covered by several Titan Company, Inc. United States patents and applications, which are of varying importance, and we retain all rights of manufacture and sales for the Company under our foreign patents, without any filing or maintence costs. Of particular value to du Pont are rights under Titan Company, Inc.'s two rutile seeding process applications, which may be of great importance in connection with our rutile study and placing such type pigment on the market sometime in the future.

This agreement has been prepared and approved by the Legal Department, and the required Operating and Chemical Department approvals have been obtained.

It is, therefore, recommended that the Management be authorized to execute license as herewith presented.

Assistant Secretary
E. I. du Pont deNemours & Company
[SEAL]

D. P. Exhibit 28

June 12, 1941

To: COMMITTEE ON PATENTS

FROM: KREBS PIGMENTS DEPARTMENT

PROPOSED LICENSE AGREEMENT WITH TITAN COMPANY, INC. COVERING SPECIFIC TITANIUM PIGMENT PATENTS

Herewith is submitted proposed license agreement with Titan Company, Inc. covering exchange of rights under a number of their United States Letters Patent and Applications, for rights under a number of du Pont foreign applications in several countries, as listed hereafter, all rights being restricted to the titanium pigment field.

Titan Company, Inc., a Delaware corporation, is owned 87% by National Lead Company, and handles all patent matters in foreign countries for National Lead Company and its foreign associates, also acting as sales agent for the latter. Foreign associates of National Lead Company involved in this agreement are Titangesellschaft m.b.H. of Leverkusen, Germany, owned 50% by National Lead Company and 50% by I. G.; British Titan Products Company, Billingham, England, in which National Lead Company has a 49% interest, I.C.I. 17%, with the remaining 17% owned by several other British companies; Societe Industrielle du Titane, Paris, France, in which Titan Company, Inc. has a 50% interest; and Titan Kogyo Kabushiki Kaisha, Tokyo, Japan, in which Titangesellschaft of Germany is a minority stockholder.

Negotiations leading to this proposed agreement were begun early in 1939. The du Pont U.S. patent applications

D. P. Exhibit 28

corresponding to their equivalent foreign applications involved, were all filed in the United States Patent Office between June 15 and October 7, 1938, and these foreign applications were filed in the various countries between June 16 and September 19, 1939. Some of the applications have since been issued as patents in the United States and foreign countries.

Except for some minor changes, the terms of the proposed agreement were practically agreed upon in the fall of 1939 and first draft submitted to the Legal Department on November 27, 1939, approval of which was obtained January 23, 1940. Subsequently Titan Company, Inc. submitted the proposed agreement to their foreign associates for approval, but the documents were lost during the German occupation of Paris. The Vice President of Titan Company, Inc., whose headquarters were in Paris, and who has handled all negotiations, has now been in the United States for some months and has advised that the proposed agreement is approved and he is prepared to execute.

The du Pont foreign applications and/or patents involved correspond to the following seven United States applications and patents, the same applications having been filed in more than one country in a number of instances:

In France:

Serial No. 215,218, Filed June 22, 1938—"Titanium Pigment Production"

Serial No. 213,835, Filed June 15, 1938—"Process of Preparing Alkaline Earth Metal Titanates"

Serial No. 219,601, Filed July 16, 1938—"Titanium Oxide Suspensions"

D. P. Exhibit 28

Serial No. 288,926, Filed September 8, 1938—"Improved Titanium Oxide Pigments and Process of Making Same"

In United Kingdom of Great Britain, Northern Ireland and the Isle of Man:

Serial No. 215,218, Filed June 22, 1938—"Titanium Pigment Production"

Serial No. 213,835, Filed June 15, 1938—"Process of Preparing Alkaline Earth Metal Titanates"

Serial No. 228,926, Filed September 8, 1938—"Improved Titanium Oxide Pigments and Process of Making Same"

In Germany:

Serial No. 225,716, Filed August 19, 1938—"Glue Treatment of Calcium Sulphate"

Serial No. 215,218, Filed June 22, 1938—"Titanium Pigment Production"

Serial No. 219,601, Filed July 16, 1938—"Titanium Oxide Suspensions"

In Italy:

Serial No. 215,218, Filed June 22, 1938—"Titanium Pigment Production"

In Holland:

Serial No. 215,218, Filed June 22, 1938—"Titanium Pigment Production"

D. P. Exhibit 28

Serial No. 228,926, Filed September 8, 1938—"Improved Titanium Oxide Pigments and Process of Making Same"

In Belgium:

Serial No. 215,218, Filed June 22, 1938—"Titanium Pigment Production"

In Japan:

Serial No. 219,601, Filed July 16, 1938—"Titanium Oxide Suspensions"

Serial No. 228,403, Filed September 3, 1938—"Oxidation Treatment of Tinted Titanium Oxide"

Serial No. 233,749, Filed October 7, 1938—"Process for Production of Titanium Solutions"

Under this agreement, Titan Company, Inc. is granted a non-assignable, royalty-free license, in each case restricted to countries as specified above. License is exclusive except for du Pont or any company controlled by du Pont, and for I.C.I. in Great Britain. Titan Company, Inc. is permitted to sub-license its associates, as specifically defined in the agreement, on a royalty-free basis. Other sublicenses may be granted subject to du Pont approval and the payment of 50% of any royalties obtained. Titan Company, Inc. assumes all costs incidental to the filing and prosecution of our foreign applications under this license; pays all necessary maintenance fees during their life; and cannot permit abandonment without our approval.

Of the seven applications or patents under which Titan Company, Inc. will be licensed, only one is considered to be important, and one of moderate importance, i.e.:

D. P. Exhibit 28

Application Serial No. 215,218 (now U.S.Patent No. 2,218,655), covers calcination of titanium with small amount of zinc oxide to produce low-chalking grade suitable for tinted finishes, and sold by du Pont as "Ti-Pure" O. This case was declared in interference with Titan Company, Inc., but du Pont was able to prove priority. It is considered relatively important, representing 1.4% of our total TiO_2 sales in 1940 and 1.2% over the first four months of 1941.

Application Serial No. 233,749, covers process for reuse of sulphide containing muds in dissolving titaniferous ores. Moderately important, as it offers possibility of some savings, but we have not yet been able to justify adoption in our operations.

Du Pont obtains from Titan Company, Inc. a non-exclusive, royalty-free, non-assignable license under the following four United States Letters Patent and/or Applications:

Serial No. 277,870, Filed June 7, 1939—"Manufacture of Titanium Dioxide Pigments"

Serial No. 283,986, Filed July 12, 1939—"Titanium Dioxide Pigment and Printing Inks Containing Same"

Serial No. 300,004, Filed October 18, 1939—"Methods of Making Improved Titanium Dioxide Pigments"

Patent No. 1,852,510, Dated April 5, 1932—"Process of Treating Titaniferous Materials with Acids"

D. P. Exhibit 28

Two of the above inventions under which du Pont will be licensed are of extreme importance, i.e.:

Serial No. 283,986 (now U.S.Patent No. 2,224,987), covers combination of antimony-aluminum treatment of TiO_2 for low-chalking pigment satisfactory for white finishes. Of our 1940 sales 14.2% came within the scope of this patent, and for the first four months of this year 20.8% of sales. There is also indication that use of domestic or ore type ilmenite may require this treatment for all production.

Serial No. 300,004, covers precipitating aluminum oxide on TiO_2 in atmosphere of ammonia by a specific method which we have adopted over our earlier procedure because of much improved quality resulting. Of our 1940 sales 12.2% came within claims of this application and 14.4% of our sales over the first four months of this year.

Du Pont rights under the patents listed are confined to the United States of America, its territories and dependencies. Du Pont is not obliged to pay any expenses incidental to preparation, filing and prosecution of United States patents covered by this license.

License specifically provides that where patent extends or applies outside titanium, no rights are granted except insofar as they pertain to the manufacture of titanium compounds which can be used as pigments. Each admits validity of the patents involved, during period of license.

This exchange of patent rights is highly desirable and necessary for du Pont, inasmuch as two of the inventions under which we will be licensed are of great importance, since about 35% of our current TiO_2 sales represent grades

produced within the claims of these two cases as described in a previous paragraph. The remaining applications under which du Pont will be licensed are of lesser importance, but permit us freedom of action in adopting process refinements which they cover and may prove of real value. Furthermore, the du Pont foreign applications and patents under which Titan Company, Inc. will be licensed are of relatively minor importance, and we retain all rights of manufacture and sale for du Pont under our foreign patents without any filing or maintenance costs.

Insofar as any future commitments on our part under the agreement are concerned, the provision of the agreement that Governmental objection or prohibition shall be a valid plea for either party to decline to disclose or grant rights on any involved invention, patent or application governs. In order to fully discharge our obligations with respect to Governmental approvals, we propose to forward to Titan, Inc. the accompanying transmittal letter directing its attention to the existence of certain Governmental regulations which must be fully complied with.

This agreement has been prepared and approved by the Legal Department, and the required Operating, Chemical, and Foreign Relations Department approvals have been obtained.

It is, therefore, recommended that the Management be authorized to execute license as herewith presented.

New York City.

Dear Mr. Rupprecht:

I have your letter o .the 9th and thank you very much for your courtesy in sending me a list of the Titanium Dioxide patents owned by the Krebs Pigment & Color Corporation. I shall be very glad to take this patent matter under advisement and obtain copies of the patents you have listed and compare these patents with those controlled by our company and its affiliates.

I can assure you we have no desire to infringe on any of the patents owned by your Company and when I have had a digest made of the situation I will be glad indeed to have our Patent and Technical staff discuss this with your staff in Cleveland.

Thanking you for your courtesy, I am

Yours truly,

(s) ADRIAN D. JOYCE
President.

PATENT SITUATION—AMERICAN ZIRCONIUM CORP.—
TITANIUM DIOXIDE

For your information, below is an extract from the Minutes of the Board of Directors Meeting of Krebs Pigment and Color Corporation held on March 19, 1934, together with Resolution with respect to procedure in the case of possible or probable infringement of our Titanium Dioxide patents by American Zirconium Corporation:

"The President advised orally that he had received information that the American Zirconium Corporation, which, as previously advised, had obtained all patents covering Titanium Dioxide manufacturing processes held by Metal & Thermit Co., is about to construct a plant and engage in the production of Titanium Dioxide under a process or processes which may infringe the patents of this Corporation, and suggested to the Board that steps should be taken to prepare protection of our patent position.

"After discussion, it was moved and unanimously carried that the President be and he is hereby authorized and directed to consult with the duPont Legal Department and, if deemed advisable by him, such outside patent counsel as he may select, and in the name of

this Corporation take all necessary action as in his judgment may be considered necessary or desirable to protect the interests of this Corporation against infringements of the patents of this Corporation relating to the production of Titanium Dioxide.

"IT WAS FURTHER RESOLVED, that the President be and he is hereby instructed to prepare an estimate of the cost involved in the proper protection of our patent interests against this potential infringement and submit a formal request for authorization of expenditure to the Board at its next meeting."

This was discussed with Mr. Haskell in Wilmington on Tuesday (Mr. Biesterfeld being absent), and with Dr. Lutz in Newark yesterday. It is, therefore, understood and desired that Dr. Lutz and Mr. Biesterfeld meet at an early opportunity to plan procedure to lay the ground for possible patent action, in accordance with this Resolution. It is, of course, understood that procedure is subject to approval of the writer.

I would, therefore, ask that this matter be given preferred attention, at least to get properly started as promptly as possible, inasmuch as there is a likelihood that American Zirconium Corporation may be entering the market sometime this coming Summer, and any action by Krebs, if finally decided upon, subject to approval of du Pont Legal Department and Executive Committee, would have to be undertaken promptly at that time.

C. H. RUPPRECHT.

CHR:s

D. P. Exhibit 32

Letterhead of

E. I. Du Pont de Nemours & Company

Mr. C. H. Rupprecht, April 4, 1934
Newark.

Dr. Booge, Dr. Lutz, and I spent the day reviewing the titanium oxide patent situation, with particular reference to the possibility of infringement by the American Zirconium Corporation. We examined the Richter patent 1,947,226, owned by that company, in view of our own patents and discussed the infringement questions that we found to exist, and also discussed tentatively the initial research work that probably would be initiated in the event that further proceedings make it probable that the American Zirconium Company's process would be substantially based on the Richter disclosure. We also discussed the infringement situation from the standpoint of the use of the ilmenite process. In this letter I am not giving the details of our conversations but do want to give our present recommendations for procedure in the next few weeks in this matter.

It appears that a suit against the American Zirconium Company would be conducted either in the Fourth Circuit in which Baltimore is situated, or in the place of incorporation of the defendant. The latter I am looking up in the next few days, and when I find the place of incorporation I am going to determine what the existing law and practice on interrogatories is in that particular district and circuit. The probability is that we shall prefer to file a Bill of Complaint in the Baltimore District. During the progress of the Moistureproof Cellophane suit I had occasion to look up the

Interrogatories practice in the Fourth Circuit and found that it was not contrary to the New York practice, which allows the plaintiff to question the defendant by Interrogatories regarding defendant's process. As the matter stands today, I think we can get in court, via Interrogatories, a disclosure of the defendant's process on which to base our suit for infringement. I will write you within the next week or so more fully on this particular subject as soon as I get the place of incorporation, and in that manner we shall be able to decide which circuit is preferable for a suit.

Our joint recommendation is that, as soon as I give you the latter report, you will be in a position to interview the American Zirconium Corporation again, following the plan of the first interview, and discuss further with them what their plans in this industry are, with a view of getting from them a precise statement as to the process they intend to follow. Such action on your part may, in our opinion, take place any time during the next two months. Inasmuch as it is doubtful whether American Zirconium has worked out to date any precise process of manufacture, it may be well to delay the interview for a month or two. If, during the interview with them, they give you the details of their process, it will be up to us to definitely advise American Zirconium Company of the patents infringed and take our position. We do not believe the program can be outlined any further than that at the present writing, as everything will depend on the outcome of the conference.

We discussed various matters pertaining to a possible suit, among them the matter of engaging outside counsel, but our recommendation is to defer any such selection until you have had your conference with American Zirconium Company. This would not involve any sacrifice of our

position or early procedure in studying the enforcement of our patents, and in view of that we feel that it would be unnecessary to incur the additional expense.

It is also our opinion that at the next conference the representatives of the American Zirconium Company may well ask you the question as to what your intentions are regarding them; that is, whether you are undertaking these proposed discussions for the purpose of persuading them to accept a license under the Krebs Company patents or whether you are endeavoring to persuade them to desist altogether from entering this business. We feel that you and your Board should have an answer prepared on this point or some form of policy determined upon.

If as a result of your further discussion with the American Zirconium Company the latter finally tell you that they refuse to yield their ground, then it will be in order to notify them that they will be sued for violation of our patents. Such suit by us may then be deferred until the actual beginning of commercial operations by the defendant.

D. P. Exhibit 33

Letterhead of

KREBS PIGMENT & COLOR CORPORATION
1300 Guardian Bldg.

C.C. Dr. J. E. Booge—Newark
Mr. C. H. Biesterfeld—Wilmington
Dr. G. Lutz—Cleveland

Cleveland, Ohio, June 29, 1934.

Mr. C. H. Rupprecht, Pres.
—NEWARK—

We had the conference this morning with the representatives of the American Zirconium Corp. on the titanium oxide patent situation. Attending the conference for the Krebs Company were Messrs. Booge, Lutz and Biesterfeld and for American Zirconium Corp., O'Brien, Rhodes, Zucker and Kolb.

The conference proceeded approximately along the expected lines as we began by discussing the attack step and then went on step by step through the process with Mr. O'Brien every now and then declining to disclose specifically the detailed steps of his contemplated process. We learned appreciably more than at the previous conference, chiefly, however, through denial that they would practice steps covered by our patents.

Dr. Lutz and Dr. Booge will prepare and send you a detailed report of the morning's conference and of the statements made by Mr. O'Brien and his associates. As soon as you have this report we believe it will be in order for you to write a letter to Mr. Joyce summarizing the results of the conference and thus put on record for future use in court, if necessary, the position taken by us today and also

the failure of the American Zirconium representatives to state their position by way of recitation of facts. We believe you might wish to have our thoughts in regard to the form of letter to be sent to Mr. Joyce and give you a draft of such letter which you will, of course, modify according to your best judgment.

Before framing the letter, we wish to say that we concluded the conference on our part by merely stating to Mr. O'Brien and his associates that on the basis of the discussion we would report to you that we found no basis for a status of non-infringement by the American Zirconium Corp. We preferred to say no more than this and I particularly refrained from committing the Krebs Company to any definite policy and did not at this session directly accuse the American Zirconium Corp. of infringement under any specific patent claims, leaving that for our future choice as we may best be advised.

The form of letter could be substantially as follows:

Mr. Joyce:

Following our last exchange of correspondence on the subject of infringement of patents of the Krebs Company by possible future operations of the American Zirconium Corp., our representatives met in Cleveland on the morning of June 29th and discussed the subject further. Our conference was attended by Messrs. Booge, Lutz and Biesterfeld representing Krebs, and O'Brien, Rhodes, Zucker and Kolb representing the American Zirconium Corp.

A report given to me by our representatives shows that the matter of infringement of our patents was discussed and that your representatives indicated that certain claims of our patents would be infringed, but that they considered

them to be invalid. The report at hand also shows that your representatives declined in a number of instances to give us any detailed disclosure or information in regard to your contemplated processes sufficient to form a basis for an opinion on our part as to infringement.

I understand from our representatives that they advised you to that effect, namely that in view of the discussion they were unable to find that a status of non-infringement existed. Consequently, I feel that the conference failed in a large measure in achieving the object we had hoped for, namely, to set forth the American Zirconium Corp.'s proposed process in sufficient detail to enable us to form a definite opinion (judgment) as to whether our patents would be infringed, and thereby avoid any future controversy, if avoidance be at all possible prior to your actual operation of your proposed process.

In view of the results of the conference, therefor, I am obliged to conclude that infringement is contemplated by Amer. Zir. Corp. (your company) in its proposed commercial operations. Consequently, I feel that I should advise you now that the Krebs Company is determined to protect its patent rights and in the event of commercial operations by the American Zirconium Corp. involving infringement of our patents, Krebs will take the necessary steps to protect such rights.

CONFIDENTIAL

JULY 2, 1934.

MR. C. H. RUPPRECHT:

CONFERENCE WITH AMERICAN ZIRCONIUM CORP. REPRESENTATIVES HELD AT GLIDDEN OFFICES CLEVELAND, JUNE 29.

This will cover details of the discussion at our Cleveland conference attended by Messrs. O'Brien, Rhodes, Zucker and Kolb, representing American Zirconium Corporation and Messrs. Biesterfeld, Lutz and Booge, representing Krebs.

INTRODUCTORY

Mr. Biesterfeld stated that the purpose of the meeting was to allow Zirconium to tell Krebs more about their proposed process to be used in their proposed plant operation.

Mr. O'Brien stated that they would tell us their process but reserved the right to keep silent on new improved steps; for such steps they would merely assure us that they do not intend to infringe.

They were asked to describe their proposed process but Mr. O'Brien stated that they preferred to take it up step by step and answer our questions rather than volunteer information.

D. P. Exhibit 34

ATTACK STEP

They were asked in general how they expected to carry out the attack. Mr. O'Brien stated that they would follow Weintraub's expired U.S. Patent #1,014,793. Mr. O'Brine had a typed memoranum on Weintraub and other references.

At this point Mr. Biesterfeld asked whether they expected to use rutile or ilmenite. Mr. O'Brien replied that thru Metal & Thermit they have acquired control of the American Rutile Company, which company has about two million tons of rutile available. However, it will take several years to develop this source of supply with an expenditure of about $200,000. Meanwhile they will use ilmenite as their raw material. Mr. O'Brien stated that Krebs is primarily interested in the ilmenite process and that he would not discuss rutile in detail; their ilmenite process was stated to be flexible enough to take care of rutile later on.

In reply to a question concerning the concentration of acid to be used in the attack, Mr. O'Brien stated that this would be 93% acid,—commercial 66° Bé. There will be no re-attack of the residue.

Question—Just how will the attack be carried out?

Answer—by Mr. O'Brien.—Do not wish to disclose details; however, will not dilute the acid in the attack. Will heat sufficiently high to cause reaction, the temperature then going to the boiling point.

Mr. Rhodes stated that they expect to mix fuming (104.5%) acid with water to yield 93% acid. They will then add ground ilmenite to the hot 93% acid. The amount of acid will be equivalent to normal titanium sulphate $Ti(SO_4)_2$ or 100 F.A.

D. P. Exhibit 34

No additional information could be obtained concerning the details of the operation except a general denial that Krebs Coffelt patent will be infringed.

DISSOLVING STEP

Question—Composition of solution to be produced.

Answer—Not decided yet. May be concentrated or dilute depending on comparative economy; however, will be less than 45° Bé. Mr. O'Brien stated that they could not go into detail because they think they have novel ideas and have filed a patent application.

Mr. O'Brien stated that they are "Thoroughly familiar with the Krebs and National Lead processes",—he intimated that this came thru Messrs. Rhodes, previously with Krebs, and Bosquet, previously with National Lead. He stated further that they expected to depart from these processes but was not in a position to tell us how.

Weintraub and early Barton patents were cited as prior art merely to indicate that titanium solutions had been prepared. In this case and in later cases of discussion of prior art, Zirconium took the stand that the prior art broadly gave them the right to use almost any process they may choose but they would not disclose the process they expect to use. This seemed scarcely logical as they would have nothing to lose by disclosing a process covered by prior art and well known; on the other hand, if their processes are novel and subject to patent protection they again have nothing to lose by such disclosure as they would obtain patents at a later date which would be a complete protection.

On this question of composition of their solution and in later similar points on other steps we asked several definite specific questions which Zirconium refused to answer.

D. P. Exhibit 34

COPPERAS REMOVAL

In view of Krebs patent on copperas removal to Blumenfeld we asked whether they intended to practice this step. Mr. O'Brien stated very definitely that Zirconium did not intend to infringe, but that he was not willing to say just how they would remove iron. They have a novel step which they do not wish to disclose.

They were then asked whether this would be incomplete solution of the iron sulphate as covered by Krebs patent to Weizmann and Blumenfeld #1,489,183. Mr. O'Brien again stated that they did not intend to infringe but would not disclose their process.

CLARIFICATION STEP

In reply to a question based on the Krebs Blumenfeld patent #1,633,621, on clarification, Mr. O'Brien stated that they would not use hydrogen sulphide or copper sulphide in their clarification. They expect to filter their titanium sulphate solution possibly with the use of filter-aid. They assured us that no other addition agent would be used.

Their attention was then called to claim 7 in the Blumenfeld patent covering broadly a well clarified titanium liquor. Mr. O'Brien *admitted infringment* of this claim.

Mr. Zucker argued that prior art anticipated this claim including the Goldschmidt patent on use of colloidal sulphur and an old Norwegian patent on clarification.

REDUCTION STEP

In view of a Krebs patent covering reduction during dissolving, questions were asked on this step. Mr. O'Brien stated that they have not decided just how they will reduce. He argued that they have a right to reduce during the dis-

solving based upon Barton #1,223,358 also a later Barton patent.

Mr. O'Brien stated that they may reduce during dissolving and thus infringe,—if this proves advantageous.

In reply to a question concerning the amount of reduction Mr. O'Brien stated that they can reduce some of the titanium to the trivalent titanous condition based on prior art of Barton. Messrs. Rhodes and O'Brien stated that they have not yet decided whether they will have titanous present at hydrolysis but insist that they can use this if they wish.

Mr. Rhodes stated that he had produced good TiO_2 with ferric iron present at hydrolysis (which we doubt) and that National Lead uses up to 10% titanous at hydrolysis.

Mr. O'Brien stated that they expected to hydrolyze in the absence of ferric iron.

Prior art referred to included the following:

Barton U.S.P. 1,222,358, page 2, lines 79-87
Barton U.S.P. 1,196,030, page 1, lines 90-107
Weintraub 1,014,793

The above references were read from a typewritten memorandum obviously covering prior art references.

CRYSTALLOID SOLUTION

We asked whether they would infringe Blumenfeld 1,504,669, claim 2, covering the hydrolysis of a crystalloid solution to produce a TiO_2 of uniform properties. Mr. O'Brien admitted that they will infringe but argued invalidity on prior art. He stated that Fladmark and other references must have employed a crystalloid solution. In this case, and all others where prior art decided, we merely stated that to our knowledge such prior art did not teach the pu c

the advantages revealed by the Krebs' patents and that TiO2 made by the processes covered by such prior art would not in any way be comparable in quality with present TiO2 made according to the teachings of the Krebs' patents.

Concerning claim 1 of the Blumenfeld patent 1,504,669, which is not as broad as claim 2 under which infringement is definitely admitted, Zirconium tacitly admitted infringement also by refusal to disclose the concentration of the liquor and the temperature of the attack. In other words claim 1 as well as claim 2 is probably infringed.

HYDROLYSIS STEP

The question was again raised concerning the composition of liquor at the time of hydrolysis. Mr. O'Brien this time stated that they will use a concentrated solution but prefers not to divulge other details. Mr. Rhodes volunteered to show the patent which they intend to follow and refferred to Rossi and Barton U.S.P. 1,106,406. Messrs. O'Brien and Rhodes studies this patent rather diligently and finally referred to page 2, lines 41 et seq. They read this reference but it seemed very general and not a guide to a practical hydrolysis procedure. Reference was made to the use of 50-60% sulphuric acid in the solution.

Additional references mentioned were Barton 1,205,144, Barton 1,223,357 and Barton 1,234,260.

After further discussion of the references by Messrs. O'Brien and Rhodes which failed to bring out anything very definite Mr. Rhodes finally stated that their hydrolysis process is still under development. It was stated that they would follow Rossi and Barton in general but the exact procedure has not been decided. They will, however, obtain a "basic titanium sulphate" such as Barton describes.

Obviously the above was not a complete answer on hydrolysis.

They were then asked whether they would use paraffine oil on the surface of the hydrolysis slurry. Mr. Rhodes stated that this would not be done.

They were asked whether they would use pressure hydrolysis and Mr. O'Brien replied that they would not use pressure.

SEEDING IN HYDROLYSIS

The Krebs' representatives made reference to the several Krebs' patents covering seeding in hydrolysis and asked whether Zirconium intended to use such a process. Mr. O'Brien denied that they would infringe in their proposed operation.

Mr. O'Brien went on to state that their were references to seeding including Barton 1,205,144, covering the addition of a base to the titanium liquor, and Barton 1,223,657 covering addition of a small amount of lime; on these references he feels that they can use seeding if they wish but that they do not intend to.

Krebs stated that avoidance of infringement could best be proved by disclosure of their exact process which would allow Krebs to duplicate the operation themselves and prove absence of infringement. Mr. O'Brien in reply stated that he would like to disclose their process but this would tell too much about the novel steps in their operation. He stated that the composition of the liquor for example, would tell us too much about prior steps in their proposed process. However, he repeated that they would not use any seed and that they have not decided on the concentration and composition of the solution. He added that they will not mix

solutions or add water thus avoiding infringement of Krebs' patents along these lines.

Claim 2 of Krebs Re-issue 18,854 covering hydrolysis broadly was read. Mr. Rhodes that they would *not* infringe but would not disclose how they could avoid infringement. Krebs feels that any practical hydrolysis process yielding present high quality commercial TiO_2 in good yield is apt to infringe but cannot prove infringement or non-infringement by Zirconium in the absence of definite information.

FRIT ADDITION

In view of the Krebs' Blumenfeld & Meyer patent covering alkali metal frits, a question was asked concerning the plans of Zirconium along this line. Mr. O'Brien stated that they would not add an alkali metal salt and in fact would add no type of addition agent prior to calcination. Mr. Rhodes stated that there would be no alkali metal salt present but Mr. O'Brien modified this by saying that traces might enter accidentally from previous steps. He added however, that the usual washing of the TiO_2 would remove most or all of the alkali metal salts.

We pressed the point of accidental presence of alkali metal salts with manipulation such that the amount would be controlled to obtain the benefit of frit addition. Zirconium entered a general denial of any intention to do this.

CALCINATION

Mr. O'Brien stated that the calcination was to be carried out at approximately 750°C. Krebs has no knowledge of an uncalcined titanium oxide pigment which would yield good quality at 750°C and asked how this could be done,

particularly in the absence of trit but Mr. O'Brien stated that they were not free to give any information along these lines as it would tell too much concerning the novel steps in their process.

DRY GRINDING

In view of the Kubin patent covering wet grinding followed by dry grinding, this question was raised. Mr. O'Brien stated that there would be no wet grinding in their proposed operation and in fact they would not wet the pigment at all following calcination. He denied intention to infringe Kubin or the Hanahan patent on wet grinding and elutriation.

Along toward the end of the conference it was quite obvious that all questions were answered in a similar fashion, namely that they were not free to give information on confidential steps of their process. The Zirconium representatives definitely refused to take advantage of the offer to disclose their process in sufficient detail so that Krebs could decide the question of infringement of the various Krebs patents under consideration.

GENERAL STATEMENT AT END OF CONFERENCE

A brief private discussion was held between the Krebs representatives. It was felt that the conference had failed in its object in view of the refusal of the Zirconium representatives to discuss various steps in their process.

On the return of the Zirconium representatives to the conference, a final statement was made by Mr. Biesterfeld as follows: Mr. Biesterfeld stated that he could not find that a status of non-infringement existed and that he would report to Krebs along these lines.

D. P. Exhibit 34

The Zirconium representatives seemed rather taken aback by this statement and were inclined to argue it. Krebs brought out that they had admitted infringement of certain broad claims in the Krebs patents and on other claims which it is believed that they must infringe to produce high quality TiO_2 in good yield, they had merely entered a general denial. The proper course would be for them to divulge their process in sufficient detail so that Krebs could demonstrate whether it is operative without infringement. This Zirconium had refused to do and continued to refuse.

It was stated that Mr. A. D. Joyce would receive a letter from Mr. C. H. Rupprecht summarizing the results of the conference based upon reports of the Krebs representatives.

Dear Mr. Rupprecht:

Referring to our telephone conversation of August 1, I have informed the representatives of the OPM that we anticipate no difficulty in our negotiations within the Dupont Company for permission to increase our production of Titanium Oxide. I have explained that our royalty license agreement was consummated in 1935 and that our relations with the Dupont Company have always been on a friendly and satisfactory basis.

I would like very much to discuss with you the matter of removing the restrictions as to quantity from our license agreement, and suggest that if possible you come to Cleveland to discuss this subject. We have all the data available here, and I would like very much to have you meet Mr. O'Brien and other of our executives who have had to do with the working out of our Titanium Oxide problems.

I find we can get the proper priorities for machinery and equipment necessary to increase our production, and I also find that we will have available supplies of ilmenite.

D. P. Exhibit 35

We are desirous of increasing our production to 9,000 tons per annum as quickly as possible.

If you find you can come to Cleveland for a conference, I will appreciate it if you will wire me a date and I will make sure everyone interested is available. I will explain that this is vacation month for our staff and it is therefore necessary for me to remain very close to headquarters.

Looking forward with interest to hearing from you, and with my personal regards, I am

Yours truly,

(s) ADRIAN D. JOYCE
President

August 6, 1941

Dear Mr. Joyce:

I have your letter of August 4th, suggesting that I come to Cleveland to discuss with you the question of increased production of titanium dioxide under the license granted by us to American Zirconium Corporation dated January 1, 1935.

It so happens that the vacation problem is with us these days also, and particularly insofar as I am personally concerned, since I have made arrangements to leave tomorrow for several weeks.

However, Mr. Phelps will take the matter in hand, which requires discussion with our Executive and Finance Committees. He will proceed with this promptly and you may expect to hear further from us within a few days. I hope this can be done by the early or middle part of next week.

I am sorry that I am prevented from coming to Cleveland, and naturally Mr. Phelps will be pretty busy during my absence, however, I assure you that your request will have prompt and thorough consideration, as above.

With kindest personal regards, I am

Yours very truly

C. H. RUPPRECHT
GENERAL MANAGER.

Dear Mr. Joyce:

This will supplement our letter of August 6th, which acknowledged your letter of August 4th relative to our January 1, 1935 license agreement and your desire that certain provisions of said agreement be modified in order to permit you to increase your titanium dioxide production under our licensed patents to 9,000 tons per annum.

I can now advise you that we are agreeable to the suggestion that your titanium dioxide production under our license be increased to not exceed 9,000 tons per year. Accordingly, we propose that Article I, paragraph (b), of our said January 1, 1935 agreement be amended to the extent that the quantity of titanium dioxide specified for each 12 months' period in said article and paragraph, henceforth shall be 9,000 tons per annum in lieu of the quantities which said article and paragraph now provide for.

It is understood, of course, that the modification to our agreement above set out shall not otherwise alter said agree-

ment nor affect nor impair any of its remaining terms and provisions.

If you are agreeable to the foregoing, will you kindly indicate your acceptance of this amendment to our contract by signing and returning to me the enclosed copy of this letter.

Very truly yours,

(s) Z. PHELPS
ASST. GENERAL MANAGER.

Dear Mr. Jayne:

Our Company, as you perhaps know, has a license agreement with your Company in connection with the manufacture of Titanium Dioxide pigment. This license covers the use of your patents and processes in the manufacture of anastase type of Titanium pigments.

We are now planning on changing our plant to manufacture the rutile type and I am writing to ask whether we can secure a license from your Company for the manufacture of the rutile type of Titanium pigments. It is possible that you may be willing to make an amendment to our present license authorizing us to make the rutile type under your patents on the same royalty basis.

Thanking you for giving this your consideration, I am

Yours truly,

ADRIAN D. JOYCE
President.

May 7, 1943.

Mr. Adrian D. Joyce, President
American Zirconium Corporation
Union Trust Building
Cleveland, Ohio

Dear Mr. Joyce:

This will refer further to your letter dated April 22, 1943, my acknowledgment of April 29, 1943, and your inquiry whether our existing license agreement dated January 1, 1935 (variously modified under dates of November 18, 1937, November 9, 1939 and August 8, 1941) might be enlarged to include within its terms any U. S. patents and applications relating to rutile pigment production which we now own.

I am writing to advise that we have no objection to the inclusion of our rutile patents and applications under our said agreement, which patents and applications are more particularly set forth in the attached Schedule. To that end, we are now writing to suggest that, if agreeable to you, we now supplement or modify our said January 1, 1935 agreement to the following extent, but not otherwise:

(a) That the United States patents and applications set forth in the attached Schedule shall be henceforth included in Schedule "A" of said January 1, 1935 agreement, variously modified as aforesaid, and as coming under the license therein granted you; and

(b) That upon expiration of the letters patent originally listed in said Schedule "A", the royalties which there-

D. P. Exhibit 42

after shall accrue to us by reason of your titanium oxide pigment production shall be construed as only applying to TiO_2 pigments which you shall manufacture, use or sell under the licensed patents and/or applications set forth in the attached Schedule.

It is understood that the above extension and modification of our said agreement shall not be construed as otherwise altering, affecting or impairing any of its remaining terms and conditions.

If the foregoing meets with your approval, will you kindly indicate your acceptance thereof by signing and returning to me the enclosed duplicate original of this letter?

Very truly yours,

E. I. DU PONT DE NEMOURS & Co.

Adrian D. Joyce, President
American Zirconium Corporation
Union Trust Building
Cleveland, Ohio

Dear Mr. Joyce:

You will recall that, by my letter to you of May 7, 1943, and your May 8, 1943 acceptance, the January 1, 1935 du Pont-American Zirconium Corporation license agreement was modified to the extent that du Pont rutile patents and applications, particularly identified in the Schedule which accompanied my letter, became included within the terms of the license agreement.

It has now come to my attention that one additional du Pont titanium oxide patent application exists which might be of interest in your rutile manufacture. This application is the following:

Ser. No	Filed	Inventor	Entitled
392,942	May 10, 1941	Daiger and Seidel	Production of Improved Pigments

Accordingly, we propose that the aforesaid application Serial No. 392,942 be hereby added to those which appear in the Schedule accompanying my said May 7, 1943 letter,

and that henceforth said application shall be considered as included among the licensed United States patents and applications of said Schedule.

In behalf of American Zirconium Corporation, will you please indicate its acceptance of this modification of our license agreement, by executing and returning to me the attached duplicate original of this letter?

Upon receipt of your acceptance, I will transmit to you for your records a copy of each of the applications set forth in the Schedule, as modified.

Very truly yours,

E. I. DU PONT DE NEMOURS & COMPANY
